# PLANNED DECONTROL

### New Food Policy

THE principles of existing food policy and the general structure of food organisation and methods of administration were laid down after exhaustive review by the Foodgrains Policy Committee appointed by the Government of India during the middle of 1943. The recommendations of the Committee in the main were maintenance of a pre-determined price level, movement of supplies in accordance with an All-India Basic Plan and the building up of a reserve. Supplies were to be kept moving within the framework of the Basic Plan in accordance with local schemes of procurement, rationing and controlled distribution.

These controls which started from small beginnings in the second half of 1942 were extended throughout 1943 and further improved in later years. Two years later, the Famine Enquiry Commission reviewed the position and endorsed the recommendations of the Foodgrains Policy Committee of 1943, emphasising the need for continued adherence to them as long as shortage of foodgrains continued.

The present system of controls was evolved during the War in order to meet emergency conditions then prevailing. Though the War ended in 1945, these controls were not only not relaxed or removed but they were continued, intensified and extended. The reason for this was that though imports from abroad had become available in quantities exceeding pre-war average figures, seasonal conditions were adverse and the yield of crops suffered to an unusual extent for two successive years.

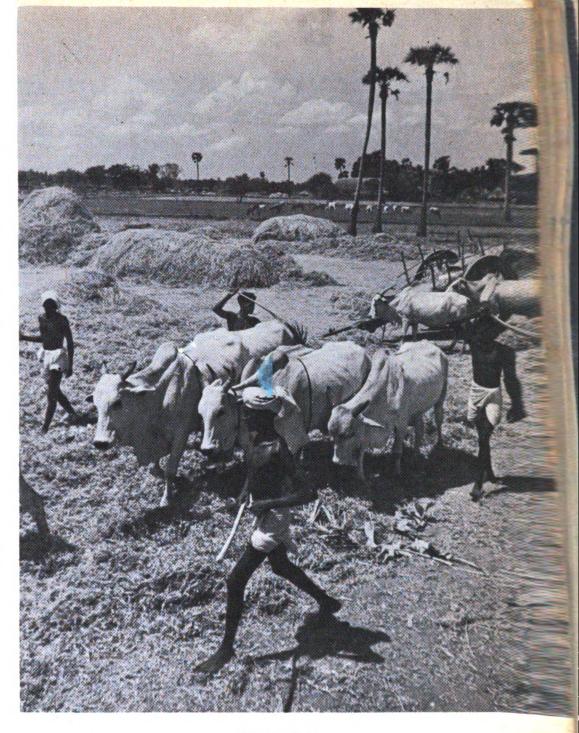

This will be seen from the following figures:—(See cols. 2 and 3)

As a result of this exceptional shortfall in production, food administration has been far more difficult after the Warthan during the War.

#### Serious Problems

A number of serious problems have arisen in regard to procurement, rationing, and imports which led to discontent amongst almost all sections of the population—traders, producers, and consumers. Internal procurement of foodgrains has been yielding poor results and causing great strain on administrations. Ration scales are diminishing and there is a constant threat of breakdown, with stocks steadily falling.

The allocations of foodgrains by International bodies have fallen far short of the minimum needed to maintain even a 12 oz. ration throughout the country. In spite of fullest co-operation by India and strong representation

against increasing prices of foodgrains in exporting countries, the International organisations have been unable to hold those prices at a reasonable level. As a result, imports from abroad are proving more and more costly, causing an abnormal strain on the country's limited foreign exchange resources and involving heavy expenditure on subsidisation.

These difficulties have reacted upon one another so as to aggravate them. The consumer is discontented because of the feeling of insecurity owing to falling fations and complaints about quality of foodgrains. The producer feels aggrieved because he considers the controlled price as inadequate. The trader, as a class, has never liked the controls which have restricted his business.

The Hon'ble Food Minister discussed these problems at an informal conference held in July 1947 attended by Premiers and Food Ministers of certain Provinces, and in accordance with the consensus of opinion expressed at that conference, a Committee consisting of officials and non-officials, including leading businessmen and members of the Constituent Assembly, was appointed under the Chairmanahia of Sin Dunbatandan Chairmanship of Sir Purshotamdas
Thakurdas. The Committee was asked
to submit its conclusions regarding the policy to be followed in 1948, urgently and in advance of their long-term recommendations. This was done as the policy had to be decided before the Kharif crops came into the market. The Report of the Committee is not yet available to the Government of India, but its recommendations have been received. These are not unanimous. A dissenting minority has also submitted separate recommendations. The re-commendations made by the majority of the Committee, as well as those made by the minority, were released for general information on Dec. 1, 1947.

The recommendations of the Committee were discussed at a Conference of Food Ministers of all Provinces and important States, on Nov. 5 and 6, 1947. There was no unanimity of view. The Press and the public have also been sharply divided on the issue of control versus decontrol. The Government of India have given the most careful consideration to this vital matter. A sub-committee of the Cabinet discussed the issues further with the Provincial Premiers on Nov. 23, 1947. After most anxious consideration, and not without some hesitation, the Government of India have reached the conclusions given below.

#### Progressive Decontrol

The Government of India have decided that the existing policy should be revised and the revised policy should be one of progressive decontrol of foodgrains. Consistently with this basic decision of policy, the Government of India have advised Governments of Provinces and States that they should progressively reduce their commitments under rationing and controlled distribution in the reverse order to the original process of extension so as to be able to withdraw and end all rationing and control as soon as may be feasible.

All the imports of foodgrains in 1948 will continue to be made by the Central Government only, and the present Basic Plan arrangements will continue. Out of the quantities actually imported from abroad, not less than 5 lakhs of tons, and if possible upto 10 lakhs of tons, will be retained by the Centre as an emergency reserve. Provinces and States have been intimated the basic export quotas for surplus areas, and ceiling import quotas for deficit areas. Governments of surplus units have been asked to accept responsibility for pro-curing and making available the basic export quotas during 1948 and also to endeavour to make available as much additional grain as possible in the form of supplementary export quotas. Governments of deficit units have been asked to plan on the basis that ceiling import quotas will not be exceeded during 1948, and that they shall have to accept full responsibility for management of their food affairs without making larger demands on the Centre. They should also endeavour to reduce their requirements from the Centre as much as possible.

#### **Procurement Prices**

Decision regarding the prices at which procurement should be effected and foodgrains should be sold within their respective areas have been left to the Provincial Governments concerned.

They may fix the prices in such manner as may be considered by them fair and feasible in prevailing local conditions. Besides bringing to an end the constant argument between the Central Government and the Provinces on the question of prices, this decision to leave provinces free to fix their prices is a necessary corollary of the revised food policy. The Government of India have, however, suggested that Provinces should fix prices bearing in mind the need for preventing an undue increase in the cost of living.

The Government of India will not bear any portion of the losses, if any, arising from enhancement of procurement price which is not passed on to consumers by an equivalent increase of the consumer's price. The subsidy required for levelling down the price of foodgrains imported from abroad which is at present borne entirely by the Central Government will be shared during 1948 by the Central Government and the Provincial Governments concerned in the ratio of 2 to 1. In order, however, to encourage internal procurement and production and maximum assistance by surplus Provinces to deficit Provinces, the Centre will pay to every Provincial Government a Food Bonus. This Bonus will be assessed at the rate of 8 annas per maund of foodgrains procured and another 8 annas per maund of foodgrains exported, subject to the condition that the Food Bonus should be utilised either on meeting the loss, if any, on the distribution of foodgrains precured in India or on supplying to the foodgrain producer at concessional prices manures, fertilisers, and other commodities essential for production of foodgrains. Supplies exported under the Basic Plan from surplus areas to deficit areas will conti-

nue to be charged on a no-profit no-loss basis as hitherto.

It is hoped that these arrangements would prevent undue increases in consumer's price, improve procurement and reduce provincial demand for food imports on the Centre.

In so far as procurement, rationing and controlled distribution continue, controls will continue to be exercised in respect of rice including paddy, and wheat including atta and flour and jowar and baira and any other millet at present procured and distributed in rationed areas, and maize. Whether barley and gram should be controlled or not has been left to the decision of the Provincial or State Governments concerned. Governments of Irovinces and States are free to adopt any method they consider necessary and feasible for procurement to meet their requirements including in the case of surplus Provinces requirements for export.

Inter-Provincial barriers will continue to be maintained for the present.

Pulses other than gram, Sugar and Gur have already been decentrolled.

In order to assist movement of decontrolled foodstuffs and for distribution of controlled foodstuffs by the trade within a Province or State, arrangement has already been made that movement of foodstuffs on private account will be classified in class II(b) of the Priority Schedule as against the present classification in class IV. Government-sponsored movements of foodstuffs will continue to receive higher priority as hitherto.

This is the revised food policy as accepted by the Government of India in broad outline. Since existing controls, their nature and their intensity, differ widely from area to area, the implementation of this policy will take widely different forms. Some provinces have their special problems. The rabi-growing areas will not have their main crop until April-May 1948. East Punjab has the special problem of the refugees. The States of Travancore and Cochin do not produce more than a small portion of their total requirewest Bengal have large industrial populations to lock after. Then certain Provinces and States are normally surplus while others are normally deficit. In local schemes of implementation, provision will have to be made for these special features. In view of this, each Province and State has been asked to make an announcement en December 10 explaining what the implementation of the revised policy would mean in their own area.

#### Safeguards

It is fully recognised that the decision taken by the Government entails a certain amount of risk. The present policy is based on the expectation that decontrol would bring out more stocks than at present under control; and that these stocks would be distributed without serious hoarding or profiteering.

(Continued on page 64)

## PROGRESSIVE REDUCTION OF COMMITMENTS UNDER RATIONING

# Dr Rajendra Prasad's Statement in Dominion Legislature

THE new food policy has been integrated in such a way that dependence on foreign imports may become less, more encouragement to procurement will be given and in course of time we may come to a stage when normal conditions will prevail. Let me hope that this will succeed, and I hope the House will support this policy with all its strength and that the country will also give its fullest support", said Dr. Rajendra Prasad, Food Minister, initiating a full day debate on Government's new food policy in the Dominion Parliament on Dec. 10.

The Food Minister stated that the main decisions of the Government fell under four heads (1) gradual curtailment of Government commitments by withdrawing rationing in the reverse order to the original process of extension (2) reduction of dependence on imports and greater emphasis on internal procurement (3) greater freedom to provinces with regard to prices to be paid for procurement consistently, to keep them within limits for the consumer and lastly to watch developments and keep in readiness a reserve of grains to meet emergencies.

#### Wartime Emergency Measures

Here is the full text of the Food Minister's speech:

The food policy is the result of certain wartime emergency measures which had to be taken during the course of the war. It will be recalled that before the last war commenced India used to import something like 15 lakh tons of rice, mostly from Burma. The effect of the war was not felt during the first two years so far as food was concerned, but when Japan entered the war and Burma was overrun this import of rice from Burma ceased and difficulty began to be experienced throughout the country on account of the cessation of this import. The Government, towards the end of 1941, took note of the situation and ordered control of the price of wheat in December, 1941. But very soon the emphasis shifted from wheat to rice and the Provinces particularly in the South which were deficit in the supply of rice which were denote in the supply of the found it increasingly difficult to meet their requirements. It became necessary, therefore, to take steps to meet the situation which was becoming more and thore scute. Ad hoc action was taken from time to time by Provincial Governments or by the Government of India and movement of grain from one Province to another was restricted. Sometimes even movement within a Province was restricted.

The Government appointed a Food-grains Policy Committee which made certain recommendations. The principal recommendations of that Committee

were: maintenance of pre-determined price level, movement of supplies in accordance with the basic plan, and lastly, the building up of a reserve.

The Famine Enquiry Commission which was appointed after the Bengal Famine endorsed these recommendations of the Foodgrains Policy Committee and the present policy which has been in vogue up till now is based principally on the recommendations of these two Bodies.

#### Extension of Rationing

As a natural corollary to these recommendations Government had to restrict movements, to control movements, to control prices, and had gradually also to adopt action for the purpose of distribution, that is to say, something in the nature of rationing. Pationing was introduced first in the bigger cities with a population of a lakh or more; gradually it was extended to smaller cities with a population of 50,000, and ultimately it had to be extended even to rural areas.

The areas in the South like the States of Travancore and Cochin which are heavily in deficit had to resort to rural rationing almost from the beginning. The rationing gradually expanded. It was hoped that with the end of the war many of the restrictions which had been necessitated by it would have to disappear. But unfortunately a situation developed, largely on account of the failure of monsoon and other natural causes, which not only made it impossible for rationing to be abolished but actually expanded it. And the biggost increase in the rationing area has really taken place after the end of of the war in 1946 and 1947.

I may just mention that in 1944 when rationing was introduced, there were only 26 million people under rationing; in 1945 the number rose to 52 million, in 1946 it rose to 100 million, and in 1947 before the partition it came to as much as 171 million. Now in India it is something like 148 million.

#### Scale of Ration

The rationing at its start was with a basic ration of one pound per adult, half a pound for children and half a pound extra for heavy manual labourers. It has not been possible to maintain this rate, and in 1946 the over all ration had to be cut down to 12 ounces for adults, six ounces for children and an extra four ounces for heavy manual labourers. But it has not been possible to maintain even this, and in 1947 in many places it has had to be reduced to as low as eight ounces or even less.

Dr. Rajendra Prasad

In Travancore, the over-all scale was reduced to 9.2 ounces from August, 1946. In December, 1946, it was increased to 10.6 ounces; in January to 10.7 ounces; in May to 10.9 ounces, and in July last it had to be reduced to 8 ounces and in August to as low as 6 ounces. From October it has again been raised to 8 ounces at which level it remains today.

In Cochin, the scale of ration never came up to one pound except for a short while in February 1945. Since then it remained at 12 ounces till July 1947 when it had to be reduced to 8 ounces and then to 6 ounces for some time. In Aug. it came to 8 ounces and remained there. In Mysore the over-all ration was reduced to 10 ounces in July 1947 and 8 ounces in October at which level it remains.

#### Difficulties of Control

In Madras, the over-all size of 12 ounces had to be reduced to 10 ounces in May, 1947, and to 8 ounces in July 1947; but it was again raised to 12 ounces from August, 1947, except in the case of rice eaters for whom it is 10 ounces now. In other areas also there were reductions in the over-all scale from 12 ounces to 10 ounces, as for example in West Bengal, in East Punjab, in Delhi and Ajmer.

We thus see that it has not been possible to maintain rationing even at the low rate of 12 ounces per adult; but there have been other difficulties too which have been experienced. The problem of rationing has created other problems, it has brought in its wake corruption among the staff, unauthorised agents and prevalence of black marketing and of ghost ration cards. For this purpose a special enforcement staff has been appointed in all areas; instructions have been issued to give exemplary punishments to offenders, in many areas mobile inspection squads have been appointed

to make surprise visits and a drive to unearth ghost cards, particularly in Delhi and Bombay, has had good results.

A system of checking retail shops by surprise visits has been introduced. Apart from this austerity measures have hid to be resorted to. But in spite of all this it has not been possible to maintain rationing at the low figures of even 12 ounces, and difficulties have mounted from day to day.

There are only two ways in which Government could secure the supplies that were required for meeting their commitments: Government could get them from internal sources and they could get it from imports. The difficulties in procurement from internal sources have also mounted: it is becoming administratively more and more difficult for the province to enforce procure-ment. Various systems have been adopted in the different provinces, some have adopted a system of levy, some have adopted monopoly purchase, while some have adopted a combined system of lovy and monopoly purchase. But the difficulties have not been solved and in one case at least force had to be used even to the extent of shooting to enforce procurement.

There has been a general demand from the provinces that prices of foodgrain for procurement should be raised. In pursuance of the policy which was laid down by the Foodgrains Policy Committee and endorsed by the Famine Inquiry Commission, the Government of India have tried to resist this demand for increasing the prices. It has to a certain extent succeeded but I cannot say that there have not been breaches. We have had to allow bonuses which are only another name for increasing the prices. In one case at least we have had to shut our cycs and allow an increase in price in the name of cartage. So, while difficulties have increased our procurement has not increased much.

#### Increasing Prices of Imports

The difficulty of import has also not been small. In the first place, there is an overall shortage of food in the world. The food that is placed at the disposal of the International Emergency Food Council is distributed to the needy countries by that international body. We have been making representations and we have been getting allocations from them. But our demand has not been fully met. We have only got something like say about 50 per cent of our demands from the international body. But it is not only that we have not got what we wanted but the prices which we have had to pay have gone on increasing. What we were getting at Rs. 10 a maund at the beginning of 1946 from Burma rose to Rs. 14 per maund in June of that year, and further to Rs. 17 per maund early in 1947. In 1948, the price that we have to pay is :38 per ton f.o. h., which comes to about Rs. 21 per maund landed in India. That is with regard to Burma.

The Brazilian and Egyptian rice is still more costly being at Rs. 26 and Rs. 24 per maund.

The Turkish wheat costs Rs. 20 per maind: Argentino maize has risen from

Rs. 10 per maund last year to Rs. 13 per maund this year. Even these supplies at such high costs have been got only because our delegations and deputations have been running from country to country and making representations to them.

In order to meet the difference between the internal prevalent prices and the prices of imported foodgrains, the Government of India has had to pay a subsidy. The subsidy was sanctioned in April 1946 and from April 1946 to March 1947 the amount came to Rs. 20.59 crores which the Government of India had to pay, and from April 1947 to December 1947 it is estimated to be something like Rs. 17.35 crores, and if it is continued to the end of the current financial year it will come to something like Rs. 22½ crores.

The price of the foodgrains that we have been importing is very high and the amount which the Government of India has to pay is tremendously high. Exchange difficulties have been mounting, and it is not known how long it will be possible for the Government of India to purchase this imported grain at such high prices to the tune of something like Rs. 100 crores a year.

It was because we fest that all these difficulties were mounting, our own procurement was not making as much progress as we wished, imports from other countries were becoming more and more difficult, we felt that something should be done to meet the situation.

#### Gap Between Demand and Supply

I might just point out that with the expansion of rationing and the resources of the Government to meet the increasing demand for supplies, we did not have a pari passu increase in the supplies. As I have said, in 1944 the rationed population was something like 26 millions and the resources of supplies at the Government's disposal were 4.93 million tons from local procurement, .76 million tons imported, total 5.69 million tons. In 1945, when the rationed population was 52 millions, procurement was 4.55 million tons, imported 91 million tons, total 5:46 million tons. In 1946 when the rationed population had increased to 100 millions, procurement was only 5.05 million tons, imported 2.1 million tons, total 7.15 million tons: and in 1947 up to September, procurement has been 4.17 million tons, imported 2.01 million tons, total 6.18 million tons.

This shows that a breakdown of rationing was inevitable because the amount procured and imported remained more or less at a constant figure, while the rationed population increased more than six times.

It became inevitable, therefore, for the Government to take a stock of the situation and in July last we had a conference attended by Provincial Ministers and others and the conference suggested that it was necessary to have some sort of of an expert committee to advise the Government on this matter, and so a committee was appointed. The committee was aked to review the whole food policy, to make suggestions about

the present programme and also to make recommendations as to how to increase production. It has made its recommendations on the first part; it has not yet made recommendations on the second part relating to increased production.

The recommendations of this Committee were circulated to the provinces and conferences have been held with Provincial Ministers and Prime Ministers and after prolonged discussions, the Government of India has come to certain decisions which I understand have been placed in the hands of Hon'ble Members so that they might study the decisions and take part in this debate.

#### Government Decisions

It will thus appear that the main decisions of the Government fall under four categories: (1) gradual curtailment Government commitments by withdrawing rationing in the reverse order to the original process of extension, (2) to reduce the dependence on imports from abroad and to put greater emphasis on procurement within the country, (2) to give provinces greater freedom with regard to prices to be paid for procurement consistently to keep them within reasonable limits for the consumer, and (4) to watch developments and keep in readiness a reserve of grains to meet emergencies.

As I have said und as the statement which has been circulated to Members also states, it is recognised that there are risks. I think we cannot shut our eves to the fact that there is a great deal of discontent against controls. Producers are dissatisfied because they feel that under control they cannot get the price which they ought to get and Government forces them to accept less then what they would otherwise get. Consumers, on the other hand, feel that they cannot purchase what they want and they have to be content with less than what they would like to buy if there were no centrols and they have sometimes to put up with certain kinds of grains to which they are not used and the quality of which is not always of the sort one would like it to

A vicious circle has been created by these controls....There is a sense of insecurity in the public mind on account of the continuance of the controls. They feel as if there is something very wrong and any day there may be trouble. And so the producer does not feel inclined to market all that he would if he felt secure about the future. consumer also, if he can manage it, tries to get as much as he can, so that he might be prepared to meet emergencies. And the trader, wherever he can, also tries to hoard. So all these factors combined together lead to shortage and shortage in its turn necessitates control. This vicious circle sometimes and scin. how has to be broken at some stage. The Government therefore had to take a decision. After all wartime emergency measures cannot be continued for ever, and especially when we feel that our difficulties are mounting we had to take some decision and we had to take a decision even though it involved a rick. We had to make a choice.

The risk involved in the policy that is now proposed is that there may be a rise in prices. Let us not imagine that this rise in prices will affect all. At present we have a large population which is either under rationing or controlled distribution. But all this population does not purchase its foodgrains. A considerable portion of the population now under rationing comprises of producers who produce more than they need. They are the surplus producers. Also there are producers who produce only a part of their own requirements and have therefore to depend upon rationing for the other part of their requirements. And it includes also non-producers who depend entirely upon rationing for their food.

#### Risk of High Prices

Any rise in the prices will not affect the first class which is of producers who are surplus producers. Any rise in the prices will not affect the second class, which is of partial producers except to the extent of the deficit which they have in their food supply. It will affect the non-producers undoubtedly. These non-producers are not confined only to cities. They are spread over rural areas also. While in the south rationing affects rural areas too, in the north, say, in the U. P., C. P., Bihar and Bengal, rationing has not spread to rural areas to any

appreciable extent. Therefore, this element in the population which is of non-producers in the villages, where there is no rationing today has to depend for its supplies on the black market and it is already paying very high prices in the black market.

Any rise in the prices of foodgrains as a result of decontrol, I imagine, will not be more than what is prevalent in the black market. It will not affect the non-producer who is not under rationing today. The number of such nonproducers who depend for their food on purchases made by them is not inconsiderable. It is difficult for me to give figures, but I can say this that their number is not small. In these circumstances the risk of rise in prices affects only a part of the population; it does not affect the other parts. The risk is there. But if we did not take the decision that we have taken we would have to face the other risk, that is of a complete break-down in course of time. I do not say that a breakdown was coming today. But I have no doubt that with the difficulty of procurement, with the rising prices of imported foodgrains, with the difficulty of exchange and generally the administrative difficulties which have arisen on account of control to which I have made reference, a breakdown sooner or later was inevitable. That breakdown would be infinitely more

disastrous than anything that may happen on account of a rise in prices. The Government had, therefore, to take the risk and it has decided to take what it considers to be the smaller risk.

I have said that I do not anticipate that the prices will go to the heights of black market prices. In this I am to a certain extent encouraged by what has happened with regard to prices of oils and oilseeds. In March last year oils and oilseeds were decontrolled. This was necessary because in large tracts of the country edible oil was not available at all, and if it was available it was available at very high prices. The Government had in these circumstances to decide to decontrol oil. The result was in a sense very satisfactory.

I will give some figures which will show how the decontrol of oil has worked. In Bengal and Assam particularly, where mustard oil is largely used, oil was not available at all in many places, and wherever it was available the prices were very high. The controlled price of mustard oil in Calcutta in March was Rs. 57-12 per maund. But it was solling at Rs. 120 per maund. In many places it was not available.

Oil was decontrolled in March and the effect was to bring down the prices from Rs. 120 to Rs. 63 which was only Rs. 6

Members of the Indian Food Mission to Australia photographed with Mr. R. T. Pollard, Australian Minister for Commerce and Agriculture. (Seated L. to R.) Mr. N. Wadia, Mr. R. T. Pollard, Sir Raghunath Paranjpye, Mr. V. Sahay and Mr. A. I. Sexena

above the control price. Since then the price has fluctuated and as the stock of last season's produce has decreased and is now approaching its end the price has gone up to Rs. 72 or Rs. 73. It is even then very much less than the black market price of Rs. 120.

In the U. P. the control price was Rs. 45-8- a maund. The market price was Rs. 55 a maund. It rose in November to Rs. 68. Now, it is worth nothing that the effect of this decontrol has been. The U. P. is a surplus province so far as oils and oilseeds are concerned. The effect of decontrol has been to push up the price of oil to some extent in that Province, whereas in the Provinces which are deficit the effect has been to 'ring down the market prices. The disparity in the price between the producing and the consuming Provinces which subsisted before decontrol has become very much less.

The same thing has happened in the case of groundnut oil. In March the control price in Bombay was Rs. 37.8-0 per maund and Rs. 35-2-0 in Madras. Madras is a surplus Province in regard to groundnut oil, while Bombay is a deficit Province. The market price was Rs. 75 in Bombay and Rs. 39 in Madras at the time when decontrol was introduced. After decontrol the price in Bombay went down, in June, from Rs. 73 to Rs. 55, and rose in Madras from Rs. 39 to Rs. 55. In November it came down to Rs. 51 in Bombay and Rs. 41 in Madras. So in this case also the result has been a levelling down in the case of deficit areas and a levelling up in the case of surplus areas and diminution in the disparity of prices between the two areas. I expect something similar will happen in the case of foodgrains also.

#### Sugar

Now I come to sugar. When a decision was taken to decontrol, gradually and in a progressive way, foodgrains, it was felt that there was no justification for maintaining control in the case of sugar which after all is not as essential a foodstuff as cereals. The control of sugar has also created a most curious situation. Under rationing everyone is entitled to a certain quantity of sugar like every other foodgrain. Many people who are not used to taking sugar have under the rationing system to take it. Many others who used to take more sugar formerly have to be content with the quantity that is rationed out to them. So, while on the one hand people who do not need it have to take it, on the other people who do need it had not got it. Those who do not need it pass on the sugar to the black market, and that markets are fed.

The price of sugar in the black market has been anything between Rs. 55 and and Rs. 65 as against Rs. 25-4-0, which was the ex-factory controlled price till yesterday. I am hoping that as a result of this decontrol the price of sugar will not go beyond Rs. 31 where it has been, but I am also hoping it will be nothing like Rs. 55 or Rs. 65, which has been the prevalent black market price today.

There has been also another effect of control of sugar. The quantity of sugar produced in the country has gone on decreasing progressively and the season 1946-47 has seen the lowest on record within recent years. We have had only 9,05,000 tons produced in India in 1948-47, or if you add the production in Pakistan, 9,25,000, as against more than 11 lakh tons which they had reached some years previously. The reason for this reduction that is suggested is that the growers have not been paid the price which they ought to get, and they have not been able to produce as much as they used to produce before.

#### Quality of Sugarcane

The quality of cane also has deteriorated leading to a fall in the recovery of sugar from the sugar-cane from 10.5 to something about 10 or below 10. It is suggested that if the price of sugar will naturally rise because sugarcane is the biggest element in the production of sugar. The cost of labour is also going to be raised. It was something like Rs. 22-8-0 before last year. This year in the United Provinces and Bihar, the minimum is going to be something like Rs. 45. The price of sugarcane was 14 annas a maund before last year. It was raised to Rs. 1-4-0 during the last season. This season it is going to be nothing less than Rs. 2. Now these elements are bound to raise the price of sugar which will be produced in the season which is now commencing, and when we think of increase in the price of sugar, we should not attribute the whole of it to decontrol because the greater part of it will be due to these causes, and I do not know what part of it, but only some part of it may be due to decontrol.

All these considerations have led the Government to come to its decision. Within recent months Hon'ble Members are aware that Mahatma Gandhi has raised his powerful voice against control. That is sure to make the continuance of control even more difficult than it has been in the past. But I am hoping that the policy which the Government has now decided to adopt will in the same measure be benefitted by the same powerful voice, and this policy has a better chance of success new than the policy which we are now giving up gradually.

#### **Precautions Against Emergencies**

But we are not taking risks without making some arrangement to get out of the difficulty if a really difficult situation arises. We have taken three or four precautions so that if a really serious situation arises, we may be able to avert it or at any rate to mitigate the effects of it. We have decided to continue the organisation which is now in existence so that when we have to revert to control again, we may have the organisation ready at hand. We have decided to build up a stock of grain which will be available in cases of emergency. It has been the recommendation of the Foodgrains Policy Committee, as also of the Famine Enquiry Commission, that this reserve should be built up. It has not been done up till now, but it has been decided to build up this year

to the extent of 5,00,000 to 1 million tons, if possible.

We have also taken the precaution of continuing control on traders by insisting upon their registration and declaration of their stocks from time to time so that if an emergency arises, the Government may be in possession of information about the stocks and may take necessary action to rush stocks from places where they exist to places where they may be needed. But while we are taking all these precautions, we also contemplate that in course of time it would not be necessary to resort to any retrograde step in the direction of control again. These precautions are taken only to meet emergencies if they arise.

This new policy is undoubtedly a break from the policy which has been in force for some years now. A break has to be made at some time or other and it is much better that it is done at a time when we are still in a position to meet an emergency if it arises than when we shall be helpless and forced to abandon this present policy. In the course of these years such success as has attended the policy of control has been achieved by the co-operation of all. Let us not imagine that our policy of control has been a complete failure. Far from it. It has succeeded in a way which has attracted the attention and earned encomiums of foreigners. With all its defects, with all the other difficulties which I have mentioned, it cannot be denied that it has helped us in the past in tiding over crises which might well have overwhelmed us.

#### Appeal for Co-operation

If necessary we may come back to control in a more rigid form if that is forced upon us, but we must make a beginning to break it and that is what is proposed to be done in the new policy which the Government has adopted. We do not want to rush things. We want things to take their natural course so that ultimately normal conditions may be restored.

When I have said that our policy has achieved some success, I must say that success has been achieved by the cooperation of all concerned—officials of Government, Ministries in the Provinces, State Governments, the public at large, and last but not the least, by the Legislature. We have had co-operation all round so far, and I hope that in the new policy which the Government is inaugurating today it will continue to get the same kind of co-operation and help so that the return to normalcy may be quickened, so that the emergency measures which have been necessitated by exigencies of war may disappear and the people in this country may begin to live once again in normal conditions.

I therefore do not accept this policy in a spirit of defeatism or of despair; I have accepted this policy full of hope, and if I get the co-operation, if the Government gets the co-operation which it has a right to claim and which it has received in the past, in the future also, I feel confident that it may

succeed. More than that I cannot say; more than that you cannot expect anyone to say.

I am going to give up the Department with which I have been associated, to take up other duties very shortly. It would have been much better if my successor had had the opportunity of taking part in the decisions which have been arrived at by the Government. But unfortunately we could not wait and decisions had to be taken. I have no doubt that the country and this House will realise that after all it is not a decision of an individual, it is the decision of the Government,—although I cannot deny my own share in it which has not been small—as I have been in charge of the Department.

If the country, if the Members of this House, if all who are interested in this, feel that this has to succeed, this will succeed. I am hoping that the producers will place larger quantities now when they get higher prices, when they feel that they are not compelled but are free to sell as they like. I am hoping that consumers will also put upon themselves some sort of a self-denying ordinance and will not, because of de-control, make unreasonable and unnecessary demands upon the stocks of food. Let us not forget that every grain that is wasted by a consumer means so much taken away from another hungry mouth.

#### Choice before Trade

I have hopes that the trade will also play its part. If nothing else, its self-interest ought to dictate to itself that it is not wise to kill the hen that lays the golden eggs. If this experiment fails unfortunately, there can be no alternative but a more rigid control which will eliminate the trade altogether. That will be one of the incentives if nothing higher counts, which will enable the trade to play its part. But I am not counting only upon this; I am hoping and I have reasons to hope that the trade will play its part honourably in this.

I am hoping that the Provincial Governments, the State Governments and all others concerned will so manage their affairs that dependence upon foreign imports will grow less and less. We are trying to encourage procurement by giving a bonus of eight annas per maund for every maund procured. We are giving an additional eight annas to every maund that is exported from a surplus area to a deficit area. On the one hand these will encourage procurement, on the other we are throwing a part of the burden which the Government of India has so far been bearing, of meeting the deficit between the imported price and the internal price, on the provinces so that they may demand less and less of the imported stuff.

The policy has been integrated in such a way that dependence on foreign imports may become less, more encouragement to procurement will be given, and in course of time we may come to a stage when normal conditions will prevail. Let me hope that this will succeed, and I hope the House will support this policy with all its strength and that the country will also give its fullest support.

# IMPLEMENTATION OF FOOD POLICY LEFT TO PROVINCES

REPLYING to the food debate in the Dominion Parliament on December 10, the Hon'ble Dr. Rajendra Prasad, the Food Minister, said:—

Sir, I am not at all surprised with the reception which the Government policy has got in this House. If in the course of the reply, I do not refer to every individual member who has participated in this debate, it is not for lack of respect for the views expressed, but because I think it would be best to deal with the questions that have been raised in a comprehensive way rather than by taking point by point raised by each speaker.

It has been suggested that control should be continued, because control is in consonance with modern economic thought and to the extent that we have already got it, we should not give it up, but rather we should extend it. I may assure Hon'ble Members that in 'coming to the decision to which I have come and which has been endorsed by the Government, we have not been influenced by any such larger issues as are involved in that suggestion.

We have not been thinking of the Marxist theory or of any other theory in coming to that conclusion, but we took facts as they are, the difficulties that we have to face and the further difficulties which we anticipate, and we came to certain conclusions. If it were a case of planned economy, as has been suggested by another speaker, which we were going to disturb, the position might be different. But, as we all know, these controls are a legacy of the war and war conditions. They arose, as has been pointed out, in a haphazard manner; they have grown equally in the same haphazard manner. And if we want to have planned economy the first step is to scrap this haphazard growth and then think of that planned economy.

#### Increased Prices

I should not like planned economy to be introduced by the back door in this way. Let the country, let this House, let the Government make up their minds about planned economy; let them prepere a Scheme of that planned economy and then introduce it. That may be something worth having. I would therefore not expect Hon'ble Members to look upon this decontrol as a rejection of the policy of planned economy. It has nothing to do with that. That is a different matter, an independent matter which has to be considered and will be considered when the time comes for it.

We have been told that decontrol, even if it is in a progressive way gradually introduced, is bound to lead to a spiral of inflation. In the very beginning I was careful enough to inform the House that we did apprehend that there were risks in the policy

which we are adopting. We did apprehend that there might be a rise in prices; and having appreciated the risks involved we decided that it was better to take those risks rather that to take the greater risk of a complete breakdown which will end in greater disaster. Therefore if there is a rise in prices we should be prepared for that; only it should not be allowed to go to such heights that it may upset our whole economy.

If there is going to be a disturbance generally in our economic life we should be prepared for that; only it should not be allowed to go up to such an extent as to make our life difficult in this country and to upset our whole economy. Therefore the policy which the Government have adopted is a policy of gradual decontrol. I am thankful to Mr. Senthanam who suggested the expression 'planned decontrol'. That is exactly what is intended; we are not going to decontrol—come what may—tomorrow or the day after; that is not the intention.

#### Government's Intention

What is intended is that we shall take each step, watch its effects, see the developments; and if we find that as a result of the step that has been taken any serious difficulties are taking place, we have kept the door open for retracing our steps if it becomes necessary. That does not mean that we are not going to stick to the policy which we have adopted; it only means that if this policy fails, if there are indications that it is going to fail and to end in disaster, we shall retrace our steps; not that the moment we have taken the step and we find that there is something wrong here and there we shall retrace our steps. That is not the idea and that cannot be the policy of Government under any circumstances.

If Government have to take certain decisions they have to stick to those decisions until circumstances arise which make sticking to that decision detrimental to the best interests of the country; and that is what we propose to do. I am not at all afraid that the prices will go up to such heights as are feared by some Hon'ble Member of this House. As I said, my own appreciation of the situation is this that the prices may go up to some extent but they can never go to the heights which black market prices have reached. We were told that there are various kinds of prices and markets now prevalent—white, grey, black, and another which was characterised by an Hon'ble friend as jetblack. While undoubtedly there are gradations I think we shall be somewhere near the grey; we shall not get near the black market and certainly not near the jetblack. I think in this country grey is the best colour for all things.

Sir, I listened with great respect to the speech of my Hon'ble friend,

Pandit Kunzru, whose devotion to duty, whose sacrifices, whose learning and whose knowledge we all respect. I listened to him with all the respect that is due to him, but I found that he relied upon the kind of arguments on which all who have fought against decontrol have relied. I should have expected from him an analysis and a consideration of the situation as it prevails in this country and then to arrive at conclusions which will be in keeping with those conditions.

AN HON'BLE MEMBER: His time was short.

DR. RAJENDRA PRASAD: It may be that if he had more time he would have probably developed his argument, but I am sorry I can go only by the arguments that were advanced and I cannot wait for the other arguments that were not advanced by him. One argument that he put forward was that other countries like America are either maintaining or re-imposing control whereas we are thinking of removing control even though in a gradual way.

#### **Need for More Production**

I do not think it is always correct to take the analogy of other countries and to apply them in their entirety to our own country, because conditions differ. If the arguments that have been put forward by several Hon'ble Members in this House are to be accepted, namely, that decontrol can only possible if there is a surplus, there is absolutely no reason why America should have control, because it has not only a surplus for its own needs but it has a tremendously big surplus which it exports to other countries. If the existence of a surplus is all that is required for decontrol there is no reason why a country with a surplus should have any control at all at any time. But in spite of that big surplus I understand America is now reimposing control and control is being maintained or continued in some other countries which have a surplus.

It has been said that ours is a deficit country. Yes, from the figures available it is a deficit country. But the deficit is not very heavy and, as pointed out by an Hon'ble Member, it does not exceed 10 per cent; the deficit is probably nearer 5 per cent.

Now in a country of our dimensions, if we could raise one maund more where we are producing 10 maunds, the deficit will be more than wiped out, and that I believe is not an impossible task. After all, whether we have control or not, the food position in this country can improve only if there is more production and that is true not only of food but of every other thing which is in deficit. Therefore naturally the attention of the Government must be concentrated more on the production side than on the distribution side.

From my own personal experience of only 15 months in this office, I can say that this control has taken more of my time than production. I think that is a position with all who are engaged in this work and who are interested in it. Controls take an abnor-

mally long time: they take a disproportionate amount of more attention than necessary and the result is that control requires more control, and more control requires still more control, and we are landed in what has been called a spiral, not of inflation but of control with the result that we reach a position when we cannot think of getting rid of this control.

#### Legacy of War

As I said in the beginning, these controls are a legacy of the war. They are not normal things. The deficit which the country is now experiencing is not a new deficit. Even before the war we were importing 11 million tons of rice. That deficit was there. Did we have control then? Did we not manage without controls till before the war? And if war had not come, could anyone have imagined that we would have introduced controls in this country? Now that the war is over, now that the exigencies which made these controls necessary on account of the war have disappeared, isn't it better to come back in due course to the position into which we were before the war, that is to say, even if there is a deficit, let the deficit be met in the normal way in which a deficit has been met in the past, in which it is being met in some other countries, or in which it may be met in this country-without control.

What I have been pleading for is this: that the time has come when we should think of going back to normalcy and not stick to the abnormal conditions which have been created by war, and this is a step in that direction. But as I have said, because we felt that there were risks involved, we thought of going slowly and of waiting and watching at every step the effect of the action taken and then proceeding without taking undue risks. That is what we propose to do. Therefore, if normalcy has to be restored, this vicious circle has to be broken at some place, and we have decided that we should begin the breaking at this point, and we are going to do it.

The idea that decontrol will increase supplies, and will release larger quantities of grain from producers which will be brought into the market has been poohpoohed. Personally, I do not think that it is a thing to be pooh-poohed. We know how panic works. The mere existence of control creates panic and that panic leads to hoarding: hoarding not in a bad sense. I do not mean hoarding by profiteers. I mean hoarding by profiteers. I mean hoarding by people of ordinary prudence, with ordinary commonsense, with ordinary intelligence, so that they might not have to meet a certain emergency in future. Because of the existence of control they fear that something might happen when they would not be able to get

## LAND RECLAMATION SCHEMES IN U. P.

ESCRIBED as the largest land reclamation plan through mechanisation in the East—outside Soviet Russia—a scheme will be put into operation in the Ganga Khadar terrain of the U. P. shortly. On Dec. 17 heavy mechanical machinery costing about Rs. 10 lakhs turned up the first sods of 50,000 acres of culturable waste land, till then overgrown with jungle and tall grass. Kept as a preserve for the sport of pigsticking for two centuries, this land will now, under India's national Government, be soon grown with food crops to bridge the gap between food demands and available supplies.

#### Food Production Campaign

Explaining this new direction being given to the food production campaign, an official of the Ministry of Agriculture stated that Government efforts during the last four years to grow more food had been greatly handicapped, by their inability to bring culturable waste lands under cultivation. Till recently the exact location of and acreages of these areas were not known to the Provincial Governments with any degree of accuracy. With financial assistance from the Centre, West Bengal, Bihar, C. P., Orissa and U. P., have carried out surveys of such lands, and there is now a better appreciation of the location of these areas, and the steps necessary to reclaim them. The tracts have long been breeding grounds for Malaria parasite, and the first task therefore is to undertake malarial control

measures before any reclamation work can be started. Such measures have already commenced in the U.P., where 250,000 acres are available in the Ganga Khadar and Tarai regions.

The 5-year land reclamation plan of the U. P. envisages bringing 160,000 acres of land under the plough. For this purpose it is necessary to have heavy land reclamation - machinery, heavy tractors and heavy ploughs. As this machinery is very expensive, the Government of India have decided to assist Provinces by providing the machinery, the operating staff and other appliances. They will also reclaim these lands for the U. P. on the principle of 'no profit no loss'. Without investing any large funds the Provincial Government will get the land reclaimed within 5 years, according to their own reclamation programme. As the time available between the reclamation of land and the actual cultivation in the U.P. and Bihar is very short, and the time for settling new colonists will be at least a year, the Provincial Government has asked the Government of India to undertake mechanical cultivation until the colonists can be settled. The Government of India have agreed to this and it is anticipated that the expenditure involved will be Rs. 50 lakhs for one

Operations on the next land reclamation scheme which will be in the Tarai region, are expected to commence in January, 1948.

grain, because if there were grain there would be no control. Because there is grain, there is control, and therefore we must keep back something which may be of use in time of need.

As soon as this panic disappears, as soon as people feel confident, more and more will come into the free market and more and more will be actually available, just as it used to be before the war, before controls were introduced and before coutrols were in force.

I anticipate that there will be not an inconsiderable amount of grain which will come into the market as a result of progressive decontrol, and there will thus be a larger quantity available. But let us look at it from another point of view. After all, by this method of decontrol, are we going to lessen the quantity of grain now available in any way? That grain that is now available in the country will be there. The imports will be there. We are not stopping imports. Therefore whether we control or do not, the grain that is now available will be available oven after decontrol.

PANDIT HIRDAY NATH KUNZRU: But will you get foodgrains if you decontrol now?

DR. RAJENDRA PRASAD: We used to get them before.

PANDIT HIRDAY NATH KUNZRU: But you used to after introducing rationing. Will you be able to get them now after accepting a policy of removing control over the distribution of foodstuffs?

DR. RAJENDRA PRASAD: I have no apprehension that we shall not get the grain. All that the international body is interested in is to see that the grains we get are not used for profiteering purposes or used by private individuals for making undue or illegitimate profit out of them.

The position of the country is well known. That we are a deficit country is well known and we shall continue to press our case before international organisations. We shall continue to import from other countries on the understanding and on the condition that no profit by private parties or by individuals will be allowed to be made out of this grain which is imported. There is no reason why they should withhold the grain which they have been giving us up to now.

#### **Expensive Imports**

Therefore, I do not apprehend that we shall lose our imports. After all, these imports are very costly for us. I wish we could do without them. We should try to do without them, and the Government must try to do without them as far as possible. Members will be shocked if they learn the prices that we have to pay simply because we import.

The procurement price of rice from Burma is only £18 per ton, to which may be added certain charges to make it £25. That is how it was calculated last year.

Procurement price in Burma £.18
Handling charges, sewing
gunnics, etc. £.1.25

Overhead and loss by deterioration at 7½% ... £.1.5

Export duty .. £. 4.25

This came to .. £. 25 per ton

This came to ... £. 25 per ton
To this there is to be added 33-1-3
per cent rehabilitation charges, coming
to £8-6-6 and the price which we paid
was £33-6-6 in 1947.

SHRI BALKRISHNA SHARMA: What are these rehabilitation charges?

DR. RAJENDRA PRASAD: Burma needs money for rehabilitation and she wants to get that out of her experts.

MR. NAZIRUDDIN AHMED: Something like a donation for the price?

DR. RAJENDRA PRASAD: I cannot say a donation but they are entitled to sell their goods at whatever price they want.

#### High Import Prices

In 1948, this price is going to be Rs. 38 per ton. Now you can imagine how hard it is on this country to have to pay this high price. But Burma alone is not to blame.

I have got the figures for Argentine. In 1947, the producer's price of wheat was 15 pesos per 100 kilos which came to Rs. 5-7 per maund and the export price was 60 pesos, which came to Rs. 21-13. If we took corn their own procurement price was Rs. 3-10 per maund and we have got to pay 35 pesos which comes to Rs. 11-11 per maund. This is what we are paying to other countries on account of these imports.

Australia has been a very good neighbour, I must admit. Australia

has considered our needs and at the present moment we are engaged in very delicate negotiations. But even with regard to Australia we have to say that we have to pay very heavy prices.

For the purpose of maintaining control and rationing all these imports become absolutely necessary and if the Government has to import it has to pay the high prices. If things were left to return to normalcy I am not without hopes that the position might improve. I cannot say that it will improve.

#### Bonuses

Our dependence upon imports must be reduced as far as possible and that is the policy which we have adopted. We have decided to encourage procurement within the country by giving bonuses for procurement, so that if we have to pay anything it gots to our own people and in any case it dots not add to the poverty of the people but enriches them to some extent.

It has been complained that this policy does not say anything about increased production. As I said in the beginning, that matter was still under consideration and no decision has yet. been taken. In fact the Committee itself has not made any recommendations on that point but that does not mean that no attention is going to be paid to that aspect. As a matter of fact with control, with less attention required for maintaining control, more attention is bound to be devoted to the production side, and that is what is going, I hope, to take most of the time and attention and I hope also that the funds that are now being wasted on imports will also go to increase pro-

What I have said is only a hope and an expectation or as Pandit Kunzru would have it, only a pious wish, which he thinks is only another name for self-deception, if not hypocrisy. It all

### THE WORLD FOOD COUNCIL

THE holding of a Rice Conference either at Bangkok or Shanghai in February 1948, and the taking-over of the functions of the International Emergency Food Council and the Commodity Committee under it, were among the main decisions taken at the first neeting of the World Food Council held in Washington in November last, at which India was represented by Mr. S. Y. Krishnaswarry, Joint Secretary, Ministry of Agriculture.

#### Long-range Problems

The World Food Council is the executive body of the F.A.C. of the United Nations of which India is a member. The meeting of the Council dealt with several important questions relating to the immediate problems of food and fertiliser allocations, as well as the long-range problems connected with the development of agriculture. For the first time allied subjects such as the distribution of surplus foods

and the means of production like tertilizers, and plans for increasing production in the various member nations have been brought under one organization.

Two special committees were formed: one is to deal with immediate problems such as overcoming exchange difficulties in securing food supplies from surplus countries, maximising the output of existing fertiliser factories and cutting down consumption of cereals by cattle, poultry etc. The second committee of which India has been elected a member, will deal with schemes of agricultural production in the various countries and the steps necessary to implement them by securing the necessary technical personnel and material. This work of the Council, according to the Indian representative, is important and if carried out efficiently should justify the existence of F. A. O.

cepends on how one looks at it. If one really feels that it is all false and still expresses a hope it is hypocrisy. If, on the other hand, one really hopes that things will turn out well and expresses that hope it is not hypocrisy. I submit that it is, a genuine and real hope, and sometimes hope is fulfilled, even though it appears at first that it may, not, be fulfilled.

#### Mahatma Gandhi's Views

I did not bring in the name of Mahatma Gandhi to support the policy of decontrol. I mentioned him as a difficulty in the way of maintaining the control. Pandit Kunzru thinks that that is the argument in favour of decontrol. To many people that should he a conclusive argument. In this country we have seen that it has provid a conclusive argument on many points.

extending over 30 years of my close association with him that my intellect and my logic have very often failed to reconcile themselves to what I call his prescience or what Pandit Kunzru will call his instinct. But I have found that his instinct has proved to be true and my intellect and logic have proved to be false. I am not without hopes that in this case, at any rate, his instinct will prove to be true and all our intellect, all our intellectual gymnastics and logic will prove to be false.

ett is not necessary to go into the details of the other points that have been raised. I desire to give the assurance to this House that we propose to hasten slowly, to go along with caution and not to close the door for retracing our steps, if we find that we are treading on dangerous ground. As to the other assurances which have been asked for by some other members I am in a position to give some of them. I am prepared to say that we shall do the best that we can for improving and increasing our production. We shall try to build up a reserve. I must say that we cannot build it up in a day. In five or mx years of control we have not been able to build up any stock at all. Now in a year of progressive decontrol we are going to try to build it up. Hon'ble Members can very well understand the difficulty. They can realise that what has not been achieved during the period of strict control all these years cannot easily be achieved in a period of decontrol. Nevertheless we are going to do it and I am prepared to give this assurance that we shall do our best in that time.

There has been a lot said about deaths and things of that sort. Well, in spite of what has been happening I am not one of those who can revel in deaths, and I am sure nobody in the Government can think of deaths due to starvation with any sense of equanimity. The whole policy is not intended or even expected to bring about deaths, as some Member was pleased to say that it would end only in uncontrolled death. All that I say is that if any situation erises which threatens to bring about deaths due to starvation we shall be prepared to reconsider the whole thing and to do what is thought best in the circum-

stances. For the purpose, as I have said, we propose to keep the organisation more or less intact for some time. Whatever difficulty arises, it will be more in the beginning and gradually things will settle down. So it is in the earlier part of decontrol that all this difficulty will have to be experienced and faced, and we are going to face all these difficulties with the self-consciousness of being prepared to meet them, because we propose to have the organisation intact.

Some other suggestion has been made that in order to help grow more food we should institute a number of prices. That is a good suggestion and I am sure the Government will bear that in mind and will take steps in that direction. Other suggestions for improving our production will also returally be accepted with alacrity an I pursued.

#### Decontrol of Sugar

One word more about sugar. There has been a lot said about decontrol of sugar, that the price of sugar has suddenly shot up from Rs. 21-4-0 to something like Rs. 35. The increase in the price of sugar is not due to decontrol but, as I said, it arises out of conditions which now prevail when the new season is starting and when fresh sugar is being manufactured.

The price of sugarcane is increased; the wages of labour are increased; and these two between themselves make a very big difference—from Rs. 1-4-0 per maund for sugarcane to Rs. 2 and from Rs. 22-8-0 of wages to Rs. 45. These are big differences and we can easily understand that if the price rises to Rs. 35 it is not on account of decontrol but on account of these other elements which have come into force.

AN HON'BLE MEMBER: What about old sugar?

DR. RAJENDRA PRASAD: The price is that of the new sugar. Can you have in the market two prices of sugar—one for the old and one for the new sugar? Can we do that and is it possible? And how is the purchascr going to distinguish between the old sugar and how can he insist on the old sugar for Rs. 21-4 or be prepared to pay Rs. 35 for the new sugar? That cannot be done. It can only be done by taking away the extra price which the old sugar now fetches, and that is exactly what has been done.

All that the Government has done is to freeze all the old stocks at the price at which it was selling on the day of decontrol. It is now for the Government to release this sugar at whatever price it likes and it proposes to take the bulk of this price to itself because it is not possible to maintain two prices in the market. That is what is being done.

I must pay a tribute to the Premier of U. P. who has been largely responsible for bringing this about. I cannot also refrain from paying a compliment to the millowners who have been coming

in for a certain amount of abuse. They have come forward with proposals to keep down the prices of sugar and an arrangement has been made with them, that the prices will not be allowed to go beyond what they would have been if control had continued. I think we should be satisfied with that. What we were able to enforce by law we are now getting out of them by their consent. I think that is any day better. I have no reason to think that we shall be let down. But, if that happens, we still have the power because we have still got the sugar under our control.

I hope, Sir, I have touched the points which have been raised, and I am grateful to the Members for the interest which they have evinced in this. That there is difference of opinion in this House is only a reflection of what prevails in the country at large. If I am not disclosing a secret it is only a reflection of what we have in our own Cabinet. So there is no reason to fear that anything disastrous is going to come about and we can in a spirit of helpfulness accept the decision and go ferward.

## GOVERNMENT FREEZES SUGAR STOCKS

The Central Government have decided, says a Press Note, issued by the Ministry of Food, Government of India, on Dec. 7, to take over existing stocks of sugar from all sugar factories in the provinces of the Indian Dominion at ex-factory prices fixed under the provisions of the Sugar and Sugar-Products Control Order, 1947. Every factory is required to submit to the Central Government as soon as may be, but not later than December 15, 1947, full details of the stocks of sugar held by them or on their behalf on Dec. 8, 1947, to the Central Government. The sugar factories are required to hold such stocks until arrangements are made for their disposal.

This order shall come into effect notwithstanding any order provisionally made by the Sugar Controller or any Provincial Government in regard to stocks of sugar and any contract or agreement for the sale of such stocks made before the commencement of this Order

#### FERTILISERS FROM RUSSIA

Russia has promised to supply India-15,000 tons of ammonium sulphate which is in addition to the allocation made to India by International Emergency Food Council.

Allocations of ammonium nitrate have been made by the Ministry of Agriculture to Provinces and States for the use of cash and dry crops such as sugarcane, and they have been asked to restrict the use of sulphate of ammonia to food crops.

During November, 12,850 tens of chemical fertilisers were received in India from abroad.

# FOODGRAINS POLICY COMMITTEE'S RECOMMENDATIONS

THE Government of India have, says a Press Communique, issued by the Ministry of Food, Government of India, on Nov. 80, completed their examination of the Interim Recommendations of the Foodgrains Policy Committee. They have taken decisions which have been communicated to the Governments of Provinces and States. The implementation of these decisions is at present under the consideration of all the Governments concerned. Meanwhile, in view of the importance of the subject, the Government have decided to release the Interim Recommendations of the Foodgrains Policy Committee, which are as follows:—

- 1. Reduction of Government Commitments: Recommendations to be made to Provincial Governments regarding Food Control Policy:—
- (i) Acceptance of policy of reduction of Government commitments under rationing and controlled distribution.
- (ii) The beginning to be made with those rationing commitments which were accepted in recent years and reduction to be effected in the reverse order to the original process of extension.
- (iii) The basis of reduction to be decided with reference to local conditions with the definite aim of liquidating Government commitments as early as possible.

Three members of the Foodgrains Policy Committee substitute the following recommendations:—

- (i) No relaxation of any existing control over foodgrains during 1948.
- (ii) Relaxation of foodgrain centrol to begin as soon as possible, after supplies sufficient for honouring all commitments on 12 oz. basis, throughout the year, in all parts of the country are assured; together with a margin for emergencies.
- (iii) Education of the public on Foodgrains Control Policy; and Resolute Enforcement.
- II. Prices of Controlled Foodgrains:
  (1) An increase of procurement prices for controlled foodgrains is necessary. The amount of increase to be allowed in different areas to be settled in accordance with the principles and procedure set out below.
- (2) Provincial Governments to propose whether and if so what increase they consider to be necessary; and forward their proposals to the Central Government, with a statement of the circumstances justifying the increase proposed, whether and if so to what extent the increased cost is recoverable from consumers, and the net cost, if any, which is not so recoverable.

- (3) The Central Government, to approve the proposal after satisfying itself.—
- (a) that the increase proposed is not excessive in the circumstances of the case:
- (b) that it does not involve unduly wide differences in the procurement prices in force in areas adjoining the common boundary of different units; and
- (c) that the increase does not exceed Rs. 2 per maund in any case.
- (4) Before passing on the cost of increasing the procurement price in whole or in part to the consumer, both the Central Government and the Provincial Government should satisfy themselves that this can be done without raising the consumer price to an unduly high level.
- (5) The Central Government to reimburse to the Provincial Government one-half of the net cost of the increased procurement price which is not recoverable from consumers.

#### Food Benus

Three members of the Committee support these proposals as they stand, but prefer a modification on the following lines:—

Firstly, the ceiling for increase in the procurement price to be Rs. 1-8-0 per maund of rice, Re. 1-0-0 per maund of paddy, and 0-12-0 per maund of any other controlled foodgrain.

Secondly, the cost of such increase in so far as it is not recoverable from consumers, to be borne exclusively by the Provincial Government concerned.

Thirdly, the Central Government to pay a Food Bonus to every Provincial Government, assessed at the rate of annas 8 per maund of controlled foodgrain procured, plus another annas 8 per maund of controlled foodgrain exported and

Fourthly, the grant of the Food Bonus to be subject to the condition that it should be utilised exclusively on financing Provincial Schemes for the procurement and distribution at concessional prices to foodgrain producers of manures, fertilizers and other commodities essential for the production of foodgrains.

- III. Imports from Abroad and Basic Plan: The following recommendations to be made to the Central Government regarding Import and Basic Plan Policy:—
- (i) A ceiling to be fixed for imports from abroad during 1948.
- (ii) A decision to be taken and announced that the policy of the Central Government is to terminate its dependence on imports at the earliest possible date.

- (iii) Out of the quantities actually imported from alroad, not less than a specified quantity to be retained by the Central Government as an 'Emergency Reserve'.
- (iv) The Central Government to determine; in agreement with Governments of surplus Provinces and States, & Basic Export Quota' for each. The Provincial (or State) Government concerned to accept responsibility for procuring and making available this Basic Export Quota' during 1948; and to endeavour to make available as much grain as possible in the form of Supplementary Export Quotas'.

#### Ceiling Import Quota

(v) The Central Government to determine, after consultation with Governments of deficit Provinces and States, the 'Ceiling Import Quotas' to be made available to each during 1948. Decision to be taken and announced that the 'Ceiling Import Quota' will not be exceeded during 1948. The Government of the deficit Province or State concerned to accept responsibility for management of its food affairs, without making larger demands on the Centre and to endeavour to reduce its requirements from the Centre as much as possible.

Three members of the Committee agree with the above proposals.

The Committee has communicated to the Government confidentially its recommendations regarding the ceiling for Imports as well as the Reserve.

IV. Fixation of 'Basic Export Quotas and 'Ceiling Import Quotas': Recommended figures for 'Basic Export Quotas' and 'Ceiling Import Quotas' referred to earlier under Item III (iv) and (v), to be as follows:—

Basic Export [Quotas]	Figures in thousands, of tons.				
Coorg	••	••	12 50 150		
Central Province Orissa Indian States		••	150 150 120		
		•	482		
Ceiling Import	:				
Bihar Bengal Madras Bombay Central Provinc United Provinc Delhi Miscellaneous A Defence Service East Punjab Indian States	es 		0 150 150 350 50 0 120 100 80 100 400		
			1,500		

Three members of the Committee do not recommend any particular set of figures at this stage and suggested that the figures could be settled on a basis equitable as between different deficit areas only after discussion with the representatives of the areas concerned.

V. Specification of controlled Foodgrains. (1) The following foodgrains to continue to be subject to controls, viz.,—

- (i) Rice (including paddy).
- (ii) Wheat (including atta and flour).
- (iii) Millets (including jowar, bajra, and any other millet at present procured and distributed in rationed areas).
  - (iv) Maize.
- (2) Whether or not controls should be retained in respect of gram to be considered further later.
- (3) All controls to be removed and complete free trade established in respect of all cereals except those mentioned above and all pulses other than gram.

Exception: The control referred to later under item VI (2) to apply to these grains and pulses also.

#### Monopoly Purchase

Three members of the Committee recommend that Barley should be included among controlled foodgrains.

- VI. Nature of Controls to be retained and removed in respect of controlled Foodgrains:
- (1) In order to secure supplies necessary for meeting Government commitments, within the Province (reduced in the manner recommended already) and in order to meet the requirements for export from surplus Provinces, freedom should be given to individual Provinces to use the method of compulsory levy or monopoly purchase in selected districts, or a combination of both; details regarding the assessment and collection of the levy as also the operation of monopoly purchase, to be settled by Provincial Governments with reference to these commitments and other relevant local conditions.

#### Anti-Hoarding Restrictions

- (2) All grain traders, and those grain growers who fall within a category to be defined (so as to cover holders of stocks exceeding 50 maunds of controlled foodgrains) to be licensed, and made subject to the following conditions:—
- (a) Submission of returns of stocks and
  - (b) Anti-hoarding restrictions.
- (3) The control of movements across Provincial boundaries to remain. Restrictions on the movement of food grains within the Province should generally be removed, excepting in so far as they are necessary in the opinion of the Provincial Governments concerned to enable them to complete their purchases.

#### INDIA AND AFGHANISTAN

In order to strengthen the friendly relations that already exist between them, the Government of Afghanistan and the Government of India have decided to exchange Ambassadors, says a Press Communique issued by the Ministry of External Affairs and Commonwealth Relations on Dec. 10.

- (4) Apart from the liability to deliver either on a monopoly or a compulsory levy basis, at a fixed price, control over prices to be removed.
- (5) A sufficiently high priority on the railways, to be allotted for transport of foodgrains on private account; the quantities of which would be increased through complete decontrol of certain grains and the reduction of Government commitments in respect of controlled foodgrains.

Three members of the Committee do not agree with these proposals in so far as they involve relaxation of existing controls during 1948. In so far as they require the institution of new systems of control during 1948, the members feel that there is insufficient time for necessary administrative proparations so far as Kharif grains are concerned. They do not advise any

material change in the system of procurement during the middle of a crop year.

VII. Supplemental Foodstuffs:

- (1) Meat consumption in statutorily rationed urban areas. A suggestion has been made that arrangements should be instituted for ensuring that some part of his cereal ration is surrendered by a consumer who buys meat, in proportion to the quantity of meat purchased by him. The purpose underlying the suggestion is to secure greater equality among consumers, and to save cereals. Details regarding the nature of the arrangements to be made, their feasibility, and the amount of cereals likely to be saved, have not been examined by the Committee. The suggestion is commended to Provinces for examination with reference to these aspects.
- (2) The question whether such supplemental foods as groundnuts, bananas, sweet potatoes, carrots, and turnips, can be made available at reasonable prices, in such a manner as to bring about a reduction of cereal ofitakes, to be also suggested for examination.

The detailed report of the Cemmittee has not yet been received by the Government.

# DISPOSAL OF INDIA OFFICE "CONTENTS"

ASTATEMET on the disposal of the India Office building and its "contents", was made by the Hon'ble Pandit Jawaharlal Nchru, Prime Minister, in reply to a question in the Dominion Legislature on Dec. 12.

The Prime Minister said: The Government of India are informed that the United Kindgom Government would wish to discuss with them the whole question of the disposal of the India Office building and its "contents", and that with that view the United Kingdom Government are setting up a fact finding committee to start work on the essential preliminary of surveying the "contents" of the India Office. The committee's functions are to be the preparation of a statement of "contents", sources from which they came, the various claims made to the "contents" and the various schemes suggested for their disposal.

#### Fact Finding Committee

The Government of India were invited to send a small party of representatives to London to join this committee. This invitation has been accepted and a tentative selection has been made of Government's representatives on the committee. According to the latest information the committee is likely to meet about the third week of January, 1948.

The committee is only of a fact finding nature and will not have anything to do with questions of policy. The idea is that after the committee's work is finished any questions which may arise for decision should be discussed at ministerial level, and only at that stage the question of a policy decision will arise.

## WELFARE OF AGRICULTURAL LABOUR

For the benefit of plantation workers, the Government of India intend to bring forward a Bill to regulate the conditions of work and to provide for their welfare.

Revealing this in the Dominion Parisment, on Lec. 12, the Holdble Mr. Jagjivan Ram, Labour Minister, recalled that the Minimum Wages Bill, now before the House, provided for the fixation of minimum wages in agricultural occupations.

He added that legislative regulation in case of agricultural workers other than plantation labour in respect of matters other than wages was somewhat difficult. He proposed to hold a random sample survey of a number of villages to collect data for taking definite action.

He would, however, be happy to consider suggestions suitable for legislation from the Members of the House.

### TERMS OF INDO-PAKISTAN PARTITION SETTLEMENT

# No Need to Seek Arbitral Tribunal's Aid, Says Sardar Patel

COMPLETE agreement between India and Pakistan on outstanding issues relating to partition, including those affecting the Armed Forces, was announced by the Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister in the Constituent Assembly (Legislative) on Dec. 9.

The Deputy Prime Minister said:

I have to make a short statement in connection with the negotiations that were going on between the two Dominions on the question of division of assets and liabilities and other allied questions. I am glad to say that there has been complete unanimity on these questions. I will now read this short statement:

A series of high-level discussions has been held in Delhi and Lahore during the last fortnight between the representatives of India and Pakistan to settle all outstanding issues between the two Dominion Governments relating to partition, including those affecting the Armed Forces. These discussions were conducted in a spirit of friendliness and good will. Complete agreement has been reached on all these issues. No references will now be made to the Arbitral Tribunal and those already made will be withdrawn.

The major issues on which settlement has been reached are:

- (1) Division between the two Dominions of the cash balances of the undivided Government of India as on Aug. 14, 1947.
- (2) The ratio in which the uncovered debt of the undivided Government of India, being the excess of liabilities over assets, should be divided between the two Dominions.
- (3) The manner in which Pakistan would discharge its share of the public debt to India.
- (4) The division of the sterling balances between the two Dominions.
- (5) The division of military stores between the two Dominions.
  - (6) The Ordnance Factories.

A detailed statement will be made by me later in the session on the settlement reached on these and other items. (See Col. 3)

#### Refugee Property

During the course of these discussions, problems relating to the property of refugees, bank accounts and safe deposit vaults were also considered. Both Governments re-affirmed the principle that the ownership of the property, both movable and immovable, of refugees continues to vest in the appointed to look after and manage the property on behalf of the refugees.

Sardar Vallabhbhai Patel

Both Governments appreciate the anxiety of the refugees in this matter and are engaged in working out schemes relating to problems connected with the property of refugees, such as the sale of property and the transfer of sale proceeds and the extent to which exchanges of property would be permitted, etc. These schemes will be discussed between the two Governments firstly at the official level in the third week of December, and as soon thereafter as possible at Ministerial level.

A full statement regarding the policy governing the operation of safe deposit vaults, arrangements for the safe transfer of such deposits, and the transfer of bank accounts between the two Dominions will be issued within the next few days.

This is the general statement that I am making today. A detailed statement will be made by me either tomorrow or day after as soon as the statement is ready. This will give an idea of the amount of work that has been done and the issues that have been settled between the two Governments so far as the partition of assets and liabilities and the allied questions are concerned. It leaves no question to be decided by the Arbitral Tribunal. To that extent we have done the work very satisfactorily.

I know there is considerable anxiety in the House and outside about the mein question which gives us trouble; that is the question of Kashmir. That question is not before the Partition Committee and it is no part of this reference but the manner and the method and the time by which these will be executed will be decided later. I can only announce this today that we are all anxious that if it is possible all issues should be settled, including that of Kashmir, so far as possible simultaneously. Every effort will be made to that end, if it is not successful, we shall act in a manner which is to the best interests of the Dominicn of India.

#### COMPLETE AGREEMENT

"Rarely indeed have matters of such complexity been settled in so reasonable a way between two independent and sovereign states. Both India and Pakistan may justifiably take pride to this achievement", said the Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister, in a statement on partition, in the Dominion Parliament, on Dec. 12. Complete agreement he added, had been reached on all outstanding issues and it would no longer be necessary to seek the assistance of the Arbitral Tril unal so far as the two Dominion Governments were concerned.

#### Sardar Patel said :

"As soon as the principle of partition was accepted by the major political parties the Interim Government appointed a Special Committee of the Cabine' to examine the administrative consequences of partition and to take necessary steps for the transfer of power to the two Dominions. This Committee was composed, at the outset, of H. E. the Governor-General, Mr. Liaquat Ali Khan, Sardar Abdur Rab Nishtar, Dr. Rajendra Prasad and myself.

#### **Cabinet Committee**

From July 1, this Special Committee of the Cabinet was replaced by the Partition Council, again with H. E. the Governor-General as the Chairman, and two representatives, each of the Indian National Congress and the Muslim League as the parties which would be called upon to form the Dominion Governments after partition. Dr. Rajendra Prasad and myself, with Mr. C. Rajegopalachari as alternante, represented the Congress while Mr. Jinnah and Mr. Liaquat Ali Khan, with Sardar Abdur Rab Nishtar as alternate, represented the Muslim League.

"The Cabinet Committee —later, the Partition Council—worked through a Steeping Committee of two officers—. Mr. H.M. Patel and Mr. Mohammad Ali. In addition, there were appointed to Expert Committees which, among them, covered the whole field of administration and dealt with important and varied subjects, such as division of the Armed Forces, of the existing administrative organisation, of records of personnel, and of assets and liabilities; problems relating

to currency and comage, domicile and nationality, trade and economic controls, central revenues and budgets and accounts.

It was the function of the Steering Committee to ensure that concrete proposals were evolved within the given time by these Expert Committees, adequately dovetailing into each other to form a comprehensive whole, and to present these proposals to the Partition Council for decision, and after obtaining these decisions, to take steps wherever necessary, for implementing them.

The Partition Council was continued after Aug. 15 by an Order issued by the Governor-General under the Indian Independence Act, 1947. Its composition was revised, two members being drawn from each of the Dominion Cabinets: India's representatives continued to be Dr. Rajendra Prasad and myself, Pakistan being represented by such Ministers as were able to attend the meetings which were held in Delhi.

- 2. Expert Committee commenced investigations in the third week of June and were called upon to submit their reports within a month. Over a considerable area the Committees were able to make agreed recommendations, while the steering Committee, which considered the reports in the first instance, was successful in reaching agreement on the bulk of the unsettled points. The field of differences was further reduced by the Partition Council, leaving over on Aug. 15, only a few important matters to be settled by the Arbitral Tribunal. The Partition Council had not altogether given up hopes of an agreed solution being found by discussion, and its confidence in this respect has been fully justified.
- 3. It will give the House some idea of the work of these Expert Committees if I review very briefly—indeed, it must, I fear, be a rather sketchy review—the more important of the numerous problems for which the Partition Council had to find solutions.

#### Civil Machinery

4. Perhaps the first important problem set to us was to reconstitute the personnel of the Civil machinery of the undivided Government of India into two cadres to serve the two Dominion Governments. For this purpose it was decided to give every Government servant an opportunity to select the Government he wished to serve and also to say whether he wished to have an opportunity to reconsider his choice within a period of six months from the day of transfer of power. Separate cadres were then drawn up on the basis of replies received but actual transfers had necessarily to be arranged over a period of time.

To enable the new Government to function effectively, provision was made on an agreed basis for the supply to Pakistan, of office equipment, furniture, stationery etc., belonging to the old Government of India. It was also decided to make over to the new Government records and documents of exclusive concern to them and to duplicate those of common interest.

5. It was no easy task to list and divide the assets of the then Central

Government, but when the problem was examined in detail by the departmental Sub-Committees of the Expert Committee on Assets and Liabilities there was found a wide measure of agreement regarding the allocation of the fixed assets on a territorial basis. The division of the railways, telegraph lines, the post offices, the mints, etc., was decided in this manner. Movable stores allocated varied with the type of stores. Thus, the railway rolling stock was divided on the basis of mileage-cum-traffic, while other stores, including the postal and telegraph stores, were divided on the basis, broadly of maintenance requirements.

#### **Fixed Assets**

Before Aug. 15, 1947, agreed decisions had been reached on the division of all fixed assets other than Ordnance factories and of all movable stores except Army stores and stocks of leaselend silver. No agreement could also be reached on the basis for the division of the cash balances of the old Central Government and the sterling assets of the Reserve Bank. of India. Nor was agreement reached as to the share of each Dominion of the old Central Government liabilities, though, as regards the initial responsibility for the liabilities of the old Central Government, it was agreed that India should assume it, subject to Pakistan contributing its share, fixed either by agreement between the two Dominions or if agreement were not possible, as determined by the Arbitral Tribunal.

- 6. In regard to the Central revenues accruing in the two territories after Aug. 14, 1947, it was decided by the Partition Council on the report of the Committee on Central revenues that each Dominion would retain the amounts collected in its territory. India agreed, however, to discuss at a later date, if Pakistan so desired, its proposal for pooling and sharing the revenues collected up to Mar. 31, 1948. Arrangements were also agreed upon for the avoidance of double taxation of income.
- 7. As regards contracts, certain principles for the allocation of contracts to one or the other Dominion, or for sharing the rights and liabilities arising from them, or for terminating them were evolved, and the contracts of the old Government are being dealt with in accordance with these principles.

#### Currency and Coinage

8. Complete agreement was reached in the Partition Council over the issues considered in the Committee on Currency and Coinage except the allocation of the Sterling assets held by the Reserve Bank. As Pakistan naturally wished to have its own coinage and currency as soon as possible, India readily agreed to assist, in every reasonable way, and with that end in view, undertook to make available, for a period of time, a portion of the capacity of the Nasik Security Printing Press and of the Mints at Calcutta and Bombay. Since, however, it would take some time to have the new coins and overprinted notes ready, it was decided that the existing India currency and coinage should remain common to both Dominions up to Mar. 31, 1948 and that the Reserve Bank of India

should be the common Currency Authority and the Central Bank for the two commons.

It was realised however, that it would take some time before the Pakistan overprinted notes could be issued in sufficient numbers to replace adequately the India notes already in circulation. It was agreed, therefore, that the period from the April 1, 1948, to Sep. 3°, 1948 would be treated as a transitional period and during that period India and Pakistan notes and coins would circulate freely in Pakistan, the India notes and coins being gradually withdrawn.

The Reserve Bank of India would, of course, continue during the transitional period as the common Currency Authority. On Oct. 1, 1948, Pakistan would take over the management of its own currency and the currency reserve held by the Reserve Bank will be allocated between the two Dominions under the provisions of the Pakistan (Monetary System and Reserve Bank) Order, 1947.

#### Trade Controls

- 9. When questions relating to trade and economic controls were examined, it was found that the long-term policies to be pursued by the two Dominions could only be discussed after the new governments had had time to examine their respective problems. Meanwhile, it was agreed that until Mar. 31, 1948, it was agreed that until Mar. 31, 1948, the status que should be maintained as far as possible and modifications in and removal of controls should not be effected except by consultation between the two Pominions. It was decided that during the interim period terminating on Feb. 29, 1948.
  - (a) no customs barriers should be raised between the two Dominions;
  - (b) existing import and export policies should be continued;
  - (c) existing customs tariffs, excise duties and cesses should be left unchanged;
  - (d) no restrictions should be imposed on free movement of goods and remittances including capital equipment and capital;
  - (e) no transit duties or taxes should be levied on goods passing from one territory to another and the existing trade channels or pattern of trade should not be interfered with.

#### Nationality and Domicile

It should be added however that Pakistan reserved the right to revise her attitude in regard to these matters in view of the fact that her preposal that the Customs Revenue should be pooled and shared during the interim period had not been accepted.

The House will be interested to know that the two Dominions have agreed to initiate discussions with a view to formulating an agreed policy in regard to the trade and economic relations of the two Dominions.

10. When the jurists examined the question of nationality and domicile, they came to the conclusion that as

ndia and Pakistan would both be members of the British Commonwealth their citizens would continue to be regarded as British subjects. No immediate change was, therefore, called for as a result of partition; the two Dominion Governments could be left to formulate their respective nationality laws at their convenience. The Partition Council further decided that passport rules should be amended so that there should be no restrictions on the movement of persons from one Dominion to another. It is of course open to either to introduce such restrictions later.

11. The arrangements agreed to in regard to Foreign Alfairs were embodied in the Indian Independence (Internaional Arrangements) Order, according to this Order, the membership of all international organisations, together with the rights and obligations attaching to such membership, devolves upon India, it being left to Pakistan to apply for membership of such international organisations as it desires to join. Rights and obligations under the international agreements to which pre-partition India was a party devolve upon both Dominions and can, if necessary, be apportioned between them, such rights and obligations as have exclusive territorial application devolving exclusively upon the Government of the territory to which they relate.

#### Armed Forces

12. As for the Armed Forces, it was agreed that the personnel would be divided on a territorial basis with the exception that Muslims from India and non-Muslims from Pakistan would have the option to choose the Dominion which they wished to serve. The division of regimental centres, installations, equipment, stores, etc., raised innumerable complex problems, mainly of an administrative nature which were dealt with by the Armed Forces Re-constitution Committee, acting under the instructions of the Partition Council.

By Aug. 15, sufficient progress had been made to enable the two new governments to assume the operational control over the Army, the Navy and the Air Force. A good deal of work of the reconstitution offorces, however, remained and for this purpose a Joint Dofence Council was established, consisting of the Governor-General of India as the independent chairman and the Defence Ministers of India and Pakistan as members. A Supreme Commander was appointed to act as the executive suthority of the Council.

#### Agreed Decisions

3. By Nov. 30, 1947, when the organisation under the Supreme Commander was abolished, virtually all the work of the reconstitution, except that of actually dividing and moving the storess had been completed. The Joint Defence Council has been reconstituted, with slightly modified functions, and is working through an executive committee, consisting of the Defence Secretaries of two Dominions and at least one Service Chief from each Dominion. The House will be gratified to learn that the Joint Defence Council, which dealt with bundreds of complicated military pro-

blems, was able to reach agreed decizions on all except two issues which, at one time, it was agreed to refer to the Tribunal, r.z., the division of ordnance factories and the division of Army stores.

14. A renewed attempt was made in the last fortnight to settle all the qutstanding issues. As I informed the House on the 9th instant, complete agreement has been reached on all of them and it will not longer be necessary to seek the assistance of the Arbitral Tribunal so far as the two Dominion Governments are concerned.

#### **Agreements Reached**

- 15. I shall now state briefly the details of the agreement reached on the more important of these matters:
- (a) The undivided, Government of India's cash balances, as on the date of partition, are estimated at a little under Rs. 400 crores, inclusive of the securities held in the Cash Balance Investment Account. Of these, Pakistan's share has, by agreement, been fixed at Rs. 75 crores. To this amount will be debited the Rs. 20 crores, already made available to the Government of Pakistan, on Aug. 15, 1947 and the expenditure incurred on that Government's account to date.
- (b) Under paragraph 4(3) of part IV of the Pakistan (Monetary System and

Reserve Bank) Order, 1947, Pakistan's share of sterling assests will be ratio of the note circulation after adjusting any expansion against P kistan securities in that Dominion. It has now been agreed that India should sell to Pakistan. for Indian rupees, additional blocked sterling up to an agreed limit as and when demand is made until Dec. 31, 1967. The formula for working out this agreed limit will be found in the paper which I am placing on the table of the House. (Arrangement regarding Stering assets is given at the end.)

- (c) As I mentioned a little earlier, the Government of India have assumed initial responsibility for all the liabilities of the old Government, subject to an equitable contribution by the Pakistan Government. It was agreed that Pakistan's share would be made up of the value of assets, physical and financial which lie in Pakistan or are taken over by the Pakistan Government plus the share allocated to Pakistan of the uncovered debt, namely, the excess of liabilities over assets of the undivided Government, less the liabilities assumed directly by the Pakistan Government. Pakistan's share of the uncovered debt has now, by agreement, been fixed at 171 per cent.
- (d) For the valuation of the assets taken over by the two Dominions it has been agreed that book values should be adopted in all cases; in the case of the strategic railways, however, the book

# RESTRICTIONS ON BULK TRANSFER OF COMMODITIES FROM KARACHI

RESTRICTIONS placed on the removal of certain items of merchandise from Karachi are a matter now under discussion between the Governments of India and Pakistan. This was revealed by the Hon'ble Mr. N. V. Gadgil in reply to a question in the Constituent Assembly (Legislative) on Dec. 5.

The Minister said that the Government of Pakistan had officially informed the Government of India that the Sind Government had armed themselves with powers under the Sind Essential Commodities (Control) (Second Amendment) Ordinance 1947 to prevent bulk transfers of certain commodities to places which had never before been supplied by or through Karachi. This was done, the Government of India had been informed, in order to meet grave threats to the economic life of Pakistan by the organised removal, in violation of normal trade channels and practice, of essential goods such as hardware, paints, varnishes, nonferrous metals, medical stores, cloth, white cement, paper and other articles of stationery.

The Minister added that the Pakistan Government had, however, stated that normal exports would be permitted on the production of satisfactory evidence that the goods had been imported for consumption in the Indian Dominion, but that removals clearly intended to deprive Pakistan markets of supplies would be prohibited.

In answer to another part of the quostion Mr. Gadgil said that if the restrictions, as stated by the Government of Pakistan, applied to the bulk transfer of merchandise from Karachi in violation of normal trade channels or practice, they would not affect the general agreement regarding freedom of trade between the two Dominions, "since the underlying object of that agreement was to leave undisturbed the pattern of trade as it existed before August 15, 1947". He added. 'If, however, the restrictions are, as alleged by several complaints enforced in a manner that would prevent the transhipment of goods which were imported through Karachi for markets in India, they would involve an infringe-ment of the agreement referred to".

Replying to another question. Mr. Gadgil declared that the High Commissioner for India in Karachi had been instructed to make strong representations to the Pakistan Government, in consultation with the shipping agents concerned, regarding the detention at Karachi of an Indian ship with her cargo. He explained that there were difficulties in the case as S.S. Jalaratna had almost completed loading operations when the Sind Essential Supplies Ordinance was issued.

"It is considered unlikely that similar difficulties will arise in future," the Minister concluded.

value by agreement is being written down arbitrarily by about 50 per cent.

(e) With regard to the payment of debt by Pakistan to India, it has been agreed that the total amount will be paid in Indian rupees in 50 annual equated instalments for principal and interest combined. The instalments will be payable on Aug. 15, each year but no instalments will be payable for the first four years from the date of partition. The rate of interest adopted will be the same as the average yield over a period of two years preceding the date of partition of the rupee and sterling securities of the Government of India, with an unexpired currency of 15 years or over rounded to the nearest one-eighth of one per cent.

#### **Pensions**

- (f) Each Dominion will continue to disburse the pensions now in payment in its territory, India continuing to pay the overseas pensions. The value of all pensions, both part-earned pensions and pensions in issue, will be capitalised and the liability shared in the ratio agreed upon for sharing the uncovered debt. To the extent that the capitalised value of the pensions disbursed by a Don inion is more or less than its share thus determined, an appropriate adjustment will be made in the financial settlement.
- (g) It has been decided that Pakistan's share of the military stores will be a third of the stocks held in India and Pakistan on the date of partition or a third of the maintenance and reserve requirements of the two Dominions calculated on an agreed basis, whichever is less. The balance, if any, will fall to India's share.
- (h) As for Ordnance factories, no physical division will take place, the Indian Dominion taking full liability for their book value, India has agreed to make available to Pakistan a sum of Rs. 6 crores to be drawn as and when required by way of assistance towards the setting up of Ordnance factories and a few other essential Institutions like a Security Printing Press. This amount will be added to Pakistan's debt to India.
- 16. Rarely indeed have matters of such complexity been settled in so reasonable a way between two independent and sovereign States. Both India and Pakistan may justifiably take pride in this achievement.
- 17. Sir, I have now given the House a complete picture of the machinery that was set up to devise plans of partition and of the negotiations which have been carried on to settle outstanding issues ending in the final settlement of all complicated issues amicably. I am sure, the House will appreciate that the Partition Council and other Committees, and organisation, set up to devise these plans and secure their implementation, have accomplished a great deal within a comparatively short time.

The House would perhaps appreciate it better if I reminded it that on the only previous occasion when a sort of partition took place in India, viz., the separation of Burma, two whole-time special officers with staff were appointed

in the latter part of 1930 and took eight months to complete their preliminary report. The Reforms Office then continued the work for four years when, in 1934, for adjudication of certain unresolved points, the Amery Tribunal was appointed in December 1934 and took another nine months to produce its award. In short, that comparatively small undertaking took five years to complete at considerable cost.

#### A Miracle

The present partition plans were, however, completed within a short period of six months, at little additional cost to the exchequer. This was made possible by the devotion to duty of our representative on the Steering Committee and all officers and men who were engaged in the task and spared no pains to secure quick and satisfactory results. I am sure when the history of the stress and strain, through which we have passed, comes to be written the partition will be recorded as a miracle of concentrated effort and consummate ability.

- In this connection, I would particularly pay a tribute—and I am sure the House will join with me in doing so—to the drive, energy, broadmindedness and impartiality of Lord Mountbatten, to whom we all owe so much for the quickening of the pace.
- 18. One word more and I shall have done. I bope the new State of Pakistan and their Government will regard this settlement as a gesture of our friendliness and goodwill. The successful implementation of these conclusions obviously depends on the continuation of the spirit of accommodation and conciliation on both sides. Discord or estrangement on any vital issue—we have many vital issues yet to settle—is bound to place the good work which we have achieved, in jeopardy.
- I hope, therefore, that, not only in the interests of the successful implementation of these conclusions but also in the interests of peace and prosperity in both the Dominions, cordiality, tolerance and amity will continue to guide both of us in the solution of other problems which demand urgent and speedy disentanglement.

#### Sterling Assets

Arrangement between India and Pakistan regarding the Sterling assets of the Reserve Bank of India.

(Vide paragraph 15(b) of the Statement of the Deputy Prime Minister.)

- It is agreed that in addition to the sterling to which Pakistan would be entitled under para 4 (3) of the part IV of the Pakistan (Monetary System and Reserve Bank) Order, 1947, an amount of sterling calculated as below will be made available to Pakistan in the manner stated below:
- (a) The total of the sterling assets in both the Banking and Issue tepartments on Sep. 30, 1948 will be taken together.

- (b) From this total will be deducted the lump sure payable to H. M. G. at the time of the final settlement of the sterling balances on account of the capitalisation of pensionary liability, for H. M. G.'s military stores and fixed assets as on April 1, 1947, in India, etc.
- (c) Out of the remaining balance a sum in storling which, taken together with the gold held in the Issue Department, will be equal to 70 per cent. of the total liabilities of that Popartment as on Sept. 3t, 1948, will be allocated in the manner prescribed in para 4 (3) of Part IV of the Pakistan (Monetary System and Reserve Bank) Order, 1947.
- (d) Of the remainder, 17½ per cent. will be allocated to Pakistan.
- (e) The difference between the total of what will fall to the share of Pakistan under (c) and (d) and what Pakistan would obtain under pera 4 (3) of Part IX of the Order, is the amount of the additional sterling to be reade available to Pakistan.
- (f) In regard to the amount of this additional sterling, India agrees to sell to Pakistan, from its Account No. If or similar Account, sterling for Indian rupee on demand being made by Pakistan up to Dec. 31, 1967.

# AIR SERVICES BETWEEN INDIA AND PAKISTAN

Describing the position in respect of air services between India and Pakistan, the Hon'ble Mr. Rafi Ahmad Kidwai Minister for Communications, stated during question bour in the Dominion Legislature on Dec. 1, that the Government of India had agreed to the operation by a Pakistan airline of air services on the following routes:—(1) Karachi-Delhi; (2) Dacca-Delhi; (3) Karachi-Bombay; (4) Chittagong-Calcutta; and (5) Dacca-Calcutta.

In return, the Government of Pakistan had agreed to the operation of air services on the following routes by Indian Airlings.
(1) Jodhpur-Karachi; (2) Bombsy-Karachi; (3) Ahmedabad-Karachi; (4) Bhuj-Karachi; (3) Delhi-Lahore; (6) Calcutta-Dacca; and (7) Calcutta-Chittagong.

The arrangement was provisional subject to the conclusion of a bilateral air transport agreement between the two Governments on December 31, 1947, whichever is earlier. The terms of a long-term bilateral air transport agreement between India and Pakistan were under examination.

Mr. Kidwai added that at present foreign air services, excepting B. O. A. C. did not carry traffic between Karachi and Calcutta. The question of B. O. A. C. continuing to carry traffic between Karachi and Calcutta was under examination by Government.

H. F. Lord Mountbatten gave a reception in honour of the Burmese Prime Minister's visit at Government House on December 4. Picture shows (L. to R.) Win, Burmese High Commissioner in India, Lord Mountbatten, Thakin Nu, Premier of Burma, Pandit Nehru, Lady Mountbatten and Dr. Rejendra Prasad

# CLOSER INDO-BURMESE FRIENDSHIP Thakin Nu's Message to India

T is my happy privilege to tender to the people of the Dominion of India the greetings and good wishes of the people of Burms. Our culture is rooted in our religion, the gift of which we owe to India, and our two countries have behind them the background of long centuries of peaceful and harmonious relationship", said the Hon'ble Thakin Nu, Prime Minister of Burma, broadcasting a message to the people of India from the Delhi station of All India Radio on Dec. 4.

The Burmese Prime Minister said:

"When British rule spread from India to Burma my country became a province of India till we parted politically with mutual goodwill in 1937. But the political separation did not severe the strong cultural and economic links which still bind our two countries.

'For many decades our two countries have in our respective ways sought to achieve political freedom. We have long admired and watched with strong interest India's fight for political emancipation which has since come to her; our own freedom is near at hand.

"At last our two countries are about to meet, and are indeed conferring, as two sovereign independent states, to regulate our future relations by agreement in the manner best suited to our mutual interests.

"Let me say how greatly the people of Burma rejoice that India is now master of her own destiny. We heard with distress of the temporary troubles which befell her but even as I speak the air is clearing. We in Burma have no doubt that your great Dominion will overcome these temporary troubles and emerge quickly into peace and prosperity. We rely on India to uphold the cause of Asia and know from what she has already done that this reliance is not in vain.

#### A Nation Reborn

"We shall leave your beautiful capital city tomorrow but take away with us imperishable memories of a nation reborn. We shall also carry with us the blessings of Mahatmaji and also happy memories of much personal kindners from the leaders we have met, from your illustrious Governor-General and your most distinguished Prime Minister, their colleagues in your Government down to those in humbler spheres with whom our few days in New Delhi brought us into contact.

'We seek the friendship of India in the new era that will be Burma's in a few weeks. We know that we shall not be disappointed. We offer our own friendship in return. May the future bind our two countries in closer bonds of friendship.

"In the next few days that will elapse between our farewell to New Delhi and our departure from Calcutta, we shall be visiting, by the courtesy of your Government, some of the places in India sacred to all Buddhists, for our Holy Land is in your country.

"It was Sakyamuni, the great Indian Seer, that showed our country and many others besides, the light of Truth. May the doctrine of universal love and goodwill, which he taught, inspire and unito our two countries in the centuries which will follow our rebirth as sovereign nations".

#### A COURTESY VISIT

Last October, the Prime Minister of Rurma, says a Communique issued by the Ministry of External Affairs and Commonwealth Relations on Dec. 5, invited the Prime Minister of India to visit Burma. Owing to pressure of business in India, Pandit Jawaharlal Nehru was unable to accept Thakin Nu's invitation. It was hoped however, that, on his return journey from England where he has gone for discussions with His Majesty's Government in the U. K., the Prime Minister of Burma would be able to halt in New Delhi for a few days. Owing to the urgent need for his return to Burma, this also did not prove practicable.

In view of the new political status of

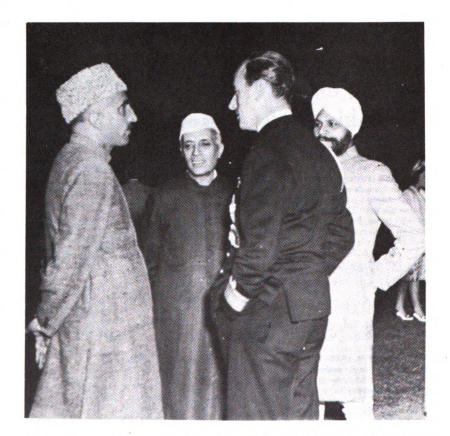

Pandit Nehru lalso gave a reception to the Burmese Premier. Here (left) India's Prime Minister Fgreets, Miss Saw Sau, daughter of Thakin Nu, and Mrs. Win. The Burmese High Commissioner Mr. U Win is on the left. (Right) Thakin Nu with Sardar Patel and Miss Maniben Patel at the Prime Minister's reception

Indua and Burma and the need for the two Prime Ministers to establish personal contacts, an early meeting between them appeared most desirable. The Prime Minister of India, therefore, invited the Prime Minister of Burma to visit New Delhi. Thakin Nu readily responded to this invitation. Accompanied by his Foreign Minister, U Tin Tut, and U Ba Swe, General Secretary of the A. F.P.F.L., the Prime Minister of Burma arrived in New Delhi on Dec. 1. The party left on Dec. 5, and after halts in Benares and Gaya, returned to Burma.

The Government of India were glad to have these distinguished visitors from a neighbouring and friendly country as their guests. It is hoped that their visit is the precurser of an interchange of other visits between members of the two Governments and of leaders of opinion in the two countries. There is a community of interests between India and Burma, born of their past association and inherent in their geographical contiguity. For the promotion of these interests on the basis of a united understanding the establishment of personal relations between prominent persons in both these countries is of the utmost importance.

The visit of Thakin Nu and his colleagues was primarily a visit of courtesy. Advantage was, however, taken of it for a preliminary and informal exchange of views regarding the settlement of certain questions outstanding between India and Burma. Both sides expressed a cordial desire for the speedy and friendly adjustment of these questions, and it is hoped that, in the near future, there will be an exchange of missions for this purpose. A further announcement on this subject will be made as soon as definite arrangements have been worked out.

Bakshi Ghulam Mohammad, the Kashmir leader, Pandit Nehru. Lord Mountbatten and Sardar Baldev Singh at the reception

### INDIA WILL KEEP OUT OF POWER ALIGNMENTS

### Pandit Nehru Elucidates Foreign Policy

NDIA'S determination to out of group alignments of world powers was reaffirmed by the Hon'ble Pandit Jawaharlal Nehru, Prime Minister and Minister for External Affairs, replying to a debate on foreign affairs in the Constituent Assembly (Legislative) on Dec. 4. He added, "Inevitably that means that to some extent we have to plough a lonely furrow in the United Nations or in international conferences of this type. Nevertheless that is the only honourable and right position for us to take up and I am quite sure that by adopting that position, we shall ultimately gain in national and international prestige, that is to say, when we take a long view of the situation, not a short view of getting immediately a vote here or there".

India, the Prime Minister said amidst cheers, was not going to join a war if she could help it but, if the choice came, she was going to join the side which was to her interest. "If there is a big war there is no reason why we should jump into it. Nevertheless, it is a little difficult nowadays in world wars to be neutral"

#### Friendly Relations

After defining foreign policy, he declared that the Government proposed to look after India's interests in the context of world co-operation and world peace in so far as world peace could be preserved. "We propose to keep on the closest terms of triendship with other countries, unless they themselves create difficulties. We shall be friends with America. We intend co-operating with the U.S. A. and we intend co-operating fully with the Soviet Union.

Pandit Nehru said: The main subject in foreign policy today is vaguely talked of in terms of "Do you belong to this group or that group". That is an utter simplification of issues and it is all very well for the Hon'ble Manuana (Maulana Hasrat Mohani) to hold terth that ludia will go to war under this banner or that banner. But that, surely, is not the way that a responsible House or a responsible country views the situation.

We have proclaimed during this past year that we will not attach ourselves to any particular group. That has nothing to do with neutrality or anything else or passivity. If there is a big war, there is no particular reason why we should jump into it. Nevertheless, it is a little difficult nowadays in world wars to be neutral. Any person with any knowledge of international affairs knows that.

The point is not what will happen when there is a war. Are we going to proclaim to the world, taking the advice of Maulana Hasrat Mohani, that when war comes, we stand by Russia? Is that his idea of foreign policy or any policy? That shows to me an amazing ignorance of how any foreign affairs can be conducted. We are not going to join a war if we can help it and we are going to join the side which is to our interest when the choice comes to it. There the matter ends.

But talking about foreign policies, the House must remember that these are not just empty struggles that are going on a chess board. Behind them lie all manner of things. Ultimately foreign policy is the outcome of economic policy and till that time, when India has properly evolved her economic policy, her foreign policy will be rather vague, rather inchoate, and will rather grope about. It is well for us to say that we stand for peace and freedom but that does not convey much to anybody, except a pious hope. We do stand for peace and treedom. I think there is something to be said for it. There is some meaning when we say that we stand for the freedom of Asian countries and for the elimination of imperialistic control over them.

Undoubtedly it has some substance, but a vague statement that we stand for peace and freedom by itself has no particular meaning, because every country is prepared to say the same thing, whether it means it or not. What then do we stand for? Well, you have to develop, then, this argument in the economic field. As it happens today, in spite of the fact that we have been for sometime in authority as a Government I regret that we have not produced any constructive economic scheme or economic policy thus far. Again my excuse is that we have been going through such amazing times which has taken up all our energy and attention that it became difficult to do so. Nevertheless we shall have to do so and when we do so, that will govern our foreign policy more than all the speeches in this House.

We have sought to avoid these foreign entanglements of joining one bloc or the other. The natural result has been that neither of these big blocs looks with favour on us. They think that we are undependable, because we cannot be sent a writ to vote this way or that way.

#### Our Delegations at U. N.

Last year when our Delegations went to the United Nations it was the first time that more or less an independent delegation went from India. It was looked upon a little askance. They did not know what it was going to do. When they found that we acted according to our own will, they did not like it. We were unpopular last year in the United Nations, I do not mean individually but in regard to our policy and they could not quite find out what we were or what we were aiming at. There was a suspicion in the mind of one group that really we were allied to the other group in secret, though we were trying to hide that fact and the other group in secret though we were trying to hide that fact though we were trying to hide that fact.

This year there was a slight change in this attitude. We did many things which the other groups disliked but

the comprehension came to them that we were not really allied to any group, that we were trying to act according to our own lights and according to the merits of the dispute as they seemed to us. They did not like that, of course, because the position today is that there is so much passion about it and so much fear and suspicion of each other between these rival great powers and groups that anybody who is not with them is considered as against them.

So, they did not like what we did in many instances: nevertheless they respected us much more, because they realised that we had some kind of an independent to be dragooned this way or that, that we may make a mistake as anyone can, nevertheless we were going to stick to cur own policy and programme, so that while we possibly irritated some of our friends even a little more than latence way got on much better with everybody, because they understood that we did stand for something. That is the brekground of it.

#### Attitude to Palestine

To give the House an instance of how we functioned, take this Palestine after which has given rise and will give rise to a great deal of trouble. We took up a certain attitude in regard to it which was roughly a Federal State with autonomous parts of it. It was opposed to both the other attitudes, which were before the United Nations. One was partition which has now been adopted: the other was a unitary state. We suggested a Federal State with naturally an Arab majority in charge of the Federal State but with autonomy for the other regions—Jewish regions.

After a great deal of thought we decided that this was not only a fair and equitable solution of the problem but the only solution of the problem. Any other solution would mean just fight and conflict. Nevertheless our solution—which as the House will remember was the solution given in the minority report of the Palestine Committee—did not find favour with most people in the United Nations. Some of the major Bowers were out for partition and they therefore pressed for it and ultimately got it. Uthers were so keen on the unitary state idea and were so sure of at any rate preventing partition or preventing a two-thirds majority in tavour of partition that they did not accept our suggestion.

When during the last few days partition somehow suddenly became inevitable and votes veered round to that owing to the pressure of some of the great Powers, then suddenly it was realised that the Indian solution was probably the best and a last minute attempt was made in the last 48 hours to bring forward the Indian solution, not by us but by those who wanted a unitary state.

It was then too late. There were procedural difficulties and many of the persons who might have accepted this

solution had already pledged themselves for the partition side. And so ultimately partition was decided upon by a two-thirds majority, with a large number abstaining from voting, with the result again of trouble and a great deal of trouble in the future in the Middle East.

I point this out to the House as an instance that in spite of considerable difficulty and being told by many of our rivends on either side that we must line up this way or that, we refused to do so and I have no doubt that the position we had taken up was the right one and I have no doubt, yet, that that would have brought about a solution as no other decision would.

That applies to many other things. But inevitably that means that to some extent we have to plough a lonely furrow in the United Nations or in international conferences of this type. Nevertheless that is the only honourable and right position for us to take up and I am quite sure that by adopting that position, we shall ultimately gain in national and international prestige, that is to say, when we take a long view of the situation, not a short view of getting immediately a vote here or there.

I have no doubt that fairly soon, in the course of two or three years, the world will find this attitude justifying itself and that India will not only be respected by the major protagonists in the struggle for power but a large number of the smaller nations which today are rather helpless would probably look towards India more than to other countries for a lead in such matters.

#### Tribute to India's Delegation

May I in this connection say that during this last session of the United Nations General Assembly, many very difficult and very controversial issues were raised, and our Delegation had to face extraordinarily intricate situations. I should like to pay a tribute to our Delegation, specially to the Leader of the Delegation. Hon'ble Members often put questions about appointment of Ambassadors, members of delegations and the like and rightly so, because the House would be interested in such important appointments. May I say to the House that nothing is more difficult than to make these appointments of persons who may be able, but appointments of particular persons to particular places where they must fit in, which is an extraordinarily difficult thing.

In the key places of the world the ideal Ambassador must be some kind of super-man. It is so difficult now not only to understand the intricacies—that is not difficult—but to keep friends with everybody and yet to advance your cause. After all we have been in the past discussing foreign affairs outside, in other assemblies, or incidentally here, rather in an academic way, rather in a college debating socity way. That is, we talk of high policies but we do not come to grips with the question as when we have to say 'yes' or 'nay' about a question and take the consequences of that.

If the House will forgive my saying so, even in today's debate many of the speeches were of an academic kind which did not take into account the vital questions which concern the world today which may mean peace or war. But when the House will have to face the question by a decision by which it may be in war or peace, when one comes face to face with realism, then one cannot bandy about merely idealistic principles when it may mean war and all manner of consequences.

Foreign affairs is utterly realistic today where a false step, a false phrase makes a difference. The first thing that an Ambassador of ours has to know is to shut his mouth and give up public or even private speaking. It is not a habit which we have developed in our past careers—of being completely silent almost. Yet that has to be developed and in private one has to be silent leat what one says might injure the cause of the nation, might create international ill-will and so on and so forth.

It is in this background that I should like the House to consider international affairs—this realistic background, the notion that this is not merely some naughty men playing about and quarelling with each other, some statesmen in America and the U.S.S.R. or the British imperialism lurking in the distance behind the curtain and doing something. We have talked so much about British imperialism that we cannot get out of the habit of it, whether it is there or not.

But it is coming to grips with this subject, in its economic, political and various other aspects, trying to understand and realise it, that ultimately matters. Whatever policy you may lay down, the foreign affairs of any country is to find out what is most advantageous to your country. We may talk about international goodwill and mean what we talk. We may talk about peace and freedom and earnestly mean what we say. But in the ultimate analysis, a government functions for the good of the country it governs and no government dare do anything which in the short or long run is manifestly to the disadvantage of that country.

Therefore, whether a country is Imperialistic or Socialist or Communist, its Foreign Minister thinks primarily of the interests of that country. And no doubt so. But there is a difference of course. Some people may think of the interests of their country regardless of other consequences or take a short distance view. Others may think "No, in the long-term policy the interest of another country is as important to me as that of my own country." The interest of peace is more important, so that in the long distance view, self-interest may itself demand a policy of co-operation with other nations, goodwill for other nations, as indeed it does demand.

Every intelligent person can see that if you have a narrow national police it may enthuse the multitude for the moment, just as the communal cry has

done, but it is bad for the nation and it is bad internationally, because you lose sight of the ultimate good and thereby endanger your own good. Thorefore we propose to look after India's interests in the context of world co-operation and world peace, in so far as world peace can be preserved.

#### India's Policy

We propose to keep on the closest terms of friendship with other countries unless they themselves create afficulties. We shall be friends with America. We intend co-operating with the United States of America and we intend co-operating fully with the Seviet Union. We have hard, as the House knows, a distinguished hepresentative of the United States here for some time past. Within a week or two we shall have a distinguished Representative of the Soviet Union here, in the Soviet Embassy which is being opened in New Delhi.

I should not like to say much more at this stage about foreign affairs partly for lack of time, partly because it is a little difficult to discuss these matters. Some of the Hon'ble Members may perhaps let themselves go about what should be done in China, Japan, Siam and Peru, but I fear it is a little difficult and it will be a little irresponsible for me to talk about these various matters. Naturally, India is interested in Asian countries even more than the rest of the world. We have had an Asian Conference, and at this moment we have a distinguished visitor, the Prime Minister of Burma, here.

#### Burmese Premier's Visit

May I say in this connection that some people are under a misapprehension that we are conducting special negotiations with the Burmese Delegation here? That is not quite true. It has been primarily a visit of courtesy. At the same time, of course, we have broadly explored the various questions, discussed various matters of common concern, not with the idea of suddenly coming to decisions in regard to these intricate matters now but rather to lay the foundations of luture talks.

May I also say that the Prime Minister of Burma is interested, as many of us have been, in closer association, not only between Burma and India but between various other countries of Asia also? We have discussed that also, not again with a view suddenly to coming to decisions because these things take a little time to grow. They all indicate the new spirit of Asia which wants Asian countries to draw closer together in defence of themselves and in promoting world peace.

Coming to another part of this cut motion in regard to Indians in the British Commonwealth, that is an old subject and a painful subject. I entirely agree with any criticism that might be made that we have not been able to do anything substantial in this direction. Something has been done in Canada or elsewhere but nothing substantial

has yet been done. Now, the odd thing is that this subject becomes more and more difficult to deal with and not easier. Indians have gone to these British Colonies and Dominions in the past in various forms, as merchants, traders, workers, indentured labourers and the rost.

Looking back on this history of Indian emigration aborad, and including in that the humblest of those who went from India, it reads almost like a romance how these Indians went abroad. Not even citizens of a free country, working under all disadvantages, yet they made good wherever they went. They worked hard for themselves, and for the country where they were in. They made good themselves and profited the country they had gone to.

It is a romance and it is something which India can be proud of, and may I say most of all of those poor indentured labourers who went out under unhappy conditions and who through their own labour, gradually worked their way up. That is so. It is also true that India, being a country that in spite of everything, has abounding vitality and spreads abroad, it rather frightens our neighbour countries, just like China which is also a country with abounding vitality and an abounding population. We spread. We tend to overwhelm others both by virtue of our numbers, and sometimes by virtue of the economic position we might develop there.

#### **A Difficulty**

That naturally frightens others who may not have that vitality in them, and they want to protect themselves against it, and then questions arise of vested interests which India has developed or Indians have developed there. Those questions have arisen, and while on the one hand we are obviously intent on protecting the interests of Indians abread, on the other hand we cannot protect any vested interests which injure the cause of the country they are in. There is that difficulty. Nevertheless, undoubtedly we shall try to do our best to protect all legitimate interests.

Now one word more. I will not take more of the time of the House. An Hon'ble Member, Mr. Kamath I think, referred to the expenditure incurred in Embassies. Now first of all, one of the minor headaches I have had to suffer from is a relatively new tendency in old and new newspapers alike to publish without check or hindrance the most amazing lies. It is impossible to keep pace with that. It is undesirable always to go about contradicting every little thing they say. It just cannot be done, and Delhi has been inflicted by some new types of papers and journals I have come across, which would not raise either the stature of Indian Journalism or anything else. So many of these stories are not true that have appeared. I read somewhere I think in Delhi paper about the U. P. Government presenting Rs. 20,000 and 200 saris to Mrs. Vijayalakshmi Pandit on her departure to Moscow. I read all manner of the most malicious and unfounded and false statements in these papers about Mr.

Now, coming to this question of cost, the figure Mr. Kamath mentioned of Rs. 5 lakhs, of course has no relation to fact. I do not know what the figure is.

MR. HARI VISHNU KAMATH: I did not vouch for the truth of it; I said it was only a press report.

Panidt Nehru: I suggest that if Mr. Kamath makes any statements, he might investigate them before he makes them

What I should like this House to remember is this, that these ambassadorial appointments have to keep up a certain dignity and a certain status. It is no good our sending an Ambassador and not giving him a house to live in, not giving him furniture in the house, not providing him with the minimum wherewithal to meet others properly and decently. I doubt if any country, big or small, is conducting its ambassadorial establishments in such a cheap way as we are doing.

A great deal of criticism has been made about our Ambassador in Moscow getting furniture from Stockholm. Well. how a house has to be furnished in Moscow, of course Hon'ble Members do not realise. It just is not possible to furnish in Moscow. You get an empty house. We thought of sending things from India, but it was almost a physical impossibility unless we spent vast sums over aeroplanes carrying chairs and tables from here. There is another way. Of course it could be furnished alternatively with Russian furniture. The Russian people, and all credit to them for this, ever since this war, are so intent on doing what they consider to be the fundamental things that they refuse to waste their time on accessories of life. They have to build up their country after the most horrible suffering and damage they suffered in the war and they are building it up in regard to the major undertakings. They go about in torn clothes and broken down shoes. It does not matter, but they are building dams, reservoirs and factories and the rest which they consider more important. So it is not easy to get any of these small accessories of life for the moment.

The only things you can get in Russia are antique pieces of Czarist days which are frightfully expensive. The result is that our Embassy in Moscow has to go to Stockholm for its chairs and tables, and as these are urgently required—office exuipment etc.—our Ambassador had to go there. But of course the visit to Stockholm was not really, Members of the House should realise, to buy furniture. When an Ambassador goes elsewhere, the Ambassador does other work too, and any kind of shepping that might be done is somewhat extra work.

I am grateful to the House for the rkind sentiments and their expressions of goodwill to the attempt to follow a certain rather vague policy in regard to foreign affairs. I wish it was a more definite policy. I think it is growing more definite, and in this connection may I say that at the present moment no country, including the Big Powers with their long traditions of Foreign

Affairs, has got anything which might be called a precise and definite foreign policy, because the world itself is in a fluid condition. Of course if you call it a definite policy of one great country looking with bitter dislike upon another and suspecting it, that may be the foundation of policy, but that is not policy, that is just passion and prejudice. Otherwise there is hardly any very definite policy in any country and they are trying to fit in their policy there day to day to changing circumstances.

## FOREIGN EXCHANGE EARNINGS AND EXPENDITURE

As a result of arrangements recently agreed upon botweer representatives of the Governments of India and Pakistan in the course of conversations held in Karachi from Dec. 10 to 12, a system of separate accounting for the foreign exchange earnings and expenditure of the two Dominions will be established as from Jan. 1, 1948, says a Press Note issued by the Ministry of Finance on Dec. 14.

Detailed instructions will be issued to the banks with the object of ensuring that foreign exchange may only be bought from or sold to a bank (which is an authorised dealer in foreign exchange) in the Dominion in which the applicant resides.

The new arrangements do not involve restrictions upon the transfer from one Dominion to the other of rupee funds owned by residence of India or Pakistan.

A five-year plan for the expansion and reorganisation of the Geological Survey of India, has been outlined in a memorandum, issued by the Director, Geological Survey of India. A note, published in the second number of the reviews, the activities of the Geological Survey of India before and after the war, depicts a plan of the organisation of the expanded Geological survey of India. It formulates its main functions as follows:

"The main function of the Survey should be the development of the country's mineral resources, but this can only be achieved if it is founded on a sound, scientific basis. Therefore, in planning the future work of the Geological Survey of India, a careful balance must be maintained between fundamental geological work, based primarily on accurate mapping and laboratory research, and activities concerned more directly with mineral development, such as drilling mining and geophysical exploring."

The Governor-General has been pleased to appoint Mr. Jugal Kishore Narayan, at present District and Sessions Judge, Monghyr, to be an Additional Judge of the Patna High Court rice the Hon'ble Mr. S.K. Das, I.C.S., appointed as permanent Judge, says a Press Communique, issued by the Ministry of Home Affairs, on Dec.22.

### INDIA'S FIRST AMBASSADOR TO NEPAL

## Sardar Surjit Singh Majithia Presents Credentials

THE continued employment in the Indian Army of Gurkha troops, whose valour is famed throughout the world, is another link for the continuance of our ancient ties', said Sardar Surjit Singh Majithia, India's Ambassador to Nepal, presenting his credentials to His Majesty the King of Nepal on December 10.

Sardar Surjit Singh said:

Your Majesty, as the first Ambassador of free India I have the honour to bring to Your Majesty, and through Your Majesty to the brave people of Nepal the most cordial good wishes and hearty greetings from the people of India. We wish the people of Nepal continued prosperity, happiness and progress in all walks of life. In my capacity as the first Ambassador of my country I will always do my best to strengthen and cement

the fraternal relations which through cultural associations reinforced by geographical contiguity has subsisted between our two countries from time immemorial and further sanctified by the sacred ceremony of Raktha Bandhan by our great Maharani Jindan, the wife of the late Maharaja Ranjit Singh, the lion of the Punjab.

The ready and willing agreement of Your Majesty's Government for the continued employment in the Indian Army of Gurkha troops whose valour is famed throughout the world is another link for the continuance of our ancient ties. We hope that Nepal and India who have got so much in common will together continue to work for the peace and contentment for our own people and lead the way for a confederation of all the Asiatic nations.

Your Majesty, I would like to take this opportunity of expressing the gratitude and thanks of the people of India and of the Punjab, in particular, for the very good work done by the gallant Gurkha soldiers in conducting in an able manner the evacuation of our Indian sufferers from the Western Punjab.

The primary need of the suffering humanity of today is perpetual peace and Amar Shanti which can only be achieved by following the cardinal principle of the teachings of the greatest man of today, Mahatma Gandhi, i.e., truth and absolute truth. The right path to this sublime and noble goal of life is reached if the tenet preached by that great soldier saint-cum-prophet Shri Guiu Gobind Singhji Maharej as summed up in the words bhai kahoen ko det neh neh bhai manat un is strictly followed and pisetised.

It is our wish, as it will be our unfailing endeavour, to strive with you and with other friendly nations to the end that the power of our respective states shall be dedicated to the service of incedem, justice and peaco.

M. Psniel Levi (second from right) French Ambassador to Indie, arrived in New Delhi on December 8. He was received at the Palam aerodrome by M. Roux, then French Charge d' Affaires (extreme left), Mr. H. Dayal. (centre) acting Joint Secretary, Fxternal Affairs Ministry, and Mr. P. A. Menon (extreme right Joint Secretary, Fxternal Affairs Ministry. With the French Ambassador came Mr. S. R. Rane (second from left)

### MALAVIYA BRIDGE OPENED AT KASHI

Pandit G. B. Pant, Premier of U. P., opening the Malaviya bridge at Kashi

## Modern Transport Demands

Tis a truism to say that great civilisations have been built on transport. In our country at present we have reached the stage where the maintenance of our standards of living, and, therefore of all that is best in our civilization, depends more than ever on the transport that we can mobilise", said Mr. V. Nilakantan, General Manager, East Indian Railway, in his address of welcome to the guests at the opening of the Malaviya Bridge at Kashi by Pandit Govind Ballabh Pant. Premier of the United Provinces.

Mr. Nilakantan said:

"We are assembled here for the opening of the Bridge across the Ganga which you see in front of you. It is a new bridge which has taken the place of an older one which existed on the same site.

"The first bridge at this place was built in 1885 by the old O. & R. Administration and was designed to take a single line of railway, as well as a concurrent roadway. Inconvenience both to rail and road traffic was inherant in such an arrangement. In the beginning, therefore, the roadway was used only during the monsoon months when the pontoon bridge over which road traffic normally crossed the river had to be put out of

"The increasing development of the country and the growth of traffic in the early decades of this century imposed an ever increasing strain on the capacity of the bridge. The position was soon

reached when the bridge became a serious restricting influence. Rail traffic increased from about 10 or 12 trains per day in 1885 to about 30 trains per day in 1925. At present it is 50 trains per day. No statistics of road traffic are available but the growth thereof was not less than that of rail traffic. Serious consideration had therefore to be given in the twenties to building a bigger bridge, with a permanent independent roadway designed to take all the traffic that was then offering, as well as what could be anticipated future traffic. 86 future traffic. An examination of the steel work of the old bridge also brought out the fact that the condition of the bridge had deteriorated to such an extent that the building of a new bridge was inevitable and even urgent.

#### Combined Road and Rail Bridge

"The accumulation of evidence about the inadequacy of the bridge led finally in 1925 to a decision that a new bridge should be built. Investigations were then set on foot for determining the type of bridge that should be constructed. Several schemes were considered and examined in detail including one under which the then existing bridge was to be retained for road traffic and an altogether new bridge was to be built for rail traffic.

"The elaboration and examination of these schemes took a long time and it was not till sometime in 1935 that it was ually decided that a combined road and rail bridge should be erected at the site of the old bridge. The design of this structure was then taken in hand and between February 1940 and October 1941 all the preliminaries connected with the erection of the bridge at the site were completed. The work, however, had to be suspended in October, 1941, since the main fabricating contractors could not undertake the work of building the girders on account of their capacity being absorbed by higher priority war works. Throughout the war period, therefore, work had to be kept in abeyance. It was not without hesitation that this course was agreed to, as the safety of the bridge was in question, but by careful examination the Administration was satisfied that it could continue to remain in use for sometime longer.

#### Double Line Bridge

"Immediately on the termination of the war the rebuilding of the bridge was pushed on vigorously. By October, 1945 all fabricated steel parts were collected at the site and alterations to the masoury piers were taken in hand.

"The first big spans were launched into position on September 11, 1946, and the last on May, 19, 1947 all within a period of a little over eight months. Of the nine Secondary spans, the first was launched on September 5, 1946, and the last on January 13, 1947, that is in a little over four months. One of the stages in the erection of this bridge was the opening of the single line on the newly-built bridge. This was accomplished on September, 15, 1947 and, today the bridge will be opened as a double line bridge.

"The original estimated cost of the oridge was Rs. 53 lakhs and for the roadway Rs. 25 lakhs, making a total of Rs. 78 lakhs. In actual fact, it has cost only Rs. 48 lakhs for the bridge; this reduction in cost has been possible mainly because of the good price it has been possible to realise for the material salvaged from the old girders. Even if the amount realised had been as originally estimated, the cost would have been just about Rs. 54 lakhs."

Mr. Nilakantan then speke of the extraordinary amount of detailed planning for the construction of the bridge and paid a tribute to the outstanding efficiency of those responsible for the construction. "The actual erection of the bridge," he said, has been in charge of Mr. M. Ganapati, whose devotion to duty, determination, drive and capacity for hard work have been mainly responsible for the work being performed in such a short time and so smoothly. He has been ably helped by everyone of the staff under him without whose devotion and whole-hearted co-operation, the work could not have been accomplished. On behalf of the Railway Administration I wish to tender my sincere thanks to all of them."

Mr. Nilkantan continued: "Owing to last minute changes in requirements it has not been possible to finish the road

way over the bridge. It has now been decided that it should be built according to main National highway standards and the work is being put in train. It is hoped that it will now be able to proceed with the work without interruption as soon as the additional requirements of material are available.

"It is a truism to say that great civilisations have been built on transport. In our country at present we have reached the stage where the maintenance of our standards of living, and therefore of all that is best in our civilisation, depends more than ever on the transport that we can mobilise. It is a matter of gratification to the East Indian Railway that they have been able to add to their contribution to the communications in United Provinces by building this important task. That the services which the East Indian Railway performs for the country may be symbolised by this gigantic structure, is my carnest wish."

#### Mr. K. C. Bakhle's Speech

Addressing the gathering Mr. K.C. Bakhle, Chief Commissioner of Railways, paid a tribute on behalf of the Railway Board to the railwaymen and to the contractors who worked on the project and said:

"The public at large can know little of the tasks that hundreds of workmen performed during the course of fabrization, launching and completion of a bridge such as the one we see before us. In fact, in these modern days the world is used to taking many things for granted especially service at the hands of public utility bedies such as Railways and it receives this service as a matter of habit. Very few amongst the public know how even a train moves along from station to station and how many persons are required to perform their duty diligently in order that that train may pass safely from one point to another. When things go as the public has been habituated to expect, no word of thanks is given but when things do not go well, criticism is levelled at the service.

"Railways have unfortunately been the target for such criticism for some time now; explanations given of the difficulties with which we are faced, some of which are not within our power to remove, are often regarded as excuses. Some of the criticism may be justified and to that extent we, on the Railways, are endeavouring to do our best to improve the situation and to render better service to the public. Much of what railwaymen are doing in this respect is not visible, and it is therefore gratifying occasionally to show to the public some good work done and this is one such occasion when we can exhibit to them tangibly the profession of our faith and a pledge of our service.

Some one has said that an engineer's function is to overcome the hundred hindrances which the inertia of circumstances interposes everywhere against the transformation of an idea into fact. Today this function can be said to be that of every railwayman, be he an engineer or not, and we are endeavouring to change the circumstances which would eliminate, some of the hindrances and make it possible for us more quickly to improve the extent and quality of

service which we have so far been able to render.

"The old bridge was known as the Dufferin Bridge. I am happy to announce that the new bridge is to be named the "Malaviya Bridge" after the late Pandit-Madan Mohan Malaviya."

Mr. Bakhle then read out a message from the Hon'ble Dr. John Matthai, Minister for Transport, and requested the Hon'ble the Premier of U.P. to name the bridge and declare it open for railway traffic.

#### Dr. Matthai's Message

Here is Dr. John Matthei's message;

"The opening of the regirdered bridge at Kashi to double line traffic is a significant event in the development of railway communications in this pert of India. The bridge which the new structure has replaced constituted a serious bottleneck in our transport system, and its renovation and enlargement would now make it possible for the railways to handle with greater expedition the increased traffic which they are called upon to carry.

"The dispersal of industries in India which has been brought about by war requirements confronts the railways with large problems of reorganization and reconstruction. The opening of this bridge marks an important step in the accomplishment of our plans for meeting them.

"From an engineering point of view, the manner in which the construction problems involved in this bridge have been handled by our officers and the relatively short time in which they have completed it have not merely been a matter of special gratification to us but have demonstrated the ability of our engineers to meet the demands which a free India may make on their technical competence and their capacity for loyal and devoted service.

#### Important Link

"I am happy to think that this bridge forming so important a link in our railway system will hereafter be associated with a name so deeply revered throughout the country and so intimately connected with this city of ancient and sacred renown. May the spirit of Madan Mohan Malaviya inspire and guide all those in our land who in this and in other ways will be called upon to face the tasks of a new age.

"I should like in conclusion to express my warm thanks to the Hon'ble the Premier of the United Provinces for agreeing to preside at this ceremony in spite of his many and grave preoccupations. It is a great pleasure to the Government of India and to me as Minister of Railways to learn that the opening of this important gateway of railway traffic in the United Provinces will be performed by Pandit Govind Ballabh Pant who fills so unique and so worthy a place in the life of the Province".

# LIMITED IMPORTS OF UNCUT PRECIOUS STONES

The Government of India has decided to allow into the country limited imports of uncut diamonds and other precious stones, unpolished pearls and rough synthetic stones for the specific purpose of being cut, polished or finished in India and re-exported.

Licences will be issued to parties who can show that they have exported polished and cut materials during the first six months of this year.

Intending importers, who are required to produce documentary evidence of re-export during January to June 1947, should apply to the Chicf Controller of Imports, New Delhi. Applications should contain an undertaking that the materials imported will be cut, polished or finished and re-exported without delay by the applicant and will not be available for sale in the country. A certificate from the Reserve Bank of India or from a dealer in foreign exchange should also be furnished showing that either full payment for the articles re-exported between January and June has already been received, or arrangements to this end have been made.

### DEVELOPMENT OF CIVIL AVIATION

In a written reply to a question in the Legislative Session of the Constituent Assembly on Nov. 20, the Hon'ble Mr. R. A. Kidwai, Minister for Communications revealed that the Government's plans for the development of Civil Aviation included the establishment of a Civil Aviation Training Centre for training in all branches.

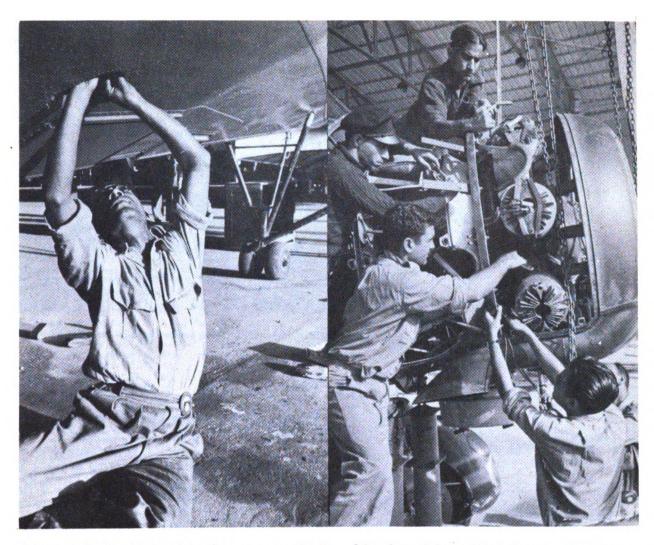

"It is proposed". he continued, "to open shortly a Flying Training School as part of the Centre. In addition to this, Government are also giving assistance to the Flying Clubs by loaning to them aircraft and by cash grants-in-aid, bonuses, etc."

He added that Government had considered the question of providing facilities for flying training in Indian Universities and colleges and had come to the conclusion that initial training in flying could best be given in Flying Clubs. Government, therefore, proposed to encourage the establishment of such clubs in all cities which were important educational centres.

An epidemic suspected to be infantile paralysis has broken out on a virulent form among the aborigines in Car Nicobar, one of the Islands in the Nicobar group.

The Chief Commissioner, Andaman and Nicobar Islands, immediately rushed a small medical party in a special plane kindly placed at his disposal for the ourpose by the R. A. F. authorities in Singapore, for their relief. Further medical assistance has been arranged by the Government of India.

A party of 8 doctors, organised by Dr. B. C. Roy at the instance of the Director-General of Health Services, and led by an experienced Pathologist, Lt.-Col.-Kapila of the Medical Lirectorate, G. H. Q. (1)., with necessary equipment including one iron lung, has been flown in a specially chartered plane from Calcutta, to Car Nicobar.

# AIRCRAFT MANUFACTURE IN INDIA

THE future programme of Hindustan Aircraft Ltd. envisages the manufacture of aircraft in India, as recommended by the United Kingdom Aircraft Mission, who visited India in March, 1946, to advise Government on this subject. This information was given by the Hon'ble Dr. Syama Prasad Mukerji, Minister for Industry and Supply in reply to a question in the Dominion Parliament recently.

Dr. Mukerji, reviewing the progress and prospect of the factory, said:

From April 1, 1946, Hindustan Aircraft Ltd., ceased to be under the sole control of the Government of India. It has reverted to the position of a private limited company, with the Government of India and Mysore continuing as the only share-holders. The factory at present acts mainly as an overhaul, repair, assembly and conversion depot for civil airlines and Air Forces. It is also doing a certain amount of general engineering

work for the public as well as for Government. The future programme of Hindustan Aircraft Ltd. envisages the manufacture of aircraft in India, as recommended by the United Kingdom Aircraft Mission, who visited India in March 1946 to advise Government on this subject generally. Hindustan Aircraft Ltd., has taken up the production of Percival Prentice Trainers for the Royal Indian Air Force, under an assistance arrangement with the Percival Aircraft Company, Luton, England. The Ministry of Defence has placed an initial order with Hindustan Aircraft Ltd. for 50 such aircraft.

The company has also undertaken the manufacture of an improved type of third class railway coaches for the Railway Ministry, which has alreedy placed an order for 100 such coaches, at a cost of Rs. 60,000 each. Further development in constructing other types for railways is shortly expected. To meet the expanded pro-

gramme, it has been decided to increase the share capital from Rs. 75 lakhs to Rs. 175 lakhs.

The railway coaches, which the Hindustan Aircraft Ltd., are supplying to the Railway Ministry are made of steel panels (in place of wood). The weight is reduced by a third and the coach provides sleeping accommodation and other amenities. The type of general Engineering work done by Hindustan Aircraft Ltd. are: (a) Fabrication of steel towers for the Mysore Electrical Department for transmission purposes; (b) Steel doors and windows for the Mysore Government and (c) a certain amount of machineshop work for textile mills, e.g., spindles, shafts, rollers etc.

#### First Aircraft

The first aircraft manufactured at Hindustan Aircraft Ltd., is expected to be out by May, 1948. This, however, will largely be an assembly from imported components. The first aircraft of the same type manufactured in Hindustan Aircraft Ltd., using Indian raw materials to a large extent, with the exception of the engine and instruments, is expected to be ready by September, 1948. The

programme is to assemble 15 aircraft from components and 5 from detailed parts and to manufacture 30 from raw materials—all to be completed before June, 1949.

The assembly and manufacture of aircraft mentioned above should provide adequate opportunities of training to Indian technicians and workers, as, with the exception of a few British and American supervisory personnel, the staff employed consists entirely of Indian personnel.

The present strength of the factory is as follows:

Indian: Daily rated—2,341; monthly rated—1,187; Officers and Executive—63; Women—11; total—3,602:

Non-Indian: British—16; American 7; total 23. Total (Indian and Non-Indian together)—3,625.

#### **Advisory Committee**

Since October 1947, three British pilots have been engaged on an hourly basis for R. I. A. F. Dakota delivery flights.

It is the policy of Government that as far as possible requirements of the Royal Indian Air Force should be met by Hindustan Aircraft Ltd. For this purpose, Government propose to constitute an Advisory Committee, to advise the Directors on question of policy and to constitute a Liaison Committee between the Company and the main indentors. This Committee will include representatives of the Ministry of Defence, the Director-General of Civil Aviation, and the Ministry of Railways. There is, in addition, a local Technical Committee of officers of Hindustan Aircraft Ltd., and the Royal Indian Air Force, to co-ordinate the activities of the Company on technical matters.

#### Development of Designs

The decision as to what aircraft should be manufactured at Hindustan Aircraft Ltd., is primarily a question for the Defence Ministry which is at present examining this matter. As soon as a decision on this major issue is reached, orders will be placed on Hindustan Aircraft Ltd. as far as possible for their manufacture.

It will be appreciated that, in the first instance, the Royal Indian Air Force will be confined to foreign designs but steps have already been taken to set up a Design and Development Section at Hindustan Aircraft Ltd, with the object eventually of manufacturing aircraft for the Royal Indian Air Force entirely to our own designs.

Insured letters, parcels and boxes will now be accepted for transmission to Burma, for delivery at Rangoon G. P. O only. The limit of insurance is \$\pm200\$, says a Press Note, issued by the Directorate-General, Posts and Telegraphs, on Dec. 20.

Soldering passenger car bodies to remove surface irregularities

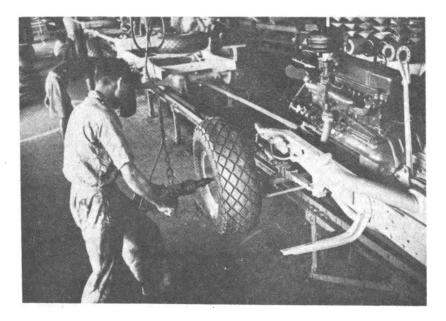

# MOTOR CAR FACTORIES UNDER CONSTRUCTION

THREE motor car manufacturing factories, two at Bombay and the other at Calcutta are under construction. Their combined capacity when the entire plant has been installed is expected to be 20,000 vehicles per annum. The Government of India are aiding these three factories in obtaining building materials and foreign technical assistance and have provided dollar facilities. Government propose to promote and assist the establishment of two more factories.

This information was given in the Dominion Parliement on Dec. 4, by the Hon'ble Dr. Syama Prasad Mcckerji, Minister for Industry and Supply, in reply to a question.

It is understood that at present nearly half the number of the motor cars put on the read in India are assembled in this country. The three factories, now under construction, are expected to produce complete motor cars by 1950.

INDIAN INFORMATION, JANUARY I, 1948

# NURSERY POWER DEVELOPMENT SCHEME IN CENTRAL PROVINCES

TYPICAL nursery power development scheme, which may be shortly taken up in the Central Provinces, is described in a recent issue of the Journal of the Central Board of Irrigation.

Drawing attention to the article which is based on a report submitted by the Central Technical Power Board to the Government of India, the Journal remarks, 'Nursery power development schemes are conceived to make the people 'electricity conscious' and to build up loads in advance of the construction of the major hydro-electric projects, to enable a large utilisation of the power developed by these projects as soon as they are constructed'.

The area chosen for the Nursery Power development scheme in the Central Provinces to serve as an illustration, extends ever 1,609 sq. miles with a total population of 390,000 scattered in about 800 villages in four teshils of three districts. As a first measure, it is proposed to bring electricity to 15 small towns and 43 important villages inhabited by about two-thirds of the total population of this area.

The area is proposed to be divided into three sections with three focal points. Temporary Power Stations each of two 250 KW. 400 V. 3 phase 50 cycles, diese alternators, are proposed to be constructed at two of these places, with necessary switch gear, arrangements for local supply and step up transformer stations. For the third focal point it is considered economical to tap off power from a proposed 66 KV transmission line to the Chindwara coal fields.

Eleven KV lines will radiate from the focal points to various towns and villages. Although the areas to be served by the two power houses are designed to be electrically independent and self-sufficient, provision is nevertheless made for interconnection of the two systems by a 11 KV line to facilitate supply from one power house to another during times of light load or during an emergency.

#### Potentialities of Development

The nursery area under consideration is predominantly rural; wheat, jowar, oil seeds, cotton and oranges being the chief products. The water table throughout the area varies from 18 to 30 feet and the average annual rainfall for the past 75 years in the three districts varies between 33 and 47 inches. Irrigation facilities are poor and the out-turn of crops and orange gardens is small due to inadequate watering. In addition, a large percentage of the land, now classified as culturable waste, can be brought under cultivation. All these provide good opportunities for pumping water from sub-soil and are the great potentialities of the proposed nursery development scheme. It is reckoned, that for irrigation pumping there will be an immediate connection of about 930 KW in the first year rising to 1,910 KW in

There are a number of processing industries for wheat, jowar, rice, cotton and oil seeds. The present installed capacity of the plants doing this job is found to be inadequate to cater for the needs of the local population and flours and oils are normally imported from outside the

province to make up this deficiency. With the availability of electricity the present mills may be expected to switch over to electric drive and more crushers and presses are likely to come into operation.

Resorting to power looms instead of hand looms as at present, extraction of oil from cotton seeds, for human consumption, setting up of small wood working industries and workshops, likelihood of the Manganese Mining Company taking power from the Government supply, railway station lighting, Municipal water supply and street lighting, coming into operation of cinemas and main centres are some of the developments for the growth of load.

#### Low Rates in Early Stages

If electricity is ever to be brought into wide-spread use in rural areas, it will have to be sold at extremely low rates during the early stages. Higher tariffs may be feasible at a later date; but for a long period, tariffs of a high promotional type will be unavoidable. The simple tariffs on which the gross revenue of the scheme have been calculated per unit are (n) domestic lighting, fans, etc., 3 annas; (b) street lighting, 2 annas; (3) industrial load with monthly load factor less than 25 per cent, (such as cinemas, flour mills and oil press) 1.5 anna; (d) industrial loads with monthly load factor greater than 25 per cent. (such as cotton gin or press and power loom) 1.25 anna and (e) irrigation pumping 1 anna. A minimum charge of one rupee per service is recommended.

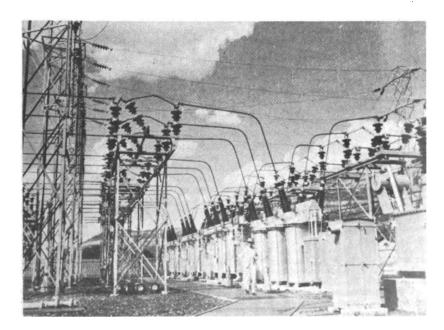

Calculations made at present show that the scheme, which may involve a total expenditure of about Rs. 49 lakes distributed over 10 years, will become remunerative from the eighth year of its commencement.

#### MOTOR CAR FACTORIES

(Continued from Page 26)

Of these three factories the Premier Automobiles, Bombay, is now assembling cars imported in kneeked down condition, and it will take three years to manufacture motor cars completely in this factory, which is being assisted in the enterprise by the Chrysler Corporation of U.S.A. The second factory is the Hindustan Motors Ltd., Calcutta, which will be in a position to assemble motor cars imported in knocked down condition by early 1948 and expects to manufacture automobile engines by 1949, and complete automobiles in 1950. This factory is receiving assistance from the Nuffield Organisation of U.K. and Studebaker Company of U.S.A. A third factory, for which plant is still being built, is the Motor House (Gujerat) Bombay, which will work in collaboration with the Kaiser-Frazer Corporation.

Government propose, it is understood to promote the setting up of two more factories, preferably one in U. P. and the other in Madras.

An outdoor switchyard of an Indian hydro-electric system

## MORE STEEL FACTORIES FOR INDIA

### Dr. S. P. Mukerji Explains Plan

REPLYING to a question in the Dominion Parliament on Dec. 12, the Hon'ble Dr. Syama Prasad Mukerji Minister for Industry and Supply, stated that steps were being taken to set up two new major steel producing units. Each would have 500,000 ingot tons capacity, capable of being doubled. The total estimated capital would be Rs. 48 crores. Matters regarding the operation, location, design and construction of the plants and the nature of the forsign technical assistance required were, he added, under active consideration.

Government were also giving every assistance to the industry both for their production up to existing capacity and for their schemes of expansion. The total production in the year 1947 (including re-rollers) was estimated at 960,000 tons, as against an estimate of 900,000 tons, as against an estimate of 900,000 tons made at the beginning of the year, but as against 150,000 tons of imports estimated at the beginning of the year, very little had been received, not more than 20,000 tons. As against this, the present demand for steel was estimated at 2 to 2 million tons per year.

#### Textile Machinery

In the Ordnance Factories, which were transferred from the Ministry of Industry and Supply to the Defence Ministry from April 1, 1947, steel products were being already produced against civil orders and Government also proposed to examine the possibility of increasing steel production in these factories. Steel billets, nonferrous alloys, hurricane lantern components, oil expellers and semi-manufactures (extruded rods, tubes and pipes) and a number of major components for road rollers were being manufactured satisfactorily in the Ordnance Factories. The value of such stores turned out by these factories during the last six months was estimated to exceed Rs. 25 lakhs.

Over 50 per cent of the components of steam-rollers and about 40 per cent. of diesel rollers were at present manufactured in Ordnance Factorics. They might manufacture textile machinery as well in future.

As for imports, strenuous efforts had been made to obtain steel from Australia, the U. K. and the U. S. A. and the Iron and Steel Controller had visited all these countries during the year. As a result of the re-imposition of the export control by the U. S. A., with effect from October, 1947, the Government of India prepared detailed statements of steel requirements for 1948 for submission to the U.S. Department of Commerce and obtained the support of the American Ambassador here. Owing to high priority demands of other countries such as China, France and Italy, exports from the U. S. A. in 1948 were not expected to be high. India might obtain a small quantity of billets from Australia for which a long standing order has been placed.

There was only one tinplate factory in India, stated Dr. Mukerji. It was the Tinplate Company of India, Tatereffer, to which the full quantity of tin hars produced in the country and a considerable proportion of tin available in India were allotted. The raw materials used in the manufacture of tinplates were tin bars, unopened packs and tin.

The potential tinplate capacity of the Tinplate Company was estimated at 75,000 tons per annum, but the maximum that they had produced so fer was only 73,050 tons. The total production for 1947 was expected to be only 52,496 tons. The maximum annual requirements of tinplates were estimated to be 90,000 tons, broadly falling under the three heads; namely, kerosene pecking (44,000 tons), packing of essential food (44,000 tons) and packing of medicines, tea, etc., (2,000 tons).

For the maximum production of 75,000 tons of tinplate per annum by the Tinplato Company, 80,000 tons of un-opened packs and 1,500 tons of the tin were required. Tinbars were used as raw materials only in the production of the tin and tinplates and so the full available quantity was allotted to the Tinplate Co. With the reduction in the output of steel,

the supplies of tin bars had been reduced proportionately. The actual allotment of tin bars, by the end of 1947, was estimated to be 66,366 tons. The Tatas were the sole suppliers of these tin bars and they were located in the same town as the Tinplate Co., namely Tatanagar.

Regarding allotment of tin to the Tinplate Co., the metal was not produced in India and allocations were made by the Combined International Tin Committee. The Committee consisted of representatives of the Governments of all tin producing countries e.g., Federated Melay States, Nigeria (British), Dutch East Indies, Bobira, etc. World's tin production was controlled by this Committee and allocated quarterly to the various countries.

#### Non-ferrous Metals Panel

The Tinplate Company required 1,500 tons of tin per year, i.e., 750 tons per half year. The actual allotment made to them was 400 tons for the first half year of 1947, against a total allocation of 1,140 tons by the Combined Tinplate Committee. Several localities were knewn in India where tin-ores were available. Hazaribagh district in Bihar, was most interesting of them but none of these were very promising.

The Non-ferrous Metals Panel, set up by the late Planning and Development Department, had made some useful recommendations on the future developments of the tin industry. Government decision on this Panel's Report was still to be taken.

### Visit of Indian Industrialists to Germany

PORTY-SEVEN experts representing industries have visited Germany during the last two years under Government auspices. The visits were arranged by the late Planning and Development Department of the Government of India.

The Hon'ble Dr. Syama Prasad Mockeji, Minister for Industry, and Supply, whose statement in reply to a question in the Dominion Parliament on Dec. I contained this information, added: The experts sent by the late Planning and Development Departments were not required to submit reports to the Government of India. They were selected to form part of the teams of technicians representing various industries sent out by the British Intelligence Objectives Sub-Committee, from time to time, to investigate and report to them on different German industrial organicatidus.

Reports of B. I. O. S. teams are submitted to U. K. Government and are made available to Allied Governments. Under this procedure, the Government of India have received copies of about 3,000 reports submitted by these teams.

The reports so far received are being examined with reference to their value to the development of Indian industries and copies of such of them as are likely

to be of interest to the Indian industrialists are being made available to them.

A limited number of Indian businessmen and industrialists are given facilities to visit Germany with a view to opening up trade with that country and to renew business contacts. It is proposed to continue this system.

Replying to another question the Hon'ble Minister said: There has been no proposal of transferring any German Patents to India. According to an agreement arrived at, at a Conference of delegates from various Allied countries, it has been decided to make German patents available for exploitation, free of royalty, to the nationals of all countries who have signed a document known as the 'Accord'. Besides India, 45 other countries are parties to this Accord.

It was decided that the Government of France would provide facilities for receiving and disseminating information of common interest under the Accord through a Central Office. That Office has not yet been established. As soon as it starts functioning we shall receive information about such German-owned patents in other countries, as would be available for exploitation by the Indian nationals free of royalty. Such information, when received, will be promptly placed at the disposal of the Indian public.

### SINDRI FERTILIZER FACTORY

THE actual construction of the Fertilizer Factory at Sindri will begin early in 1948, according to a statement by the Hon'ble Dr. Syama Prasad Mookerji, Minister of Industry and Supply, in the Dominion Legislature recently. The statement which was placed on the table of the House, was in reply to a question on the subject.

Agreements have been concluded with the Chemical Construction Corporation of the U. S. A. for the design of the factory and with the Power Gas Corporation of the U. K. for procuring plant and erection of the same, the Minister added.

Resident Engineers of the Chemical Construction Corporation and the Power Gas Corporation are at the site and the necessary technicians for the erection of the factory are beginning to arrive.

Orders for the most important items of plant have been placed, orders having been distributed between the U. S. A., the U. K. and India.

After protracted negotiations the land required for the factory and township has been acquired and a great amount of preliminary work has been completed. Temporary housing for the construction staff and workmen has been built. Temporary water supply and power supply have also been arranged.

Most of the structural steel work required for the building has been ordered and fabrication is well advanced, notwithstanding difficulties regarding supply of steel. A considerable tonnage of plant has arrived at the site, or is in transit.

A permanent township is being built for housing the staff and workmen required to operate the factory, and all necessary services, such as water supply, electricity, etc., are being provided.

#### Training of Personnel

Contracts will have to be let out for executing the big water supply scheme for supply of some 12 million gallons of water per day for boilers and process work in the factory and for supply to the township.

For the present, only one kind of fertilizer, namely, amonium sulphate, is intended to be manufactured at Sindei. The quantity of amonium sulphate, which the factory is planned to produce, is 350,000 tons per annum.

The forecast for pilot production is the end of 1949 and full production, end of 1950, though, one or two months after this might be required in order to co-ordinate and tune in the various units to operate the whole most economically.

Agreement with the suppliers of plant and machinery and the consultants provides for the training of personnel for operating the factory. A considerable number of applications for training have

already been received, although the scheme has not yet been advertised publicly. The training scheme, as far as it has gone at present, is an obligation on the part of the suppliers of plant and machinery to train Indian nationals in the operation of similar plant and machinery. For this purpose Indian nationals will have to be sent to the U. K. or the U. S. A. according to sources of supply of each particular group of plant.

#### Main Problem

The availability of gypsum is one of the main problems facing the industry at the outset. The Sindri Factory alone is expected to require 0.6 to 0.7 million tons a year. On a rough geological estimate, the total quantity of gypsum within the boundaries of the Indian Union (including the acceding States) is a little above 30 million tons. Trichinopoly, in South India, is known to possess 15.3 million tons of gypsum, though mixed with clays and limestone. The Rajputama States, Bikaner, Jodhpur and Jaisalmir contain 15.5 million tons, of which nearly 10.5 million tons are in the mines of Bikaner. In the Rajputama deposits, the gypsum is in a soft crystalline form, enabling excavation

without troubles by mechanical shovers. Ther are a number of other minor sou: s like Uri in Kashmir, Nellore in Madras, Garhwal district, Jhansi in the the U. P., Rewa Tehri Garhwal, and Rajpipla States. The Ministry of Industry and Supply are appointing a Mining Engineer to report on the availability of this chemical. The Geological Survey of India has also been requested to give top priority to further exploration of gypsum deposits.

Comparisons have been drawn between the Sindri project and the factory at Alwaye, Travancore. The former is being designed to produce 3,50,000 tons of amonium sulphate per year, while the latter can produce 45,000 tons. While the Sindri factory is to produce solely by the gypsum process, the Travancore factory provides also for the sulphuric acid process, on which it is known to be operating now. This latter process necessitates the importation of sulphur.

Again, while wood is used in the Travancore factory, for making synthesis gas, at Sindri it will be manufactured from coke and, in this connection, it is proposed to instal coke ovens at Sindri for the coking of second grade coals. This proposal has special adventages, because the coke oven gas can be used for firing the kilns of the cement factory, which will operate on the calcium carbonate sludge by-product from the factory.

### Import Control Restrictions to Continue

WING to the continued stringency of toreign exchange, the Government of India have decided to continue the main feature of the existing import control restrictions for the January to June 1948 shipping period, says a Press Note, issued by the Ministry of Commerce, on Dec. 12. Another important decision is to cancel Open General Licence No. IX with effect from Jan. 1, 1948.

Government are closely watching the world dollar position, and, for the present, it has been decided to make a distinction between dollar and non-dollar areas of supply in the administrative arrangements for licensing. The dollar area will comprise all the countries included in the continents of North, South and Central America, besides the Philippine Islands.

#### Clearance without Licence

Imports have been divided into three categories: those which will be licensed freely from (a) dollar areas, (b) non-dollar areas: and (c) those which will not be licensed at all. Lists of goods in these categories are published in a Cazette of India Extraordinary, dated Dec. 12, 1947. Goods not in these lists will be subject to over-all monetary ceilings.

With regard to the cancellation of O. G. L. No. IX, Government have decided that in order to enable importers to honour commitments already entered into, shipments made within a period of three months, i.e., until Mar. 31, 1948, will be allowed clearance without licence.

Further, all articles now included in O. G. L. No. IX will, on its expiry, be treely licensed for imports from non-dollar areas. It should, therefore, be possible for importers to obtain licences for any shipments made after Mar. 31, 1948.

It has also been decided that licences issued on or after Jan. 1, 1948, shall be valid for shipments made within a period of six months from the date of issue. A period of validity corresponding to one year from the date of issue may, however, be obtained in respect of articles which normally take a considerable time for delivery.

A new form of application for licences has been drawn up, and in their own interests importers are advised to furnish all the information required in it. For the speedier disposal of applications it has been decided to invite them in three batches:

- (a) Applications from actual consumers of goods will be received from Jan. 1 to 20;
- (b) Applications from parties who, in 1945-46 or earlier, imported goods similar to those in which they are now interested.

  —Jan. 20 to Feb. 10;
- (c) Applications from those who due not import such articles in 1945-46 or earlier—Feb. 10 to 28.

For the import of freely licensed goods applications may be made at any time.

# TRAINING FACILITIES IN MERCANTILE MARINE SERVICES

### Mr. N. V. Gadgil Outlines Government Policy

SPEAKING in the Constituent
Assembly (Legislative) on Dec. 2,
on the non-official resolution,
"That this Assembly is of opinion that
immediate stops be taken by the Government of India for expanding the facilities
for training in various branches of
mercantile marine services so as to ensure
an adequate and efficient personnel for a
national mercantile marine", the Hon'ble
Mr. N. V. Gadgil said:

"I am much obliged to my hon'ble friend, Mr. Santhanam, for having given me an opportunity to enunciate the policy of the Government with respect to the matter raised in this resolution. I want to say in the beginning that Government accept this resolution. Having done that, I just want to give very briefly some facts which will go to show that the urgency of this question has not escaped the attention of the Government.

"Only a few days ago, the Hon'ble" Mr. Bhabha (Commerce Minister) while addressing a conference of representatives

of shipping interests, stated that it had been accepted by the Government that the target for the increase in Indian tonnage for the coming five years would be two million tons. It is obvious that this is not enough unless there is properly trained personnel to run our ships. My friend, the hon'ble Mr. Santhanam, has given some idea as to the number that would be required in order efficiently to run this tonnage. Very hurriedly, for obvious reasons, he gave a picture in which a complete scheme for training the entire personnel was visualised.

"In this connection I might to the notice of my friend, the Hon'ble Mr. Santhanam, as well as the House that in order to see that the Indian tonnage is not only increased but the shipping industry is owned, managed and run by Indians, the principle having heen accepted, the Government have appointed a small committee, consisting of Captain H. I.. Davis, Dr. S. R. Sen Gupta, and Mr. M. A. Master, of the Scindia Steam Navigation Company,

as has been visualised by my friend Mr. Santhanam.

"This small Committee has been asked to report as early as possible and the Terms of Reference are so wide that I am sure we will satisfy every Member of this House; they are, among other things—

"(a) To consider what measures can usef:.lly be taken:—

"(i) to expand the existing facilities for preliminary training of cadets for sea-service; and

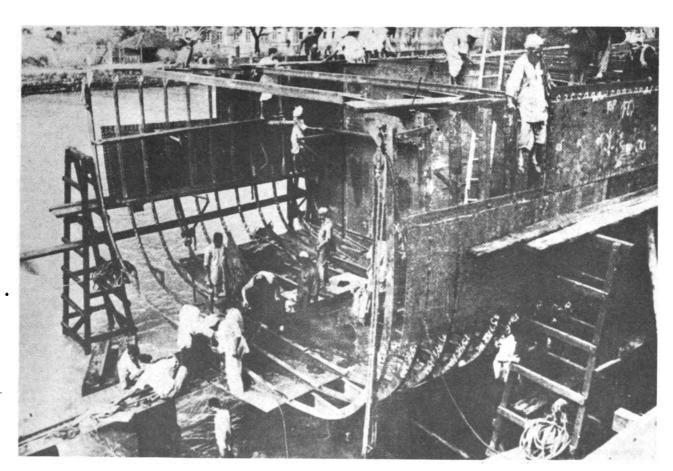

"(ii) to provide higher stages of training in navigation and engineering to prepare candidates for Board of Trade or equivalent certificates;

"(b) The Committee will also examine and report as to:—

"(i) whether for the purposes of higher training an independent Nautical College should be run or whether Nautical Classes should be opened in the existing Government or private institutions;

"(6) whether such a Nautical College should train for Ship Surveyor's Course and "Extra" examinations besides for ordinary certificates of Competency,

"(iii) whether such a College could undertake to train Nautical Surveyors, Engineers and Ship Surveyors and Examiners of Engineers and Masters and Mates for the Mercantile Marine Departments;

A trawler under construction in an Indian shipping yard

"(iv) whether and if so what arrangements should be made for the holding of Extra Master's and Extra First Class

Engineer's examinations in India; "(v) whether facilities for higher training should be provided to only those cadets who take advantage of the preliminary training scheme or to all candidates who come forward for such training;

"(m) what method should be adopted for the selection of candidates for higher training:

"(vii) what fees should be charged for higher training;

"(riii) what should be the length of course and the curriculum for higher training; and

"(ir) what arrangements should be made for the recruitment of coaching staff required for the Nautical College.

"(x) The Committee will be competent to make such other recommendations as seem germane to the subject.

#### **Useful Suggestions**

"You will see, Mr. Chairman, that the Terms of Reference are so wide that nothing more can be included in the same. At the same time, Sir, I promise to forward to the Chairman of the Committee the proceedings of this House covering the discussion on this particular subject for such consideration as they may consider necessary. I also earnestly request those Members who have taken a keen interest in this subject to make such useful and constructive suggestions as they can to the Chairman of the Committee directly, or if they so desire they may send them to the Chairman of this Committee.

"I agree with my friend, Mr. Santhanam, that there is another aspect which is far more important than merely manning the Mercantile Marine. In times of war this staff is bound to be taken over for the purpose of defence—in other words, this is the second line of our Naval defence. From that point of view, all I can say is that cost will not be a consideration in evolving any scheme which will secure an adequate number for running the ships the target of which has been very recently fixed at two million tons in the coming five years.

SHRIM. S. ANEY: When is the Committee's Report likely to be available?

MR. N. V. GADGIL: As early as possible, but within six months.

SHRI M. S. ANEY: When was the Committee appointed?

MR. N. V. GADGIL: About a fort-night ago.

MR. R. K. SIDHWA: May I know whether the Board of Trade Examination which is now held for all these purposes in England will also be instituted in India?

MR. N. V. GADGIL: That is a matter on which the Committee will certainly report, and if it does, my friend may rest assured that the Government will accept its recommendations.

# WELFARE OF COAL MINES LABOUR

### 50,000 Houses Under Construction

REPLYING to Mr. Ramnaryan Singh, in the Dominion Parliament, on Dec. 9, the Hon'ble Mr. Jagivan Ram, Minister for Labour, disclosed that about Rs. 75,00,000 would be collected during the current year as welfare cess on coal.

The Minister placed on the table of the House a statement detailing the activities of the Coal Mines Labour Welfere Fund in the provision of housing, health and medical facilities and other amenities to colliery workers.

Housing—A start had been made on the proposal to construct 50,000 houses for miners. A number of quarters would be constructed for railway collieries including those at Bermo.

Health and Medical Facilities—Two regional hospitals, each with about 12 beds, had been built at Katras and Toura for the Jharia coalfield, and two more, for the Raniganj coalfield. They were expected to function shortly. The construction of similar hospitals for the Pench Valley and Chanda coalfields, in the Central Provinces, would be taken up soon. A dispensary had been sanctioned for Mugma.

Steps were being taken to construct a central hospital at Dhanbad with over 100 beds. Another hospital would be put up for the Raniganj coalfield on a site already chosen.

Other measures to improve medical facilities for colliery labour included reservation of beds in the hospitals at Jamadoba and Sanctoria, the sanction of an X-ray unit to be installed at the State Railway Collieries Hospital at Giridih, the provision of seven ambulances for the transport of colliery patients (two for Asansol Mines Board of Health, two more for the Jharia Mines Board of Health and threefor colliery labour in the Central Provinces) and the appointment of a Tuberculosis Specialist. A scheme for the establishment of veneral diseases clinics was also ready.

#### **Anti-Malaria Operations**

Anti-malaria operations, such as spraying of D. D. T., were being undertaken in all the important coalfields under the direction of the Director, Malaria Institute of India. In 1947-48 a sum of Rs. 12,50,000 had been provided for this purpose.

Grants had been made to the Leprosy Association in Bengal and Bihar for the maintenance of a certain number of beds. Contributions had been made from the Welfare Fund towards the cost of refresher courses for colliery medical officers, of training nurses at the Delhi College of Nursing, of baby shows, health exhibitions, etc. Annual grants were being given to the Asansol and Jharia Mines Board

of Health to meet expenditure on improvement of sanitation.

Water Supply and Other Schemes—Schemes for improving the water supply at Jharia, Asansol and Pench Valley were being considered.

Visual and craft education provided at demonstration centres had proved popular and it was proposed to have a net-work of such centres throughout the Jharia and Raniganj coalfields.

A mobile canteen to sell tea and snacks, a mobile shop for consumer goods and a mobile cinema to give shows on a nominal admission fee had been provided by the Fund.

A number of Inspectors of Labour Welfare, Propaganda Officers and a Lady Welfare Officer were employed by the Fund to visit collieries and ascertain the grievances of colliery labour.

# EXPORT OF RAW COTTON PROHIBITED

The Government of India announced in a Press Communique dated Agust 30, 1947, that exports of cotton from India would be free until November 30, 1947, and that restrictions would not be reimposed unless exports were likely to exceed 15 lakhs of bales for the year September 1947 to August 1948, or unless the export of any type or variety needed by Indian cotton mills excessive.

The Government have reviewed the position and have decided to prohibit the export of raw cotton of long staple (cotton 13-16" and above) to all countries including Pakistan, until it is known whether supplies of long staple cotton from Pakistan will be normal during 1947-48.

The bulk of the requirements of Indian mills in this type of cotton were met before the partition of the country from areas which now lie within the Dominion of Pakistan and discussions are in progress with the Pakistan Government in the matter of their cotton export policy. Since Pakistan depends for the supply of cloth on India, it is hoped that a common policy will be arrived at in the matter of cotton and cloth.

Exports of short and medium staple cotton will continue to be free, in accordance with the Press Communique of August 30, 1947, since the rate of export does not make it probable that the target figure of 15 lakhs for India and Pakistan combined will be exceeded. The position will be reliewed early in March.

Mr. N. 'V. Gadgil, Minister for Works, Mines and Power, addressing the 18th annual meeting of the Central Board of Irrigation

# INDIA'S RIVER PROJECTS---SCOPE OF MULTI-PURPOSE SCHEME

THE meaning of a multi-purpose project was elucidated by Rai Bahadur A. N. Khosla, Chairman of the Central Waterways, Irrigation, Navigation Commission, while presiding over the 18th annual meeting of the Central Board of Irrigation held recently in Delhi.

"The basis of multi-purpose treatment of a river valley", said Mr. Khosla," is that fullest advantage of the valley's water resources can be secured only by bringing together the several related water uses in a comprehensive plan of co-ordinated development. This comprehensive plan of development of the water resources should be integrated with the development of all other resources in the region. This total plan will include, besides irrigation, flood control, power development and navigation, such other activities as proper land use by means of soil conservation, regulated afforestation and deforestation, use of natural and artificial fertilizers, exploration of mineral resources, industrial and economic development, health measures and various other related activities which tend to raise the standard of living of the people.

## **River Valley Projects**

"The development of the Tennessee Valley in U. S. A. provides a model of total planning. The Bhakra, Damodar and Hirakud Projects, which have been recently sanctioned, are designed more or less on that model. Many other river valley projects, which are in various stages of investigation, will be prepared on similar lines.

"These include the Kosi Dam Project in Nepal and Bihar, the Tikarpara and Naraj Dam Projects on the Mahanadi in Orissa, the Narbada, Tapti and Sabarmati Valley Projects in Bombay, Central Provinces and adjoining States, the Indravati Project in Bastar, the Chambal and Sone River Valley Projects in the United Provinces and Central India States, the Dihang, Manas and Bharauli and other tributary stream projects in the Brahmaputra Valley in Assam, the Eihand and Nayar Dam Projects in the U. P. and several other major and minor projects on the many other streams in India.

"The total power generation on these projects already under investigation may be 10 million kilowatts and annual irrigation, over 6 million acres.

"On the economic side, while a project conceived for a single purpose may not be productive or self-financing, it may become so if it is recast to include one or more additional allied purposes. With a judicious combination of tariffs in respect of the various purposes covered by a project it should be possible, in most cases, to more or less wipe out the unproductive part of any project without imposing undue burden on the beneficiaries from that project.

"There is yet another aspect which must be considered in assessing the financial soundness of a project and that is the many hidden and indirect returns from increased taxation, excise, etc., as a result of increased prosperity. To these may be added the invaluable asset of progressively increasing national self-sufficiency in foodgrains and industrial production.

"In his recent address at the Narbada Tapti Conference, held in Bombay, on Sep. 22, the Hon'ble Mr. N. V. Gadgil truly remarked that 'where it is a question of life and death, cost is of little relevance. We have to be self-sufficient in food and in defence measures. Our ideas of productivity of a project must be viewed in the light of these vital needs'.

Speaking of the offects of the partition of the country Mr. Khosla said: "This has cut across our economic and cultural unity. Both India and Pakistan are the poorer for this division but both have enough potential resources for balanced development. India has more of the mineral resources, power potential and industrial production. Pakistan has more of irrigation and food production.

"The bulk of the magnificent irrigation works of the country now lie in the new Dominion of Pakistan. Out of the total of 400,000 cubic feet per second of water carried by the canals of undivided India nearly one-half is now carried by the canals in Pakistan. Of the total of 33 million acres irrigated by the State controlled canals, a little more than half lie in Pakistan. In respect of overall water resources and power potential, however, India is relatively more happily placed".

Welcoming the Government's sanction for three major projects, he said: "Three major river valley development projects, together estimated to cost nearly Its. 175 crores have been sanctioned for execution during the last few weeks. These are: the Bhakra Dam Project in East Punjab, the Damodar Valley Project in West Bengal and Bihar and the Hirakud Dam Project on the Mahanadi in Orissa. The project for the construction of the Ramapadassagar Dam on the Godavari is actively under consider ation. It is, therefore, reasonable to hope that, henceforth our dreams will progressively culminate in achievement and our blue prints translated into reality.

# **Priority for Food Production**

"In our programme of resource conservation and utilisation the first priority must be given to the production of food. According to Mr. Shanmukham Chetty's budget speech, India produces 45 million tons of foodgrains per year and has, in addition been importing up to 2.2 million tons from abroad. These imports are costing us over Rs. 10 crores a year and making a large hole in our foreign exchange resources. The total expenditure incurred on food imports during

INDIAN INFORMATION, JANUARY 1, 1948

the last 3 years is almost exactly twice the entire capital cost of all the existing Irrigation Works in undivided India. In the seven and half months between Aug. 15, 1947 and the end of March, 1948, the Government of India will be paying a subsidy of Rs. 22.52 crores for foodgrains. With over 4 million annual increase in the population of India the food situation will deteriorate still further.

"There is, however, no cause for undue alarm. Our imports of foodgrains so far have not exceeded 6 per cent; of our internal production. This state of affairs should not be difficult to remedy. Tens of millions of acres of culturable land still lie waste due to short and uncertain water supplies, while nearly 94 per cent. of the water wealth of the country, a good proportion of which can be put to beneficial use, is running to waste in the sea. By proper land and use planned conservation and utilisation of our river waters, we can not only become self-sufficient but can produce surplus food grains for export to deficit countries.

#### Flood Protection

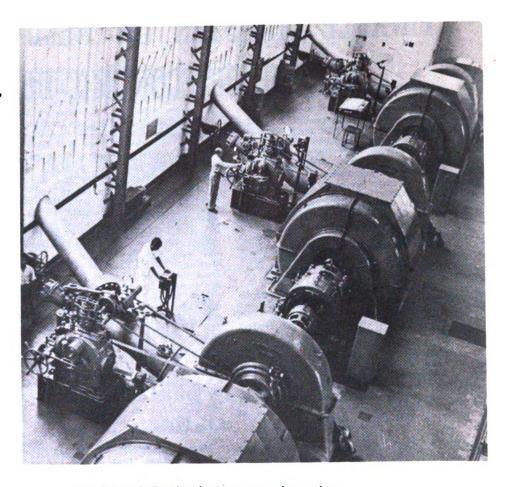

"The second priority in our schemes of resource conservation and utilisation should go to flood protection. Uncontrolled floods are a menace to the economic life of the people. They constitute a tramendous waste of national wealth.

"The ravages caused by the floods of the Kosi in Bihar and Nepal; the Damodar in Bengal; the Mahanadi, Brahmini and Baitarani in Orissa; the Bharauli, Manas, Kopiili and other tributary rivers of the Bahmaputra in Assam; the Narbada and Tapti in Bombay and several other major and minor rivers in the other Provinces and States of India, are an indication of the magnitude of the problem. The catastrophic floods which occurred in the Sutlej, Beas, Ravi and Chenab rivers of the Punjab in Sept. 1947 added immensely to the toll of human life, already taken by fanaticism and human savagery.

## **Power Generation**

"The conservation of flood waters and their regulated releases with a view to provide equalised stream flow throughout the year, coupled with the utilisation of the natural falls in the river, would offer immense possibilities for the generation of water power on almost every major river and tributary in the country.

"The Brahmaputra valley in the province of Assam, alone, has a waterpower potential of between 5 and 16 million k. w. Orissa and Bihar have protential of 4 to 6 million k. w., each. Similarly, other Provinces and States have considerable water power potential. The total electrical power installed at present in the country is nearly 2 million k. w., of which less than half a million k. w. is water power. The per capita consumption of electricity in India is ridiculously low. It is 9.2 k.w. hours, against 906 in England, 1470, in U. S. A., 3510, in Canada, 1941, in Switzerland, 3090, in Norway and 2000, in Sweden.

The Pykara hydro-electric power generating station

"Our next need is navigation. India possesses numerous inland waterways, with a widespread network of tributaries. These waterways, if conserved, would afford the most extensive and the cheapest arteries of traffic. Navigation of inland waterways, which was fairly considerable in the past, has been progressively on the decline, partly as a result of a mistaken railway policy and partly, due to the reduction in dry weather supplies caused by the diversion of water for purposes of irrigation. Waterways purposes of irrigation. are a most important national asset both from the economic and defence aspects and must be conserved in the national interest".

Mr. Khosla also referred to a number of problems arising out of the execution of river projects. Referring to the resettlement policy to be adopted be said:

"It is desirable that the sacrifices and benefits be uniformly distributed. In case where no new areas are available for resettlement, this can be achieved by the owners of the areas benefited by irrigation being asked to part with a percentage of their land corresponding to the ratio, which the submerged area bears to the total area benefited, subject to the condition that no holding shall be reduced below a minimum economic holding.

"The problem of compensation and resettlement has to be faced with vision and sympathy. Compensation should, as far as possible, be land for land. Model villages with modern amenities should be set up in the new lands in place of old dwellings which will be submerged."

# Proper Land Use

"After explaining the disastrous results of inter-State water disputes," he said, "It is gratifying to note that the Drafting Committee of the Constituent Assembly has made recommendations in respect of development of inter-unit waterways which will cut down delays in future. The Central Board of Irrigation has been consistently cressing for this essential reform for many years.

"Another matter of vital concern to integrated basin-wide development is proper land use. Unrestricted deforestation and soil erosion are widespread. These interfere with nature and adversely affect the economy of man. Floods are accentuated, productive lands are ruined, some beyond reclamation and heavy silt burdens are carried down the streams to shorten the life of sterage reservoirs or, by heavy deposition to render waste rich culturable lands, as has been the case in the Kosi flood plain-Urgent preventive measures, backed by legislative action, if necessary, are called for in this connection".

# FINANCE MINISTER ON NEED FOR PRACTICAL SCHEME OF ECONOMIC DEVELOPMENT

REPLYING to the general discussion on the Budget in the Constituent Assembly (Legislative) on Dec. 1, the Hon'ble Mr. R. K. Shanmukhan Chetty, Finance Minister, expressed the hope that outstanding differences on financial and economic problems between India and Pakistan would be amicably settled in "the very near future". It would be only after the solution of some of the economic and financial problems involved that a full and clear picture of India's economic position could be given.

The Finance Minister said:

I must at the outset express my grateful thanks to my hon'ble friends in this House for the generally cordial reception that they have accorded to my Budget statement. Notwithstanding the criticisms—and all the criticisms were really of a helpful character—there has been in amplee vidence appreciation—I would say a sympathetic appreciation of the difficulties under which the new Dominion Government in India is working, specially the difficulties of its first Finance Minister.

A great many points were made during the course of the discussion but I would like to touch upon two or three of the more outstanding points.

My hon'ble friend, Mr. Munshi said that I had not given a clearer picture of the consequences of partition. This sentiment was re-echoed by my hon'ble friend Mr. T.T. Krishnamachari, who said that a clearer picture of the economic situation in the country had not been given in the Budget statement. Straightway I plead guilty to the charge. I am myself not satisfied with the picture that I have presented of the economic and the financial conditions prevailing in the country after partition.

### Intricate Problems

If I am not yet in a position to see the picture in clearer light, with all the light and shadow on the picture, it is not entirely my mistake. A fuller and clearer picture of the economic pattern of the Indian Dominion can be gained only after some of the outstanding economic and financial problems have been settled with the Pakistan Government. All evidence tends to show that there is every hope that all these outstanding differences will be amicably settled between the representatives of the two Dominions in the very near future. In fact, I find for the last one week a conspiracy in which my hon'ble friend, the Home Minister, is deeply involved, to take away the work of Sir Patrick Spens, the Chairman of the Arbitral Tribunal. I think the House should wish him success in his efforts, and if, as we all hope, some of these most intricate and difficult problems are settled out of court, it will redound to the crecit of the two Governments and

to those who are in charge of the two Governments.

My Hon'ble friend, Mr. T. T. Krishnamachari, also said that I should have given some statement of the account of the undivided India before Aug. 15. For one thing I still hold the view that even if it were possible for us to give these figures, they would not serve any useful purpose because those figures cannot form the basis for any comparison with the figures for the Indian Dominion that I have presented. Apart from the value of those figures, it was not possible for me to give them for the simple reason that the account of the undivided country for the period ending Aug. 15 has not yet been closed. The joint account is still kept open. and a great many adjustments have to be made before our joint family account can be closed. In these circumstances it was not possible for me to give even a rough idea of the state of account of the undivided Government as on Aug. 15, 1947.

# Loan Policy

My Hon'ble friend, Mr. Munshi, again told the House that I had not given any clear indication of the loan pro-gramme of the Government of India. I have stated in my budget speech that it was not the intention of the Government to go to the market for any fresh loan before the close of the current financial year. Now that is a positive statement in one respect. But I agree that I have not given any clear indication of what our future loan policy is going to be. If I have not given any such clear indication, it is because I am not yet in a position to do so. What confronted me when I took office on Aug. 15 was the hard fact that the entire money market in India was seriously disturbed. There was a lack of confidence, with the result that there was no great demand for Government securities in the money market.

PANDIT LAKSHMI KANTA MAITRA: Does the Hon'ble Minister think that the lack of confidence was the only factor in this?

THE FINANCE MINISTER: That is the main factor so far as I have been able to study the market.

PANDIT LAKSHMI KANTA MAITRA: What about the reactions on last year's Budget?

THE FINANCE MINISTER: Probably that is one of the causes of the loss of confidence, but the fact with which I was concerned was the fact that there was loss of confidence. I had therefore to hold my hand before I went to the money market for any large loan. Naturally the investing public wanted to know what the policy of the Government of India was going to be in the matter of the future industrialisation of the

country, in the matter of the economic development of the country and more especially in the matter of the borrowing policy. There have been a great many plans and reports regarding industrial development. If the Government had not been preoccupied with the unfortunate events of the last few months, I have no doubt that the Government would have straightaway applied their mind to coming to some definite and positive conclusions regarding these plans that have been made. Now that some sort of order and peace have been restored, I am hoping that in the very near future we shall be in a position not merely to make up our mind regarding the future trend of our policy in industrial sation, but also take concrete decisions on the execution of some of the schemes which have been included in those plans.

# Chesp Money Policy

The market was also uncertain about our borrowing policy. One of my predecessors, Sir Archibald Rowlands initiated the cheap money policy. He very successfully converted our 3½ per cent loan into a 3 per cent loan, and he aimed at securing 2½ per cent. credit for the Government of India. He was lucky. In fact, now that I am on this subject, I an free to confess that the destiny of a Finance Minister is very often governed by the luck that attends him rather than his own cleverness.

AN HON'BLE MEMBER: It is true of everybody.

THE FINANCE MINISTER: More specially true of the Finance Minister.

As I indicated in my Budget speech, even the British Government, which adopted this policy found that it could be carried very far. The position that faced us was somewhat difficult. Evidently, as the Reserve Bank Governor had observed, the cheap money policy had been carried a bit too far in our country. But then my difficulty is this: when once a cheap money policy had been adopted it is extremely difficult to retreat from that policy. In fact a retreat from cheap money policy will always be disastrous to the Government on the money market. Therefore it was decided that without following the policy any further or extending it any further I would attempt to consolidate the position gained so far. And from all the evidence that I see in the money market, I think the market has taken this decision well.

I felt confident that next time when I go to the market it will be for a fairly big loan and we would appeal to our country men to come to the help of the Government by lending funds so that our vast programmes of development might be put through. In fact, I am thinking whether that first loan should not be an independence loan—a loan the success of which will assure the success of our economic

policy and our stability. Knowing our people as I do, I have not the slightest doubt in my mind that when the Government makes an appeal to the money market the market will respond. I know that the money market is a hard nut to crack; they are not easily moved by mere appeals—in fact the appeal must be to their pockets and not to their hearts; and the clear enunciation of our policy that it is our intention to consolidate the gains made so far would I think be a sufficient inducement for the market to come forward to the help of the Government.

I want Hon'ble Members to realise how much the stability of a modern Government depends on its capacity to raise loans in the money market. We are apt to think that the stability of a budget depends only on the revenue expenditure side of it. There is one other budget which very often is ignored by Hon'ble Members in this House and by the public at large, and that is the Ways and Means Budget. If you analyse the budget of any modern State, you will find that the outgoings of the Government on the capital side are very often more than the disbursements on the revenue side.

Take our own modest Budget for these 7½ months. While our revenue expenditure is about Rs. 197 crores, our Ways and Means Budget discloses a disbursement of over Rs. 145 crores. If we launch a more vigorous drive in the direction of industrial and agricultural expansion, the outgoing in the capital budget will be infinitely larger, and there it is that we must get the entire co-operation and help of the investing public. My main object in presenting the financial picture of the country as I see it is to instil that confidence which had been lost; from the reactions on the stock exchange and on the money market in general, I feel confident that that objective of mine has very amply succeeded.

# Private Enterprise

A great deal has been said, by various Hon'ble Members about the question of nationalisation versus private enterprise. Probably my observations on the scope and need for private enterprise in our country have not been sufficiently appreciated.

One Hon'ble friend remarked that the emphasis on private enterprise had been laid a little too much. What I intended to say is this, that the scope for production in our country for the next many, many years is so vast that there must necessarily be scope for private enterprise even though we decide on a downright policy of nationalisation.

The other day I said I am not a capitalist and the House was fairly amused. Probably they will be more amused if I say today that I consider myself a socialist. And my own interpratation of socialism is this: that economy which ensures a fair and equitable distribution of national wealth is really the socialist economy. State enterprise or private eterprise is only the means towards achieving that end. What does it matter if our entire industrial structure has been nationalised and yet the standard

of life of our people is low? You would not call that socialistic economy in the real sense of the term.

What has been ignored in the capitalistic economy of the world in the past is that sufficient emphasis has not been laid on distribution as that on production. What we in our country must aim at is to increase and increase a hundredfold the national wealth of our country and distribute that wealth equitably among all the people of this country. I am clearly against the concentration of wealth in a few hands. In fact, the whole system and structure of taxation in modern society is intended to prevent that concentrated accumulation of wealth in a few individuals. If we utilise that mechanism wisely and with prudence we could, in effect, achieve a really socialistic economy. But in exercising that right of taxation we have to be cautious.

If private enterprise has got a place in the national economy of the country, then you must create the incentive for investment in private enterprise, and if your scheme of taxation hinders investment in industry and damps the enthusiasm of private enterprise, to that extent it has defeated its own purpose. In fact the wisdom of a Finance Minister in these days in any country in the world is just to reach beyond that point in taxation which will prevent the concentration of wealth in a tew hands but which will at the same time not destroy the incentive to investment.

Speaking about the burden of taxation, probably the House will be interested if its monotony is relieved, if I nargate to the members a story. Three Englishmen were one day having lunch. All of them were businessmen. When the lunch was over each one wanted to vie with the other in paying the bill. So one man said, "No, let me pay the bill, because after all I am going to charge the cost of this lunch to my company; already the company is paying 19s. 6d. in the pound as tax, and therefore it is only 6d, in the pound that the company will be paying and the rest will be Government money".

The other man said, "No, let me pay", and added, "you see, my company is paying Excess Profits Tax and the Excess Profits Tax is 100 per cent. I will also charge this bill to the company which means that the entire cost of this bill will be paid by the Government".

The third man said, "No, no. I am still in a better position". Everybody was surprised and this is what he said: "You know, I am working for the Government on cost plus 10 per cent. basis. I am going to charge the cost of this lunch to Government and I will get 10 per cent. of it from Government". (Laughter). Now, that gives an idea of the burden of taxation today in the country.

But we should judge that burden from the criterion of how far it will encourage

# MINISTERS' SALARIES BILL

NOVING the Bill to provide for the salaries of Ministers in the Dominion Parliament on Dec. 1; the Hon'ble Sardar Vallabhbhai Petel, Minister for Home Affairs, said:

"Sir, I move that the Bill to provide for the salaries of Ministers be taken into consideration. I will not take much time of the House over this small matter. I may take the House into confidence and say that although this is a small matter it has taxed our minds considerably and we have spent a considerable time over it. We considered this question several times and we had two or three meetings of the Cabinet, and we had to reconsider proposals that we had once arrived at because any salary that you fix is liable to be criticised from one point of view or the other.

"But I may inform the House that looking at all the circumstances it may be said that the salary that we have proposed is not unreasonable. It will give an adequate amount for proper living in Delhi and, in some cases, by the deducation of income-tax, some of my colleagues, who have not got other income may, after the deduction, have very little and some will be out of pocket.

"So on the whole, taking everything into consideration, the amount cannot be considered to be unreasonable; and as we have given a good deal of time and consideration to it I hope the House will pass it without any dissent.

"In the matter of allowances it is not necessary to come to the House because it can be done by executive order or by a Cabinet decision, but we thought it better to put it to the House so that the House may know what the actual position is.

"The provision of double accommodation may require some explanation. I may inform the House that although we have provided for house accommodation here as well as in Simla, there is surely no probability of any of us going to Simla. Houses there are all occupied by the East Punjab Government, who are short of houses. Even if it were not so, we have no time or inclination to go to Simla because we think it an unsuitable place for conducting administration from those heights right down to the south, and we cannot go there.

"It may of course be necessary for some Minister or other to go there occasionally on State business or for a short change of climate and reasons of health. In such cases, the House will not grudge them such accommodation for a short or temporary period. But, on the whole, all the houses in Simla which belong to Government are now occupied. My Hon'ble colleague in charge of Works, Mines and Power will know more about it than I do; but I thought that the House should not carry a wrong impression on this question and feel that we are providing for double accommodation. In fact, there will hardly be any case for any of its going to Simla".

investment in industry. It is because I felt that there was some justification for the criticism that the taxation imposed in the last Budget has seriously interenterprise that I gave the undertaking that I shall re-examine the whole structure of taxation to destroyed. After all, whatever might be the ideological differences amongst some of us, if we sit down and evolve a practical scheme for the economic development of our country, we will find that notwithstanding ideological differences there is a great deal of common ground amongst all of us. Let us, for the next few years at least, exploit every point of agreement and not unnecessarily emphasize points of difference. It is agreed on all hands that the future of India depends upon her industrial and agricultural production and with that common objective, about which there is no difference of opinion, there is no doubt that we might be able to evolve a practical scheme of economic development.

Now, more and more production is wanted not merely for creating the future wealth of this country but for fighting inflation. Mr. Munshi was right when he said that we all know about the existence of inflation but we really do not know how to tackle it. Well, we know how to tackle it, but the thing is our efforts do not succeed.

#### **Economic Sub-Committee**

I am clear in my mind that inflation today is not so much due to monetary causes, but really due to the very rapid fall in production. I gave index figures to show how the inflationary tendency has become more acute in spite of a considerable reduction in the volume of notes in circulation and in bank deposits. How exactly we must bring about that increase in the volume of production is a matter that lies entirely in our own nands. There are various bottlenecks. A special Committee of the Cabinet has been appointed, called the "Economic Sub-Committee", to study this problem in great detail. As result of the preliminary study that we have made so far, I find that one of the greatest bottlenecks in our country which hampers production is the problem of transport.

Take, for instance, the position regarding coal. Production has increased and there is a danger of its coming to a standstill. Why? Eccause coal at the pits has accumulated and it cannot be quickly transported to the destinations because of the inadequacy of transport. And in transport, when you come to details our greatest want today is the want of locomotives. As my hon'ble friend, the Transport Minister, told us the other day, one of the greatest acts, amounting almost to a criminal act, by the previous Government was their ignoring the need for building locomotives in this country.

I came into the Central Legislature in 1924 and I can even today recall the debate during the Railway Budget year after year when those of us sitting or the Opposition Benches tried to impress upon the then Government the need for establishing a locemotive industry in this country. Twenty-three

years have passed and still we are not in a position to manufacture locomotives in this country. That is the unfortunate legacy we have got, but we are trying to do our best to rectify this state of affairs. It will take time.

As a matter of fact, to get over this difficulty, we are now seriously examining the possibility of buying or chartering a few ships and transporting coal, by sea, for the various places and thereby reducing at least the haulage of coal. For instance, instead of carrying coal by an all-rail route from the pit's mouth to Madras, it will be easier to carry it to Madras by sea. I think a great deal could be done to overcome this difficulty if we succeed in this effort. I am only giving this as an example to tell the House that not only are we alive to the problem, but that we are taking all positive and concrete steps necessary to solve it.

My Hon'ble friend, Pandit Kunzru. very prudently asked me whether I was going to be satisfied with merely increasing the production on the existing plant and machinery. I say: No. We have got plans, which are going to be put into execution very soon, for adding to our productive capacity. For example, a Steel Panel was appointed by the late Government and the Panel has sub-mitted two reports. The Panel has recommended the erection of two modern steel plants, one in North Bihar and one in the Central Provinces, each with a capacity of half a million tons, but so constructed that they might easily attempt at doubling the productive capacity. I have asked my Hon'ble colleague, the Industries Minister, to go ahead with that plan and I am hoping that before I

present the next Budget in February I might be in a position to announce that concrete steps had been taken to start these two scehmes. That is only one illustration of the concrete steps that we are taking to actually add to our productive capacity.

While we can do everything that lies in our power to restore the diminished production and to add to our productive capacity, there is one other factor which I submit, namely labour, also counts a great deal in the solution of this question. Here again, I am free to confess that by mere ordinances and orders we cannot persuade labour to produce more. We must get their wholehearted and willing co-operation. We must create an entirely new outlook in the relationship between labour and employer.

## Control Versus Decontrol

The time has now come when the Government with the co-operation of employers must make labour feel that it is an integral partner in the whole industrial structure of the country. Some Hon'ble friends referred to the scheme of profitsharing. That is again one of the problems which is now engaging the attention of the Economic Sub-Committee of the Cabinet. Speaking for myself, even four or five years back, I advised my friends engaged in industry to offer to labour a straight forward scheme of partnership and profit-sharing. I hope that the Cabinet will betere long be in a position to evolve a satisfactory formula which will ensure the willing co-operation of labour in our enterprises.

A great deal has been said about the problem of control versus de-control.

My Hon'ble freind, Pandit Kunzru, naturally expressed serious apprehensions

# CLAIMS FOR LOSS SUFFERED IN SIAM DURING THE WAR

LAIMS against the Siamese Government, under the terms of the formal Agreement between the United Kingdom, India and Siam dated Jan. 1, 1946, for "personal prejudice" (that is, personal claims unconnected with property of any kind), may new be lodged, says a Press Communique, issued by the Ministry of External Affairs and Commonwealth Reations, on Dec.

Claims formulated in India will be received by the Ministry of External Affairs and Commonwealth Relations, Government of India, New Delhi, and will be forwarded to the Siamese Government through the Indian Legation in Siam.

The particulas of authorities appointed to receive claims formulated outside India will be published in the countries concerned.

Claims must be prepared on the official Claim Form and, in accordance with the Notes for Guidance issued therewith. Copies of such Forms and Notes are available from the Ministry of External Affairs and Commonwealth

Relations, New Delhi. Five copies of each claim and supporting documents must be lodged.

Claimants who have previously registered their claims are required to relodge them on the official Claim Form in accordance with this notice.

Under the terms of the Claims Agreement, claims for personal prejudice must reach the Siamese Government within 12 menths of the date of this notice. To allow ample time for the examination of claims, for reference back to claimants, where necessary, and for transmission to the Siemese Government, claimants are advised to ledge their claims as above as soon as possible and not later than the Aug. 11, 1948.

Claims arising out of personal prejudice suffered by labourers on the Burma-Siam Railway need not be submitted as:
a separate announcement regarding such claims will be made in due course.

A separate announcement concerning claims in respect of property will also be issued at a later date. as to what would be the state of affairs if decontrol was effected and prices go up. He was answered by certain other Hon'ble Members, who, like Mr. Ramalingam Chettiar, spoke with practical experience of the working of control. There is no danying the fact that theoretically when there is a gap between supply and demand they should be controlled if everyone is to get an equitable share at a reasonable price. We must go one step further. If control is to be effective, it must be an integrated control. There is no use of tinkering with controls, controlling only one or two essential articles and leaving the rest unchecked, because an upward trend of prices with the state of the s these other commodities will have serious repercussions on the commodities under control. Control to be successful should therefore be an integrated control, covering all essential commodities. As I said, no one questions the soundness of the statement, but what has been our practical experience?

l am myself a believer in the value and the need for integrated control, but my sad experience is that in our country our mechanism of control has completely failed. We talk of a controlled price. Let us take sugar. What percentage of the consumers of sugar do you think are really getting sugar at the controlled price? Similarly take any foodgrains; except the growers of food it is my belief that not more than 10 per cent of our people get the foodgrains at really controlled prices. Probably 10 per cent is an overestimate. The rest really buy in the black market.

#### Inflation Problem

Today we have got in our country an inflation which really is not reflected in the index figures that we have published. The index figures are published on the hasis of our controlled prices. But if an index figure were prepared today at the black market price at which people have to buy these essential foodstuffs, you will find the index figure will be absolutely alarming. What is the use of keeping up this show of control when you really cannot manage?

The question of decontrol has been engaging the Cabinet for the last few weeks. We have given most anxious thought to this problem. For, meeting after meeting in the Cabinet we had to postpone decision because even though we came prepared to do something yet when we discussed the problem in all its aspects, we were frightened at the consequences of decontrol and yet we had to take decision. We know we are fully conscious of the fact that we are taking a risk, but a stage has been reached when that risk has to be taken. It is our intention not to disband our machinery of control, so that if things go radically wrong, we would again come back to control. Subject to these precautions, it is our intention to gradually decontrol certain things and take the risk.

AN HON'BLE MEMBER: Then what happens to integrated control?

THE FINANCE MINISTER: Integrated control, I wish freely to confess, has not succeeded in our country.

I can write quite a thesis on the need of controls in India. The point is, can we with the mechanism that we can control really put these controls effectively into operation. So, I have made a clean breast of the thing. I have nothing more to answer. If control has failed, this House and the public at large must share the blame with the Government and if the measures of decontrol that we propose to adopt gradually are to succeed, it will again require the co-operation of the public at large. After all you cannot legislate to a people unwilling to work that legislation in its real and true spirit. Let us, therefore, hope that the social consciousness of our people will be roused by the human misery that surrounds us and that with this gradual process of decontrol things might be better. That is all I can hope for and let us all hope for the best.

# Sterling Balances

My Hon'ble friend, Mr. T. T. Krishnamachari, referred to the question of the sterling balances and he criticised statement because it happens to coincide with a similar statement that Archibald Rowlands made. I am sure the House will agree with me when I say that the validity of a statement is not necessarily destroyed because somebody else corroborates that statement or concurs with that statement. I firmly hold the view that the sterling balances must be wisely utilised for the economic and industrial development of this country and not be frittered away for the payment of current consumption of luxury articles. Whether Sir Archibald Rowlands agrees with me or anybody disagrees with me, I am prepared to hold to that

My Hon'ble friend also referred to the negotiations that have taken place regarding the temporary settlement of the question of sterling balances. The last Delegation from India was purely on an official level because it was intended to bring about only a temporary settlement. The next stage of the discussion will also be on official level and I am glad to announce that His Majesty's Government in the United Kingdom have responded to our invitation to send some of their officials to Delhi to discuss this matter. My idea is that we should make another interim settlement valid till June, 1948. Thereafter, we must think of a more permanent settlement which must really take place on ministerial level. When such a stage is reached, I am hoping to include in that Delegation private members who would be in a position to help the Government in coming to satisfactory settlement with the British Government.

These are some of the general matters, barring one. Having sat in this House for 12 years and having listened to the magnificent speeches that Pandit Kunzru used to make, attacking the Defence Budget in those days, it was so refreshing to hear from him that we are not spending enough on Defence. I welcome that attitude. That shows that there is a sense of realism among our responsible leaders.

As Finance Minister I um naturally very nervous about the rate of Defence expenditure; but I might assure this House that whatever might be our financial position; I am sure we can find enough finance to maintain a strong and adequate army in our country.

### Assam's Needs

These cover the general points. My Hon'ble friend from Assam spoke about the needs of his province. Only last week the Governor of Assam and the Prime Minister of Assam had discussions with me on this point and they went away satisfied. And this morning there is a report of a broadcast talk by His Excellency the Covernor of Assam from the Calcutta Broadcastig Station. This is what he says:

"During my recent visit to Delhi I was happy to get heartening proofs that our difficulties are understood and that our needs in the matter of overcoming them are now to be given the assistance required. It is now up to the people of Assim to rise to the height of opportunities offered. I have no doubt they will"

I am sure what has satisfied the Governor of Assam will also satisfy my Hon'ble friend, Mr. Chaudhury.

The right note regarding the appraisal of the Budget was struck by my Hon'ble friond Mr. C. Subrahmanyam. He said rightly that the financial soundness of the ccuntry should not be judged by the deficit or surplus in the Budget but by the deficit or surplus in the national income. That is the right way to study the Budget and that is why I attempted to give as accurate a picture as I could of the economic and financial position of our country, and gave my emphatic opinion that the financial position of our country is perfectly safe and sound. It is quite possible that I might prove to be a false prophet. But if it came to that I would prefer to be a false optimistic prophet rather than be a prophet like Jeremiah: because if hopes are dupes fears might be liars. I am one of those who believe that even faced with a difficult situation, with confidence in yourself and a stout heart, you can certainly overcome your difficulties.

# BURMA RE-ENTRY CERTIFICATES

The Burma Government has contented to extend the period for issue of Burma re-entry certificates to holders of departure and residence certificates from Dec. 15 to Jan. 15, says a Press Note, issued by the Ministry of External Affairs and Commonwealth Relations, on Dec. 19.

Permits will be issued up to this date and recipients will be allowed reasonable opportunity of returning to Burma after that date.

The Governor-General has been pleased to appoint the Hon'ble Sir Clifford Monmohan Agarwala, acting Chief Justice of the Patna High Court to be the Chief Justice of that High Court, says a Press Communique, issued by the Ministry of Home Affairs, on Dec. 22.

# ECONOMY COMMITTEE TO EXAMINE EXPENDITURE ON ADMINISTRATION

PEAKING in the Constituent Assembly (Legislative) on Dec. 4, on a cut motion that the Demand under the head "Ministry of Finance" be reduced by Rs. 100 (to discuss the question of economy in the Central Administration) the Hon'ble Mr. R. K. Shanmukham Chetty, Finance Minister, said:

I welcome the discussion initiated by the motion of my Hon'ble Friend, Mr. B. Das. He and I have sat together on the Opposition benches for nearly 12 years in the old legislature and we have taken part in many debates, criticising the extravagance of the administrative machinery. Even though I am sitting in a difference place, Sir, my feeling, about the scale of expenditure in Government is very nearly the same as it used to be when I was sitting in those benches.

My Hon'ble friend, Mr. Santhanam said, that the Finance Minister should not be a mere compiler of figures. I whole-heartedly agree with that observation. The Finance Minister is really the watch-dog of this House. The Finance Ministry does not simply sanction as an automatic measure proposals for expenditure that come before it for scrutiny. In fact the financial implications of every proposal are clearly examined in the Ministry of Finance. Notwithstanding this check exercised by the Ministry, I would welcome the deduction of this House that every possible measure should be taken to reduce the scale of expenditure in the administrative machinery.

The Finance Minister is generally the most unpopular of the Ministers amongst his own colleagues, because he often has

to perform the unpleasant task of turning down proposals coming from the Ministries of his own colleagues. I can say the function of a real Finance Minister is not that of one who, without any meaning, turns down all proposals for expenditure, but who would help all other Departments to spend money wisely and effectively. That is the true function of a Ministry of Finance, and I certainly shall try my utmost to see that Ministry of Finance discharges its functions in that spirit.

My Hon'ble friend, Mr. Punjabrao Deshmukh, suggested that someone might go to the United States to find out about the expeditious methods of administration in that country. Well, Sir, it so happens that I was there myself for nearly a year in charge of the Indian Supply Mission. There is no doubt that during the War at least the machinery of administration in the United States moved very fast. In fact I made it a rule in the Supply Mission that there should be no note-writing on files. In fact every problem was practically solved by the officer or the Director concerned coming either to the Secretary or to one of the Directors of Supply or coming directly to me in important cases; and I found that the system worked very effectively indeed. In fact I used to put through great deals with the American departments just over the telephone. Under the normal practice of red-tape it would probably take months of note-writing before a similar problem was solved. I am therefore not merely familiar with the model of a more businesslike administration, but I am fully alive to the need for such an administration in our country.

There is no doubt that the scale of expenditure on the administration has gone up enormously during the last few years: probably Hon'ble Members themselves do not realise the extent to which it has gone up. We doubt during the war there was great demand for the expansion of the activities of departments. But the curious fact here is that after the termination of the war the scale of expenditure on the administrative services is really more than what it was during wartime. I will just give one illustration. If you take General Administration, the total expenditure in 1938-39 just before the war—was Rs. 1,87,00,000 in 1944-45, which was the peak war year, it was Rs. 4,25,00,000. But curiously enough in 1946-47, it was Rs. 6,23,00,000 and in 1947-48 the budget figure was Rs. 6,14,00,000. This was of course the pre-partition budget, but the pattern will be applicable even to the post-partition budget.

# Scope for Economy

That shows that there is certainly very great scope for retrenchment and economy. But one word of caution must be uttered in studying these figures. There are two factors which have resulted in increase of expenditure over which we have no control. The first and the most important of them is the enormous increase in expenditure resulting from the acceptance of the recommendations of the Pay Commission and the higher scales of Dearness Allowance and pay that we have to give. So a great deal of that will be a reflection of this phenomeon.

Another factor which has contributed to increase in administration expense is the system of economic controls. The elaborate mechanism of controls that we maintain is really costing the country quite a good bit of money; but when we succeed in our measures of decontrol this item of expenditure will automatically go down. Notwithstanding these two factors—the importance of which should not be ignored—I feel certain that there is still scope for economy in expenditure.

\*\*

ne newly reconstituted in Tariff Board. (L. to K.) 3, V. Narayanswamy Naidu aber) Mr. G. L. Mehta ident) and Mr. H. L. Dey (Member)

13

In the nation-building departments the expenditure has no doubt gone up enormously. For instance, in departments like Scientific Departments, Education, Medical, Public Health, etc., the pre-war expenditure in 1938-39 was Rs. 2.17 crores, in 1947-48 it was Rs. 18.03 crores. But that is developmental expenditure about which we need not quarrel.

Hon'ble Members were disappointed that I did not make any reference to the need for economy in my Budget speech. I was fully conscious of the need for economy, in fact it was my intention within a few weeks of my assuming office to appoint an economy committee. But on account of the great cataclysm that overtook us I thought the time was not appropriate to set such a committee in action.

I have now decided to set up very shortly an economy committee which will examine the entire field of administration covered by the activities of the Central Government. In fact I have already given instructions to the Ministry of Finance to prepare the necessary memoranda and documents so that when the committee is actually appointed within the next month or two the work could be done in an expeditious manner.

I have no doubt that the economy committee will keep in mind the desire expressed in all quarters of the House for the utmost economy and retrenchment in expenditure consistent with efficiency.

There is only one other matter about which I should give a reply. Hon'ble Members rightly criticised the expenditure under the Ecclesiastical Department. The position, I am told, is this that all the British Chaplains will go away before the end of this month, and we are bound to incur expenditure on the maintenance charges of churches and cemeteries only up to Mar. 31, 1948. Thereafter this charge will not fall upon us and Hon'ble Members will have no room for criticism. I have no doubt that the house will feel satisfied from the expression of my own opinion that I am one with them in searching all avenues for economy in expenditure.

MR. B. DAS: Sir, I ask for leave of the House to withdraw the motion.

The motion was, by leave of the House, withdrawn.

A meeting of the Joint Defence Council was held at Government House, New Delhi, at 11 a.m. on Dec. 22.

Those present included Earl Mountbatten of Burma, Pandit Jawaharlal Nehru (Prime Minister of India), Mr. Liaquat Ali Khan (Prime Minister of Pakistan), Sardar Baldev Singh (Minister for Defence, India), Mr. Mchammed Ali (Secretary-General, Pakistan), Mr. H.M. Patel (Secretary, Ministry of Defence, India), Lieut-Col. Iskander Mirza (Secretary, Ministry of Defence, Pakistan), Gen. Sir Rob Lockhart (Commander-in-Chief, Indian Army), and Gen. Sir Frank Messervy (Commander-in-Chief, Pakistan Army).

# BILL TO AMEND INCOME-TAX AND B. P. T. ACTS

N the Constituent Assembly (Legislative) on Dec. 3, the Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance, moved that the Bill further to amend the Indian Income-tax Act, 1922, and the Business Profits Tax Act, 1947, be taken into consideration. He said: There is nothing new or controversial in this amending Bill. It is only intended to clarify the original intention of the Business Profits Tax Act and the Capital Gains Tax, and to rectify certain drafting errors and omissions. The best way of dealing with this Bill will be for me to explain briefly the object of the two clauses.

Clause 2 is intended to make certain drafting amendments relating to the Capital Gains Tax. It was the intention that capital gains arising out of sale of agricultural land situated in the provinces of India should not be subject to the Capital Gains Tax. But it was not intended that if such agricultural land was situated outside the provinces of India, they should also be exempted from the operation of the Capital Gains Tax. The object of exempting from the operation of the Capital Gains Tax the sale of land in the provinces of India is that the income from such land is considered as agricultural income and therefore not subject to our income-tax. The agricultural income-tax derived from lands situated for example in an Indian State is, however, not exempt from the operation of our Indian Income-Tax Act, and therefore we want to provide by their amendment that any sale of land situated outside the provinces of India, if it results in a profit to the owner of the land, that profit will be subject to the Capital Gains Tax. That is the purpose of clause 2 (1) sub-section (a).

### Object of Amendment

Sub-Section (b). In the original Bill it was provided that only capital gains arising in the previous year for the asses-ment year 1947-48 should be chargeable. In the Select Committee, however, an amendment was made limiting the liability only to profits arising after March 31, 1946. A consequently amendment in the explanation to clause 6 (a) of section 2 was unfortunately overlooked. The objects of the present amendment is to rectify that error so that the intention should be made clear, namely that if a company distributed dividends out of capital gains made prior to April 1, 1946, such distribution out of capital gains will not be chargeable as dividends in the hands of shareholders. That is the object of clause 2 (1) (b).

Now I come to clause 2 (1) (c). This amendment relates to capital gains where the assessee acquires the property by succession, in heritance or devolution. Under the Act as it stands now, the value of the property is its cost to the owner, but if a person acquires it by succession, inheritance or devolution, he has not paid any price for it. Therefore, there is no value that he has paid. Now it is

intended to provide that in such cases th value will be the cost to the previous owner. That is the object of this clause

Now these three amendments cover the Capital Gains Tax. Clause 3 relates to certain amendments to the Business Profits Tax.

# **Business Profits Tax**

Clauses 3 (1) (a) and (d). These have got the following objects. This proviso existed in section 5 of the Excess Profits Tax Act 1940 but was omitted in the Business Profits Tax Bill as in the Bill originally drafted the abatement was fixed at a sum of Rs. 1 lakh in all cases without any reference to the capital or other circumstances of the business. It was also considered that the substantive clause 5 of the Bill secured that the application of the law would not be wider in scope than that of the IncomeTax and Excess Profits Tax Acts. Changes were made in the Bill by the Select Committee, and during the passage of the Bill the Act as it emerged varied the abatement in the case of a firm according to the number of its working partners subject to a maximum of Rs. 2 lakhs, and in the case of a company at 6 per cent. of the capital computed in accordance with schedule II, subject to a minimum of Rs. 1 lakh.

In the case of a company the entire profits are not chargeable to Business Profits Tax. It is necessary that the capital for the purpose of abatement should not be the entire capital but should be in the same proportion as the amount of its profits chargeable to taxes bearing to its total profits. In other words the capital of the company is to be reduced by an amount which bears to the capital the same proportion as the amount of profits not so chargeable bear to the total profits. This explaining the fourth amendment inserting rule 2 (a) in Scdedule II relating to the computation of capital.

In amending Schedule II, opportunity has also been taken to insert a proviso which existed in section 5 of the Excess Profits Tax Act to make it clear beyond doubt that where a part only of the business is chargeable to Business Profits Tax, such part would be treated as a seperate business. Clause 3 (1) (b) enables the Income-Tax Officer to call for a return not only of the profits on business but also of the taxable profits.

Clause 3 (1) (c). The third amendment to section 19 of the Business Profits Tax Act is to enable the Central Board of Revenue to prescribe by rule the necessary formal modifications in those sections of the Income-tax Act which under the law are applicable to the Business Profits Tax Act. As section 19 now stands, it makes certain provisions of the Income-tax Act as applied to the Excess Profits Tax Act, 1940, also applicable to the Business Profits Tax Act, but those sections of the Income-tax Act as apply to Excess Profits Tax are unsuitable for

(Continued on Page 57)

# RELIEF AND REHABILITATION OF REFUGEES

# Pandit Nehru's Statement in Legislature

SPEAKING in the Dominion Legisture on Nov. 29 on the motion rolating to the Relief and Rehabilitation of refugees, the Hon'ble Pandit Jawaharlal Nehru, Prime Minister, said:

Sir, the exports have spoken and others who have intimately been in touch with this problem have given us the benefit of their advice and criticism. There has been some praise of Government and plenty of criticism, and I think probably there is a great deal of truth in both. For my part I feel, not only myself but speaking on behalf of the Government, a certain inadequacy in having to deal with this problem because, however efficient or however able or competent a Government we might be, the problem is so big that one is aptrather to qual before it.

I do not know what in future might be said about the handling of this problem not only by this Government or by the East Punjab Government or by this llouse or by all our officials and others; but I do think that in future history it will be said that vast and colossal as this problem was—something which might shake the very foundations of Government and the social order—the people of India stood up to it bravely, tackled it and, I hope, ultimately solved it to the advantage of the nation (hcar, hear), for after all no Government, however good it may be, can tackle such a problem without a vast amount of public support.

It is essentially a problem in which the co-operation of vast numbers of people is required. We have got into the habit in past days or past periods of thinking too much in terms of a Government doing this or not doing it, of blaming a Government for this or that. Now I do believe that a Government must shoulder their responsibility.

## Full Responsibility

My hon'ble friend Mr. Aney asked the quastion whether we want to make ourselves responsible for the rehabilitation of all these people fully or just temporarily. Well, if he wants an answer I should say that any Government of India should make itself responsible for the well-being of every Indian in this country, and not temporarily responsible but permanently responsible.

But it is all very well for me to say that and I know that in this country vast numbers of people are starving or have no houses, are poverty-stricken and all that; but the point is that we as a Government and we as a House must realise that it is our responsibility that every Indian should have food to eat and a house to live in, and education and opportunities of progress.

If that is so for everyone in the country, certainly it is so for these unhappy

countrymen of ours who have sudden found themselves lost in the storm th arose. We recognise that responsibility fully. How far we shall discharge it is a matter of our ability and strength, and the country's strength, and it is a little difficult for me to be definite and precise about it.

# Psychological Aspects

We have heard in today's debate a great many points raised on the practical aspect of the question I should like to draw the attention of the House to certain other and psychological aspects if I may say so. When any great catastrophe comes, a Government or a country tries to ameliorate the lot of the sufferers; they address themselves to their task with all their strength. The process of healing starts immediately after the catastrophe. Here we have been dealing with a very peculiar state of affairs, the catastrophe was a man-made catastrophe—not a natural phenomenon like earthquake or some other calamity like that—and all the evils of man's passions followed it throughout and follow it still, so that while we tried to heal, the process of destruction went on.

On the one side there was a process of building on the other, of breaking up, actually—physically even more senin men's hearts. All the time many of us thought in terms of helping certainly, but also in terms of hurting others, and when you mix up these two feelings the result is that the helping part suffers. You do not create that proper atmosphere of helping and rehabilitation and building up when half your mind is turned to breaking down and hurting others.

There has often been talk of retaliation. In fact all this sorry and terrible business that has happened in these three or four months everywhere might be put in one word—" retaliation". Each person, each group, apparently thinks of retaliating so as to protect one's own interests. Now it passes my thinking and imagination how anybody can think that in the state of affairs that we have to face in India today, we can help our cause by widespread or small-scale re-taliation. I have not a shadow of doubt that if, as soon as the catastrophe overwhelmed us, most people had thought in terms not of retaliation but of healing and stopping it. 75 or 80 or 90 percent of this business would have been stopped. But we did not-I am not talking about this House of course; I am talking about the passions that were roused in this

People thought that they would protect their interests or the interests of their dear ones by hitting out and hurting others and thus by this process of retaliation possibly bringing presure on the other party. Exactly the same feeling worked all over the place on both sides with the result that every act of retaliation brought further retaliation and the vicious circle went on.

Pandit Jawaherlel Nehru

And yet I find people talking in terms of retaliating and yet I find newspapers and others blaming this Government for not adopting a retaliatory policy. I want to say quite clearly that so far as this Government is concerned, it is not going to adopt the method of retaliation. Of course every Government has to protect the interests of its citizens, of those who look to it for help. We are going to protect them by every means. If they are attacked or if they are injured it is our business to protect them in every way. But we do not think—leaving out any higher plane of action—even in the narrower plane of expediency and self-interest that the way of protecting is the way of retaliation and injuring others.

# Major Causes

I do not know if Members of this House or others outside when they talk or think about these problems give much thought to any future picture of India that they may have before them. After all, unless we have some such picture, what are we aiming at, what are we working for, and what kind of edifice are we constructing? It is important that we should do so because when we are dealing with millions of people who have lost everything and we are trying to help them and rehabilitate them, we must have some picture.

I am not merely talking in terms of actual rehabilitation, which is very important, but something even further than that. What exactly are we aiming at? We have seen a terrible operation—the cutting up of the living entity of India—and we have seen the still more terrible consequences of it. We may blame this or that individual—and no doubt many persons and groups have

been terribly blame worthy but something that has happened has been on such a cataclysmic scale that it passes human blame. It is in the nature, if I may say so, of some mighty tragedy of which the Greek dramatists have written, which comes and envelopes and overwhelms a nation and where human virtues and human foelings somehow count for little. This is a big thing that has happened, so that mere blame does not help nor saying that it is the result of so-and-50's ill-will or action.

In tracing these events it is easy enough to know, and we all know, what are its major causes. Nevertheless, the thing that has happened has been so big and so all-round in its evil nature that it does little good to excuse oneself by blaming this or that person. Let us be quite clear about this. Whatever the origin, whatever the initial errors and crimes that may have been committed, what has happened on either side in the Punjab has been terr ble in every sense of the word. And the most terrible part of it has been the psychological partfrom injury to poverty; injury to all manner of things, even injury to life. The terrible thing is how it has perverted men's minds and perverted the minds possibly of the younger generation that is growing up scoing these herrors.

# **Healing Process**

Now, what is the kind of picture that we have in our minds? What are we building for? Are we building for conflicts, wars, destruction and the rest, to satisfy a feeling of vengeence which may be justified? Or are we building for some other type—building for peace and ordered progress? For my part, I have no doubt at all about this.

Again, not from any high moral ground, but from the narrowest ground of expediency and the national good and the ind.vidual good, if we try to lay stress on the destructive part, on the vengelul part, on the retaliatory part, we shall build nothing at all. We shall carry on this misery and this trouble till some time or other the nation turns to other progressive acts.

Looking round, personally I see definite signs of the healing process starting. Probably that is a more hopeful thing than all the work that this Government or anybody else might ever have done. That healing process has started—no doubt every process tarts because of individuals working to that end—but probably it has started by the reaction to the shock of events, ultimately and gradually. As the pessions of the moment have cooled, people have begun to think a little more deeply and realise the folly of much that has been done.

May I say one thing rather personal, if I may say so? It has been a terrible time for those who had to shoulder any responsibility. It has been, no doubt, a terrible time for any sensitive human being who lives in India. The name of India—and when I say 'India' I am not referring to the Dominion of India but this country of India which will remain India, whatever political divisions may take place—became mud because of what many Indians had done, and Indians still

live in Pakistan and they continue to be Indians, whether they call themselves so or as Pakistanis.

The curious position arose that those of our detractors and enemies who live abroad and who often have to manufacture all manner of stories and tales against us d'd not have to manufacture anything. Reality was so bad. All that they had to do was to quote one person against another. All that they had to say was what certain persons in Pakistan wrote about India and what certain persons in India wrote about Pakistan.

Now, we need not balance that, I am merely saying that what appeared in foreign countries was just quotations from what Indians said against each other. Now, it may be, and I believe it is, that whin such things occur, there is a measure of right on one side, more right and perhaps a measure of less evil or more evil on the other.

I need not tell the House what my opinion on this subject is, as to where more right lies or more evil. But the point is that so far as the outside world is concerned, it is there—this mudslinging, there acts, these horr ble acts. Sometimes there may have been true statements. What could they think of India then? We may have been interested in clearing our honour as against Pakistan and the Pakistan people no doubt wanted to show that they were not evil-doors but the fact remained that whatever the rights and wrongs, the whole reputation of India suffered and it became a dreadfully difficult thing to clear that reputation.

Blood had flowed and many millions of people had shed tears in the country. It was not easy to wipe ourselves clear of that blood till at last we approached the question, not in the way we had been approaching it, but in a spirit of healing,

and not a spirit of revengeful retaliation or of recrimination, although recrimination may have been justified. Retaliation does not help. That is the first point which I venture to place before the House regarding the spirit in which we should deal with the problem.

The second point—and it is also related to the first one—is that in these days when we lived fevered lives, speaking personally, I do not think I could have carried this burden at all but for one fact, and that fact was the magic presence of our great leader, Mahatma Gandhi. I have not a shadow of a doubt in my mind that just as he performed a miracle in Bengal, so also he performed his miracle here. The obvious miracle may not have occurred here, but nonetheless there was the miracle of his presence which affected the situation tremendously. I would beg of you, therefore, to consider this problem in this context in regard to the future of India.

### Broader Things

Now, coming to the problem directly, I would mention two essential facts of it which I consider most important. We have to look after the refugees, do this and that for millions of people, but whenever there is a huge problem one inevitably has to give certain priorities. Talking about everything, trying to do everything, means sometimes that you do nothing at all. What are the obvious priorities in this problem? I say the obvious priority is that the youth, the students, young boys and girls should be saved, because after all the future of India depends upon them. All honour and respect to the older generation who are suffering, but the first priority must go to the youth who should be saved not only from the point of view of life, but saved from the point of view of broader things. They must be educated,

# Technical Training Facilities for Refugees

WITH a view to facilitating their settlement in life and to help meet the shortage of artisans who are urgently required for reconstruction work in East Punjab, the Government of India have sancticaed a scheme for imparting technical and vocational training to a selected number of adult male refugees from Western Pakistan. It will come into operation with immediate effect.

The existing training centres for ex-Servicemen in Delhi, Ajmer-Merwara and East Punjab are going to be opened to the refugees and four new centres will be started in East Punjab in consultation with the East Punjab Governments.

To start with, the training will embrace 12 trades including smithy, carpentry, bricklaying, fitting, gas-welding, watch-repairing, mechanical draughtsman-ship, manufacture of footwear, tailoring, etc. The scheme contemplates provision of 2,272 seats, of which about one-half will be immediately available. The selection of candidates will be made by local selection committees;

presided over by the Regional Director.

The period of training will vary from trade to trade and from individual to individual but, on an average, it will be six months

During the period of training, the trainees will receive a consolidated allowance of Rs. 40 per month, in lieu of board, lodging and stipend. In addition, trainees undergoing training in technical trades will receive quarterly a free supply of workshop clothing, or an allowance in lieu thereof. In addition, free medical treatment will be available at each centre.

Trainees who report at the centre will be paid a single third class railway fare from their place of residence to the centre for joining and, on completion of training, from the centre to their place of residence.

Refugee candidates who wish to take up training under the apply at the nearest Exchange or District Office.

they must be looked after and they must be made proper citizens of India.

I think, if I may even as a Member of the Government criticise our own Government, that we have not paid sufficient attention to this aspect of the problem. We have, of course, generally speaking, but I think far more attention should have been given to this aspect.

We should concentrate our attention, even though evil may befall others, as in a war or some other calamity, to the saving of these children—boys and girls and students—and provide for their education and their future. That, of course, is also a big problem, but it must be tackled because the whole future of India depends upon them.

### **Abducted Women**

The second, though it is not second really, it is at least as important, is the saving of our womenfolk who have been abducted. When I say that, let me repeat again, this is not a one-sided problem. Women have been abducted in both the Punjabs and elsewhere. Women have been abducted by the thousands, not a few cases. Nobody knows the exact figures, but if you know the estimated figures, both for West Punjab and East Punjab, you will be staggered at the number. Therefore, one of the highest priorities should be given for the relief of these women.

Of course, attempts have been made and thousands have been rescued, but tens of thousands still remain. Now, this work cannot be done easily without the full co-operation of the two Governmonts in the Punjab. It cannot be done otherwise. You can take an army and march in and you may conquer and defeat the enemy, but you don't rescue anybody thereby. Therefore, we have to approach this problem from the point of view of co-operating with each other and, naturally, all parties are concerned in that co-operation. In a certain measure we have achieved that cooperation, but not enough yet. I hope that within the next few days a more efficient organisation will grow up in co-operation with both Governments for the rescue of these abducted women. These two aspects I specially place before the House for consideration.

# **East Punjab**

One thing more. We want to render all possible help to those people who have suffered. Members of the House have pointed out that if you can spread out the families in all the 700,000 odd villages of India, you can absorb them. That is very interesting, this mechanical calculation, but I don't think it takes us any distance. One way of looking at it would have been, which I think has not been considered in that way obviously, to tackle this question of temporary shelter for people. What did they do, it has been asked, in wartime in various countries where they had to deal with vast numbers of refugees? They were in the military fashion spread out to various families; each family had to take one or two members. The burden was distributed just like armies are distributed in that way.

No particular attempt has been made

Lady Mountbatten discussing refugee relief with the authorities of the Kuldip Refugee Camp in Ambala which Her Excellency visited recently

to think of that problem in that way. Take East Punjab. It has suffered greatly, but they have their millions of people living there. Why should not each family in the East Punjab accommodate one other or one, two or three persons. That would accommodate a million or two million persons. Let the Government help them, if necessary. Let them help them by money or by food or whatever it is, but immediately millions should be accommodated or be helped to spread out and then you may think about permanent arrangements.

Unfortunately, to some extent, our social conditions do not fit in with this kind of thing. People do not like these difficulties to arise. They can accept somebody and not somebody else. You cannot do it at the same time as they did in Europe during the war. It is a matter worth pursuing. Your problem of temporary accommodation becomes less, not only lesser if you spread out these people; these vast camps that have grown up.

Sccondly, there is this business of large numbers of refugees going into the rest of India. Now the rest of India ought to do everything in its power to help them. That is true. Apart from vague statements and heroics, let us examine the problem from the merits. If you look at the East Punjab population—I won't go into all these figures; I will give you the result of these figures—the pre-migration population of East Punjab is likely to be one million and a half less after the migration. For various reasons, whatever the population was, there were more Muslims going out and less Hindus and Sikhs coming in. The effect is about 600,000 Hindus and Sikhs

from the West Punjab have spread shout over the rest of India and that, unfortunately, large numbers of people have died and so on and so forth.

The result is that at the very least the population of East Punjab after these migrations will be one million and a half less than it was before; it may be more or less. Now, therefore, if that is so, then the question of large numbers of refugees from the Punjab not finding room in East Punjab does not obviously ariso. The question arises in another way.

## Prosperous Punjab

The Punjab used to be in a sense the most prosperous Province of India, from the middle-class point of view, from the peasant proprietor's point of view. In West Punjab, the average holding was, let us say, 20 or 25 acres of very good land.

They have not got that in East Punjab, neither good land nor the big holding. They are providing with I believe 10 acres, not so good land and there is the complaint. We cannot do with 10 acres.

When friends suggest that land should be given in the United Provinces or in the C. P. or Bengal, or wherever it may be, certainly if land is available it should be given. It has to be remembered that the average holding of the United Provinces is 2½ acres so it comes to this. In order to provide two persons with a room, you put them in a room where there are ten persons. You are putting two more in it.

We cannot be vicariously generous, we cannot be a greater burden on the poverty-stricken people of any place merely because you want to be generous. Let us be generous, but not obviously because, apart from everything else, this is going to give rise, as it is giving rise to grave discontent in various ways and an unfortunate tendency to dislike these refugees coming there. We do not want that to happen. This kind of thing sows seeds of bitterness for the future. Therefore, the problem has to be examined in all its aspects in this way and the burden has certainly to be spread out the financial burden and the burden in many other ways is, of course, being borne by the whole of India today and it will be borne.

## Urban Dwellers

But this business of taking land where there is none and giving to somebody something is not a proper way of giving relief. So far as the question arises, I see no difficulty. I think the land in the Punjab, including, of course, the States in the Punjab, is enough. The problem will arise in regard to the urban dwellers and I think we should try to absorb them and help them in every way in other parts of India also.

In fact, cities can be built in East Punjab—and will be built—which will absorb them, so that the problem, if analysed, is not so big or difficult of solution. People seem to think that somehow EastaPunjab is a tiny little place where people have not got room

to stay in and, therefore, they should spread out all over the place. The East Punjab from any Indian standard is not only enough but bigger from the population of India point of view to absorb those who come. But from another point of view the Indian and the urban point of view, it is not big enough to absorb it.

It is perfectly true at the same time, that the population of big cities cannot be absorbed in a few villages in East Punjab. That is a big problem and we must at any rate act promptly. We shall be able to solve it by not only building cities in East Punjab, but by taking them to cities in the rest of India having colonies, suburban areas, etc. As a matter of fact, the Punjabees fortunately are a very enterprising people, more so than, if I may say so the people in most parts of India. To them is due the prosperity of their province and with the help that they are obviously going to get from the State, I have no doubt they will make good far more rapidly than probably any other people in India might have done.

So big as the problem is, I do think that there is nothing in it which should really frighten us. But if I may come back to what I began with and say if we tackle this problem in a spirit of retaliation, we get into trouble.

Here in the City of Delhi there are

too,000 people who are refugers. All the time we are having trouble in regard to housing and there is a continuous pressure on owners of Muslim houses, where Muslims still dwell, to push them out. Now from any point of view, Government or other, it is highly improper to think that residents of Delhi, because they are Muslims, should be pushed out it is unbecoming to put up with it. It is unbecoming for the Delhi Administration. No nation, no Government, no country can carry on if it follows that kind of policy. If a national requires protection he must be given that protection, whether he is a Hindu or Muslim or anybody.

Now it is true that there is pressure of refugees coming in and the difficulties arise which in some cases are unfortunately insoluble. We must be clear about it and the Administration must be quite clear about it, that you do not solve the difficulty by creating another difficulty. That is not the way of solving the difficulty.

May I finally say that in regard to some of these problems, as Members will no doubt know, the All-Ind.a Congress Committee met some days back. They gave thought to that and they passed certain resolutions. Some of those resolutions may be termed 'unrealistic' in part, may be, nevertheless they wanted to emphasise that outlook and I want to say that we as a Government entirely adhere to that policy and will try to follow it.

Inmates of the Kuldip Refugee Comp, Ambala

# Mr. K. C. NEOGY ON MAGNITUDE OF REFUGEE PROBLEM

OVING that "the problem of the relief and rehabilitation of refugees be taken into consideration", the Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation, asid in the Dominion Legislaure on Nov. 29 that the magnitude of the refugee problem has been such that there has been no historical parallel to it. Nowhere in history has a transfer of population of such dimensions taken place in such a short time and under such circumstances.

The House will also realise, he continued, "that the Government was faced with this problem at a time when the administrative machinery was partly out of joint as a result of the partition, and we had hardly settled down to the task of the governance of Free India. The problem that faced us in so far as refugees are concerned was not really one problem, but literally scores of problems, each one having an importance and urgency of its own. I would like to tell the House of our short-coming, or our frustrations and of our frustrations and of our frustrations behaved in a large degree by Pakistan authoritics, and against the background of this bleak picture of our modest achievements.

#### Evacuation

Today we have recovered over four million non-Muslims from West Pakistan. The Military Evacuation Crganisation, started active operations on S.p. 4 and has evacuated so far by rail, by road transport and by foot 2,583,000 persons. Some five lakhs had come out before Aug. 15 and it is estimated that enother eight lakhs came out between Aug. 15, and Sep. 4. It may be said that over five lakhs still remain to be evacuated, but no accurate figures are yet available and this is a matter which is still the subject of investigation. Amongst those that remain to be evacuated about 50,000 are in the N. W. F. P.

Prom Sind out of a total non-Muslim population of 13 to 14 lakhs, about three lakhs have already come out. We provided all available shipping to promote evacuation from Karachi. With the assistance of the Jodhpur Government we had arranged for refugee specials to be run from Hyderabad (Sind) in addition to the scheduled trains.

## **Abducted Women**

In regard to the non-Muslim population still left behind in Pakistan, I would like to emphasise that there are three classes of persons who have been engaging our serious attention. There are abducted women, persons forcibly converted to Islam and the Harijans.

In regard to abducted women we have to depend on the active assistance of military authorities, d.st. ct authorities, women social workers and prominent persons of the locality concerned. Such activity must be organised on both sides of the border and must be complementary. A machinery for this purpose is already in operation and further proposels have been made to the Pakistan Government for the enlarging of such machinery and in the light of the reports we are receiving I am hopeful of some co-operation.

The problem of the Harijans still remaining in Pakistan is engaging the earnest attention of the Government. The Government recognise that the economic position of this class of people is such that they could not themselves move in the matter of leaving Pakistan and getting over to India without special assistance. It also seems l.kely that the services that they have been rendering to the people in the area in which they are living would make the Pakistan authorities unwilling to assist in their evacuation. I can assure the House that everything that is possible for this Government to do in this connection will be done.

Broadly speaking, the question of relief and rehabilitation of refugees not to speak of other ancillary problems that haffle classification can be classified under the following heads:—

Reception to refugees at the time of their arrival from Pakistan.
Provision of adequate shelter.
Provision of food.
Provision of clothing,
Medical relief.
Disporsal of refugees,
Resettlement of refugees in rural areas and finding employment for them..
Sottlement of urban refugees.

## Rains and Floods

I now turn to the question of affording relief to the refugees and would at once admit that the magnitude of the task with which we were faced was such that it was impossible to achieve any high degree of perfection. I do not cla m that the present arrangements are anywhere near being as good as I would like them to be. All I cla'm is that we and the East Punjab Government have put out our maximum effort. After making allowances for the disorganisation and disruption of governmental machinery in the affected areas and the abnormality of conditions under which the Government was working, I feel that the East Punjab Government have done their best.

The provision of adequate shelter for the incoming refugees is proving one of the most baffling of our problems. All available educational, religious and charitable institutions were impressed into service for the accommodation of refugees. Surplus military barracks, wherever available, were utilised for this purpose. It is needless for me to add that a large proportion of refugees have found accommodation with friends

Mr. K. C. Neogy

and relatives. Tents that were available were, or are being, put out for this purpose to provide accommodation by some amount of squeezing to about seven lakhs of persons.

As soon as it became apparent that exchange of population between East and West Punjab had become inevitable and that many of the refugees entering India were coming in with nothing except the clothes that they had on, Government took immediate steps for securing blankets, quilts and such other warm clothing as were available in the market. Orders were placed for the supply of nearly 10 lakhs of quilts and over three lakhs of blankets for free distribution amongst indigent refugees. Orders were also placed for the supply of two and a half lakhs of cotton-filler coats and three and a half lakhs of jerseys.

## Clothing from Abroad

About 1,25,000 fbs. of knitting wool has been issued to the Provincial Governments for distribution to the various voluntary committees and societies in their areas for knitting jerseys. This, it is expected, vill enable Government to secure six lakhs of jerseys and bandis ready by the end of this month (Nevember). Arrangements have also been made for the supply of about 40 lakhs yards of various kinds of cloth for the use of refugees. Ready-made garments such as shirts, shorts, trousers numbering about 20 lakh pieces, have been obtained from the Director-General of Disposals and are being rushed to East Punjab for the use of refugees.

Apart from the efforts of Government in the matter of obtaining clothing, large quantities of old and new readymade garments, blankets, etc., are being received from all over India and

abroad. In Delhi the Cloth Collecting Committee of the United Council of Relief and Welfare is collecting clothing and organising knitting parties. Government have also waived the levy of customs duty on gifts parcels received from abroad and also exempted such parcels from the payment of railway freight and postal charges.

Government in consultation with the East Punjab Government, has prescr.bcd a standard ration scale for refugees who are in camps For the use of refugees in the Kurukshetra Camp, Government is sending approximately 80 tons of atta per day. On account of the damage to the *kharif* crop, the food position of East Punjab has deteriorated considerably. In order to assist the East Punjab Government in the matter of food, the Central Government allotted 10,000 tons of food grains in October, and 16,000 tons in November. These allotments are exclusive of the despatches to the refugee camp in Kurukshetra. On receipt of information that in some places in West Punjab the non-muslim refugees were starving, Government has on several occasions to rush food supplies to them by air or road. Spiendid efforts on the part of Delhi public made it possible on three such occasions to fly several aeroplanes loaded with cooked food for the starving Hindus and Sikhs in different refugee camps in Pakistan.

"Up to Nov. 18, medical stores to the extent of over 76,000 lbs. have been supplied not only to East Punjab, Kurukshetra and Delhi, but also to non-Muslim camps in West Punjab and Kashmir. Over 70 lakh dozes of vaccine have been supplied to East Punjab. Thanks to the energetic steps taken by the Health Ministry, and the personal attention given to the matter by my colleague, Rajkumari Amrit Kaur, there was no serious outbreak of any epidemic. As in other fields, here also voluntary organisations have been of immense help to Government. A large number of doctors and nurses have been provided by such organisations and they are doing splendid work in many parts of the country.

## Dispersal of Refugees

Immediate dispersal of refugees, if not on the basis of resettlement, at least on the basis of temporary shelter and care, is our first object. On Nov. 24, a Conference of Prime Ministers of a number of Provinces and representatives of a number of Indian States was convened and measures for the immediate provision of shelter in different parts of the country were discussed. I would be failing in an elementary duty if I do not acknowledge in this connection the splendid response of people all over India to our call for help to accommodate refugees, which has been the most heartening feature in an otherwise tragic situation.

We have decided on implementing almost immediately a programme of dispersal to various places such as Gwalior, Bharatpur, Kotah, Ratlam, Alwar, Indore, Bombay, the Central Provinces, Bihar, Orissa and Madras. The pace of dispersal is, however, limited by the number of trains that are available for the purpose. I have requested the Ministry of States to investigate immediately the possibility of

finding accommodation in Indian States in Fast Punjab. I am not satisfied that the accommodation available there has been fully taken advantage of. A conference of the Rulers of these States is likely to be held shortly to discuss this matter.

The natural desire of Punjab is not to move too far away from East Punjab partly explains the congestion in East Punjab, and the influx of a very large number of persons in Dell.i and in the U. P. The stage has now been reached when dispersal must take place if lives are to be saved during the next two or three months and any progress is to be made with the tasks of resettlement and rehabilitation.

#### Allocation of Lands

There are several States which are prepared to absorb agricultural refugees in their economy. While East Punjab is expected primarily to undertake the rehabilitation of refugees from West Punjab, men from the N. W. F. P., Sind, Baluchistan and Bahawalpur State have no special place to go to. It has, therefore, been decided that accommodation in some of the States and Provinces outside East Punjab should, as far as possible, be reserved for refugees from the N. W. F. P., Sind, Baluchistan and Bahawalpur. It is estimated that over one lakh persons will be absorbed by Provinces and States outside East Punjab, in addition to those that have already found refuge in those areas—and their number runs into several lakhs.

It is estimated that out of the 42 lakh refugees arriving in India, about 30 to 32 lakhs will be from rural areas. They must be settled in villages so as to enable them to pursue the occupation they are

accustomed as agriculturists. as agricultural labourers or as artisans. It has been decided that lands vacated by Muslims in East Punjab should be allotted to non-Muslim refugees for the period up to rabi 1948. The allotment is to be made on a group basis. The Deputy Commissioners are, however, authorised to make a departure from this general rule in the case of gardens and well-irrigated lands. It has also been decided by the East Punjab Government that refugees arriving from certain districts in East Punjab are to be allotted lands situated in particular districts in East Punjab, though it has not been possible to adhere to this scheme in all cases.

So far 20 lakh acres have been allotted to over two lakhs of families in East Punjab. It is obvious that agricultrists and village artisans, who have been deprived of all that they possessed, will need assistance from Government in the Matter of purchase of cattle, implements and seed. They will also require help for the repair of houses which have been left by the previous Muslim occupants in a dilapidated condition.

For these purposes, Government would desire Provinces and States to advance loans to such people and if the Provinces and States are unable to bear the financial burden, the Central Government will give them financial help. It is obvious that refugees who will settle down on land will stand in need of food for themselves and fodder for their bullocks till the next crop is harvested. It is our intention in such cases to give free grants to refugees, and the Centre and the Provinces and States will share the financial burden. The East Punjab Government has already sanctioned the distribution

# RECOVERY OF ABDUCTED WOMEN

N pursuance of the decision of the Inter-Dominion Conference to send mixed parties of troops and police for the recovery of abducted women and children, the Ministry of Relief and Rehabilitation has decided to organise a squad of over 100 women social workers to assist in this work.

Although the work of recovering abducted persons from Pakistan was being done by the Military Evacuation Organization (India) the desired results could not be achieved because interested parties carried on propaganda that the abducted women, after rescue, would not be accepted in their families again, in India. It was therefore considered advisable that women social workers should accompany troops and police to instill confidence in these women who are to be rescued.

Among other difficulties placed in the way of rescue was the fact that captors demanded ransom money for the return of non-Muslim women. Now, in accordance with the decision of the Inter-Dominion Conference recently held in Lahore, joint parties of military and police drawn from the Dominion of India and Pakistan will visit all the affected areas and rescue the abducted persons under the authority of the

Dominion concerned. The search will be carried on reciprocal basis in both the Dominions.

The Advance Headquarters of women social workers working on behalf of India will be in Lahore from where they will operate under instructions of Miss Mridula Sarabhai. The workers will be on the staff of the Women's Section of the Ministry of Relief and Rehabilitation and arrangements will be made for their board and lodging.

### Information about Whereabouts

In order to successfully rescue to all abducted persons, it is necessary that all persons having information regarding their relations who might have been abducted or forcibly converted in West Punjab and N.W. F. P. should supply this information immediately to the Information Bureau of the Ministry of Relief and Rehabilitation, 'P' Block, Raisina Road, New Delhi, if they have not already done so. Similarly, if there are people who have information regarding the present whereabouts of Muslim girls who might have been abducted and kept in East Punjab, they should convey the information to the Information Bureau of the Ministry in New Delhi.

of taccavi loans amounting to Rs. 1,57,50,000. Of these, Rs. 32 lakhs are for the purchase of bullocks, Rs. 25 lakhs for the repair of houses and Rs. 50 lakhs for the purchase of fodder.

Government are faced with the problem of rehabilitation of about 12 to 15 lakhs of people from urban areas belonging to all sections of the community. It is obvious that existing towns in East Punjab are incapable of absorbing this large number of urban population from West Punjab. With a view to accommodating refugees, steps have been taken to carry out repairs to houses and bungalows which were damaged. It has also been decided that allotment of residental accommodation in East Punjab will be made only to those who have come from urban areas in West Punjab.

It is estimated that there will be about 5½ lakhs of non-Muslim urban refugees for whom no accommodation is immediately available. These refugees will have to remain under canvas and in refugee camps for a longer period than others, until arrangements were made to absorb them in urban areas. In this context, schemes such as urban development of large cities, building of a new capital for East Punjab are being examined.

We have addressed all Provincial Governments and Indian States to consider immediately and report on \*1.A possibilities of suburban development in the vicinity of large towns and cities all over India. We have also requested certain States to give priorities to refugees in the matter of exploitation of business opportunities created by the evacuation of Muslims from those States.

# Registration of Refugees

According to an Ordinance promulgated in Delhi, a refugee must register himself within a specified period from the date of his arrival in Delhi. The registration work in East Punjab will commence shortly. While registration and tabulation results will take time to complete, plans for rehabilitation have not been held up on that account.

The registration of refugees at Delhi has revealed that there are a large number of highly educated, qualified and experienced refugees, suitable for being placed in employment all over the country. The task of bringing the talented refugees together and providing Central and Provincial Boards to find them employment throughout the country is now engaging the attention of the Ministry, and we propose to accept the offer of help that has come from the Tata organisation in this connection.

Employment Exchanges have been opened in Pelhi and Simla. Exchanges have also been opened in East Punjab and West U. P. at places where a large concentration of refugees has occurred. A large number of refugees have already been registrered by the Exchanges and many of them have secured employment. A Transfer Bureau has been opened by the Ministry of Home Afiairs and instructions issued to all Ministries that racancies should not be filled until it

has been ascertained that suitable candidates cannot be supplied by the Transfer Bureau. Up to the middle of November, over 8,000 refugees secured employment under the Government of India and in certain Provinces.

Training of semi-skilled and skilled persons is of the utmost importance in any programme of rehabilitaticn. The programme of industrial development requires that supply of trained manpower should be substantial. With this object in view it has been arranged that over 4,000 men will be immediately trained in Labour Ministry's centre for exservicemen in a number of technical and vocational trades. Large stocks of goods available in the Disposal Directorate have been frozen with the idea of utilising them for rehabilitation of refugees. The stocks cover equipment required for 27 different trades.

#### Loans to Students

Government has sanctioned an advance of a sum up to Rs. 300 to an individual in order to facilitate resettlement. These loans are meant for traders, business men, artisans, persons wishing to set up their own workshops or cottage industry. This scheme will be brought into operation almost immediately in the Centrally Administered Areas. The Central Government will be prepared to render financial assistance to any Province or administration which decides to adopt a similar scheme with such modifications as it may consider necessary.

A scheme for granting loans to students and trainees abroad whose guardians are no longer in a position to finance them has been sanctioned. An extension of the scheme to students in India is also under consideration. For holping big industry and business, proposals to have a Rehabilitation and Financial Corporation are under consideration in consultation with the Reserve Bank of India.

In order to provide facilities for refugees coming from Pakistan who have been unable to transfer their savings bank accounts to post offices in India, it has been decided to allow withdrawals from postal savings banks in respect of investments made prior to Aug. 14, under certain conditions.

The payment of advances to Central Government civil pensioners, who have come as refugees from Pakistan, has been authorised. Indian military pensioners have also been permitted to draw pensions subject to certain conditions.

All the various schemes of rehabilitation may help in mitigating the hardships to which refugees have been subjected, but there is no denying the fact that these are merely palliatives. Many of these refugees who were in affluent circumstances have been reduced to a state of penury. It is inconceivable that they will contentedly settle down to a standard of life which is far below that to which they have been accustomed in the past. The Government will undoubtedly try to do their best to salvage as much as possible of the assets left behind by such people in Pakisten. But there limiting factor to Government's efforts

in this direction and that is that—full and hearty co-operation on the part of Pakistan Government cannot be taken for granted.

Now, let me turn to some of the ancillary activities of the Ministry. We have an Information Bureau which, despite difficulties, defects and shortcomings, is now organised to render good service. We have a Fact Finding Organisation which is collecting authentic details of difficulties and hardships which non-Muslims in Pakistan had to endure. A large number of cases have been investigated and a number of witnesses have been examined. We have an organisation for registration of property claims. An Enquiries and Search Service working under the Indian Red Cross Society and St. John's Ambulance Unit is beginning to produce useful results.

Sir, no account of the activities of the Ministry will be complete without special mention of the Women's Section. All activities pertaining to women and children amongst refugees are now the special concern of the Women's Section, which is in charge of Mrs. Rameshwari Nehru as Honorary Director, who is not likely to spare either time or effort to start Homes for unattended women and children, place orphan children in Foster Homes, and take every measure for securing rehabilitation of these classes of persons. The organisation is already busy working on these problems.

# Voluntary Bodies

I cannot pass on without a reference to the work of the United Council of Relief and Welfare and the bodies affiliated to it. The bringing together of all these various voluntary bodies has been mainly the work of Her Excellency Lady Mountbatten. Apart from this, she has personally rendered great service in the cause of refugees, and assisted the Ministry in many ways for which she deserves the gratitude of the country. Some of the prominent bodies affiliated to this Council deserve mention. They are the Indian Red Cross Society, St. John Ambulance Unit, Friend's Service Unit Marwari Relief Society and National Christian Council. In addition to these bodies, the Ramakrishna Mission has been doing useful work at the Kurukshetra Camp.

The Congress workers have brought into being another organisation styled the Central Relief Committee, which under the inspiring leadership of its President, Shrimati Sucheta Kripalani, has rendered very useful service by organising certain camps in Delhi, besides looking after the reception arrangements of refugees arriving in Delhi.

Assistance has come from all quarters and in many shapes. I am very thankful for the useful suggestions I have received from individual members of this Heuse and from individual refugees themselves. I cannot adequately express my gratit de to the Advisory Committees attached to my Ministry for the valuable help I am continuously receiving from them.

Sir, I have tried in a small compass to give the House a glimpse of the nature of the problems and an account of what

(Continued on Page 67, Col. 3.)

INDIAN INFORMATION, JANUARY 1, 1948

# Mr. GOPALASWAMI AYYANGAR ON REHABILITATION

PARTICIPATING in the debate on the relief and rehabilitation of refugees in the Constituent Assembly (Legislative) on Nov. 29, the Hon'ble Mr. N. Gopalwami Ayyangar, Minister without Portfolio, said that the "very comprehensive" account given by Mr. Neogy was "a very modest description of the great work, that he and his staff—not excluding the I.C.S. members of it—have been doing during the last three months."

#### He continued:

If I wish to place anything before this House it will not be in connection with matters with which my Hon'ble colleague is more intimately connected; it would rather be matters which I have had to do something with after I came into the Government.

## **Urgent Needs**

Very soon after I assumed office and after I had had a little time to study the problems connected with East Punjab, I felt that one of the most urgent needs to be attended to was the speeling up of the evacuation of people from one Dominion to the other. That was forced upon me by more than one consideration. The first consideration was the large numbers that were involved; the second consideration was that the winter was near us. Therefore I thought that the best way in which i could be of assistance to my hon'ble colleague on the one side and the East Punjab Government on the other would be to take off their shoulders some of the burden that this particular aspect or the refugee problem forced upon the attention of Government. And therefore with the assistance mainly of our armed officers, very largely of my Hon'ble colleague the Minister for Transport and the Railway Board, with the assistance also of the Ministers of the East Puniab Government, we evolved an organisation which was calculated to organise this movement on a regular basis to bring about a complete transfer of population between the two Dominions in the quickest possible time.

This movement, after it had been organised, started on Oct. 21. On Oct. 20 the position was that about 28 lakh Muslims were in India awaiting evacuation and about 15 lakh non-Muslims had to be brought over to India from West Punjab and the Frontier Province. After that date we divided up the period that was before us into ten-day sections, and in each section arrangements were made both for evacuation by rail and for evacuation by foot and motor transport.

The House will be interested to hear how this scheme has worked. In the first ten-day period Oct. 21 to Oct. 31—six lakh Muslims entered Pakistan and about 5.5 lakhs of non-Muslins entered India. From Nov. 1 to Nov. 10, 6.5 lakh Muslims and 1.3 lakh non-Muslims; Nov. 11 to Nov. 21, 3.8 lakh Muslims and 1.8 lakh non-Muslins. Between Nov. 21 and Nov. 25 there were 7.7 lakh Muslims on the move and in transit to

# **OF REFUGEES**

Pakistan and there were 1.4 lakhs of non-Muslims on the move and in transit to India from the other side. So that about Nov. 25 the balance that remained to be moved was somewhere about four lakhs of Muslims from this side and about three lakhs of non-Muslims from the other side. After these dates the movement has been even more rapid.

# Agreeable Surprise

I must warn the House not to be too meticulous about examining the accuracy of these figures. I can only say that they are approximately reliable and we have obtained these figures from persons who might be considered to know most about the numbers involved. But this particular figure which I am giving you new as to what the state of things was yesterday, will prove a very agreeable surprise to you, assuming that the figures supplied are entirey accurate This is from our special Officer in Lahore.

The latest information indicates that in West Punjab there are only 40,000 refugees in concentrations awaiting evacuation. There is some difference of opinion about the number of refugees in pockets. The Military Evacuation Organisation estimates it to be 50,000 and our Chief Liaison Officer thinks it is about a lakh. Whatever the accurate figures may be, that shows that we have practically reached the evacuation of all refugees in West Punjab who were concentrated in camps either of a large size or of a small size.

As regards the figures of Muslims awaiting evacuation, I have not got those figures as late as yesterdny. But this is the figure which we got for the period ending Nov. 22. The Muslims that remain to be evacuated—the estimate of their number—was about 13 lakhs and the estimate of the time within which they would all reach Pakistan was as follows:

Between Nov. 21 to Nov. 30....5 lakhs Between Dec. 1 to Dec. 10....5 lakhs. Between Dec. 11 to Dec. 20....3 lakhs.

As a matter of fact a good many of them have moved in already by today. In order to speed up the movement of Muslims into Pakistan, as also to help the sick, infirm and old people to travel not by road, but by rail, it has been decided to keep the trains running till all of them have been cleared from this side.

"That gives you an idea of the amount of work that has been done in this direction and the bulk of the credit for it should go to the Military Evacuation Organisation of India. Their efficiency in this respect has been beyond praise and I wish to take this opportunity of publicly thanking them for the enthusiasm and energy they put into this matter. But what is more to their credit than

their mere efficiency is the manner in which they have obtained the co-operation of the Military Evacuation Organisation of Pakistan, and that has considerably helped in making a success of these movement operations.

Now, Sir, one matter that was mentioned by my Hon'ble friend, Mr. Mohan Lal Saksena, and that related to the Bahawalpur State. He stressed the need, and very rightly too of evacuating from Bahawalpur all those Hindus and Sikhs who wanted to get away from there to what they considered to be places of greater safety. We have hat this very actively under consideration. We recently had a contenue at which a deputation of Bahawalpur refugees now in the limited in the Bahawalpur State, and we discussed the whole matter with them.

But at the time in view of the offers of assurance which had been made by their Nawab, the representatives who met me were not in a position definitely to say whether those who had come out of Bahawalpur wanted to go back there, or whether those who were in Bahawalpur wanted to be evacuated from there. Time was given to them for the purpose of ascertaining the wishes of their own people and within the last day or two we have been informed that they would rather come out than go back. The matter is under consideration and we are evolving arrangements for the purpose of speeding up evacuation from there. In this connection you will be interested to hear what our Vilitary Evacuation Organisation has said on this point:

'We have at last succeeded in sending trains with Indian escort from Bahawalpur State. The first train carrying non-Muslims reached Fazilka on Nov. 20. We have been told that the State will in future collect non-Muslims at the various railway stations where the Pakistan Mititary Evacuation Organisation will be asked to send empty rakes to carry them to Fazilka.'

# Mr Munshi's Suggestion

I hope this is a definite admission on the part both of His Highness the Nawab of Bahawalpur and the Government of Pakistan.

l'aking that to be so, I think we should be able to run the necessary number of trains for the purpose of taking out those now in Bahawalpur desirous of getting out in the quickest possible time.

There was one important suggestion which was made by my hon'ble friend, Mr. Munshi, and that was that it would be desirable to make refugees and all the problems connected with them a Central subject and practically the administration of all the measures thas we undertake in connection with thit problem should be in the hands of the Centre.

Now, Sir, in a matter like this, it is necessary for us to proceed with caution. It is not always wise to do what for the moment and on momentary considerations we consider would bring about a better state of things than exists now. We have got to remember that whatever policy we may decide on at the Centre with regard to these problems, a great portion, the bulk of it, will have to be implemented by machinery for which we shall have to depend on the Provincial Governments in order to make the scheme work.

Now in a problem like settling people on land, it involves an amount of investigation and enq ury and exploiting of the information which is in the hands of the Provincial Government, and the Centre is not equipped for the task of doing that work with as much efficiency as a Provincial Government can if only it went about its business in the proper way.

Now, you may ask it has been suggested in the course of this debate that there are legitimate complaints against the manner in which the East Punjab Government has gone about this business. I would only ask the House to judge the East Punjab Government and the com-plaints that have been made against it with a certain amount of care and caution. The East Punjab Government got into office in a period of, what we call turmoil and it had to begin almost from the scratch. In spite of it and having been intimately connected with the manner in which it has been discharging its obligations, I have no hesitation in saying that it has given an account of itself which no Government which started its career under similar disabling conditions could have done better.

I ought to insist on this, because I am afraid it is too easily taken for granted that all that the refugees are now suffering can be traced to the inefficiency of the East Punjab Government, if not something worse. I am not here to say that the administration of the East Punjob Government has been perfect, nor is our administration altogether perfect. It is necessary to remember that the numbers it had to deal with, the crowds that poured into East Punjab during the weeks that have passed since Aug. 15. and the kind of problems that it had to face would have shaken any Government, even if it had been a well-established one which had been functioning for

Therefore, I thought it was my duty to stand up for that Government in this House, and, in doing so I am not unmindful of the fact that the working of that Government is capable of considerable improvement.

### Distribution of Business

I think my hon'ble friend. Diwan Chaman Lal, referred to the manner in which business had been distributed amongst the Ministers of the East Punjab Ministry. I think he said that more than one Minister was doing the work of two and a half Ministers. I rather think that one or two of them have been doing the work of four Ministers. At a time like this when they are faced

with problems of this colossal magnitude there is room for a reshuffling of the subjets amongst the different Ministers of the East Punjab Government so as to make the burden of each man something which he can tackle with efficiency. There is also room, in my opinion for an expansion of this Ministry and for placing the most important subjects of law and order and of rehabilitation in the hands of Ministers who are not hampered by burdens of a heavy character in other directions and whose honesty and computency will be above envil.

Having said that, I still would reiterate my position that within the resources at their disposal and in the conditions in which they had to work they have done will on the whole. The condition of East Punjab today is much better than it was two or two and a half months ago and a great deal of the credit for that should go to the Ministry and, if I may say so, to the Governor, who gives them an amount of guidance which is drawn from his wide and large experience as an administrator in this country.

# Safe Deposit Vaults

That was one point. There were a few other points which were referred to in the course of this debate and on which I would like to say a few words. The first is the controversy regarding safe deposit vaults, banks and prejerty. With regard to safe deposit vaults the House is in possession of what did actually occur. The question of banks is now under active consideration both in the Relief and Pehabilitation Ministry and the Finance Ministry. As regards property that also is under active consideration of all of them.

All these three subjects, which are of the most important character, have been set down for discussion with the representatives of the Pakistan Government at an inter-Dominion conference. This was to have been held more than a month ago but, owing to the illness of more than one Ministers of the Pakistan Government, it has had to be postponed.

The House will be interested to hear that I took advantage of the opportunities afforded by Mr. Liaquat Ali Khan's visit to Delhi to have a preliminary talk with him two days ago on all these problems and I might say that on the whole his reaction was favourable to a proper and just settlement of all these three issues. The present idea is first to have an inter-Dominion Conference at the Secr tar at level, that is to say, our officers will meet their officers and explore possibilities of settlement, and their report wil come up before an inter-Doning Conference of Minsters, at which w will take decisions. At the end of that it is hoped that the two Do r in one will be able to issue a statement of policy, which will be the same as between the two Dominions and which wo ld be mplemented by them without any reservation thereafter.

# Railway Movement

There was one matter connected with railway movement—a small matter—which was referred to by two representatives from the United Provinces and that was the ineffective kind of screening that was done at Kalanaur.

At this stage the Hon'ble Mr. Speaker recated the Chair, whi h was taken by Mr. M. Ananthasayanam Ayyanaer, one of the members of the Panel of Chairmen.

Mr. Chairman, let me refer to the criticisms that were levelled, I take it, partly against the railways, partly against the East Punjab Government and partly against the checking department. Kalanaur was fixed as the screening point after all the Governments and interests concerned had been consulted, because it was felt that that was a convenient point for getting down people from trains, which had been invaded by unauthorised persons, and keeping them at Kalanaur and allowing to proceed further on only those people who had to proceed to Delhi.

But as generally happens, and I

# Welfare of Refugee Women and Children

A Women's Section was established recently in New Delhi under the auspices of the Ministry of Relief and Rehabilitation for the welfare of refugee women and children with Shrimati Rameshwari Nehru as Honorary Director and Shrimati Hannah Sen as Honorary Secretary.

Replying to a question by Pandit Hirday Nath Kunzru in the Dominion Parliament recently, the Hon'ble Mr. N. Gopalaswami Ayyangar, Minister without Portfolio, revealed that schemes for training women in different crafts and professions were under consideration. Some of the crafts for which arrangements were being made were spinning and weaving, calico-printing, dress making, basketry and willowwork, fretwork and wooden toys, including rag-dolls, hand knitting and embroidery, soap making, preservation of fruits and vegetables, making of tin and linen buttons, bleaching and dyeing, weaving of newar, tape and borders,

typing, stenography and clerical and commercial work.

Similar schemes for training children were also being considered. Arrangements were also being made for starting a Women's Home in Subzi Mandi at Delhi.

Discussions took place between the Prime Ministers of India and Ceylon on the question of rights of citizenship of Indians in Ceylon. The various points of view were examined in a friendly atmosphere in order to arrive at a settlement acceptable to both countries. The broad principles governing the qualifications for citizenship were agreed upon, subject to further examination by the two Governments, says a Press Communique, issued by the Ministry of External Affairs and Commonwealth Relations, on Dcc. 30.

House, these are not altogether under our control. People do storm these trains and somehow find their way to places to which they want to go. Crowds gathered at Kalanaur and, after a discussion with the Premier of the United Provinces, who said that at Kalanaur there was no arrangement even for feeding the people who were detained there, we shifted the screening point to Jagadhari, because it was thought that if people were detained there, they could get something to eat and some place to sleep in.

I do not say that the system has worked very well. There have been complaints that quite a large number of permits had been issued by district authorities in East Punjab--so many, indeed, that the trains went crowded and nobody could do anything for stopping people at places and poventing them from proceeding forward. We have asked the East Punjab Government to do their best to prevent such un-authorised travelling. They protest that they are doing their best; their officers protest that they are doing their best and it is hoped that something will come out perhaps in the way of easing the situation, Now that evacuation will be completed soon and we shall have made arrangements for temporary sheltering during winter of all the refugees that have come over, it might be possible to put on more trains and disperse people to the localities they want to go to.

# Shelter for Refugees

There was mention of the fact that tens of thousands of refugees were now without a roof over their heads, that they were staying on railway platforms or on open ground. That certainly has been the state of things in many places. But recently we have tackled this problem in consultation with the representatives of the East Punjab Government. I do not know if I can vouch for its entire accuracy, but I have been told that the officer who is responsible for refugees in East Punjab now claims that there is not a single place where you will find a refugee without some kind of roof over his head even if it were merely the corrugated iron sheet on a railway platform. That is the claim he has made.

This much I can inform the House and that is that the East Punjab Government took kindly to a suggestion which I made at our last discussion with them, and that was this that when they are allotting groups of refugees to villages and allotting land and houses to them, they might simultaneously ask them to make provision for housing during winter urban population amounting to 10 per cent of themselves, so that even if 20 houses had been allotted to them they might huddle up in 18 houses and make two available for people who were urban refugees from West Punjab and who, therefore, could not be allotted land in those villages. That is the kind of billeting which I suggested in the course of the debate which I think ought to work and I was interested to hear that the officer responsible for accommodating the refugees in East Punjab thought that it could be easily implemented.

# believe as the Hon'ble the Railway MOVEMENT OF REFUGEES BY MOTOR TRANSPORT

# One Million Gallons of Petrol used In One Month

NE million gallons of petrol were used in one month alone for the movement of refugees by motor transport, mostly by the Military Evacuation Organisation. In addition aircraft used for evacuation and allied purposes consumed 600,000 gallons of aviation spirit a month.

Over four million non-Muslim refugees were brought out to India up to Nov 21. Of these, 3,786,400 came from West Punjab and the N. W. F. P., 275,000 from Sind and about 70,000 from Bahawalpur State.

Refugee trains carried 1,193,000 non-Muslims, including 140,000 from Sind. Nearly 400,000 non-Muslims were evacuated by motor transport and over 32,000 by air in both dire tions, including 21,000 non-Muslims.

In addition to the regular Persian Gulf Line Steamers of the British India Steam Navigation Company which pick up non-Muslim evacuees from Karachi on their way to Bombay, nine steamers have had to be chartered by the Government of India. By Nov. 21, nearly 133,000 non-Muslim evacuees had been cleared from Sind by steemer and country craft, destinations being Bombay, Okha, Bedi. Navlakhi, Kundla and Cutch Mundvi.

#### Movement of Goods

Special prority assistance has been given for movement by the railways of large quantities of goods such as tente, corrugated sheets, raw wood, plankets, conts, shirts, desuti cleth, flour, milk powdar, etc.

A Transport Officer was deputed by the Ministry of Transport early in September to East Punjab to help in the organisation of civil transport for the movement of refugees. The services of some staff belonging to this Ministry have also been temporarily loaned to the Provincial Government free of charge for working the scheme. Special arrangements have been made for the supply of spare parts, batteries and tyres for vehicles employed in the evacuation of refugees.

A special allocation of 50,000 gallons of petrol to the East Punjab Government and of 26,000 gallons of petrol to certain Punjab States has been sanctioned for evacuation and relief work. Another allocation of 30,000 gallons of petrol was made to the Government of Bombay to enable the movement of 508 trucks by road from Bombay to Sulemanki.

The main concentrations of refugees are in East Punjab, Delhi, the United Provinces, Bombay, East Punjab States, Bikaner Jodbur and other Rejputana States. It is estimated that the total number of refugees in camps all over

India may be about 1,250,000. Of these five lakhs may be in East Punjab, 300,000 in Kurukshetra and 150,000 in Delhi, and the rest in camps in other parts of the country. The responsibility for provision of relief rests on the province and State in which the refugees take shelter. Daily expenditure on camps runs into several lakhs of rupees. During 1947-48 a budget provision o. Rs. 10 crores has been made for relief purposes.

### Accommodation Problem

In the towns of East Punjab, Delhi, western and northern districts of the U: P. and some of the States along the border of Western Pakistan, all available houses scrais, dharmasalas, etc., have been put to full use. Housing accommodation has been supplemented by tents -20,600 large size tents provided by the Army enough to accommodate over 400,000 refugees and 150,000 bivouse tents enough to accommodate nearly 300,000 refugees.

Even then the East Punjab Government have been forced to utilise school and college buildings to provide she ter longed. In other parts of the country the Army has provided surplus military barracks which can accommodate about 200,000 refugees.

The Ministry of Food has already provided 310 tons of milk powder to East Punjab and is supplying 86 tons of flour and lentils daily to he Kurukshetra

For medical care and prevention of epidemics, the Ministry of Health and the Medical Directorate of the Army Headquarters have provided 7,050,000 deser of vaccines and over 260 tons of medical stores and equipment to East, Punjab and Indian States, including 3,140,000 doses of vaccine to Pakistan.

About 155,000 blankets and 158,000 quilts have been despatched to East Punjab, Delhi and Kurukshetra. Relief is not confined to the Indian Union. Arrangements have been made for the desputch of 10,000 blankets to the Chief Liaison Officer, Lahore, for the relief of non-Muslim refugees in Sargodha and other districts. Of these about 2,500 blankets have been flown to Lahoro.

The Ministry of Relief and Rehabilitation has prescribed the following scales of rations and clothing for refugees :--

A. Rations:

10 ozs. Atta or Rice.

1 oz. Dal.

l oz. Vegetables.

1 oz. Vegetable Ghee or Oil,

i oz. Gur or Sugar.

1 b. Milk per day forchildren belew

fruits, milk and vitamin tablets and other special items will be provided on medical a luice.

B. Clothing.

1 Blanket, or Razai or Greatcoat.

1 Pair of pyjamas, or shorts, or in the case of woman, salwar. In lieu of ready-made garments, cloth may be given at the following scale for an adult, making an appropriate reduction for a child.

2½ yds. for a pyjama. 4 yds. for a salwar.

1 Shirt or kurt: of not more than 3 vds. of loth.

1 Dopatta (for women only) of 21 yds.

1 Turban ifor Sikhs only)-5 yds., muslin.

1 Bundi (cotton waistcost stuffed with cotton) or one jersey.

Already two million acres have been allotted to over 200,000 families in East Punjab. Of the total area of 4,500,000 acres abandoned by Muslims in East Punjab, as against 5,700,000 acres abandoned by non-Muslims in West Punjab alone, only 3,300,000 acres are cultivable. Owing to incomplete exodus from East Punjab, it is estimated that 3,000,000 acres only may be available for resettlement. The East Punjab Government has already sanctioned the distribution of taccavi loans amounting to Rs. 1,57,50,000, of which Rs. 32,50,000 will be distributed for the purchase of bullocks, Rs. 2,500,000 for the repair of houses and Rs. 50,00,000 for the purchase of fodder.

# Dispersal Programme

Implementation of the programme of dispersal of refugees to various places such as Gwalior, Bhuratpur, Kotah, Ratlam, Alwar, Indore, Bombay, the Central Provinces, Bihar, Orissa and Madras has begun. Two trains carrying refugees have already left Kurukshetra, one for Gwalior and one for Visapur camp, Bombay. It is proposed to disperse 50,000 refugees from Kurukshetra in the first instance.

For the resettlement of urban refugces, the Government of India are exploring the possibility of reserving for refugees certain sites both in residential and industrial areas. Over 4,000 refugees will be immediately trained in the Labour Ministry's Centre for ex-Servicemen in a number of technical and vocational trades. Possibilities of absorbing a large number of skilled workers in railway workshops after a short period of training are being examined. Centres are being opened in the various refugee camps where refugees will be engaged on remunerative occupations like spinning and weaving, hosiery and knitting, button-making, dyeing and calico printing, tailoring, thread balling, soap-making wood work, durry and newar making, etc. Schemes for voluntary training of iuveniles are being prepared.

### Spinning and Weaving Centres

Large stocks of goods available in the Disposals Directorate have been frozen with the idea of utilising them for rehabilitation of refugees, the stocks covering equipment for 27 different trades. The U. P. Government has sanctioned a sum of Rs. 1,00,000 for

remunerative trades in refugee camps in the province.

The Government have sanctioned an advance of a sum up to Rs. 300 to an individual in order to facilitate resettlement. These loans are meant for traders, business men, artisans and persons who wish to set up their own workshops or cottage industries. The scheme will be introduced almost immediately in the Centrally Administered Areas.

The East Punjab Government has decided to organise 50 cotton spinning and weaving centres and five wool spinning centres for a period of six months to enable refugees to supplement their income from land, incidentally helping in the production of cloth and blankets. For assistance to big industry and business, proposals for a rehabilitation and financial corporation are under consideration in consultation with the Reserve Bank of India.

The question of providing employment to refugee teachers and professors who were employed in the various educational institutions in Pakistan and who have suddenly lost their means of livelihood is receiving full attention. A register of displaced teachers who desire to be resettled is being maintained by the Ministry of Education and full particulars regarding their academic qualifications, experience, scale of pay, etc., are being kept. Thanks to the co-operation of local bodies and private namegements of schools in Delhi, it has been possible to give employment to 270 refugee teachers.

## EMPLOYMENT OF REFUGEES

Of 9,643 refugees registered during the fortnight ending Nov. 15, 1947, at the Employment Exchange and District Offices in the Indiac Union, 1,659 were placed in employment, says a Press Note, issued by the Directorate-General, Resettlement and Employment, on Ice. 13.

The total number of refugees registered since the inception of the scheme for the employment of refugees up to Nov. 15 is 29,164, of whom 4,666 were found employment.

A classification of the refugees on the registers of the Exchanges on Nov. 15 shows the following categories:—Clerical 12,153, Office workers (unskilled)—2,765, Professional and learned trades—2,094, Domestic workers—543, Factory workers (unskilled)—358, Out-door labourers—225 and Miscellancous—11,016.

Whereas persons on the clerical and miscellaneous groups are in large supply, opportunities of employment for them are extremely limited. On the other hand, there is considerable demand from employers for skilled and professional workers who are in very short supply.

# MAHATMA'S MESSAGE TO DISPLACED PERSONS

In a special message addressed to displaced persons and their families, released through the Ministry of Relisf and Rehabilitation, Mahalma Gandhi says:

I am certain that no sin or guilt can be imputed to these Hindu and Sikh sisters, who have been abducted, molested or converted by Muslims. They should be received with open arms and given the same place which they occupied before in society.

"Saintly poet Tulsi Das had once said: "Compassion is the root of religion." If we do not show regard to these sisters of ours, we cease to have any religion at all."

# Providing Occupation For Refugees

More than three lakh refugees have been forced to take shelter in camps in Delhi and Kurukshetra, says a Press Note, issued by the Ministry of Relief and Rehabiliation, on Dec. 8. Many of them will be glad to have facilities for engaging themselves on remunerative occupations instead of sitting idle. The Ministry of Relief and Rehabilitation is providing some equipment for occupations such as spinning, weaving, tailoring, calico printing, carpentry and blacksmithy. But what has been provided is a fraction of what is needed for the large camp population.

In order that equipment for remunerative occupations may be made available to refugers with the least delay, the Ministry appeals for gifts in the shape of charkhas, handlocms, hand and treadle machines, etc. All those wishing to make such gifts are invited to see or write to Mr. S.K. Dey, Honorary Technical Adviser to the Ministry of Relief and Rehabilitation, Room No. 202, Imperial Secretariat, North Bleck, New Delhi.

# NON-MUSLIMS FROM W. PUNJAB

Mass evacuation of non-Muslims from West Punjab has been completed within the time allotted.

The districts of Dera Ghazi Khan and Muzaffargarh are clear. There remain just over 5,000 people, scattered in small pockets, whose evacuation is expected to be completed in about a week. Clearing of pockets, however, is not easy. People have to be combed out in two's and three's from out-of-the-way places with the co-operation of the Pakistan civil and military authorities. Known pockets are often found empty and new pockets keep springing up.

Even more difficult is the job of rescuing the abducted and converted. The Military Evacuation Organisation (India) has been carrying out this job all along and has recovered hundreds of such people.

# NEED FOR NURSES AT KURUKSHETRA

TODAY I am making a special appeal to my sisters of the nursing profession on behalf of over 300,000 refugees at Kurukshetra camp. The need is great and very urgent for organising adequate medical aid to these people, who have undergone much suffering and are living in tents and in other temporary structures under the trying conditions that prevail during the winter.

A broadcast by the Hon'ble Rajkumari Amrit Kaur, Health Minister. Governmeet of India, from A. I. R., Delhi, on Dec. 4.

The Government of India are doing their best to provide adequate medical facilities, including preventive care, to these people and are deeply grateful to all those organisations and individuals who have generously volunteered their services and have been working at Kurukshetra for the past few weeks to supplement the provision which Government have made.

Our main difficulty has been to secure an adequate number of nurses. We have now a sufficient number of men and women doctors. Their efforts need to be added by as large number of nurses, midwives and Health Visitors as possible. I am glad to have the opportunity today of paying a public tribute to those hospitals in Bombay, Delhi and elsewhere and to those Christian missionary institutions in the country which have lent the services of some of their nursing staff for work in Kurukshetra. More are however needed.

The existing medical organisation has done praiseworthy work under very trying conditions. In the month of November 400 cases of confinement took place and the number of maternal deaths was only three or three-quarter per cent., a figure which compares very favourably with the rate of two per cent of maternal mortality for the country as a whole. This is all the more remarkable because of the hardships and sufferings which these women must have undergone and which must have helped to reduce materially their vitality. In other respects too, our medical organisation at Kurukshetra has rendered a good account of itself. Owing to the chilly nights the occurrence of a number of cases of pneumonia has been inevitable but the mortality rate has been kept as low as 5 per cent, an achievement

of which I believe any hospital in the country may well be proud.

I am referring to these details mainly to show what can be accomplished even under difficult conditions when the desire to serve the people and to give of one's best to them becomes the motivo force which impels the worker in his or her own sphere of duty. I do feel that, if more of my sisters in the nursing profession can volunteer for service at Kurukshetra, we may achieve even far more substantial success in the alleviation of suffering and the prevention of sickness through appropriate measures.

# Trying Conditions

I may warn them that the conditions of life at Kurukshetra are more trying than those to which they are accustemed in the institutions in which they work. But the refugees, to whom they are proposing to render help, are in a much worse plight. They are footsore and weary, having had to trudge hundreds of miles, they have lost their homes and valuable possessions and many of them have had to go through experiences of such a distressing nature that these might leave marks of a lasting character on both body and mind. To help such people should be deemed equally a privilege and a duty and it is in this spirit of joyful acceptance of a very difficult task that I ask the nursing profession of India to respond to the call of Kurukshetra for their services. I would invite them to communicate their willingness to serve to the Director-General of Health Services New Delbi. Voluntary and paid workers -both male and female nurses-are equally welcome.

# **KURUKSHETRA-A CITY OF TENTS**

TH the influx of a large number of refagees, a city of tents has sprung up in Kurukshetra within an area of about 9 square miles. The population at present is approximately 3 lab. The Camp is designed for the reception of 2,00,000 refugees and the surplus population is being dispersed. Over 7,000 persons have left since Nov. 27.

Medical arrangements for the relief of refugees, which were started on a modest scale, have been greatly expanded and will be completed within the next few weeks and made adequate for the population of the Camp.

Dr. Jivraj Mehta, Director-General of Health Services, Government of India, visited the Camp on Nov. 30 He was glad to find a definite improvement in the general samitation since his previous visit two weeks earlier. The fly nuisance has been controlled and they are present only in negligible numbers.

The entire Camp has been divided into four towns, each with a population of 50,000. In each town for every 25,000 persons there are to be two dispensaries with 25 beds each and a child welfare centre. Fourteen dispensaries are at present functioning. The number will soon be raised to 16 and later, to 20.

Besides these dispensaries in each town, there are the main Kurkushetra Hospital, with 142 beds and a Women's hospital in Patiala House, with 80 beds. There have been 400 confinement cases aince the beginning of November. Only three maternal deaths have occurred. Over 500 beds are at present available

in the Camp. More beds, with necessary equipment, are shortly to arrive.

There is also an Infectious Diseases Hospital where cases of typhoid, tuber-culosis and other infectious diseases are segregated.

The Director-General was gratified to learn that, though there were quite a number of cases of pneumonia, the rate of mortality was small. There have been some cases of small-pox. Every case discovered has been hospitalised and nearly 2,00,000 of the total population of about 3,00,000 have been vaccinated. Cholera is practically absent. Delousing of about 1,00,000 people has also been done.

Forty-two dectors and a number of lady doctors and nurses are working in the various dispensaries.

Besides the usual ration dict, the patients are given multi-vitamin tablets and tinned milk. Arrangements are also being made to provide them with fruits and fruit juices. Cod-liver oil will be supplied to ailing children.

Rats are being destroyed to prevent an outbreak of plague. Deep-trench latrines have been dug. More than 100 wells have been chlorinated and bleaching powder put in.

Ramkrishna Mission and Marwari Relief Society are among the voluntary organisations doing relief work. The Mission distributes daily, free of charge, about 12 maunds of fresh milk and 100 tins of milk powder. The Marwari Relief Society is running a dispensary.

# "SWARAJ" STAMPS

The Government of India have decided to held a competition in design for India's new Swaraj Stamps which will be issued in 1948. Nearly Rs. 7,500 will be given as prizes to the winners.

Artists are being invited to submit designs that have a definite relation to India's new status. The effigy of the King will no longer be a feature of India's stamps.

It is learnt that new designs will be used for the following denominations:—3 pies, half-anna, 9 pies, 1 anna, 1½ anna, 2 annas, 2½ annas, 3½ annas, 4 annas, 6 annas, 10 annas, 12 annas, Re. 1, 2, 5, 10, 15 and 25.

The competition, which is open to all resident in the Indian Union, will be held in New Delhi under the auspices of the Indian Institute of Art in Industry. Entries must be submitted before February 15, 1948, through the Institute's Offices at Delhi, Calcutta, Bombay or Madras. The selection of designs will be made by a panel of five judges. An exhibition of all selected designs will be held after the competition in Delhi, Bembay, Calcutta and Madras.

There will be three prizes. I Prize of of Rs. 3,000 for the full series accepted from any one competitor, II Prize of Rs. 1000, to the best individual design and III Prize of Rs. 500 for the second best individual design. In addition there will be not more than 12 awards of Rs. 250, each to approved designs.

# COLLECTIVE RESPONSIBILITY OF THE PEOPLE

# Sardar Patel on Purity in Administration

HILSTI appreciate the criticism and whilst I appreciate the bona-fides of Hon'ble Members to keep their Government awake, I appeal to them to accept what my friend, Dr. Syuma Prasad has said, namely, that we have a collective responsibility. It means not collective responsibility among the members on the Treasury Benches alone, but collective responsibility of the whole House as well as of the whole population. To drive out corruption is not an easy thing. It is an abnormal situation which has to be reduced to normality and we must raise the general moral tone as also the tone of the services," said the Hon'ble Sardar Vallabhbhai Patel. Deputy Prime Minister, replying to a debate on a cut mot on to discuss corruption in Government Departments in the Dominion Legislature on Dec. 5.

Sardar Patel said:

This annual opportunity which comes for a discussion to draw the attention of the Government on this vital question which affects the good name of the administration is welcome. Every year we see and hear a discussion on the question of the general tone of the administration, and its object is to keep the administration in trim and to keep those in charge of administration up to their sense of responsibility and auty. It is a good opportunity and we shall make the best use of it.

## Accommodation Problem

I have been listening to the debate since this morning. Most of it, in fact all the cut motions moved today, concentrated on the question of corruption in administration. Undoubtedly there is a lot of corruption of which we hear almost every day wherever you go. I get about 500 people to interview me in the mornings from 5 to 6—early morning. Most of them are from Punjab. All of them have come to Punjab. An of them have come to Delhi as refugees. They want accommodation, housing accommodation in the City of Delhi. There isn't enough accommodation. We cannot provide for those people in this city where they have there are over 2½ lakhs of people.

Many of them are residing in the houses of their relations but many others are living in the open and almost all of them had a very good status in life and were living in good housing accommodation. They are very bitter and angry and they complain that they must be provided somewhere. I hear them patiently. I tell them sometimes: "Please, see our difficulties. We cannot accommodate you all. Why don't you go to some other city? Why do you come here, all of you? But yet if you do not find any place to go to, will you go to the

officer in charge of this Department or the Minister in charge:" They say: "It is no use, Sir." And they complain of many things from which people infer that they have not been fairly treated.

Now it is not an easy thing. How far the stories I hear of their complaints are true and how much false it is difficult to ascertain because it is an established fact that we have very little accommodation and there is a considerable demand. We cannot meet with the demands. I do not say all of them tell tales. But 50 per cent of them do because if they do not get anything and somebody else does, they conclude they must have paid money and that they must be corrupt. In some cases it may be true, but in other cases, it cannot be true.

We must go to the cause which has led to this state of affairs—general corruption in all departments. It is a general demoralization that has set in as the result of war. The war conditions brought about a general deteriorations all over the world. It is not in this country alone and the aftermath of the war has not ended. You have got controls, you have the licenses and you got the general deficiency in the requisite things that are necessary for life and therefore these tight controls and these licenses make considerable scope for corruption.

As my hon'ble friend from Bombay said, the thing is so rotten that there is nothing to mend and if the corruption is so bad and is so rampant in all departments, the only thing remains is to shut up the shop because there is no room to mend. But that fortunately is not the case. During my experience of a short period, however short it may be, I have had the pleasure of working with many officials and I may say that to work with many of them would be a matter of pride and I am proud of them. Most of them today are our own people and I feel very proud of their ability, of their integrity and of their sense of duty. You may take it that if I find the slightest suspicion in any of my officers who are in charge of the administration I would not stand it even for a moment.

# Special Police Establishment

When I came here as a member of the Government the first thing that I did was to see what could be done to remedy this evil. Those who were in this House will remember that the first two measures that I brought before this House were the Special Police Establishment and the Bribery and Corruption Prevention Act, in which the normal law of evidence was relaxed and the responsibility was placed on the accused to prove his bonafides. Also, in some

cases the minimum sentence was also prescribed. The House was good enough to give me almost unanimous support. I had not to make any speeches from which quotations may be flung in my face. Therefore you will remember that the first measures that we passed in this House were those two measures with a view to checking this evil.

Subsequently we met with a serious crisis in this country. You all know that the year through which we have passed is a type of year which we have not seen in the history of this country. We have passed through a period during which in a short period we have had complete transfer of power. We have had a partition of the country to which all of us were opposed; We have had the partition of the provinces to which many were opposed, we have partitioned the defence forces of the country, we have partitioned the civil administration of the country and we have done all these in a very short space of time. Along with this we have accomplished the transfer of a population of ten million people. That transfer was not voluntary: it was an involuntary or forcible transfer. Do you think any country could stand this strain?

# Responsible Administration

I like this criticism that you have been making here and perhaps it is the privilege of the Opposition. It is a good thing but we are not in a House in which the Opposition is functioning in the old fashion. Here is a responsible administration and here instead of quoting the speeches of the Members in charge of the Administration you have to replace them and take charge yourself. If you think that a particular member who made a speech the other day of a particular type and is behaving in a contrary fashion, the quoter has to take his place and show that he can do better. Therefore although we hate corruption and we must all of us put our heads together to strangulate that evil as soon as possible, we must not create an atmosphere in which the remedy may prove to be the disease.

If you make a general atmosphere of criticism, that all our services are corrupt, the administration is corrupt, there is nothing good left in it, remember you dispirit the people and drive them to desperation: people who have a sense of honour, who have a sense of integrity and a sense of duty feel that there is no appreciation here and it was no use serving. Let us not create that position. I appreciate, therefore, your criticism fully but we must be discriminating in our criticism. We must see what is good in our services.

You must also remember that our services are broken to bits. Fifty per cent of the services have left. We had 1,250 officers, who were called the steel frame of this country, of which 50 per cent have left, because we did not want them or they did not want to stay. Even if they wanted to stay they found conditions unsuitable. Out of the 50 per cent several of them went to the other side of the country; they opted to serve in a country where thought it would be better for them. Beginning from the highest

alministrative port down to that of a chaprassi people were given the option to choose where they would serve.

If you have a shrewd sense of sight you will find in the departments where you might go that there has been a considerable change. When I came here and was entering my office I found crowds of chaprassies sitting round fire places, and I was told that there were 18,000 chaprassies. Before the were 18,000 chaprassies. war there were only three or four thousand. I am only giving you an instance. The departments were inflated during the period of the war and it was difficult to retrench any of then. when we came here, conditions were such that we could do nothing. If we proposed retrenchment we were threataned that there would be a general strike. It was at that time that partition came and I issued a general order that those people who opted out should be allowed to go and their places should not be filled then. We found there an opportunity. We find now that there is a considerable improvement. We have now to man the services again and have to find the men.

# Special Department

When you think that nothing is being done I will just give you, for your information, as an example how action is being taken. After this special department was created the action taken up to September 1947 was, 1,224 cases were investigated, 750 cases were sent up for trial and out of them 407 ended in conviction; 120 cases are still under trial and 180 cases were recommended for departmental action, out of which 145 people have been dismissed. But mere actions of dismissal or prosecution will not be enough.

We will have to change the atmosphere in the country. We must raise the general tone of the people. Today the giver is as ready and willing to give as the taker is willing and anxious to take. Bribe-giving and bribe-taking has become a normal thing and when it becomes a normality it is not a crime, it is not regarded as a crime. I remember a case 25 years ago when a railway officer, a station master, was being prosecuted for taking bribes, that for every wagon he was giving for goods he was taking a huge amount. When investigations were made, and he was caught and prosecuted he defended himself openly that he had not committed any offence, that was not bribery, that was dasturi or recognised practice, that it was being done not only by him but by every man from the Agent down to the lowest clerk in the railway department. Why it was called a crime he did not know. After all that there was a technical conviction and he was given only Rs. 200 fine, because the practice was recognised by the trying judge.

SHRI M.S. ANEY: It was recognised by the courts.

SARDAR VALLABHBHAI PATEL: Yes. Therefore if conditions become such then the moral sense deteriorates. Let us not create that condition. Of course so long as the practice of licenses, permits, and controls continue

bribery and corruption are their handmaids. Therefore we have to check it and we are taking measures as quickly as possible to do away with licenses and controls. But it is not an easy thing.

My friend, the Minister in charge of the Commerce Department, who has left for America has talked to me several times on this subject. He asked me, What can I do about these licenses and these permits for import? The goods dumped in this country as a result of the permits given have been so much that there is no market for them, and the licences given are so many that they are being sold in the market. What can I do about these things?" I told him, "You can do nothing. It is past history. Let us close it and begin afresh." It has to be forgotten and there is no use criticising it. The conditions were different. The stage on which we functioned was quite a different one. We have worked for a year and only we know how and under what conditions we worked. it was not a Coalition. It was a different Government for which there is no parallel in history. Therefore, all this criticism is not with reference to a normal situation but a very abnormal situation. Those who had worked it, they alone know what it was. Hon'blo Members here cannot have an idea of it.

# An Appeal

Therefore whilst I appreciate the criticism and whilst I appreciate the bona fides of Hon'ble Members to keep their Government awake I appeal to them to accept what my friend Dr. Syama Prasad has said, namely, that we have a collective responsibility. It means, not collective responsibility among the members on the Treasury Benches alone, but collective responsibility of the whole House as well as of the whole population. To drive out corruption is not an easy thing. It is an abnormal situation which has to be reduced to normality and we must raise the general moral tone as also the tone of the services. That is all I have to say.

# Bill to Provide for Extension of Enactments To Ajmer-Merwara

MOVING the Bill to provide for the extension of enactments to the Province of Ajmer-Meiwara to be taken into consideration in the Dominion Parliament on Pec. 11, the Hon'ble Sardar Vallabhbhai Patel, Minister for Home Affairs, said:

"The House is aware that the province of Ajmer-Merwara is peculiarly situated, surrounded on almost all sides by Indian The size of this States territorics. province is almost the size of an old British district. Now, in this province, there is no arrangement for proper modern administration or any arrangement for passing any legislation. similar province is the province of Delhi, with some d fferences as to the size and its surroundings. The Delhi Province also has no Legislative Assembly but it has the advantage of being situated near the capital of New Delhi and its administration is, not, therefore, so detached or unaffected by modern trands of thought.

"In Aimer Merwara, however, the administration is largely governed by rules and regulations which are-some of them of -very old and antiquated. So when we took charge, we thought that something should be done to bring its administration, so far as possible, to the level of the other provinces But we found that it was very difficult to make any revolutionary changes which would be required to bring the admin stration to modern conditions. It would require a Legislative Assembly or Council ard for that legislation will have to be passed here also and it would take much time and involve much labour. By that time the new constitution would be passed and at that time this question has to be considered.

"Therefore. I thought it better to bring into being some sort of Advisory Council. We have set up Advisory Councils in both Delhi and Ajmer-Merwara. But in Delhi we have got the advantage of an enactment which authorises us to apply the provisions of any law passed in any Provincial Assembly. Therefore, it is easy for us to bring this administration of Delhi almost to the level of the adjoining Provinces of the Punjab or the United Provinces and we have, in some manner, applied the provinces recently.

'I may quote an instance. When I got representations from the Schedulest Castes people about the disabilities which they had to suffer in the Province of Delhi, we made use of this Act and extended the Disabilities Removal Act of Bonday to the Province of Delhi, and in that way we could easily set right or remove their difficulties.

#### Object of Bill

"In Ajmer, unfortunately, there is no such act in existence and, therefore, for the short period till the passing of the new Constitution by the Constituent Assembly, it would be advantageous to have this power of extending the operation of the legislation to the adjoining Provinces or any province of this nature and, therefore, I have come with this proposal.

"That would give rener to the people of Ajmer-Merwara during the interval and with this object I have come to this House and I do not think it is necessary for me to take any more time of the House. I hop that the House will help u in passing this legiclation. I move the consideration of the Bil".

# PARAMOUNTCY NOT TO BE REVIVED Sardar Patel on Scope of Extra-Provincial Jurisdiction Bill

WANT again to make it clear that there is no intention on our part to assume in any form or shape or to take the place of paramountcy. Paramountcy is dead and gone and nobody lamints or mourns it," said the Hon'ble Sardar Vallabhbhai Patel, Daputy Prime Minister, in the Dominion Parliament, on Dao. 9. He was spaking on the Bill to provide for the exercise of certain extra-Provincial jurisdiction of the Central Government.

Risterating Government of India's determination to function as a Government and not to leave a vacuum, Sardar Patel said, "it must also be understood that this Bill is not intended for the purpose of entering into places where there is a conflict between the people and the State. It is not the purpose of the Bill. The puspose is to step in where there is a vacuum, and I do not think anybody will take exception to it".

Here is the text of Sardar Patel's speech:

"I believe that there is a lot of misunderstanding about the exact purpose and the intention as to the operation of this Bill in spite of my having made the position clear; and therefore, I want again to make it clear that there is no intention on our part to assume in any form or shape or to take the place of Paramountcy. Paramountcy is dead and gone and nobody laments or mourns it.

"There is no reason to think that hecause paramountcy has disappeared there is going to be no power in India: the Government of India proposes to function as a Government and will not leave a vacuum or anarchy in any part of India whatever happens. That must be understood clearly, because it is neither in the interests of the States, nor of the States people.nor of India.

#### Purpose of Bill

"But it must also be understood that this Bill is not intended for the purpose of entering into places where there is a conflict between the people and the State. It is not the purpose of the Bill. The purpose is to step in where there is a vacuum, and I do not think anybody will take excep tion to it.

"This bill originated in this sense hecause several States were attached to bigger States. A large number of States were attached to Baroda: several States were attached to Jamnagar, some, to Janagadh and some, to others. Some objection was raised to some of these attachments. Some States were forcibly attached against their will by the Political Department.

"This issue was fought out in a civil court. A special commission was appointed by the Political Department

before which, I remember, Sir Chimanlal Setalvad appeared and argued the case on behalf of the States and that court, which was appointed by the Political Department, gave a decision that the attachment scheme was not legal and eventually it was legalised by Parliament, passing a small Bill.

"Now when paramountcy lapsed, these attached States were detached automatically. So the Parliament Act also did not justify or legalise the continuance of the attachment after the lapse of paramountcy. The States, to which they were attached, also announced that they did not want them because they found it a burden. Some of these small States were semi-jurisdictional and some, nonjurisdictional and they were in such a state that they could not discharge their functions with any degree of responsibility.

### Instruments of Accession

"What is to happen to the people of these States? If we did not intervene, there was a possibility of complete lawlessness there and we were approached by the States as well as the people that we should take over these directly under the Central Government. Therefore, we drafted an Instrument of Accession of two separate kinds: the first one was of the full jurisdictional States—the first class States. They had to accede.

"But these smaller States were of two varieties—one, semi-jurisdictional States and some non-jurisdictional. Now we drafted two different Instruments of Accession for them, the relevant portions of which my hon'ble friend, the Law Member, has read out to you and under which we assumed jurisdiction and provided for a machinery for the exercise of that jurisdiction, for the establishment of courts and other necessary paraphernalia, and took over that jurisdiction by pissing on ordinance because there was no Legislature sitting.

"Now is the opportunity for legalising the matter. In drafting the legislation, we took the phraseology from the Foreign Jurisdictions Act. The words there are:

"Whereas by treaty, capitulation, grant, usage or sufferance, and other lawful means".

"We only drop the word 'capitulation' and we agree to put in the word 'Agreement'. The rest is kept intact. We use this wider phraseology in order to meet any contingency where any area may be such perchance that there may be no authority. So far as the full jurisdictional States are concerned, there is no reason to fear. In my speech in the morning I referred to the Nilgiri State. It was suggested that it was an improper interference by usage.

On the contrary, it was an interference by agreement because the State itself approached us and so did the people. They have not taken exception to it and they are very glad that we interfered.

i will suggest, for the consideration of the House, a possible instance in which, supposing there is a minority regime and during the period of the regency the minor disappears or dies, and the regency abdicates as has happened in some instances. Then there is no authority because there is no heir, and there is nobody to assume authority. Then we have to take a wider phraseology and accommodate all such instances where there are small areas in which such instances are likely to happen. So when we legislate, we do not want to come again for such emergencies with a separate Bill. Therefore, we have adopted a wider phraseology.

# Temporary Mcasure

"At the same time I wish to draw the attention of the House to the fact that this is also a temporary measure, because you will see that when the permanent constitution is passed, then all these things will disappear. Then again, as this is a temporary measure to meet an emergency which arises out of a sudden disappearance of paramountcy, you will have to see that there is no cause given to any State or any people for any apprehension.

"Therefore, we have taken care, and as I have told you, that in the administration of the Ordinance we have taken so much care that up till now no complaint has been received and I have no doubt that no complaint will be received. There can be no desire on our part to assume jurisdiction by means of legislation. But I may be permitted to say that the States have no fear of encroachment on the part of the Government of India by means of legislation. They have every reason to fear if they do not progress with the times and do not meet the legitimate demands of the people".

### DR. AMBEDKAR'S SPEECH

Speaking earlier on an amendment that the Bill, as reported by the Select Committee, be circulated to elicit public opinion the Hon'ble Dr. B.R. Ambedkar, Minister for Law, said:

"The one point which was made by the Hon'ble Mover of the amendment was that this Bill was reviving the jurisdiction of paramountey which was abolished by the Indian Independence Act. It is quite true that the Indian Independence Act releases the Indian States from all the obligations that were imposed upon them by virtue of paramountey. But, I think, what that means is this, that the Dominion Government cannot, as a succession State inherit the jurisdiction which arose out of paramountey. It means nothing more than that; it does not mean that any Indian State could not confer by an agreement upon the Dominion Government the rights and jurisdictions which were exercised by the

British Government as against an Indian State.

I think that point has been clearly lost sight of, and I should like to repeat that what the Independence Act means is this that the Dominion Government cannot be regarded as a succession State to the British Government in so far as paramountey is concerned. It certainly does not mean that if an Indian State chooses for reasons which it thinks are imperative, to confer jurisdiction of the analogous type that arese out of paramountcy upon the Dominion Government, there sanything either in the Government of India Act or in the Indian Independence Act to prevent the Indian State from doing so. I think that point has to be clearly borne in mind.

"When the question is raised as to which are the Indian States to which this particular Bill and its provisions would apply, the answer to the question must be related to the Instruments of Accession which have been passed by the various Indian States in favour of the Dominion Government of India. Therefore, in order to understand what are the States to which this Bill applies, what we have to do is to go to the Instruments of Accession and find out what is contained therein.

# Three Categories

"As the House knows, so far as the accession of Indian States is concerned, they are divided into three categories: (1) fully jurisdictional States, (2)semi-jurisdictional States, and (3) non-jurisdictional States. All the three classes of States have pussed, barring a few exceptions here and there, Instruments of Accession in favour of the Indian Dominion.

"Now if Hon'ble Members were to refer to the Instrument of Accession passed in favour of the Dominion of India by States which fall in class (2) they will realise that their Instrument of Accession contains this very important clause which, in order to remove all doubts and suspicions, I propose to read with your permission, Sir. This is in paragraph 1:—

"And I further declare that the Dominion of India may through such agency or agencies and in such manner as it thinks fit exercise in relation to the administration of the civil and criminal justice in this State all such powers, authority, and jurisdiction as were at any time exercisable by His Majesty's representative for the exercise of the function of the Crown in its relation with the Indian States".

"That, I submit is a very important clause in the Instrument of Accession passed by the semi-jurisdictional States.

"Now if my Hon'ble friends will turn to the third category of States and read the Instrument of Accession passed by them, it reads as follows:

"Whereas I.. of the said state or taluka, am desirous that the Dominion of India should exercise in relation to the said taluka or state all the powers and jurisdictions which were exerciseable before such attachment by His Majesty's representative for the exercise of the functions of the Crown in its relation with the Indian States", etc.

"This is a clause which finds a place in the Instrument of Accession of the State falling in the second category or the third category; it has not found a place in the Instrument of Accession passed by the States which fall in the first category, namely fully jurisdictional States.

"Obviously two things follow from The first is that this Bill does not this. apply to those States whose Instrument of Accession does not contain this clause; secondly, that this applies only to those States whose Instrument of Accession contains such a clause and which have voluntarily granted to the Dominica Government the rights, whether they or suffe-were exσf treaty out arose usage which rance or ercised by the British Government; they have transferred them voluntarily to the Indian Dominion, and they may do so in future.

# Object of Bill

"Now the point is that all that the Bill does is this that wherever any State has granted to the Dominion jurisdiction by virtue of its Instrument of Accession the Central Government will have the legal authority to exercise that jurisdiction. There is no case of usurpation at all; it is merely giving legal authority to rights and jurisdictions which have been voluntarily transferred by the Indian States to the Dominion of India.

"Therefore, the first thing that I should like to emphasise is that there is no clandestine effort in the Bill to usurp any authority as against any Indian State which has not voluntarily surrendered its authority in this respect to the Dominion Government. I think that ought to put at rest all the doubts and suspicions which have been expressed in this House with regard to this Bill. And I do not think that if Honourable Members bear in mind what I have stated there will be any necessity for very many of the amendments which I find on the order paper.

# No Inconsistency

"I do not want to say enything more because that is all that I wanted to say but my Hon'ble friend Mr. Senthanam, while making his observation on the Bill said that there was an inconsistency in the position which I took yesterday and the position as it arises from this Bill. I think my Hon'ble friend Mr. Santhanam, must have completely misunderstood what I said yesterday.

"What I said then was that having regard to the fact that the Nursing Council Bill had reference to entry No. 16 in the Concurrent Legislative List there was never any possibility of the Dominion Government acquiring any jurisdiction because the Instrument of Accession and the Indian States have made it absolutely clear that if they at all join the Indian Union they will join it only with respect to list No. I which is a federal list and that, too, with respect to some subjects only. Therefore, my contention was 'hat there was not even the remotest possibility having regard to these circumstances, that the Indian Dominion should acquire

(Continued on Page 67)

# HOW NILGIRI WAS SAVED FROM ANARCHY

# Sardar Patel's Statement

REPLYIG to a short notice question in the Dominion Parlicment, on Dec. 10, on Government action in Nilgiri State, the Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister said:

"On Oct. 28, 1947, we received information from the Origsa Government that the situation in the neighbouring States in general was tense and that in the Nilgiri, in particular, there was a general state of lawlessness, resulting in systematic looting of property, riots and clashes between various sections of the people. The troubles soon spread in the neighbouring district of Balasore.

The position assumed such dimensions that the only property which was secure in the State was the palace of the Ruler and its immediate precincts, which were heavily guarded by armed guards whom the Ruler had recruited from the Easterr States Joint Police Force. The State Police was completely ineffective incapable and even unwilling to suppress these disturbances. Telegraphic and postal services had also ceased to function.

"On Oct. 31, the District Magistrate of Balasore contacted the Ruler who pleaded that the situation had gone beyond his control. Some negotiations were in progress between the Ruler and the Praja Mandal and, in order not to disturb them, the Government of Orisea held their hands in the hope that the affairs would be settled satisfactorily, but the situation suddenly took a turn for the worse on Nov. 12, when a serious clash occurred in which fire-arms were used and a number of persons died.

"On the same day elsewhere villages were looted and a number of houses burnt down.

"It was clearly impossible to wait any longer and, in order to save the State and the neighbouring areas in Orissa Province from anarchy and chaos, it was decided that law and order should be restored in the State. The Government of India, therefore, requested the Orissa Government to ask the District Magistrate of Belasore to preceed to Nilgiri and restore law and order and take over the administration. On Nov. 14, therefore, the District Magistrate, Balasore, with the consent of the Ruler, took over the administration of the State peacefully".

The question of concluding bilateral air agreements with the U. K., China, Pakistan, Egypt, Italy and Switzerland is now engaging the attention of the Government of India.

Early this year Government Delegations may leave India to conduct negotistions with the respective countries.

# ENLARGEMENT OF FEDERAL COURT'S JURISDICTION

# Law Minister on Aim of New Legislation

the direct passage of appeal from the High Court to the Privy Council. In other words, the aim of the Bill is to make it compulsory that all civil appeals which arise from the judgment or decree of the High Court, shall, in the first instance; go to the Faderal Court", said the Hon'ble Dr. B.R. Ambedkar, Minister for Law, while moving for consideration the Bill to provide for the enlargement of the appellate jurisdiction of the Federal Court in civil cases, in the Dominion Parliament, on Dec. 11.

#### Dr. Ambedkar said:

"The Federal Court, as constituted under the Government of India Act as adopted, exercises three kinds of jurisdiction:

- (a) Original jurisdiction under Sec. 204:
- (b) Appellate jurisdiction over High Courts under Sec. 205; and (c) Advisory jurisdiction under Sec.
- "The present Bill is concerned only with the appellate jurisdiction of the Federal Court. As I said, the appellate jurisdiction of the Federal Court under Sec. 205 is a very limited jurisdiction. It is confined, in the first place, only to those cases in which the issue involved is the interpretation of the Constitution, that is to say, the interpretation of the Government of India Act, 1935.
- "Secondly, this limited jurisdiction accrues to the Federal Court only if the High ('ourt, after deciding a case before it gives a certificate to the effect that a question regarding the interpretation of the Constitution is involved.
- "It is only when these two conditions are satisfied, namely, that there exists an issue relating to the interpretation of of the Constitution; and, secondly, when the High Court has given a certificate, that an appeal can go to the Federal Court under Sec. 205.
- "The result of this limitation is this: All other appeals from the High Court in which question relating to the interpretation of laws, other than the Constitution of those in which the interpretation of the Constitution is involved but where the High Court has not given a certificate, go directly to the Privy Council without the intervention of the Federal Court.
- "The object of this Bill is to prevent the direct passage of appeals from the High Court to the Privy Council. In other words, the aim of the Bill is to make it compulsory that all civil appeals which arise from the judgment or decree of the High Court shall, in the first instance, go to the Federal Court.
- "The method adopted by the Bill to achieve this object is as follows:

What the Bill first does is to fix a day, which is the first of February and which, in the Bill, is called 'the appointed day. The next thing that the Bill does is after the appointed day no appeals shall go to the Privy Council directly from the High Court unless and until the appeal falls in a category of what is called 'a pending appeal'. If an appeal, on the first day of February, can be described within the terms of this Bill as 'a pending appeal' then the appeal shall be continued to be heard and decided by the Privy Council. But, if on that day, the appeal is not 'a pending appeal' within the definition of this Bill, then the jurisdiction of the Federal Court extends to such an appeal as the Federal Court gets a right to hear and decide such an

# Pending Appeal

"Sec. 7 of the Bill describes what is 'a pending appeal'. Now for this purpose a rough and ready-made rule has been adopted in the Bill. The rule is this; that if the records of an appeal are transmitted by the High Court to the Privy Council on the appointed day or before the appointed day, then the appeal is a pending appeal and the Privy Council continues to exercise its jurisdiction to hear such an appeel, although it is a direct appeal.

"If, on the other hand, the appeal is in such a state that the records have not

been transmitted, then the appeal becomes automatically transferred so to say to the Federal Court and the Federal Court gets the right to hear the appeal.

- "Appeals to the Privy Council go in two different ways. They go under what are called the provisions of the Civil Procedure Code, Sec. 109 and 110, which are called appeals by grants or they are appeals where the party have a right to appeal. In addition to that the Privy Council also has got the right to give special leave to appeal and when a party obtains a special leave to appeal, such appeals also go to the Privy Council. Appeals which go to the Privy Council directly from the High Court on special leave being granted by the Privy Council, are also dealt with in Sec. £ of the Bill. The provision there is this:
- "Every application to His Majestyin-Council for special leave to appeal from a judgment to which this Act applies remaining undisposed of immediately before the appointed day shall on that day stand transferred to the Federal Court by virtue of this Act".
- If it is disposed of, that is to say, if it is rejected no further question arises. If it is admitted then the Privy Council will be competent to deal with it. But if the Privy Council has not passed any order, then such an appeal shall be deemed to be transferred to the Federal Court and the Federal Court will have the right to dispose of the matter.
- "I should like to tell the House in very concrete terms what this Bill does

# MAIN PROVISIONS OF THE BILL

THE Federal Court (Enlargement of Jurisdiction) Bill, 1947, introduced by the Hon'ble Dr. B. R. Ambedkar, Minister of Law, in the Dominion Legislature on Dec. 9, provides for the enlargement of the appellate jurisdiction of the Federal Court in civil cases to the fullest extent permissible under section 206 of the Government of India Act, 1935, as now in force and for the abolition protanto of all direct appeals in such cases from High Courts to the Privy Council either with or without special leave.

The main provisions of the Act which is designed to come into force on Feb. 1, 1948, are as follows:—

# Pending Appeals

"Judgment to which the Act applies" is defined as any judgment, decree or final order of a High Court, in a civil case from which a direct appeal could have been brought to the Privy Council with or without special leave of the Act had been passed. From the appointed day, that is Feb. 1, next appeals will lie to the Federal Court from these judgments, and no direct appeal will lie to the Privy Council either with or without special leave.

Proceedings taken in a High Court,

and orders and certificates given by a High Court, in connection with pending appeals to the Privy Council will be deemed to be in connection with appeals to the Federal Court, unless the records pertaining to the appeal have been transmitted to England before the appointed day. Applications pending before the Privy Council for special leave to appeal in civil cases will stand transferred to the Federal Court on the appointed day and will be disposed of by that Court.

Appeals pending before the Privy Council immediately before the appointed day in which the records have already been transmitted by the High Court concerned to England and appeals to the bringing of which special leave has been granted by the Privy Council before the appointed day will not be affected by the Act.

The provisions of the Civil Procedure Code and other laws relating to direct appeals in civil cases to the Privy Council will have effect in relation to appeals to the Federal Court with the substitution of "Federal Court" for "His Majesty in Council".

INDIAN INFORMATION, JANUARY 1, 1948

and what it does not do. I have told the House what this Bill does. I will tell the House now that this Bill boes not do.

"In the first place, it does not abolish appeals to the Privy Council in criminal matters. Criminal matters can still be entertained by the Privy Council from the judgments of the High Courts. Secondly, it does not abolish appeals to the Privy Council from courts which are not high courts, that is to say the courts of the Judicial Commissioner of Ajmer-Merwara or of Coorg. Thirdly, it does not abolish appeals to the Privy Council from the judgment of the Federal Court.

"The House would probably like to know why these deficiencies have been retained in the Bill and why we have not been in a position to provide in this Bill for the complete transfer in all 2333s, criminal or civil, from the High Court to the Federal Court and from the Vederal Court to the Privy Council.

"The reasons are to be found in certain limitations from which the Dominion Legislature, i.e., the Constituent Assembly (Legislative) suffers. As members of the Assembly would realise we are exercising the powers for enlarging the jurisdiction of the Federal Court, which are given to us by Sec. 206 of the Government of India Act. If Hon'ble Members would refer to Sec. 206 they will see that it is a sort of section which enables this Assembly to alter the Government of India Act, 1935. Section 206 says:

- (1) The Dominion Legislature may by Act provide that in such civil cases as may be specified in the Act an appeal shall lie to the Federal Court from a judgment, decree or final order of a High Court without any such certificate as aforesaid.
- (2) If the Dominion legislature makes such provision as is mentioned in the last preceding sub-section consequential provision may also be made by Act of the Dominion Legislature for the abolition in whole or in part of direct appeals in civil cases from High Courts to His Majesty-in-Council, either with or without special leave.

Sub-section (3) requires the sanction of the Governor-General.

# Section 206

"Anybody who reads Sec. 206 will find that although the power to amend and enlarge the jurisdiction of the Federal Court is given to this Assembly it is limited in certain particulars. It is limited to civil cases. Therefore, no provision can be made for the abolition of direct appeals in criminal matters. Secondly, it refers to direct appeals, that is to say, appeals from the High Court to the Privy Council. The reason why we are not able to abolish appeals from the Federal Court to the Privy Council is because of the existence of Sec. 208 in the Government of India Act.

"Section 208 says: (a) that an appeal will lie to His Majesty-in-Council from a decision of the Federal Court, from any

judgment of the Federal Court given in the exercise of its original jurisdiction in any dispute which concerns the interpretation of this Act and

(b) in any other case, by leave of the Federal Court or of His Majesty-in-Council.

"What I wanted to tell the House was that if it was desirable to abolish all appeals to the Privy Council and to enlarge the jurisdiction of the Federal Court in as complete a manner as we want to do, for that purpose we would have been required to hold a session of the Constituent Assembly and ask the Constituent Assembly to pass a Bill which it can do, notwithstanding any limitations in the Government of India Act 1935, for the simple reason that the Constituent Assembly is a sovereign body and is not bound by the provisions of the Government of India Act, 1935.

"The position of this Legislaure which is spoken of as the Dominion Legislature, is very different. It is governed by the Government of India Act of 1935 and, therefore, it must conform in anything that it wants to do, to such provisions of the Act which permit it to do what it wants to do. As I said, the only permissive section which we have in the Government of India Act is Sec. 20% and we have taken the fullest liberty of this section to enlarge the jurisdiction of the Federal Court to the fullest extent possible".

Replying to the debate on the Bill, the Law Minister said:

"I am grateful to the House, for having expressed its general satisfaction with this Bill, I will, therefore, deal only with certain points of criticism which have been raised by certain Hon'ble Members who have taken part in this debate.

## Limitations Imposed by 1935 Act

"The first point of criticism relates to what I might call a timidity for my not going the whole hog and abolishing appeals to the Privy Council and conferring the fullest jurisdiction on the Federal Court. I am told that I am making a sort of artificial distinction between this legislature and the constituent Assembly and that I am for no reason limiting the powers of this House.

"I am sure that that is a criticism which, to put it mildly, is certainly far from valid. I cannot accept the proposition that this Legislature, as distinguished from the Constituent Assembly, is a completely sovereign body, as complete as the Constituent Assembly itself. It is true that the same Members who sit in this House sit in the Constituent Assembly, so that in regard to the personnel there is no distinction. But I have not the slightest doubt in my mind that so far as functions are concerned the two Assemblies are quite different.

"The function of the Constituent Assembly is to make the constitution and in making that constitution it is bound by nothing except by its own vote. So far as this Assembly is concerned, it is

bound by the Government of India Act, 1935; that is the constitution which is binding upon this legislature.

Except the British Parliament which has both sorts of powers, namely, ordinary legislative powers as well as constituent powers, I do not know of any Assembly anywhere which has got a written constitution which possesses powers to override a constitution which has created that particular legislature.

"I, therefore, submit that I am on perfectly strong and stable footing when I say that in carrying out the provisions of this Bill we must be bound by and we must recognise the limitations that have been imposed upon this legislature by the Government of India, Act, 1975, as adapted.

"Then the question was raised with regard to the Courts of the Judicial Commissioners of Ajmerc-Merwara and Coorg. It is quite true that it would be very anomalous that we should stop direct appeals from the High Court to the Privy Council and allow appeals from Judicial Commissioners to go to the Privy Council without the intervention of the Federal Court. The anomaly is patent and nobody can deny it.

"But the question is this: that unless and until we declare the Courts of the Judicial Commissioners as High Courts we could not make this Bill binding upon them. Now I am told that the question of the declaration of the Judicial Commissioners' Courts as High Courts would involve certain administrative problems. For instance, all the provisions in the Government of India Act relating to High Courts would have to be applied to the Judicial Commissioners before, in fact, they become High Courts. It seemed to me that that might create complications and that is the principal reason why we did not think it advisable at this stage, to extend the provisions of this Act to the Judicial Commissioners."

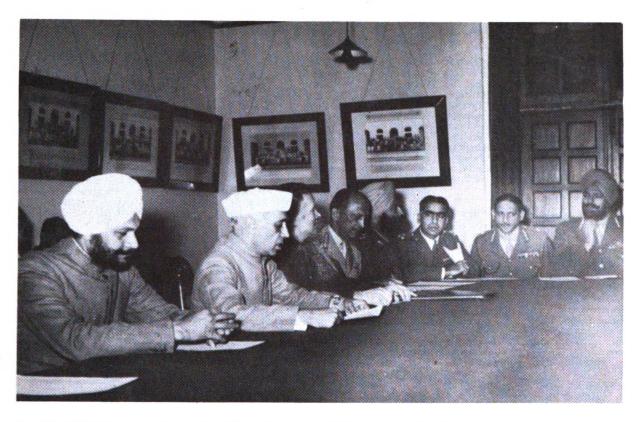

The Governor-General has been pleased to appoint Mr. Kamal Chunder Chunder, I.C.S. to act as a Judge of the Calcutta High Court in the vacancy caused by the appointment of the Hon'ble Mr. Justice Phanibhusan Chakravarty as Chairman of the Committee to inquire into the affairs of the Calcutta Corporation, says a Press Communique, issued by the Ministry of Home Affairs, on Dec. 27

# AMENDMENT TO INCOME-TAX ACT

(Continued from Page 39)

application to Business Profits Tax without certain formal modifications. Hence the need for the amendment.

I am sorry, Sir, that the explanation of these clauses is rather cumbrous, but it is unfortunate and it cannot be avoided. It is rather technical, but I might assure the House that it is not the intention to introduce any new ideas, but only to clarify the old ideas and to rectify certain drafting omissions and errors.

The Prime Minister met senior officers of the Armed Forces receptly. (L. to R.) Sardar Baldev Singh, Defence Minister, Paudit Nehru, Gen. Sir Rob Lockhart, then C.-in-C., Lt.-Gen. K. M. Cariappa, G. O. C.-in-C., Eastern Command, Maj.-Gen. Chimni, Maj.-Gen. P. N. Thapar, Maj.-Gen. A. A. Rudra, and Maj.-Gen. G. S. Dhillon

# YOUR DUTY IS TO SERVE YOUR COUNTRY AND COUNTRYMEN

# Pandit Nehru's Broadcast to Armed Forces

OU have a great opportunity to serve, because you have the armed power of the State in your hands. You must take care not to abuse it", said the Hon'ble Pandit Jawaharlal Nehru, Prime Minister, broadcasting to men of the Armed services in the new Forces programme inaugurated from the Delhi station of All India Radio on Dec. 1.

The Prime Minister said: Soldiers of Free India, Jai Hind:

Some months ago I told the Commander-in-Chief that it was my desire to meet as frequently as possible the officers and men of the Indian armed orces, to visit units and to see them at work and at play and particularly totalk to them. I wanted to know you and speak to you, because it is very necessary that we should understand each other.

It is very necessary in an independent country for those in authority who represent the people, to know what is in the minds of the men of the armed forces. There should be no distance between the people generally and the armed services; they are all one, because recruitment to the armed forces is made from the masses. The old idea that the army was a separate entity does not now hold good. It, therefore, becomes essential that we should understand each other. However, owing to extreme pressure of work and the many vital problems requiring immediate attention, I could not meet most of you, although I have had occasions to meet and talk to some. Therefore I decided to speak a few words to you this evening over the radio.

# Meaning of Freedom

Our country has become free. What is the meaning of freedom? It means that we are free to do things without outside interference. It does not mean that anyone is free to do what he likes, because such licence would lead to chaos. If everyone takes the law into his own hands, it becomes jungle law. That sort of freedom does not become civilized people.

Ours is an ancient land with an ancient civilisation dating back to thousands of years. Our new-born freedom has brought us great responsibilities. If anything goes wrong, it will be our fault, we cannot blame others. If we do good, we reap the benefits; if we do evil, we suffer. Therefore it behoves you, men of the armed forces specially to realise these responsibilities. Your duty is to serve your country and your countrymen.

They call me the Prime Minister of India, but it would be more appropriate if I were called the first Servant of India. In this age it is not titles and positions that matter but service. You, in particular, have a great opportunity to serve, because you have the armed power of the State in your hands. You must take care not to abuse it.

You know that our forces are operating in Kashmir to drive out those who invaded that State. Why did our forces go to Kashmir? We do not want to invade other countries and enslave people. As we have wanted freedom for our country, so do we desire freedom for other countries, especially those in Asia. Kashmir, of course, is a part of this land. Our forces went there not to oppress or conquer. They went there because the people of Kashmir were in

INDIAN INFORMATION, JANUARY 1, 1948

peril, and their country was being overrun by forces of aggression. When Kashmir was being ravaged by the raiders, the people asked us for help. It was thus our duty to go and help. We sent our forces who performed their task speedily and courageously. Much has been accomplished but more difficult work lies ahead and I am confident that they will succeed.

I went there and spoke to our men. I told them that they were there as guests and friends and as servants of the people of Kashmir, and that on their actions depended the fair name c. India. Any ill-considered action by our men in Kashmir would bring discredit to India. I am glad that while performing their duty they have established cordial relations with the Kashmir people. We must constantly remind ourselves that whatever our religion or creed we are all one people.

I regret that the recent disturbances have given us a bad name. Many had acquiesced in the prevailing spirit. This is not citizenship. Citizenship consists of service of the country. We must prevail on the evil-doers to stop their activities. If you, men of the Navy, the Army and the Airforce, serve your countrynen without distinction of class or religion, you will bring honour to yourselves and to your country.

JAI HIND.

# DEFENCE MINISTER'S TRIBUTE TO ARMED FORCES

DISCLOSE no sccret when I say that the magnificent work you have done and are doing fully, justifies the confidence which the Government has placed in you," said the Hon'ble Sardar Baldev Singh, Defence Minister, in a broadcast, in the new Defence Forces programme inaugurated from the Delhi Station of All India Radio on Dec. 1.

Sardar Baldev Singh said:

Much has happened since I addressed you last. Much, that has changed the face of many things. We gained our independence. We lost the unity of our motherland. We are free today; but in the wake of the division of the country, we have been overtaken by a sequence of disasters, some of which are unparalleled in the history of the world.

The worst is over. We are fortunate that we have at the helm of our affairs such stout-hearted men and leaders who have refused to bend before the calamitous storm that all but overwhelmed us. It is not my purpose to dwell on what we all hope and pray is past history. It take this opportunity of paying my tribute to you all, our men and officers

of the Armed Forces for your loyal and patriotic co-operation in the stupendous task you have had to perform and for the commendable manner in which it has been carried out.

Not that I or anyone else had any doubt in your capacity and valour. I and my colleagues knew well the stuff you were made of, the renown you had won, and the patriotism the world was witness to. There were some who feared that you had not had the experience and training necessary for undertaking big tasks. I will not waste time to examine such fears. What you have done is sufficient answer. As a matter of fact, I on my part have no hesitation whatever in affirming that in all that has happened you have surpassed your own unequalled record.

The dawn of freedom found us grapping with the demon of heinous trouble. The seed of hate sown sedulously in our body politic had borne fruit. You soldiers who under alien rule had done duty before to suppress disturbances were now a lled upon to stand by your own Government to restore order out of chaos. It was a different role. All honour to you that you grasped this difference, so

Paudit Nehru and Sardar Baldev Singh greet Army Commanders

quickly and with such vision. Indeed that was the reason of your success.

In the areas in East Punjab where civil administration has pretty well collapsed due to an almost mass departure of Muslim officials to Pakistan, it was the Armed Forces who had to step into the void. And as if this was not all, you were called upon to undertake the entire responsibility of protecting and transporting lakha of refugees, Hindu Sikh and Muslim, uprooted and maddened and knowing not what had come over them.

The Military Evacuation Organisation was created early in September and it has all along done very good work, and the credit goes to every officer and man employed in it as I know that everyone has given his best in the performance of this human and sordid task. The sum total of non-Muslims brought in about ten weeks is over 30,00,000. Much that we mourn and condemn has taken place. The only bright spot in it all is the disciplined and loyal work of you soldiers. You kept your hands clean. Your task is not yet ended. But the magnificent work already done is a guarantee that we shall pull through the rest with confidence.

## **Arduous Operation**

Nor is it only the evacuation rafugee care in which you have made notable history, you answered the call of your Covernment and your country in the deliverance of the beautiful valley of Kashmir from hordes of band its and marauders who had all but destroyed it. I doubt if ever before an Armed Force had carried through so arducus and so difficult an operation at such short notice and with so much courage. As our Prime Minister stated a few days ngo, our Armed Forces got just a few hours between the call of help from Kashmir and the dead-line when Srinagar might have fallen. We knew little about the strongth, resources and indeed even the disposition of raiders. All our men knew was that they could still land on the Srinagar aerodrome. The will the Government had only to be made known to our brave officers at Head-quarters. They undertook the operation promptly. In spite of the short notice, the paucity of available units and air craft, our troops landed in Sriuagar within 24 hours and what they did and are still doing is the marvel of friend and foe alke. In this work, we had the willing co-operation of nearly all the civil aviation companies as well.

#### Undaunted Determination

I need hardly say how everyone is grateful to our magnificent Air Force boys, the civilian pilots and crew, the soldiers who went all out in an undaunted determination to do the bidding of their Government in bringing which and deliverance to the unhappy victims of these cruel marauders whose villany and crime is unparalleled.

We have read and heard of many and daring incidents of valour in military history. The story of the deliverance of Srinagar will be an epic for all times. You remember I said that the sword you

carry will be unsheathed only for the protection of your Motherland and vindication of justice. Your operations in Kashmir justify this stand. You have gone there to give aid to people who are our own; your action is nothing other than one of punishing those wicked invaders who looted, murdered innocent men and women and children in a territory where they have no right to enter. As matters stand today, the Valley has been cleared up. Your units are now operating in mountanious terrain in the interior. Their task is none too easy. But I have no doubt you will carry it to fulfilment and come out of it with flying colours.

# Reorganisation of Armed Forces

Now a word about yourselves and the general reorganisation of the Armed Forces. When I spoke first you remember power to support the cause of nationalisation. We had planned for it before the decision to divide the country was taken. After this decision which inevitably meant the division of the Armed Forces, much of the earlier planning had to go over-board. In free India, it was obviously incongrucus to retain foreign elements. Internal unrest tended to tie our hands. The Government however determined. The Armed remained Forces as a whole are now completely in our own control. We are retaining the barest minimum of British Officers in technical jobs for a little longer. In the army, a considerable number of Generals and Brigadiers is new Indien and accelerated promotions are being given to younger men to fill key jobs, particularly operational joks and along the line.

In the Air Force, you have one Indian Air Vice Marshal assisted by other simi-

larly promoted to fill higher ranks. Our Navel Wing is small, but we have two Captairs and a few other able officers who will occupy key jobs, including commands. Our aim is to speed up this work of progressive nationalisation inspite of cur preoccupations. I disclose no secret when I say that the magnificent work you have done and are doing fully justifies the confidence which the Government has placed in you.

I am conscious that there is a good deal that still needs doing. I shall continue to strive for your well being within the limits of our country's resources. I have only one request to make. Keep up the great traditions of discipline. Now in fact you must doubly maintain solidarity in your ranks and loyalty to your officers and your Government. You are now truly engaged in the service of your Motherland and have proved to the world that you are the true soldiers of the nation. To serve the country loyally and keep it free from any danger is your role, which you have already proved that you will perform well.

The Overseas Radio Telephone Service will be extended to Mexico and Cuba with effect from Jan. 1, 1948. Service will be available from 10.30 hours 18T to 00.15 hours 18T daily, says a Press Note, issued by the Director-General, Posts and Telegraphs, on Dec. 31.

The charges will be Rs. 50- for the first three minutes and Rs. 16-11-0 for each subsequent minute and Rs. 2-11-0 for the report charge.

# PRINCESS ELIZABETH THANKS INDIA

Her Royal Highness the Pincess Elizabeth, Duchess of Edinburgh and His Royal Highness Prince Philip of Edinburgh have sent the following replies in acknowledgment of the presents and in response to the messages sent by the Prime Minister on behalf of the Government and the people of India on the occasion of their wedding.

Letter dated Nov. 16, 1947, from H.R.U. the Princess Elizabeth, Duchess of Edinburgh, to Pandit Nehru:

#### Dear Pandit Nehru,

It is very kind of you to send me your book "The Discovery of India", and a length of such beautiful gold and coloured brocade. This is, indeed, an acceptable wedding present, and I want to thank you most warmly for the good wishes which I know you feel towards us both at this time of great personal happiness.

You have in addition sent me, on behalf of the Government of India, an unusually charming necklace and a silver figure of the god Shiva with both of which I am delighted. Would you please tell all concerned what great pleasure they have given me, and how genuinely grateful I am for this most welcome present.

Yours sincerely,

ELIZABETH

Letter dated Nov. 24, 1947, from H. R. H. Prince Philip of Edinburgh to the Hon'ble Jawaharlal Nehru, Prime Minister:

Dear Pandit Nehru,

Thank you and the Government of India for the delightful present which my uncle brought back to me on your behalf, and also for your most interesting book, which you so kindly sent me.

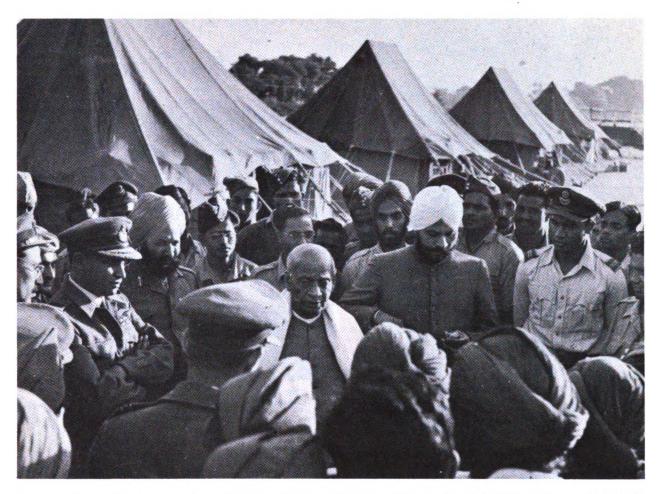

Would you kindly convey to the Government and peoples of India the deep gratitude of Hor Royal Highness Princess Elizabeth and myself for their kind message of good wishes for our future happiness.

I trust that when you come to England we may have the pleasure of seeing you.

Yours sincerely, PHILIP

INDIAN INFORMATION, JANUARY 1, 1948

Sardar Vallabhbhai Patel, Deputy Prime Minister, and Sardar Baldev Singh, Defence Minister, talking to R. l. A. F. Officers and men during their recent visit to Jammu

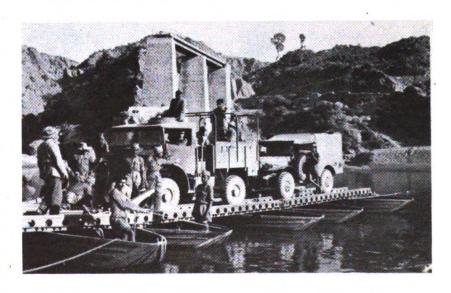

SARDAR Vallabbbhai Patel, Deputy
Prime Minister and Sardar
Baldev Singh, Defence Minister,
visited Jammu on Dcc. 2, and held consultations with His Highness the Maharaja of Kashmir, Mr. Mehr Chand Mahajan
the Prime Minister, Sheikh Mohammad
Abdullah, the Head of the Administration
and Bakshi Ghulam Mohammad, the
Defence Minister, Kashmir State. Maj.Gen. Kulwant Singh and Air ViceMarshal S. Mukerjee were also present.

The overall operational position in Jammu and Kashmir provinces was surveyed when both the Ministers received first-hand appreciation of the military position. The refugee problem was also discussed.

Both the Ministers and their party returned to Delhi in the evening accompanied by Bakshi Ghulam Mohammad for further consultations in the Capital.

While at Jammu, the two Ministers visited the Air Force Officers and men encamped at the aerodrome. They were all in good heart and gave a cheering assurance of their fine mettle and vigilant alertness.

# Prime Minister on Future Employment of Gurkha Troops

THE Hon'ble Pandit Jawaharlal Nehru, Prime Minister, made the following statement in the Dominion Parliament. on Dec. 10, on the future employment of Gurkha troops:

I should like to inform the House that the discussions recently held at Kathmandu between representatives of the Government of India, the Government of Nepal and His Majesty's Government the United Kingdom, on the subject of the future employment of Gurkha troops under the Government of India and H. M. G., have been satisfactorily concluded and a tripartite memorandum of agreement was signed on Nov. 9.

The documents signed by the heads of the three delegations include a number of detailed points on which further negotiations will be required to effect a final settlement, but the main principles have been agreed upon. The texts of the documents will not be published until these details have been settled. The main points on which the three Governments have agreed are as follows:—

(a) Arrangements have been made for the continued employment of Gurkha officers and men in the Indian Army. The Government of Nepal have also agreed that His Majesty's Government in the United Kingdom may employ Gurkha officers and soldiers up to the number required to maintain eight battalions or their equivalent at peace time strength, on mutually satisfactory terms and conditions of service.

- (b) It has been agreed to transfer to service with the British Army all volunteers from the regular battalions of the 2nd, 6th, 7th and 10th Gurkha Rifles, together with personnel, from their regimental centres who opt for such service in the referendum about to be held. The Gurkha personnel of the units transferred but who do not opt for service with H. M. G., will remain in the Indian Army.
- (c) Representatives of the Government of Nepal and of the Government of India will be present with the eight units earmarked for H. M. G., while the referendum referred to above is being taken.
- (d) The Government of Nepal have agreed that Indian officers will, in future, serve in Gurkha units. Nepalese subjects, with suitable qualifications, will be eligible for Commissions in the Indian Army.

The Government of India have agreed that Gurkha soldiers from regiments in the Indian Army, who have completed their engagements and do not wish to continue in the Indian Army, may join the units earmarked for H. M. G. in order to make good any deficiency that may occur in those units by Gurkha soldiers declining to serve under H. M. G.

It has been agreed that the Government of Nepal and H. M. G. will consult together on the question of recruiting Gurkha troops in excess of eight battalions, but that such additional recruitment will not, in any way, interfere with

recruitment to the Gurkha units in the Indian Army.

In connection with the employment of Gurkhas by H. M. G. the Government of India have agreed to grant to H. M. G. certain necessary facilities such as the use, as a temporary measure, of the existing recru.ting depots at Gorakhapur and Ghum and the provision on mutually satisfactory terms of transit facilities, postal and tolegraphic facilities, special foodstuffs Indian currency and remittance facilities.

The Government of the United Kingdom have agreed to use the corresponding Indian pay codes and rates of pay as the basis of the scale to be applied to Gurkha Officers and soldiers and to give an appropriate additional allowance during service abreed.

The arrangements, which I have described, fully meet the requirements of the Government of India. The willingness of the Government of Nepal to allow us to retain in service in the Indian Army the full strength of Gurkha units which we desired is another indication of the close relationship that exists between Nepal and India. The negotiations proceeded in an atmosphere of cordiality and good-will and I should like to express our appreciation of the co-operative spirit of the Government of Nepal and of H. M. G. in the course of these discussions, and our special gratitude to H. H. the Maharaja of Nepal.

# **NEW FOOD POLICY**

(Continued from Page 2)

Only experience will show whether these expectations will be fulfilled or not. If they are, the country would gain immensely; the phase of return to normalcy would be quickened; administrative personnel at present engaged on controls would be released for more urgent and productive tasks and there will be general public satisfaction. On the other hand should there be an outburst of hoarding and profiteering on the part of traders and large producers or panic among consumers, then the consequences would be extremely sericus.

While the Government of India consider that the risk involved in a policy of progressive decontrol of food should be taken in the larger national interests, they are fully conscious of the need for watching developments carefully and maintaining preparedness against possible emergencies. The Government of India have, therefore, advised the Governments of Provinces and States that the present food control organization maintained substantially intact until the success of the revised policy has been assured. They have also been advised that existing arrangements of requiring holders of stocks of foodgrains to take out licences and submit returns should be continued. In order to watch the situation closely the Government of India would obtain weekly information from provinces and States regarding stocks, procurement, prices and the general food situation. Besides the progress of implementation of the revised policy will be reviewed at all India Conterence at Ministerial level to be held at quarterly intervals. Should the situation so demand the Government of India will not hesitate to re-establish rigid control.

# Field Marshal Auchinleck Leaves India

Eyre Auchinleck, G. C. B., G. C. I. E., C. S. I., D. S. O. O. B. E., left India after nearly 45 years' service, on relinquishing his appointment of Supreme Commander on Dec. 1.

Sir Claude, born in 1884, was educated at Wellington and Sandhurst and entered the Indian Army in 1903. He was posted to the 62nd Punjabis, a regiment that had lately been transferred from the Madras Army, and which is now the 1st Battalion of the 1st Punjab Regiment.

During the War of 1914-18, he served with distinction in Egypt and Mesopotamia, gaining the Distinguished Service Order and the Order of the British Empire.

Between the wars, he occupied a number of command and staff appointments, and was one of the first Indian Army officers to attend the Imperial Defence College in London. Whilst commanding the Peshawar Brigade in the early thirties, he carried out

highly successful operations against troublesome tribesmen on the Northern frontiers, for which duty he was made a Companion of the Bath.

The beginning of the 1939-45 War saw him commanding the Meerut District. having previously held the appointment of Deputy Chief of the General Staff Headquarters. at Army Duringe the war he held many great commands, in Norway, in England after Dunkirk, in the Middle East and in India, where he was twice the Commander-in-Chief. As C.-in-C. in India, he laboured unceasingly to produce a National Army worthy of the then undivided country; and also to foster the smaller and less well established R. I. N. and R. I. A. F. Then, with his plans approaching fruition he was faced with the position of the control of the contro with the partition of the Armed Forces. As Chairman of the Armed Forces Reconstitution Committee and as a member of the Joint Defence Council, he has been largely instrumental in the carrying out of this delicate and difficult taska task that has never before been attempt. ed in the history of the world.

# UPLIFT OF SCHEDULED CASTES also feel with the last speaker that economic uplift and educational oppor-

# Rajkumari Amrit Kaur's Assurance

the uplift of the scheduled castes is in the forefront and will remain in the forefront of this Government until such time as there is no such class as scheduled castes in our society," said the Hon'ble Rajkujmari Amrit Kaur, Minister of Health, Government of India, speaking on the resolution moved by Shri V. I. Munaswami Pillai in the Dominion Parliament on Nov. 27, regarding the amelioration of the condition of the scheduled castes.

The Hon'ble Minister said: Inasmuch as the resolution before the House refers to certain aspects of the general question of amelioration for the scheduled castes, I would like to say that Government is wholly in sympathy with its spirit and its aims. It is the clear and definite policy of the Government that living conditions for all those who today live in hovels—and it is not only scheduled castes—should be ameliorated. Naturally, the scheduled castes will benefit as well as anyone else. Development grants, as is known to the House, are made to the Provinces. They can use them for any purpose and doubtless there is no Province but keeps the needs of the backward and the poor classes in the forefront of all their programmes.

As far as the Centrally Administered Areas are concerned and for which the Centre is responsible, the Improvement Trust in Delhi had decided to clear all slum areas, and I would like to assure the mover of the resolution that those slum areas in which the scheduled castes live will be the first to go. All the poor that will thus be displaced will be given new sites.

# **Poor Class Housing Scheme**

There is also a poor class housing scheme, which will also benefit the scheduled castes. In this scheme the criterion is not going to be community. It is the earnest desire of the Government not only to banish untouchability root and branch, but also to give to the backward and poor classes all the help that they need for improvement of their living conditions and for their general

As far as the water supply is concerned, all public sources of water are legally open to the scheduled castes, but we are all aware that custom and usuage deal harshly with them. Recently, therefore, the provisions of the Bombay Removal of Social Disabilities Act of 1946 have been extended to the Delhi Province and they are going to be extended to the other Centrally-Adminis-Aered areas also.

Any schemes for the amelioration of the condition of the scheduled castes will certainly have the full sympathy of the Central Government. Supplementary grants to Provinces for any schemes of such amelioration or uplift will obvicuely depend on what the Provinces have ready in the way of schemes and what they are able to work out, and I may assure the House that it will be the policy of the Central Government to help the Provinces do all they can to ameliorate the condition of these unfortunate people.

It is, however, difficult to accept any specific figure for such grants at this stage. The House may rest assured that the uplift of the scheduled castes is in the forefront and will remain in the forefront of this Government until such time as there is no such class as scheduled castes in our society.

### "UNTOUCHABILITY MUST GO"

speaking on the resolution on Dec. 2 the Health Minister said that Government policy on the subject was absolutely clear and definite. Untouchability must go and Government is pledged to resort to every means in its power so that this curse shall be eliminated from this land.

"There are Acts for the removal of social disabilities in practically every province", she added: "It is only right that they should be there, and as I said the other day, the Bombay Act is now going to be applied to all the Centrally Administered Areas also. But I am painfully aware of the fact that while these Acts do obtain and are on the Statute Book, they are observed in the breach rather than in their observance, and for that I do feel that the Provincial Governments as well as the Centre should have some machinery to see that the law is not disobeyed. I shall not hesitate from the Centre to give this directive to all Provinces, and I hope that not only Provinces, but all the States will also bring these laws on to their Statute Books.

"I had occasion to tour Kathiswar during a drought period, and it hurt me beyond measure to see that while cattle and dogs could come and drink water from the chaubachas or tanks near the wells, Harijans could not come to quench thur thirst even there. Government is aware, I repeat, of all these disabilities. I know also that money is necessary for the provision of wells not only for Harijans but for everybody where there is no pure water available.

"I know also that the housing needs of Harijans and of all the poor are a crying urgency and need 'immediate action. I know also that money is needed for educational and economic uplift. Government will do everything within its means to supply these needs because I

also feel with the last speaker conomic uplift and educational opportunities for the scheduled castes, and indeed for all backward clarges, are created of the chief means of raising their present standards. But I do want to say this to the mover of the original resolution that in the development schemes that the Government has in view I am quite sure that the scheduled castes will get all the financial need that is necessary, and I hope it will be more than what he asked for in his resolution (hear, hear).

## **Educational Facilities**

"For the Centrally Administered Areas I would like to say that we shall try to do everything that we possibly can from the point of view of housing for Harijans, for drinking water, as well as for educetional facilities for them. But I do also want to ask Members in this House who are going to pass this resolution today to speak with the same cloquence and work with equal energy so that all those people whom they represent will bansih unter chability in their respective areas, because however much money may be given from Government, however many laws are passed for the removal of untouchability, there has got to come that heart-change among those who have so far practised this evil custom, and that is the best way of removing this inhumanity from our society.

In accepting Seth Govind Das's amendment to the original resolution, I wish to assure the House on behalf of Government that we shall not rest content until the word "Scheduled Castes" is banished from our vocabulary (hear, hear), and I also wish to assure Shri Thakurdas Bhargava that this resolution will not be interpreted in a narrow sense. It is not only house sites or drinking water facilities or scholarships that are required, but the removal of all disabilities so that the scheduled castes may have the fullcat opportunity of self-development and that they may attain an equal status with every other citizen of this country. submit also that no separatism is needed for them in the matter of drinking water or for anything else. They are eligible for houses for living wherever they want to, for drinking water from wherever they want to, for going to any educational institution they want to etc. For after all, they are part and parcel of the great Hindu community and nothing elic.

In connection with the proceedings of the United Nations Assembly when the vote on the partition of Palestine westaken, it was reported that the Indian Delegation had withdrawn after the proposal for partition had been carried by the requisite majority, says a Press Note, issued by the Ministry of External Affairs and Commonwealth Relations, on Dec. 11.

#### It added:

Members of the Indian Delegation.

Now back in Delhi, have stated that this cocount is entirely incorrect. India did not withdraw after the vote: only the representatives of the Arab States did so.

# BILL TO CONSTITUTE INDIAN NURSING COUNCIL

# Health Minister's Speech

Noving "That the Bill to constitute an Indian Nursing Council be taken into consideration" in the Constituent Assembly (Legislative) on Dec. 9, the Hon'ble Rajkumari Amrit Kaur, Minister of Health, said that statutory provision for a Nursing Council had been a long-felt need, and the measure was very much overdue. "The present position", she added, "is absolutely untenable. There is no central body to co-ordinate or to ensure a uniform minimum standard of training. There is no inter-provincial recognition of nursing qualifications. It is not possible. Provinces have their separate Councils and they have separate standards. It is a most unsatisfactory position.

"It causes the utmost inconvenience to hospitals or other authorities who wish to employ nurses. Moreover, it is a very great hardship on the profession itself. Further, there is no body either to negotiate with foreign authorities for the reciprocal recognition of qualifications. That also is a very great lack. This Bill is intended to remedy these defects.

# The Central Council

"The Central Council, that is sought to be brought into being, will provide means for raising the standards of training and improving the status of the profession itself and for giving it international standing also. For, it will provide minimum standards of training it will grant recognition to nursing qualifications and it will also negotiate with foreign countries for recognition of those qualifications. The Council has been sought to be made an extremely representative body. It will represent all the Provinces. It will be representative of the profession itself. It will have, on its Board, administrative medical officers, in charge of the health services and it will be representative also of the medical profession as a whole in India and of all others that are qualified to contribute to the work of this Council.

"There is one important thing which I should like to bring to the notice of the House and that is that the Council will also have powers to withdraw recognition of qualifications, and under the Bill only those with recognised qualifications will be enrolled as nurses, midwives and health visitors. This, in itself, will ensure that inter-provincial reciprocity in the matter of registration which is today absolutely lacking".

The Health Minister, after referring to the history of the Bill, said:

"I do not konw, Sir, if the House is aware that today in the whole of India including Pakistan, there are only 7,000 nurses and only 5,000 midwives. This constitutes a ratio in our country of one nurse for every 43,000 of the population, as against one nurse to 300 in the United Kingdom and one to 367 in the United

States of America. Because of the need for nurses in the Kurukshetra Camp I was impelled, the other day, to make a country-wide appeal for nurses. But as I was making that appeal I was wondering how it could be responded to.

"The hospitals that have spared me nurses from Bombay and elsewhere, and my own hospitals of Delhi, have been depleted of their nursing staff in order to provide the need for Kurukshetra. All of them are now working almost at breaking point and they say that they will have to close down the wards on account of the shortage of nurses. This position is deplorable. Apart from the fixing of minimum standards for training and qualification, I feel that this measure will give some encouragement to our girls and our women to come forward to enter this noble profession.

"We lose many lives today simply because we have not got midwives who are properly trained and because nursing qualifications are not as high as they should be. If this Bill is passed-as I hope -with one voice, I know that it will be a big step forward towards the attainment of our object. But I also hope that Members of this House will not rest bringing content with merely bringing this measure on to the Statute Book but that they will go back to their various Provinces and insist on the Provinces having at least one Nursing College, so that opportunity may be afforded to our girls to come and join this noble pro-

"We cannot render proper medical aid to our people without adequate nursing aid because nursing is one of the most important limbs of the medical profession. However skilled the surgeon and however efficient the physician, the life of the patient really is in the hands of skilled and efficient nurses".

# LEGAL POSITION

The legal position regarding the amendment moved by Mr. M. Ananthasayanam Ayyangar to part (C) of Clause 2 of the Indian Nursing Council Bill was explained in the Dominion Parliament, on Dec. 8, by the Hon'ble Dr. B. R. Ambedkar, Minister of Law.

Dr. Ambedkar said:

Part (C) of Clause 2, of the Bill, which was moved by the Health Minister, is as follows: "Provincial Council means a Council (by whatever name called) constituted under the law of a Province to regulate the registration of nurses, midwives or health visitors in the Province". The amendment, moved by Mr. M. Ananthasaynam Ayyangar, was:

"That in part (C) of clause 2 of the Bill, after the word 'Province' wherever it occurs, the words 'or a State' be inserted.

The States he explained, were linked with the Union of India in two different ways: the one way by which they were linked was what is called the standstill agreement, which had been made between the Union of India and the various Indian States. The second link by which the States were bound to the Indian Union, are the Instruments of Accession.

"There is a fundamental difference between the two links", he added. "The standstill agreements are purely contractual. They preserve such agreements as existed between the old Government of India and the Indian States under paramountcy before Aug. 15, 1947. They do not confer any jurisdiction upon the Government of India to legislate either by way of altering those arrangements or making them the foundation of any law which would bind the Indian States. Therefore, so far as we are concerned, in the matter of making any law by this Legislature which is intended to be applicable to the Indian States, it is quite clear to my mind that we cannot take our stand on the standstill agreement. We must, therefore, rely upon the Instrument of Accession, which is the only foundation which gives us legal jurisdiction to pass any law ".

Dr. Ambedkar said that this Legislation related to entry No. 16 in the Concurrent List and that Instrument of Accession, whatever power they gave to the Central Legislature to legislate, definitely excluded all items included in the Concurrent List. "I should have thought that by that very proposition that the Concurrent Lists are not covered by the Instruments of Accession, the jurisdiction of this House is completely ousted.

# Three Subjects Only

"When we apply legislation which is originally in the Bill confined to a particular area, to another area not made subject to that at the time when the Bill was passed, the position is this, that the area over which the legislation is subsequently extended is not subject to the jurisdiction of the legislature. If the legislature wanted, in the very first instance, to apply that law to that area, nothing in the constitution of this Government, or in the powers of the legislature could prevent the legislature from doing so.

"So far as the States are concerned, we have jurisdiction over their territory with regard to three subjects only; we have not got full jurisdiction. We are not limiting our jurisdiction when we are legislating with respect to a State in respect of the three subjects; we are, in fact, spending our legislative authority to the fullest extent that we have.

"So far as the Provinces are concerned, we have at the moment, when we are enacting the law, jurisdiction which we could exercise if we wanted to do so. That is not the case with regard to the Indian States.

"True enough, if a supplementary Instrument of Accession was passed we could get the jurisdiction necessary for the purpose of enacting the law; but

NDIAN ENFORMATION, JANUARY 1. 1948
Digitized by

what I would like to submit to my friend, Mr. Ananthasayanam Ayyangar, is that the law can never be hypothetical and law can never be passed in anticipation of some jurisdiction being acquired. That is contrary to the principle of legislation. Law must be definite, law-must be absolutely clear to what it applies, to what it cannot apply. And therefore, unless and until we have with us a supplementary Instrument of Accession giving the Central Legislature the power to enact it to extend this, I am sure, we could not anticipate that there might be an Instrument of Accession which the Governor-General might accept and then we might get a chance to extend this legislation. I am sure that is contrary to the principles of legislation.

"All that, therefore, we must hope for is, for the moment, to confine the Bill to the Provinces' of British India, to hope that we will get similar Instruments of Accession—supplementary ones—from the Indian States, when we can by law, either extend our legislation to the States, or the States can parr passu along with this legislation, have similar legislation in their own States and make the provisions of this law applicable to their territory.

"Sir, I therefore think that this amendment would make the Bill ultra wirs and, therefore, could not be accepted"

# BANKING COMPANIES ORDINANCE

The Banking Companies (East Punjab and Delhi) Ordinance 1947, which requires banks under moratorium to pay 10 per cent. of the deposits, does not contain any provision regarding payment of drafts issued by the banks before the date of the moratorium, says a Press Note, issued by the Ministry of Finance on Dec. 13.

A number of representations have been received from the holders of such drafts, and after careful consideration. Government of India have decided that payments against such drafts should be allowed to the same extent as in the case of deposits.

An amending Ordinance has accordingly been issued on Dec. 13, 1947, to provide for payments up to 30 per cent. of the amount of the draft or Rs. 750, whichever is less, during the three months' period of the moratorium.

# DR. AMBEDKAR'S SPEECH

(Continued from page 55)

any jurisdiction. And so any sort of legislation which he wanted to be introduced by his amendment to clause 1, would be purely speculative.

"Here, so far as this Bill is concerned there is nothing inherently impossible in the Indian Dominion acquiring further jurisdiction of an extra-provincial character, and therefore, a legislation, which looks at the application of this by anticipation, would not be speculative because the possibility is always there. I, therefore submit that there is no inconsistence in the two positions I have taken.

# "KEEP THE VILLAGE CLEAN"

# Rajkumari Amrit Kaur's Broadcast

very great deal of our ill-health is due to our own fault, and ignorance is its cause" said the Hon'ble Rajkumari Amrit Kaur, Minister for Health, broadcasting in Punjabi to the people of East Punjab from the Delhi Station of All India Radio, on Dec. 11.

Rajkumari Amrit Kaur said:

I am at the radio tonight to speak to my village friends about village reform and because I am, at the moment, trying to serve you in the sphere of health my talk to you today will be about health.

You must be aware how very backward our country is in the matter of health. All kind of diseases and fevers are rampant in the country. The incidents of death in childhood are great as also for women during child-birth. Our expectation of life is the lowest in the world. It is true that our poverty is very largely responsible for most of these ills. We do not get enough to eat, milk and ghee are rare commodities today, the pressure on land has increased tremendously, there is unemployment and very little money. But I do want to say this to you that in spite of all this a very great deal of our ill health is due to our own fault, and ignorace is its cause".

- "If you remain the victims of disease you will never be able to make any progress. I therefore ask you to pay due attention to the following:—
- (1) Eat bread made from handground flour. If handground flour is not procurable, let it be flour ground by kheras (bullock mill). You should realise that machineground flour has no vitamins in it.
- (2) Cultivate the habit of eating vegetables and the more raw vegetables you can eat the better. Whenever you can find fruit, eat fruit also.
- (2) Give the utmost attention to the care of your cattle. They are your greatest wealth. It is because they do not get proper care that our cows yield little milk and our cattle are of poor quality. Then how can we expect to get either milk or ghee and how can our agriculture thrive?
- (4) Keep the village clean. It is because we do not conform to the laws of hygiene and sanitation that disease spreads in our midst. Dirt produces flies, mosquitoes and other germs which are the root cause of the spread of disease. To keep your houses and lanes clean and free of all refuse is your duty.
- (5) Due attention must be paid to personal cleanliness also. Clean clothes, clean cooking and eating utensils, clean children, clean houses, clean lanes, healthy cattle, all these are the signs of a prosperous village.

- (6) Unclean water is another cause of disease. Always drink water from a good well, never from a stagnant tank or a pond. Keep the place near your drinking-water well clean.
- (7) Inculcate early in your children the habits of cleanliness. If there is a school send all your children to that school.

## Village Handicrafts

- (8) Every house must hum with the spinning wheel. Isn't it a shame that we cannot produce our own cloth? That our women have, to a large extent, given up spinning has been a crime on their part. I beseech all my village sisters to take to the spinning wheel once again and make their village prosperous and I do not plead only for the spinning wheel I plead with you for the revival of all village handicrafts. If you can cater for all your requirements in your own village then what need have you of anything else? You will then, indeed, be kings, in your own bomes. This is what Mahatmaji has been telling you for years. This is what he is saying to you today. You should listen to him.
- (9) My message, therefore, to you today is to awaken from your shand. Drive the wolf of poverty from your door. Do not spend foolishly, get rid of all the evil customs which have crept into our society, do not gamble, do not drink alcohol, do not get into debt, keep your character above reproach, live with each other as brothers. Today internecine strife has brought the utmost misery on our country. We must drive this evil out of our society. Quarreling and killing lead nowhere. Love conquers all things. Our health can only be good if we live cleanly and well".

## Mr. NEOGY'S SPEECH

(Continued from Page 46)

has been done. Much has to be done still. As I have said before, the response of the country has been magnificent so far, but the final and satisfactory solution of the problems created by this huge transfer of population can only be arrived at by the nation's representatives exercising a diligent and continued interest in the matter. I am aware that there have been criticisms of the Ministry. I welcome all criticisms. I do hope that this debate will reveal to the Ministry the wishes of the House in the shape of concrete suggestions, so that the Ministry can go forward to the bigger and more serious task ahead with the assurance that it has the Hou-e behind it and, through it, the confidence of the nation'

## ECONOMIC ASPIRATIONS OF UNDER-DEVELOPED COUNTRIES STRESSED

## Mr. Bhabha's Address at Havana Conference

T is our belief that one of the main tasks before this Conference is to seek to reach agreement on the outstanding issues regarding economic development and commercial policy in a manner that will meet the legitimate aspirations of comparatively underdeveloped countries", declared the Hon'ble Mr. C. H. Bhabha, leader of the Indian Delegation, at the Plenary Session of the Trade and Employment Conference at Havana on November 29.

Mr. Bhabha at the outset, expressed satisfaction that India had been closely connected with the various stages leading to the framing of the draft Charter since the first session of the Preparatory Committee and said: The draft Charter still contains a wide area of disagreement, but it is our hope that as a result of the joint efforts of the representatives of the countries gathered here these differences will have largely disappeared and the Charter in its final form will have reconciled the needs and aspirations of individual countries with the requirements of international economic cooperation.

#### **Mutual Understanding**

"The draft Charter now before us differs materially from earlier drafts. It is a tribute to the spirit of mutual understanding and co-operation displayed by the countries represented on the Preparatory Committee that the principles originally enunciated have been modified in an attempt to meet the needs and circumstances of countries with different economic systems and in varying stages of economic development.

"That does not, however, imply that the present version of the draft Charter is perfect or that it fully resolves all major issues of policy on which unfortunately some divergence of views still persists. The Indian Delegation will in the course ask for a further consideration of the issues on which, members of the Preparatory Committee will recall, the Indian Delegation reserved its position at the second session of the Preparatory Committeee at Geneva. Nor does it follow that the draft Charter as framed vill immediately on its enforcement release the wheels of intermational trade which are now clogged by all manner of restrictive practices and lead to an automatic expansion of world trade on a abbstantial scale. If, nevertheless, the Government of India are in general agreement with the broad outlines of the draft it is because they feel that, subject to the observations which I shall presently make, the revised version of the draft Charter represents the widest measure of agreement that it has been possible to reach on a subject which is free neither from technical complications nor from embarrassing controversy.

"At the same time it is our belief that one of the main tasks before this Conference is to seek to reach agreement on the outstanding issues regarding economic development and commercial policy in a manner that will meet the legitimate aspirations of comparatively underdeveloped countries.

"Mr. President, as I said a little while ago, our general support to the framework of the draft Charter does not imply that we believe that an automatic expansion of world trade on any substantial scale would follow upon the enforcement of the Charter by the signatory nations. That of course follows from the fact that the fundamental economic problem of the world today is the problem of production, and unless the productive resources of the world, damaged or destroyed by war, are repaired and re-employed and unless resources now lying undeveloped are exploited as efficiently and rapidly as possible, mere liberalisation of trading conditions will not bring about a substantial and lasting increase in world trade and employment. It was therefore eminently right and proper that the problems of full employment and economic development should have been placed in the forefront of the draft Charter.

#### National Policy

"There is, however, one aspect of this matter, which requires special emphasis. While there can be no difference of opinion as to the necessity for the quick development of the productive resources of a country, the agency by which, and the terms and conditions on which such development should take place are issues which, I believe, must in the last analysis be decided by national policy. There are considerable misgivings on the provisions of the Charter by countries on the threshold of industrialisation, or are still in the early stages of industrial development. These misgivings are genuine and cannot be disregarded.

"Before I conclude, I would like to say a word about the nature of the organisation which is to administer the International Trude Charter. Now, in this Assembly or outside it, no one can object to the high aims set forth in Article I of the draft Charter, namely attainment of higher standards of living, full employment and conditions of economic and social progress and development. If these objectives are to be attained. the administration of the Charter must be in the hands of a body which is fully representative of the different types of economy and which will approach its task in a spirit of mutual understanding, goodwill and co-operation. That way alone her the success of any international organisation."

## UNDER- Assurance of Loyalty to Indian Dominion

Assurances of loyalty to Indian Dominion were given by different sections of Indian population in Sumatra when India's first Consul-General in Batavia, Mr. N. Raghavan, recently visited the island.

Accompanied by Mrs. Raghavan, the Consul-General visited Medan, Palembang, Singapore and Penang during his eightday tour of Sumatra and Malaya.

In Medan, the Muslim Association of India and Pakistan, on behalf of the Indian Muslim community, gave an address of welcome to the Consul-General. They said: "We, Indian Muslims, pledge our loyalty and faith to the Government of Indian Dominion and to the Tricolour flag.".

#### **Indian Consultative Committee**

Indians in Sumatra, it is learnt, have formed a joint body, called the Indian Consultative Committee representing all Indians, both from India and Pakistan.

Mr. Raghavan addressed a gathering of Indian labourers and visited six Indian schools in Medan. A deputation of Indians from outlying districts met the Consul-General.

At Palembang, Mr. Raghavan discussed with the local authorities problems relating to the Indian population there.

As a result of the Consul-General's tour problems relating to nearly 20,000 Indians in Sumatra have been taken up for consideration.

## EMIGRATION CONTROLLER FOR MADRAS

The emigration establishments in India were taken over by the Central Government in 1944. Since then the flow of Indian nationals overseas which had been held up during the war, due to the lack of shipping facilities, has created a variety of complex problems arising out of the post-war conditions obtaining in those countries, and other allied factors.

The need for effective and co-ordinated control of emigration through all the Indian ports has therefore become even more important than before.

The Government have accordingly decided to appoint a Controller of Emigration at Madras to assist the Controller-General of Emigration of the Government of India at Delhi. The Controller will be primarily responsible for the working of the Indian Emigration Act in the Madras Presidency and will exercise supervisory and co-ordinating control ever all Protectors of Emigrants in that Presidency.

# NEED FOR INTELLECTUAL CLEANLINESS AND COURAGE

## Mrs. Asaf Ali's Address at UNESCO Conference

THE basic causes that take human beings to the brink of disaster are greed and the power lust of the few. Unless we can eradicate this primary defect in our socio-economic structure, I, for one, cannot foresee a world settling down to life where evil, untruth and unloveliness will cease to influence man", said Mrs. Aruna Asaf Ali, a member of the Indian Delegation, in her address to the recent plenary session of the UNESCO General Conference at Mexico City.

Mrs. Asaf Ali said: "What is UNESCO doing to restore national equilibrium? I am not ignoring the UNESCO's limitaticus; I am not overlooking the limitations of even greater and more powerful body, U. N. O. At the same time, we must honestly face our responsibilities and the implications of the fact that the world's sick condition is a cause for grave anxiety today even more than it was two years ago, when the UNESCO was ushered in to heal that sickness. It may be said that the remedy that is being trued is a sure one though it takes some time to yield desirable results. I am afraid that does not satisfy me. The world is sick today and gravely, critically sick; it needs to be healed here and now and immediately if it is to be saved.

"As one reads the Director-General's report, one cannot help admiring the outlines of a design for peace which is to

unfold itself gradually through international collaboration in the fields of education, science and cultura. The design is, however, too complicated and elaborate and its completion will take ionger than humanity can afford to wait. A crisis will overtake us unless we make haste and war will win the race, not the UNESCO.

#### Serious Limitations

"I reasliso the difference positive peace and negative peace; I also realise that we must build peace on a positive basis if it is to be lasting. The question, however, before us today, I suggest in all humility, is not what is ultimately or ideally desirable, but what is immediately essential. Unless, therefore, we devote our energies to the urgent task of banishing and outlawing war and rescuing peace from its present precarious condition, there is danger of the UNESCO itself and all that it stands and strives for being washed away by a rapidly advancing deluge.

"I am tempted to say that in the present conditions, a body like the UNESCO has serious limitations, and that even the bigger and more powerful United Nations Organisation is a house divided against itself. I may also say that so long as the present political and economic pattern of the world is not radically altered, there can be no real peace for mankind, and that only a political

organisation, not we here, can do anything immediately effective to save the peace of the world. But that would be no better than a counsel of despair, and its logical conclusion would be to wind up this Organisation and to admit that the forces of education, science and culture are no more than instruments in the hands of political and economic bosses, to be used for their own ends, as and when they please. I, however, will not be a Cassandra.

"While the UNESCO should not neglect such important subjects as Fundamental education, the Natural Sciences, Arts and Letters, Philosophy and Humanities, Museums and so on, I feel that for some time to come we must concentrate our limited energies and material resources on those activities which help in the immediate task of combating international distrust and conflict and mobilising the mind of the common man all over the world against the forces which are today leading the nations to a war of unimaginable frightfulness and destruction. I am certain that even in the present state of things, if the intellectual leaders in the different countries are determined to establish peace, they can achieve a great deal. The only conditions of success are intellectual cleanliness and courage.

#### International Understanding

"The UNESCO's activities, in the immediate future should be centred around one main project designed to bring about international understanding and implementing this project; and the UNESCO must align itself with all progressive forces and with progressive forces and with progressive forces only. International co-operation has failed during the past because the ruling cliques which control wealth and political power within national groups were opposed to each other and could not rise above their conflict of interests. Let us not make the same mistake again."

According to information received from Mexico City, where the Second Session of the United Nations Educational Social and Cultural Organization (UNESCO) was held, Mr. H. J. Bhabha was elected Chairman of the Working Party on Natural Sciences; Mr. Ashfaque Hussain was elected Vice-Chairman of the Working Party on education for International Understanding, a Member of a Committee of seven to revise the rules of procedure and also the convener of a Committee of three to investigate and report on the financial administration of UNESCO. Sir S. Radhakrishnan, lender of the Indian Delegation, was one of the Vice-Presidents of the Conference.

Indian and Gurkha officers have already been posted to the battalions of the six Gurkha Rifle Regiments which will continue to be in the Indian Army. These regiments are the lst, 3rd, 4th, 5th Royal, 3th and 9th Gurkha Rifles.

Over 70 Gurkha officers are now holding Commissions in the Indian Army. They were Viceroy's Commissioned officers and were promoted to 2nd Lieutenants after appearing before 8 Services Selection Board.

## India's First High Commissioner in Ceylon

ORDIAL greetings were exchanged between the Prime Minister of Ceylon, Mr. D. S. Senanayake and Mr. V. V. Giri, on the latter's appointment as India's High Commissioner in Ceylon.

The Prime Minister of Ceylon said;

"It is a great privilege for me today, on behalf of my Government and the people of Ceylon, to offer you our felicitations and good wishes on your appointment as the first High Commissioner of the Dominion of India in Ceylon. To me personally this appointment gives genuine pleasure as it will give me an opportunity of dealing with a friend for whom I have had the highest regard, and who, I know, is held in high esteem by the people of this country.

"I shall be grateful if you will convey to the Government of India greetings from Ceylon and assure them of our assistance and co-operation in maintaining and strengthening the cordial relations between the Dominion of India and Ceylon".

Mr. Giri replied:

"Your kind message of felicitations and good wishes on my appointment as the first lligh Commissioner of the Dominion of India in Ceylon has given me the greatest pleasure. I have had the privilege and pleasure of your friendship now for more than half a dozen years and I consider it a great compliment when you say that I have to some extent succeeded in my endeavour to secure the esteem of the people of this country.

"I am conveying to the Government of India your greetings on behalf of Ceylon. With you as the Prime Minister of Ceylon I feel confident that the cordial relations that exist between the Dominion of India and Ceylon will grow from strength to strength and that any outstanding differences will soon be settled to the satisfaction of both countries."

## TREATMENT OF INDIANS IN SOUTH AFRICA 8, 1946;

### Prime Minister's Statement

AKING a statement on South Afr.ca in the Constituent Assemble (Legislative) in New Delhi on Dec. 12. the Hon'ble Pandit Jawaharlal Nehru, Prime Minister, sa d:

The House is aware of the text of the resolution adopted by the General Assembly of the United Nations on Dec. 8, 1946, on the treatment of Indians in South Africa. To refresh the memory of Hon'ble Members, I would quote the substantive part of the resolution:

"The General Assembly is of the opinion that the treatment of Indians in the Union should be in conformity with the international obligations under the agreements concluded between the two Governments and the relevant provisions of the Charter; and,

Therefore requests the two Governments to report at the next session of the General Assembly the measures a lopte ! to this effect".

The House is also aware of the correspondence which took place between me and Field Marshal Smuts with a view to giving effect to this resolution. The Prime Minister of South Africa was insistent that, before any negotiations could take place between the two Governments, the so-called sanctions which India had applied against South Afr.ca, namely the severance of trade relations between the two countries, should be withdrawn and the High Commissioner for India should return to the Union. We, on our part, while expressing a sincere desire to settle the problem of the treatment of Indians in South Africa by friendly means, expressed our inability either to resume trade relations, or to enter into negotiations, except on the basis of the Assembly resolution of 1943.

#### **Broad Directive**

Since no agreed basis for discussion between the two Governments could be reached as a result of this correspondence, we instructed our Delegation to the Second Session of the United Nations Assembly, which commenced in New York last September, to work for a resolution which, after expressing the regret of the Assembly at the failure of South Africa to accept last year's resolution as a basis of settlement by negotiation with the Government of India, would require South Africa to enter into negotiations with this country on the aforesaid basis and would request both India and South Africa to report the result to the Security Council not later than three months from the end of the Assembly session. Subject to this broad directive, the Delegation was given discretion to adjust the exact terms of the resolution to the exigenies of the atmosphere and the mood of the Assembly.

After sounding opinion amongst other Delegations, the Delegation presented a resolution, of which the operative part ran as follows:

"The General Assembly, having considered the reports submitted by the Government of India and by the Government of the Union of South Africa, pursuant to the aforesaid resolution;

"Expresses its regret at the refusal by the Government of South Africa to accept implementation of the resolution of the General Adssembly dated December 8, 1946, as a basis of discussion with the Government of India and of its failure to take any other steps for such implementation:

resolution dated "-Reaffirms its December 8, 1946;

"Requests the two Governments to enter into discussions at a Round Table Conference on the basis of that resolution without any further delay and to invite the Government of Pakistan to take part in such discussions;

"Requests that the result of such discussions be reported by the Governments of South Africa and India to the Secretary-General of U. N. O. who shall, from time to time, make inquiries from them and

"Submit a report on the action taken this resolution by the two Governments to this Assembly at its next session".

In the course of the discussion of this resolution by the Political Committee, the Delegations of many countries who had supported India's cause during the 1946 debate urged that the part of our resolution which invited the Assembly to express its regret at the refusal by the Government of South Africa to accept the implementation of the resolution of the General Assembly December 8, 1946, as a basis of discussion with the Government of India and of its failure to take any other steps for such implementation" was tantemaunt to a condemnation of South Afr.ca and likely to be regarded as evidence of a desire on the part of India to humiliate the South African Union. Since our Government or show any spirit of vindictiveness but only to work for a settlement which would safeguard Indian interests, the Delegation, with our approval, agreed to accept an amendment, moved by the Maxican Delegation, which had the effect of deleting the words which I have just quoted.

With this amendment, the resolution was adopted by the Committee by 29 votes against 10. On November 20, the same resolution was placed before the Assembly Thirty-one countries voted for the resolution and 19 against it. The resolution runs as follows:-

"The General Assembly considered the reports submitted by the Government of India and the Government of the Union of South Africa pursuant to the aforesaid resolu-

Requests the two Governments to enter into discussions at a Round Table Conference on the basis of that resolution without any further delay and to invite the Government of Pakistan to take part in such discussions;

Requests that the result of such discussions be reported by the Governments of the Union of South Africa and India to the Secretary-General of the United Nations, who shall, from time to time, make enquiries from them and submit a report on the action taken on this resolution by the two Governments to the Assembly at its next session."

The majority in favour of this resolution, though substantial, fell short of the requisite two-thirds figure by 3. According to the rules of the Assembly which require a two-thirds majority for all resolutions on important subjects, this year's resolution is not binding. Its moral importance, however, is in no way diminished by the shortfall of three votes in the requisite two-thirds majority. In any case, we are advised that last year's resolution remains operative.

#### Tribute to India's Delegation

I should like to take this opportunity to express our gratitude to all those countries which supported us on this occasion and to pay a tribute to our own Delegation for the ability with which they pressed India's case. The outcome of debate on issues such as that of the treatment of Indians in South Africa is to be measured not in terms of arithmetic but the intrinsic merit of the cause and the support of enlightened world opinion for that cause. Judged by these tests, the stand taken by the Government of India at the last session of the Assembly has been fully vindicated.

In supporting the cause of Indians in South Africa, we have worked not only for the rights of people of our cwn race but for the rights of oppressed people throughout the world. That attitude we are determined to maintain, in the firm faith that our cause is right and that ultimately right will prevail.

The House will not expect me, so soon after the conclusion of the Assembly session, to make any definite announcement as to our future course of action in this matter. Government must have time to study developments and to chart their future course in the light of such developments, particularly in the light of the views of those Indians in South Africa who, in order to uphold the honour of their race, have undergone and still are undergoing heavy sacrifices. All that I can do now is to give the House the assurance that we shall not falter either in our resolve to secure justice for Indians in South Africa or in our desire to achieve this object by methods which are consistent with the letter and the spirit of the Charter of the United Nations.

## EXPANSION OF BROADCASTING--REVIVAL OF INFORMATION FILMS -MINERAL RESEARCH

## Standing Finance Committee Approves Schemes

ANUFACTURE of telephone equipment in India, development of broadcasting, revival of Information Films of India and the setting up of a Bureau of Standards for Medical Institutions formed the subjects of important schemes a proved by the Standing Finance Committee which met in New Delhi on December 13 and 14, under the chairman ship of the Hon'ble Mr. R. K. Shanmukham Chetty, Finance' Minister, Government of India.

The scheme for the manufacture of automatic telephone equipment and stores in Ind.a revealed that negotiations are in progress with some leading industrialists in the country for the setting up of a factory to produce each telephone equipment as at present is being imported. The necessary machinery, patent rights and technical assistance will have to be procured from abroad. If the scheme materialises, India should be in a position to make automatic telephone equipment within three years.

To improve the telephone service in Delhi, it is proposed to provide a new 4,000-line automatic unt in the Lothian Exchange in place of the existing one of 1,670 lines which was installed in 1923.

#### Making Radio Popular

From humble beginnings 20 years ago with two small transmitters at Calcutta and Bombay, broadcasting in India new aims at providing a programme for every person in the country in his own language and one which could be picked up with an inexpensive receiver. This is the essence of the Government of India's Basic Plan of Broadcasting.

To implement this plan, the Government have, in the first place, formulated an Eight-Year Programme, the highlights of which are: provision of new medium wave transmitters at Nagpur, Bezwada, Ahmedabad, Cuttack, Dharwar, Gauhati (or Shillong) and Calicut; construction of studio buildings at Madres and Calcutta, installation of medium-wave transmitters at various centres for urban and rural programmes; strengthening of the Research Department and the establishment of a Staff Training Echecl in New Lelli.

Filming life in each Province in its many fields of endcavour is one of the main purposes of the scheme to revive Information Films of India and Indian News Parade. Each Governer's Province will be 'covered' by a cameraman of the Government's news reel organization which is expected to begin distribution of films early next year. In addition, cameraman will be stationed at Delhi and one extra photographer will work at the headquarters office at Bombay. For the 'shooting' of short films six units are to be set up—four to produce

documentaries for cinemas, one for special films for external distribution and one for rural area 'specials'. The five distribution centres will be Bombay, Madras, Calcutta, Lucknow and Nagpur.

The Government of India feel that the interests of the country will be best served by the setting up of a Government organization for the production and distribution of news reels, and that the exhibition of these news reels should be made compulsory.

To serve as a reservoir of knowledge and research which would help to present a true picture of the various aspects of life in India is one of the main functions of the Rosearch and Reference Division of the Ministry of Information and Broadcasting which is shortly to be revived. Its other main purpose will be to collect material and prepare studies on foreign subjects.

It is planned to divide the Research work into seven sections—India, Pakistan, Russia, America and Europe, Britain and Commonwealth Countries, Far East, Middle East. The importance of a good Library for such work is obvious.

\*The Standing Finance Committee sanctioned expenditure for the appointment of staff.

It was pointed out to the Standing Finance Committee that the preperal for the establishment of a Burcau of Standards for Medical institutions to not as a centre for hospital standards formed part of the five-year development plan drawn up by the Ministry of Health in accordance with the recommendations of the Health Survey and Development Committee.

#### Mineral Resources

The Bureau's functions would be to prepare standard schedules of hospital equipment and standard plans of rooms, departments and hospital units, to carry out research in building and running costs of hospitals and to maintain a reference library of hospital plans, photographs, books, periodicals, etc.

Investigation of the mineral resources of India will be the a m of an organisation that is being set up under the Indian Academy of Sciences, Bangalere. This Research Institute, which will begin to function in March 1948 under Dr. Sir C. V. Raman, will direct scientific investigation of India's mineral resources from three points—physical, chemical and geological.

The Government of Mysore having given the Institute 11 acres of land for its site and the Institute having obtained from private contributions a sum of Rs. 4,08,000, the Standing Finance Committee sanctioned a non-occurring grant of Rs. 3 lakhs for the scheme.

Preparations are under way for the establishment of a Coston Textile Research Institute as Annidabed, expenditure on which was approved by the Committee.

Improving materials used in the textile industry and its products will be primary object of the Ahmedabad Insutute. A special task will be to conduct research of a medical nature with particular autention to the wilfare of workers employed in the Industry.

The Committee also approved a grant for the establishment of a Regional Societatural Research Station at Kodegal, in Madras Presidency.

#### Grant to Allahabad University

A grant of Rs. 10 lakhs by Government to Allamabad University on the occasion of its Diamond Jubilis as a token of appreciation of the work done by the University was sanctioned. The donation will be earmarked for the development of the study of scientific and technical subjects and on research.

The Committee also sanctioned a grant to the Ramakrishna Mission to find a suitable permanent building for its Institute of Culture.

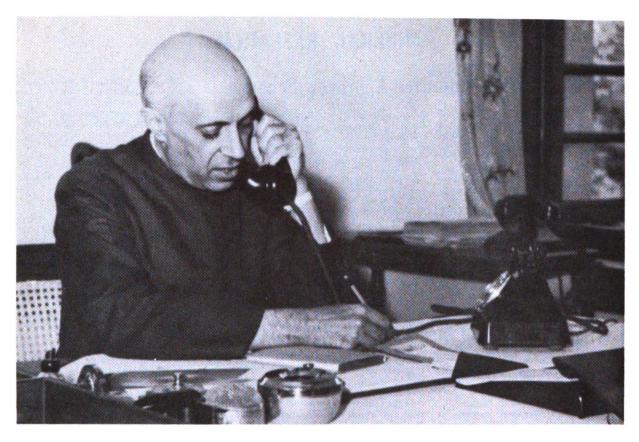

Fresh plant and equipment is to be installed in the Government of India's new mint at Alipur, construction of which, suspended during the war, has now been resumed. Sanction for this expenditure was obtained from the Committee.

The proposal to build a Rs. 140.54 lakh Mint at Alipore was approved by the Committee last year. Intended to replace the Mint at Calcutta, it would also have absorbed the Mint at Lahore which had been set up on a temporary basis during the war due to the decision to suspend the Alipore project. Consequent on the partition of the country, however, the Lahore Mint has been allotted to Pakistan, resulting in the loss to India of much machinery which had been earmarked for Alipore. Purchase of freeh plant and equipment has, therefole, become essential.

On Dec. 13 the Committee approved a grant of Rs. 19,43,000 non-recurring (involving about Rs. 2,50,000 recurring) to the Indian School of Mines, Dhanbad, towards its reorganisation up to the year 1950-1951 for the present. A Reorganisation Committee appointed by the Government of India recently submitted proposals for the extension of the rectivities of the School and for raising it, generally,

Pandit Nehru inaugurated the India-Kashmir telephone link-up by greeting Sheikh Abdullah from his New Delhi residence on December 2

## Pandit Nehru Inaugurates India-Kashmir Telephone Service

THE first call in the new trunk telephone service between India and Kashmir was put through on Dec. 2, by India's Prime Minister, the Hon'ble Paudit Jawaharlal Nehru.

From his residence in New Delhi, Pandit Nehru greeted the Head of the Kashmir State Emergency Administration, Sheikh Abdullah, who had arrived in Jammu and was staying at the Maharaja's palace. Pandit Nehru spoke in Hindustani first to Sheikh Abdullah and then to Begum Abdullah and Bakshi Ghulam Mohammad, Chief Emergency Officer. The conversation lasted about four minutes.

The inauguration of this service completes the new communication links forged recently between the State of Kashmir and India in place of the old one which passed through territories now lying in Pakistan and were snapped when raiders from the West inwaded and pillaged the State.

With the accession of the State to the Indian Dominion, the task of forging new communication links became the responsibility of the Indian Posts and Telegraphs Department. Within about a week of the State's accession telegraphic lines were laid. Mail communication was speeded up so that all first class mails were flown from Delhi to Kashmir and Jammu. Arrangements were also completed for wireless transmission between the State and Indian territory. In addition, vigorous steps were taken to accomplish the present telephone link-up overcoming difficult hilly terrain and shortages of transport, stores and labour. This job which would have taken about 5 to 6 months even in normal times was finished in less than one month.

The carrier equipment which is now being set up in Jammu will enable four conversations to be carried on simultaneously between Srinagar and any other place in the Ind.an Dominion.

The Post and Telegraph offices in the State of Kashmir, now kept open all the 24 hours, are all manned by Indian Posts and Telegraphs staff. Mr. Krishna Prasada, Director-General, Posts and Telegraphs recently made a three-day tour of the State, during which he inspected the arrangements for postal and telegraphic communications.

#### STANDING FINANCE COMMITTEE

(Continued from Page 71)

to a standard as near as possible to that of the Royal School of Mines. As a result of the recommendations of the Committee, it is proposed progressively to raise the annual intake of students from 24 to 60, including 48 mining engineering students, and 12 geology students. For the present, however, it has been decided to limit the expenditure on expansion of the School on the basis of 48 annual admissions up to the year 1950-51.

Other schemes approved included a grant to the Government of Orissa for its new Capital project, investment by Government in Air Transport Companies, creation of the Indian Foreign Service and the Indian Administrative Service, creation of the Ministry of Relief and Rehabilitation and Ministry without Portfolio, appointment of Indian High Commissioners in Canada and Pakistan, creation of temporary poets for the Consulting Architect's Branch of the Central Public Works Department and transfer of the Government Nursery in New Delhi to a new site.

INDIAN INFORMATION, JANUARY 1, 1948

Mr. N. C. Ghosh, Director-General of Civil Aviation, addressing the Conference of Civil Aviation Officials of the Government of India and representatives of Flying Clubs in New Delhi recently

## INDIAN AIR SERVICES TO FOREIGN COUNTRIES

WHILE the Indian air service to U. K. is expected to start from May, 1948, the question of establishing Indian air services to neighbouring foreign countries is under consideration by the Government of India.

Disclosing this in the Dominion Parliament in New Delhi on Dec. 11, the Honble Mr. Rafi Ahmad Kidwai, Minister for Communications, stated that a daily service had been in operation between Calcutta and Rangoon for over four months. The Air Transport Licensing Board had granted a provisional licence to Indian National Airways Ltd., to operate the Calcutta-Rangoon route for a period of 90 days with effect from Nov. 1, 1947. A Pakistan airline with headquarters in Chittagong was also operating this route. Permission of the Burma Government, he affirmed, was necessary in respect of air service between India and Burma.

He added that the progress of schemes for the development of external air services was held up owing to constitutional uncertainties during the last 12 months.

Referring to training facilities in various branches of aviation, the Minister stated that the Civil Aviation Training Centre with two schools, namely, the Communications School and the Aerodrome School, commenced functioning in Saharanpur in November 1946. Necessary action to organise the Flying Training and Engineering and Mechanics Schools was in hand and it was expected to start them at an early date.

## NATIONALISATION OF AIRLINES

Government's policy is to facilitate the employment of Indians in the superior cadres of air transport companies. The question whether Government should secure any share in the capital and management of air companies is under consideration and the policy will be announced at an early date.

This declaration was made by the Hon'ble Mr. Rafi Ahmad Kidwai, Minister for Communications, in the Dominion Parliament in New Delhi, on Dec. 12, in reply to a short notice question.

Mr. Kidwai also disclosed that Government would subscribe 49 per cent. of the capital of the new company Air India International Limited which would operate an air service between India and the U. K. The share of Air India Limited who would be the Managing Agents for the new company, would be between 20 and 25 per cent. Fifty per cent of the Board of Directors of the new company as well as the Chairman would be Government nominees.

Government had not taken any share in the capital of any of the air transport companies in India, nor had they any control over the management. The provisions of the Indian Aircraft Act and the Rules made thereunder gave Government adequate power to control the operation of air services, both in the technical and the economic fields.

While the majority of the pilots in other Indian air transport companies were non-Indian, out of about 70 pilots employed by Air India Limited only two were so. The establishment of the Civil Aviation Training Centre would facilitate the training and recruitment of Indian air crews and ground engineers.

A press telegram service to Japan has been opened with immediate effect and press telegrams to Japan can now be booked at the rate of 5½ annas per word, says a Press Note, issued by the Directorate-General Posts and Telegraphs, on Dec. 12.

## DEVELOPMENT PLANS FOR ASSAM

## Sir Akbar Hydari's Broadcast

ROADCASTIG from A. I. R. Calcutta on November 28, His Excellency Sir Akbar Hydari, Governor of Assam, indicated the main objectives of the development plan for Assam and revealed the role which the Government of India would be playing in the furtherance of the plan. Sir Akbar Hydari, after referring to the notable part played by Assam in halting the Japanese said:

"War and the imminent invesion from which the Province narrowly escaped, showed up the insecurity of its geographical position and the need to strengthen it. Close after the war came the partition of India. It had resulted in Assam being all but cut off from her parent India. "We ere now the North-East rampart of India", he added. "To the North, South and West, a good part of our boundaries—and the boundaries of two States whose integrity we have been charged by the Central Government to safeguard, Manipur and Tripura—march with those of Tibet, Burma and Pakistan. The province itself consists of freedom-loving communities which are to be fully integrated. All these factors present problems which give those who are in charge of her destinis many anxious and searching moments.

"In modern times the concept of a country's defence has undergone a fundamental change. It is not enough to have armed might. It is equally, if not more, essential to have contented, happy and healthy people to benefit from the mechanical means of self-defence which may be placed at their disposal. They must also have good communications for the transport of raw materials and their produce to the market. These problems are not peculiar to Assam; similar problems exist in other provinces of India; but what gives urgency to them in the case of Assam is the fact that so little was done in the past towards solving them; therefore Assam has more leeway to make up than the other more developed provinces of India; and now factors which I mentioned earlier have added their own urgency to the speedy attainment of these ends.

#### Integration of Communities

"There is however another problem which is peculiar to Assam and that problem is the integration of many communities which inhabit her hills, her valleys and her plains. We have reached understandings or agreements, whatever they may be called, with people inhabiting all main tribal areas. It is now our duty to implement them with sympathy and patience. These communities are freedem-loving, attached to their customs and their land. The problem is how to get them to live and work together as parts of one organism.

"It has been Assam's misfortune that in the past it was divided into three what may be termed zones of administration, each separate from the other; each not knowing very much of what is happening in the other. In fact it was a system of administrative compartmentalism. We have begun to change this and cradually rediscover relationships which existed before 1828. In Assamese Buranjis or chronicles of the 17th and 18th centuries one finds many notices of intercourse between hills and plains. It was as one of the steps in the process of this rediscovery of ancient contacts that the 'Hills and Plais s Peoples' Week' was organised in Shillong this month. I need not say more about this event as you may have come to know something of it through the courtesy of All India Radio. But this useful step can only be in the nature of a breaking of the ice, of getting people to know each other, to know at least what the other

looked like, how he sang and how he danced, what things he made and what clothes he wore. This is not all. The people must also be made to realise their material advantages in coming together, and these we are attempting to provide in the shape of roads, education and health. The development plan for tribal areas is grouped round these three main objectives.

"I am glad to say that in spite of great and unexpected demands on the Central purse, the Government of India have decided to maintain this grant in its entirety. Our development plan for areas other than tribal are also in the main aimed at achieving these simple but basic objectives. Assam is still emerging from a primitive economy which was looked after by a primitive administrative machine. They are now both out of date and what we are trying to do is, having regard to provincial peculiarities, so to remodel them as to equip Assam to take a useful place in the comity of Indian provinces.

## LORD MOUNTBATTEN'S BELIEF IN INDIA'S UNITY

## Address at Jaipur Banquet

has been a leading state for many years, and the fine new buildings which can be seen everywhere, the new University, the magnificent hospital and the schools, reflect the greatest credit on His Highness and the policy he and his Government have followed," said H.E. Lord Mountbatten, Governor-General of Ind.a, at the State banquet at Jaipur, while investing His Highness the Maharaja of Jaipur, with the Insignia of a Knight Grand Commander of the Most Exalted Order of the Star of India, on the occasion of his Silver Jubilee, on Dec. 14.

Here is the text of Lord Mountbatten's speech.

#### "Your Highnesses, Ladies and Gentlemen:

"I need not say what a pleasure it is to us to be present at Jaipur on this very special occasion of the Silver Jubilee of His Highness, and also to have the opportunity of renewing friendships with so many of the Ruling Princes of India. We not be made so many friends among Your Highnesses during our first visit to India in 1921, that we have always retained a very special affection and friendship for all the Princes.

"I have always been a strong believer in the unity of India, and I feel sure that the accession of the Indian States to the new Dominion of India cannot but be of advantage to both. The new Dominion of India and the States have many difficulties to face at the present time, and it is most important that each should give the other all possible support. It is, therefore, particularly gratifying to member the future with India, and I can assure you that their actions were deeply appreciated by the present Government of India.

Ar was only to be expected His Highness the Maharaja of Jaipur, whose State in recent years has been well to the fore in all constitutional and administrative progress was one of those Eulers who took a reading part in bringing about accession. I need hardly emphasise the stablising effect which the accession of the Indian States to the Dominion of India has had; and this applies particularly to the Rajputana States in view of the strategic position which they occupy in India.

#### Constitutional Advance

"If I may speak for a moment on Jaipur State itself, I should like to say how much I personally, and my Government appreciate the constitutional and administrative advances which have been made in recent years, and which I feel sure will continue. I think the best evidence of the good political atmosphere in the State is shown by the happy relations that exist everywhere between all

sections of His Highness's subjects, the absence of disorders in the State during recent months is a striking tribute to the policy which His Highness's Government has pursued, and I have been particularly interested to see in the streets of Jaipur City, the friendly intermingling of Hindus and Muslims.

"On the administrative side, Jaipur has been a leading State for many years, and the fine new buildings which can be seen everywhere, the new University, the magnificent hospital, and the schools, reflect the greatest credit on His Highness and the policy he and his Government have followed.

#### Fitting Recognition

"I have known His Highness intimately for many years and as he has reminded you earlier, we often met on the polo field, but His Highness's activities have not 'been confiend to the field of sport. He holds the unique privilege of having served as an officer in His Majesty's Household Cavalry, and seen war served with the Life Guarde. In addition, the Jappyr Guarde' war cervice in Italy is well known to all of you have and I enail never forget the provilege of learne I had on most ng this fine unit during my visit to Hongkong early in 1945.

"Those of us who had the pleasure of seeing the Jaipur Guaris trooping the Colour will agree with me that it was worthy of the trooping of the Colour by any of the Regiments in His Majestr's Brigade of Guards on the Horse Guards Parade in London, and I should like to take this opportunity of saying how proud I was to have been invited to take the salute at this parade.

"It was a particular cleasure to me to be able to invest His Highness with the Insignia of a Knight Grand Commander of the Most Exalted Order of the Star of India after his Durbar today. I regard this as a fitting recognition of all that His Highness has accomplished during the 25 years he has been on the gaddi. This honour was to have been among those announced in the final Indian Honours list before the transfer of power, dated Aug. 14, 1947, but which, for administrative reasons, is going to be promulgated on Jan. 1, 1948, but in view of His Highness's Silver Jubilee celebrations His Majesty was pleased to approve that I should hold a special Investiture during these celebrations in the State. I am sure you will all be pleased as I am at this honour and join me in congratulating His Highness most sincerely.

"His Highness was kind enough to make some references to my wife's work, and I should like to thank him warmly on her behalf. My wife has a very keen interest and affection for India, and through all the troubles of the past few months, she has placed her knowledge and experience at the disposal of the United Council for Relief and Welfare. I am extremely proud of all that she has accomplished and while thanking His Highness for his kind words, I hope I shall be forgiven for paying this small tribute to her myself.

"In conclusion may I thank Your Highness on behalf of my wife, my daughter, and myself for the friendly welcome you have given us here, for your splendid hospitality, and all the arrangements which have been made for us during our visit. It has been a great joy to us to revisit Jaipur and we shall always have the happiest recollections of the impressive celebrations of Your Highness' Silver Jubilee.

"May I say I look forward with equal pleasure to the Golden Jubilec celebrations in the years to come. Your Highnesses, I adies and Gentlemen, I ask you to join with me in drinking the health of His Highness Maharaja Sawai Man Singh Bahadur of Jaipur".

## ALLOTMENT OF JUTE QUOTAS

XPI.AINING that exports of raw jute and jute goods are allowed through established shippers as well as new-comers to the trade in the ratio of 90 to 10, the Hon'ble Mr. N.V. Godgil, Minister for Works, Mines and Power, stated in reply to a written question in the Dominion Parliament on Dec. 9, that, with regard to jute products, 347 applicants had been granted quotas from the new comers' reservation and 6,539 applications had been rejected.

New comers' applications in respect of raw jute were still under consideration, 588 such applications had been received. He added that the total quantity of jute manufactures allotted to new comers for export amounted to 68,657 tons.

Referring to the principle of distribution of quotas, the Minister indicated that firms or individuals were selected for allotment on their fulfilling the two following conditions:

- (1) They should not have received allotment as established shippers under the 90 per cent. reserved for such shippers.
- (2) They should have produced evidence of having received firm orders direct from the importing countries concerned, preference being given to those who produce evidence of letters of credit also.

Answering an oral question, Mr. Gadgil said that from the point of view of making the best possible use of India's foreign exchange resources, as well as in the ultimate interests of Indian shipping, it was Government's opinion that Indian shipping companies should be encouraged to purchase rather than charter ships.

He gave an assurance that the Government would render all 'practicable assistance" to Indian companies in the building or purchasing of additional ships.

## SHARE POWER WITH THE PEOPLE No one realises more than I do that the States can become honourable and

## Bikaner Maharaja's Appeal to Princes

HE time has come for us to take our people, fully into our confidence and share power with them", said His Highness the Maharaja of Bikaner in a broadcast from the Delhi Station of All India Radie on Dec. 12.

His Highness said: There was never a time in the history of India when the position of the States was more important or more significant than it is today. With the secession of the Pakistan provinces there has come into being a great nation of which no less than one half the area is comprised of Indian States. It was by their accession that the free Indian Dominion was converted from an area of 680,000 square miles to a Union of 1,200,000 square miles. How important they are in maintaining the stability and upholding the integrity of India has been amply proved in the four months of crisis through which we have passed.

The way the Princes of India rallied to the side of their mother country and gave every kind of assistance to enable her to surmount what seemed to be insuperable difficulties, will always be a memorable chapter in the history of new India.

In the matter of evacuating refugees, settling the uprooted population, in maintaining law and order, in giving military assistance where necessary, the States have shown their ready willingness to co-operate fully with the Indian Dominicn. Today the value of that co-operation, I am happy to say, is fully recognised and the States of India have established their undisputed claim to be considered equal partners in the building up of a new India.

#### Two Major Problems

The two major problems which the States have now to deal with are the regulation of their relation with the Dominion and the reconciliation of their ancient and traditional forms of Government with the claims of modern democratic ideas. So far as the first question, that is the relationship with the new Dominion is concerned, on the major subjects of Defence, External Affairs and Communications, they are now regulated by our accession to the Constitution. Over a wide range administrative matters our relations are governed by a Standstill Agreement. Apart from these matters covered by mutual agreements, the integration of the country as a whole has necessitated the co-ordination of policies in regard to economic, financial and other problems as the decisions taken by one party inevitably affect the other. To give only one familiar example, in the matter of food administration it is obviously necessary for India and the States to follow a unified policy. Again in the matter of irrigation projects, large-scale industrial development and the rehabilitation of refugees, effective action is possible only by the active co-operation of both the Don.injon and the States.

So far as the rehabilitation of refugees is concerned it is no doubt widely known that the Bikaner State has borne a large share of responsibility from the very beginning, placed in a peculiarly difficult position as it was, hemmed in between the two troubled areas of Eastern Punjab on the one side and Pakistan on the other.

Law and order has been completely maintained in the State throughout this period though unsettled conditions prevailed on both the borders of the State. From the time of the first Rawalpindi troubles the State has afforded asylum and refuge to thousands of Hindus and Sikhs from Western Punjab. thousands of When the partition troubles began, no less than 75,000 refugees mainly from Bahawalpur, poured into the State within the space of a fortnight. Many have been settled in the State.

#### Rehabilitation of Refugees

We have recently agreed with the Ministry of Rehabilitation to take 10,000 more to settle both in rural and urban areas. In the movement of refugee population between India and Pakistan both ways, the activities of the State have been specially notable. A total of over six lakhs of refugees have been evacuated under escort without a single person being killed or attacked within Bikaner territory. This perhaps is the largest single instance of active cooperation with the Indian Dominion.

In the same way in the matter of irrigation, the Bikaner State will soon have over 2,000 square miles of territory brought under the Bhakra Dam Project. In this respect too it is my intention to reserve a portion of the area to be so irrigated for the settlement of Hindus and Sikhs uprooted from Pakistan. It is only by co-operation in this manner, by sharing our common responsibilities, that a new India can be built up.

This changed relationship from paramountey to co-operation should with it a new attitude, a new approach to the problem of the States. The past has left a legacy of suspicion and distrust and the habit of mind towards the States has not kept pace with the changed circumstances. They are still looked upon in certain quarters with suspicion and even in States where the Rulers themselves are fully prepared to share power with their people and have taken measures accordingly, agitation is considered an essential pre-requisite of such sharing of power. I would strongly urge that this attitude of mutual suspicion and distrust should now give way to one of active co-operation and collaboration as between two units of the same body politic.

No one realises more than I do that the States can become honourable and effective members of the Indian Union only if they show their readiness to democratize their institutions and administrations. Monarchy, to play a useful part, must be ever-progressive, must be ready to adjust its theory and practice to the political conditions of the time.

It will be an act of wise statesmanship on the part of the Rulers to realise this and place on the people the responsibility for the governance of their own States. True, conditions in all the States are not such as to permit the establishment forthwith of responsible government, but it should be our aim as speedily as possible to do so within a period which should be clearly specified.

#### Interim Arrangements

For my part I had as long ago as June 1946 declared my intention to establish responsible government in Bikaner, and in August 1946 I had outlined the scheme whereby this objective would be attained after an opportunity had been afforded to the people to gain experience in carrying on the administration under an interim arrangement for a period not exceeding three years. Since then on a fuller consideration of all the factors I came to the conclusion that the pace should be accelerated and I have taken the decision that such interim arrangements should be continued for a period which should not exceed two years and at the end of which responsible government would automatically be established in my State. A new Constitution on that basis has already been promulgated on Dec. 4, which will vest in the people the substance of power and responsibility for the administration of the State.

I would in conclusion, say to my brother Princes that the time has come for us to take our people fully into our confidence and share power with them. The Ruler and his people should now work in unison to realise our common aim for the greater good of the State.

To the people of India outside the States, I would say that the Princes of India are no aliens, ruling over a hostile population. Like every one also in India they are of the soil, part of the proud history of India, an essential and stabilising factor in the unsettled conditions of today.

The Princes have a contribution of their own to make to the future greatness of our motherland. The conditions in the States are changing as fast as they are changing elsewhere, but it will be realised that the States have come into an integral relation with India for the first time in history, and given a little patience there is no reason to suppose that they will lag behind the rest of India in their political, economic and cultural progress.

Booking of all classes of articles including money orders and insure articles, for Western Pakistan has been resumed in all Post Offices in the East Punjab, says a Press Note, issued by the Directorate-General Posts and Telegraphs, on Dec. 29.

## REDISTRIBUTION OF PROVINCES

## Prime Minister's Statement

NSWERING a short notice question by Prof. Ranga in the Constituent Assembly (Legislative) on Nov. 27, regarding the formation of provinces on a cultural and linguistic basis, Pandit Jawaharlal Nehru, the Prime Minister, said:

The attention of Government has been drawn to the resolution referred to in the question.

Government are fully aware of the demand in some parts of the country for new provinces to be formed primarily on a linguistic basis. Many years ago this demand was recognised by the Congress and Government to accept the principle underlying that demand. In giving effect to that principle, however, many other considerations have to be borne in mind. Apart from linguistic and cultural aspects sometimes also there is no clear demarcation and cultural and linguistic areas overlap. Hence a very careful enquiry is necessary before a decision can be arrived at.

Government are anxious not to delay the enquiry of the decision. But, as the House is fully aware, the country has had to face, ever since the new order started functioning, a very critical situation resulting from purtition. A living entity had a part severed from it and this unnatural operation resulted in all manner of distempers which have naturally affected the political, social and economic structure of the country. Reactionary forces took advantage of this asituation to consolidate themselves and to raise separatist cries. The old equilibrium having been shaken up, disruptionist tendencies came to the forc. To a large extent we have faced this crisis and overcome it. But many dangers still surround us.

#### Numerous Urgent Demands

There are numerous urgent demands in the economic and other spheres. When there are a multitude of such demands a certain priority has to be observed, otherwise there would be dispersion of effort and ineffectiveness. First things must come first and the first thing is the security and stability of India. Before we can undertake any major schemes we must have a strong state and a smoothly running governmental machinery. The first essential therefore is for India as a whole to be strong and firmly established, confident in her capacity to meet all possible dangers and face and solve all problems. If India lives, all parts of India also live and prosper. If India is enfeebled, all her component elements grow weak.

I suggest to the House that every problem must be viewed in this context today.

It is necessary to have a reconstitution of the provinces, or some of them. But

if we tackle this problem in a large way at present, there is grave danger of our energies being diverted from some of the more urgent tasks. In the case of some provinces the problem may be relatively easy, in the case of others it would be very difficult and very controversial.

The final determination in regard to the creation of new provinces appropriately rests with the Constituent Assembly. Government propose to take up this matter in the Constituent Assembly and ask for steps to be taken for preliminary enquiries to be made on this subject. One or more boundary commissions may also be appointed. It would be desirable not to complicate the issue by having too many simultaneous enquiries.

The demand for the province of Andhra, which, if I may say so, is a perfectly legitimate demand, raises relatively few difficulties and it can be included among the provinces in the constitution as was done in the case of Orissa and Sind under the Government of India Act of 1935. This decision can be implemented soon after the constitution is adopted.

The creation of the provinces of Mahrashtra and Karnatak involve greater difficulties as any marked change will powerfully affect the structure and economy of the provinces concerned. This question will require very careful consideration in all its bearings so that the final decision may be a just one and acceptable to the parties concerned.

It must be remembered that the creation of a new province inevitably affects all the neighbouring provinces and the interests of these will have to be considered. Every decision must of course be considered from the point of view of the country as a whole.

There is no reason why enquiries referred to above may not be completed within a year or so.

## RULES FOR STANDING COMMITTEES

THE rules to regulate the constitution and procedure of the Standing Committees of the Constituent Assembly (Legislative) as adopted by the Assembly on Nov. 19, are:

I. The Chairman of each Committee shall be the Minister in charge of the Ministry to which the Committee is attached or any member elected by the Committee to act as Chairman for that meeting when the Minister is unable to be present, and an officer in that Ministry designated by the Minister shall be Secretary to the Committee.

II. A member of a Committee who ceases to be a member of the Constituent Assembly shall cease to be a member of the Committee, and if a vacancy occurs in a Committee for this or any other reason during the course of the period for which the Committee was constituted, a motion shall be made as soon as may be in the Constituent Assembly (Legislative) for the election of a member to fill the vacancy.

III. The following subjects shall be laid before the Standing Committee

- (1) All non-official Bills introduced or proposed to be introduced in the Assembly and legislative proposals which the Ministry concerned intends to undertake.
- (2) Reports of Committees and Commissions (not including unpublished reports of departmental committees) on which the Assembly is not adequately represented.
- (3) Major questions of general polic; and financial questions.
  - (4) Annual Reports.
- (5) With the approval of the Minister in charge, any topic of public importance within the field of the Committee which a member of the Committee may propose for discussion;

Provided that:

- (i) In cases of urgency a reference to the Committee may be dispensed with by the Ministry concerned.
- (ii) The following cases shall be  $\epsilon x$ -cluded from the purview of the Committee:
  - (a) Cases concerning appointments.
    (b) All cases which the Minister in
- (b) All cases which the Minister in charge considers cannot be placed before the Committee consistently with the public interest.

IV. The functions of Standing Committees will be purely advisory and that proceedings will be strictly confidential. No Press representatives will be allowed to attend any meeting of a Committee. Brief reports of the activities of each Committee, mentioning the subjects discussed and the conclusions reached by the Committee but not the tenor of the discussions, will be circulated to all members of the Assembly.

V. Meetings of the Standing Committees will be summoned by the Sccretary not less than twice a year at such times as may be decided by the Minister in charge. The agenda of the meeting will be drawn up and circulated by the Secretary together with a memorandum explaining the nature of each item of business and copies of such papers as the Minister in charge directs to be furnished to the Committee. Such papers will be returned by members to the Secretary at the close of each meeting. The proceedings of the Committee will be confined to items of business entered in the Agenda and any requests for further information will be dealt with under the orders of the Minister in charge.

VI. At a meeting of a Standing Committee, the Sccretary may be requested by the Minister to explain each item of business. The Chairman will then invite a discussion and the Sccretary will note on the departmental file the general opinion of the Committee.

## PERIODICAL REVISION OF LAW

## Dr. Ambedkar Outlines Government Attitude

laudable and he has my full sympathy with the motion that he has made", said the Hon'ble Dr. B. R. Ambedkar, Minister for Law, in the Constituent Assembly (Legislative) on Dec. 2 on the non-official resolution moved by Dr. Sir Hari Singh Gour, namely, "This Assembly is of opinion that a Scatutory Law Revision Committee be appointed to clarify and settle the questions of law which require elucidation".

The Law Minister said there was no doubt that periodical revision of law in a modern society was an absolute necessity. When a popular legislature ongaged itself in the task of legislation, touching every aspect of the society which it governed, there were bound to be created certain problems, which it was necessary for some expert legal body to examine and to rectify.

#### Statutory Law Revision Committee

"It often happens", he said that in modern times when a legislature is so busy that it is unable to give the whole of its time to codifying the whole of the law on a particular subject it tries to discharge its responsibilities by undertaking what we call fragmentary and piecemeal legislation. This accumultion of piecemeal and fragmentary legislation again in course of time creates a problem. People cannot understand where the law is and consequently a problem of codification arises. Therefore it needs no special pleading to suggest that a Statutory Law Revision Committee is necessary.

"Therefore there is no difficulty in my accepting the underlying purpose which my Hon'ble friend, Sir Hari Singh Gour, has in mind, namely that there should be a Statutory Law Revision Committee. The only point of d fference between him and me is whether we should forthwith proceed to establish a Statutory Law Revision Committee that he has in mind or whether we should leave the matter to Government to think about the most appropriate time and the most appropriate machinery which could carry out the purpose which both he and myself have in mind."

The Law Minister then dealt at length with the work of the Statutory Law Revision Committee which was set up in 1921 and dissolved in 1932. This Committee, during its 11 years of existence, codified the Merchant Shipping Act, the Criminal Tribes Act, the Indian Succession Act, the Forests Act and the Tolls Act. This, he said was certainly not "an enormous piece of work which could be expected from a Committee of this kind."

The reason why the Committee failed to fulfil the promise which it was expected

to fulfil was that there was a great defect in its composition and constitution. The members of the Committee, having been drawn from the Legislature, met only during the sessions of the Legislature and when they were asked that now that they were present in Delhi they might dwote some portion of their time to the discharge of their functions as a mmbers of the Statutory Law Revision Committee, all of them pleaded that their legislative work was more important than the work of the Committee. At the end of the sessions all of them naturally repaired to their homes in order to perform either their personal or their professional duties. The result was that the Committee was not able to devote all the time that it was expected to devote.

"Now, obviously, my Hon'ble friend, Sir Hari Singh Gour, will agree that if his purpose is to be carried out we must have an altogether different sort of Committee. It is no use having a Committee of the sort that we had and which, for the reasons I have mentioned, did not fulfil the functions with which it was chargd.

#### Body of Experts

"There are two ways, in my judgment, of doing the things. First of all we might have a permanent Commission sitting for no other purpose except that of revising and cod fying the statute. Secondly, it is to be a permanent body it undoubtedly must be a body of experts who know their job. And I think every one will agree that if experts are to be called away from their professions we must make it worth their while to come and serve on the Committee. Obviously it is a matter of cost. That being so,

it is not possible for me to say off-hand that wit out examining the question of cost it will be possible for Government to say here and now that we shall agree to appoint a Statutory Law Revision Committee of any sort that might be suggested whether by Sir Hari Singh Gour or by any other member of the Logislature.

"There is also another way of carrying the purpose into practice. That might be by the appointment of a small standing committee consisting of the Law Minister of the Government of India, a Judge of the Federal Court, the Advocate-General of India, one or two Judges of the High Courts in India and two or three eminent lawyers. The Committee might be asked to sit at stated periods of the year and a person from the Law Department of the Government of India may he deputed to act as Secretary, to collect the information and to place it before the Committee for the Committee to take notice of what might be done.

#### No Difference of Opinion

"As I say these are various ways of carrying the purpose into effect. That, as I said, requires time and examination and it is not possible for the Government, besieged as it is with an infinity of problems of all kinds to find time for the work which it will have to do if I were to accept the resolution of Sir Hari Singh Gour with the immediacy with which I believe he has charged it.

"Therefore, what I would like to suggest is this: that Sir Hari Singh Gour would realise that so far as the ultimate purpose is concerned there is no difference of opinion between me and him. Both of us are agreed that this is a matter which the Government of India ought to take into consideration. The only difference is when and how, and that is a matter on which he need not press the Government of an immediate issue. Therefore my suggestion is this: that as I have given a reply which meets more than half the ground on which he stands, I think it will be gracious on his part to withdraw it"

## Jute Production in Indian Dominion

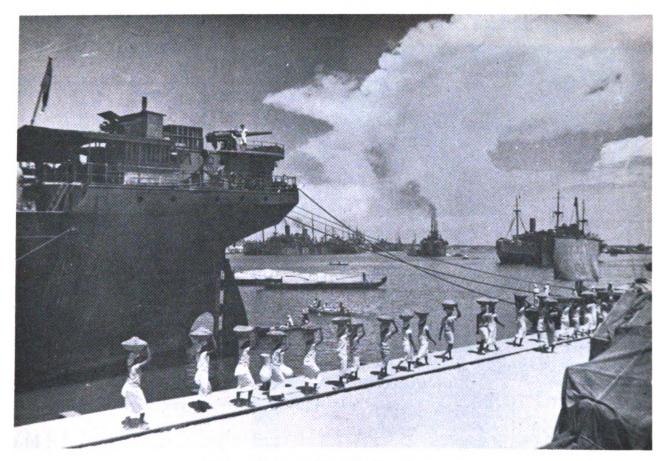

THAT the production of jute in the Indian Dominion could be increased by nearly 20 lakh bales by growing early varieties of jute as a second crop in some of the lands now entirely confined to Aman paddy in Bengel, Bihar and Orissa, was emphased by Sir Datar Singh while presiding over the meeting of the Governing Body of the Indian Central Jute Committee in Calcutta on Dec. 10. He pointed out that the area under Aman crop in these three Provinces was approximately 10 million acres, a considerable portion of which could be utilised for immediate cultivation of jute by adopting the system of double cropping.

One stumbling block in the way of more extensive jute cultivation, Sir Datar Singh said, was the scarcity of seed. He was, however, able to announce that as a result of his personal discussions the Minister for Agriculture, Forestry and

Tisheries, West Bengal, had decided to start a scheme for Government precurement of surplus jute seed from cultivators for utilisation in extending cultivation during the coming season. He also agreed to give the Central Jute Committee 50 acres of land at the Chinsura Agricultural farm for housing the staff and laboratory equipment of the Agricultural Research Laboratory now at Dacca. A survey of land now lying fallow in the Provincial Government and the Minister agreed that with the co-operation of the export staff of the Central Jute Committee and their own Agricultural Department all such land which could be brought under the jute cultivation should be taken up immediately.

The Provincial Government would explore the possibilities of growing

(Continued on Page 79)

Women crolies at work in an Indian port

### REGULAR EMPLOYMENT FOR PORT LABOUR

REGULARITY of employment will be ensured to over 70,000 of India's port labourers when the Dock Workers' Bill becomes law.

The Bill, which was introduced on Nov. 17 in the Constituent Assembly (Legislative) by the Hon'ble Mr. Jagjivan Ram, India's Labour Minister, seeks to do away with the evils of casual employment of labour at ports and reduce their hardships arising from unemploymet or under employment. It gives power to the Central Government in respect of major ports and to Provincial Governments in respect of other ports to frame a scheme for the registration of port labour and to regulate their employment.

#### Hours of Work

The scheme may provide, inter alia, for the terms and conditions of employment such as wages, hours of work and paid holidays. It may also ensure minimum pay for them during unemployed days and for their training and welfare.

Provision is made in the Bill for the constitution of a tripartite Advisory Committee, consisting of 15 members representing the Government, labour and

employers in equal proportion, whose advice will be taken by the appropriate Governments in framing and administering the scheme.

The demand for labour in Indian ports is usually intermittent, depending on the arrival or departure of ships. There is also generally a tendency on the part of employers to keep reserves of labour in order to provide for emergencies.

While there was great activity in the ports during the war, conditions are different today. Both the Royal Commission on Labour (1931) and the Labour Investigation Committee (1946) recommended regulated employment for dock workers and discouraged recruitment through contractors.

According to the Labour Investigation Committee's Report, the Port Authorities of Madras and Calcutta directly employ labour, whereas in Bombay and Cochin the system of contractors continues. The strike threatened on Nov. 15 in the Bombay docks is reported to be based on the demand for abolition of the system of recruitment through contractors.

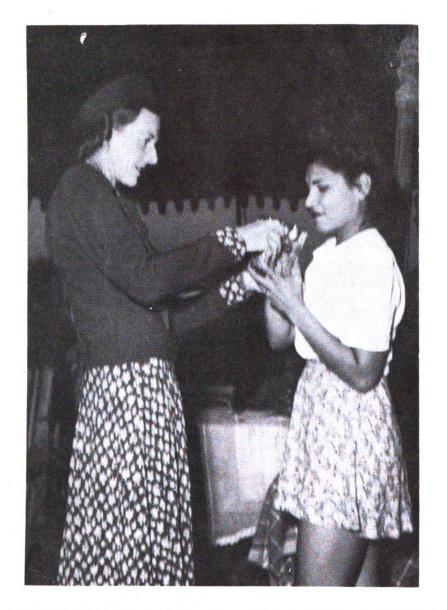

#### IUTE PRODUCTION

(Continued from 7 agr 78)

carly varieties of jute on Aman lards in West Bengal for which the Indian Central Jute Committee would give all technical advice and help so that as much land as was possible might be under jute cultivation during the ensuing season without affecting production of food crops.

Sir Datar Singh expressed the hope that steps would be taken by other Provincial Governments also. He has stressed that the Provincial Governments should try to grow more improved seed on their farms and also to encourage registered growers to do the same, so that ample supplies of improved seed might be available for increased jute cultivation. The decision to change the constitution

The decision to change the constitution of the Indian Central Jute Committee consequent on the partition of India into two Deminions was taken at the meeting. The Committee decided to exclude those members who were representing the interest of jute growers in areas which now fall in the Dominion of Pakistan. As the entire funds of the Committee were being provided by the Government of Indian Union, it was decided to terminate the activities of the Committee outside the Dominon of India. The representation of communal organization in the Committee was also done away with.

H. F. Lady Mountbatten giving away a prize to a winner in ex-Servicewomen's Sports

## LADY MOUNTBATTEN'S TRIBUTE TO EX-SERVICE WOMEN

A tribute to the fine work of ex-Service women in the cause of refugees was paid by H. E. Lady Mountbatten when she presided over Sports Day of the ex-Service women's Training Centre in New Delhi on Dec. 6.

The Centre run by the Labour Ministry of the Government of India, is training over 100 ex-Service women in commercial subjects and crafts such as stenography and tailoring.

Lady Mountbatten said: "You have done wonderful services amongst the large number of refugees in Delhi and at the refugee camps in various other places including the one at Kurukshetra.

Her Excellency expressed appreciation of the excellent facilities provided by the Labour Ministry at the Training Centre.

Requesting Lady Mountbatten to distribute prizes to the winners, Dr. N. Das, Director-General, Resettlement and Employment, referred to Her Excellency's abiding interest in the welfare of ex-Service women.

The function was attended among others by Mrs. Matthai, Mr. V. K. R. Menon, Secretary, Labour Ministry, officials of the Resettlement and Employment Organisation and the Principal and staff of the Training Centre.

## Development of Tea Industry

THAT India should continue to be a member of the International Tea Committee and abide by the International Tea Agreement, provided limitations on the extension of cultivation are maintained in some form, was the recommendation of the Tea Conference which met in Calcutta on December 10, under the Chairmanship of Mr. K. K. Chettur, Secretary, Ministry of Commerce. Representatives of Tea Associations, Chambers of Commerce, Provincial Governments and some States in the Indian Union attended.

The conference was of the view that during the two years for which the International Tea Agreement (due to expire on March 31, 1948) was likely to be extended, there should be a limit of two per cent per annum on new cultivation and five per cent per annum on replacement, provided the plants on old land are uprooted as soon as fresh plantation is undertaken.

A number of other points connected with the International Tea Agreement and their application to India were considered.

#### Indian Tea Cess Act

The Conference, resuming its deliberations on Dec. 11, agreed on continuance of the Indian Tea Cess Act for a further period of five years beyond March 31, 1948.

It discussed the enlargement of the scope of the Act so as to provide for Coss funds, which, at present, are carmarked for expenditure on propaganda purposes, being utilised on research and other such projects as may help in the development of the tea industry.

The importance of supplementing the international tea propaganda campaign by specific publicity on a national basis in foreign countries was recognised. The Conference felt that at exhibitions abroad, measures should be taken to popularise "India Tea", in addition to general propaganda for tea as a beverage.

The conference also discussed the question of adjustment of the excise duty on the export of tea and the feasibility of evolving a simpler method of taxation, which would ensure full revenue to the Government and, at the same time, obviate difficulties now experienced by the industry arising out of the existing Cess refund portion of the export duty.

Other items discussed included the development of Calcutta's tea warehouses registration of new tea estates, composition of the Indian Tea Market Expansion Board and transport problems.

## BILL TO REGULATE PROFESSION OF PHARMACY

OVING that the Bill to regulate the profession of pharmacy be referred to a Select Committee in the Dominion Parliament, on Dec. 12, the Hon'ble Rajkumari Amrit Raur, Minister of Health, said:

"In asking the House to accept this motion, I would just like to say a few words about the very unsatisfactory position that exists today. There is no authority whatsoever to regulate the profession and the practice of pharmacy. The practice is largely in the hands of persons known as compounders and they are both trained as compounders and they are both trained and untrained. The profession is unorganised. There is no provision for registration. There is no check to prevent untrained persons from under taking this very responsible work of compounding and dissensing medicines without ary restriction.

"Compounders are trained today in compounders are trained today in provinces but the training is not of a high enough standard. A Drugs Act actually exists to control the quality of drugs that are imported and those that are manufactured at home but how can this Act be effective if we have not got an organised and trained profession of phar a ists for dispensing those very drugs. The position in advanced countries

is that every pharmacist is required by law to be registered and he cannot be registered unless he has gone through a particular course of studies and pressed a pasticular examination.

"I submit that it is only right that we also should have such rules in our country. This Bill that has been brought forward is intended to remedy these glaring defects. It is sought to provide for Central and Provincial Councils that will not only prescribe minimum standards of training and qualification but will also inspect training institutions and will maintain registers of qualified persons. It is absolutely necessary that dispensing by unqualified persons should he stopped.

"The Bill was actually introduced in January 1946. It was circulated for opinion to all Provincial Governmen's and later, circulated again. Replies have been received. The Bill was grafted s.ter connectation of these replies. The measure is long overgue. I, therefore, hope that the House will have no hesitation in accepting the motion to refer is to a Select Committee".

## MEDICAL COUNCIL OF INDIA

447 HE South African Medical Council from Bengal, the Punjab, Sind or N-W. has intiamted its decision not to continue further negotiations for reciprocity between the two Councils. We shall certainly reciprocate their decision", said Lt.-Col. Dr. A. S. Krulkar in his presidential address to the 27th session of the Medical Council of India beld in New Delhi on Nov. 28.

Referring to the constitutional position of the Council after Aug. 15, Dr. Erulkar said that the Government of India intimated on July 24, 1947, that it might be assumed that the Medical Council of India would continue as a statutory corporation with jurisdiction limited to the new Dominion of India.

The Indian Medical Council Act, 1933, in its application to the Indian Dominion will be modified by omitting the word "British" wherever it occurs. In its "British" wherever it occurs. In its application to the Dominion of Pakistan the Act will enable the Government of that Dominion, if it so wishes, to constitute a Medical Council for Pakistan.

As regards the existing members of the Council, after Aug. 15 those nominuted from Bengal, the Punjab, Sind and N.-W. F. P. will cease to be members and the Central Government will have to nominate members from West benkal and East Punjab; as also those elected from Universities located in Pakistan territory. Members elected by Medical Graduates

F. P. will also cease to be members.

The Government of West Bengal have directed that the Provincial Medical Register of the former Province of Bengal shall be deemed to be the Register for the present Province of West Bengal. In view of this fact the Government of India have decided that Dr. K. S. Ray, the member from Bengal elected by Medical Graduates, will continue to be a member of the Council.

#### TEA PARCELS TO U.K.

Complaints have been received from. the U. K. Postal administration that a large number of parcels from India, mainly those containing tea packed in plywood boxes, arrive in damaged conditions and sometimes even empty, says a Press Note, issued by the Directorate-General, Posts and Telegraphs, on Dec. 11.

The cause is attributed to the use of inch and inch wire nails in fixing the lid of boxes. This results in cracks which widen during transit and allow the contents to escape.

The public, particularly those who send the tea by post to the U. K., are requested in their own interest to see that parcels are properly packed.

#### Mr. Asaf Ali Entertained

PLEA for closer political and economic co-operation between India and the United States was made by Mr. Asaf Ali at a recent luncheon reception at the City Club of Cleveland, where India's Ambassador was the guest of honour.

Over 300 members, including industrialists and professional men, were present.

Mr. Asaf Ali, who was received by the City Mayor of Cleveland, said that India was financially solvent with vast potential resources and was prepared to pay for technical and industrial capital equipment which she needed in quantities and which the United States alone could supply.

Stressing the need for rehabilitation of Asia, he said that world peace would be in jeepardy unless the world economy become more integrated.

Answering a question about India and Pakistan, Mr. Asaf Ali visualised close co-operation between the two Dominions at least in the economic sphere.

The Indian Ambassador eulogized The Indian Ambassador eulogized Mahatma Gandhi's contribution to the regeneration of India and pointed out that his was the most civilized way of dealing with the forces of evil and aggression.

Replying to a question about untouchability, he reminded the group that Mahatma Gandhi had been the greatest champion of the "Untouchables" and that untouchability had been banned in India. He mentioned the inclusion of two Ministers in the Cabinet, originally from the Untouchable class, as evidence of new life in India.

The address was carried over a radio

#### SIR AKBAR HYDARI'S **BROADCAST**

(Continued from Page 74)

"A time may come when a great deal may depend on Assam's prosperity and on her having a contented and people. Should no crisis come, all the better, in any case the province could become the home of many useful industries, powered by the electricity produced by her water wealth. Her hills and valleys would be ideal recreation ground for the people of India or even from abroad. Nature has endowed her with resources. It is our task as well as our aim to utilise them. For all these purposes we must, in addition to unremitted effort on our part, have the sympathy and assistance of our parent Government, the Government of India. During my recent visit to Delhi I was happy to get heartening proofs that our difficulties are understood and that our needs in the matter of overcoming them are now to be given the assistance required. It is now up to the people of Assam to rise to the height of opportunities offered. I have no doubt they

#### **WEIGHTS AND MEASURES**

Weights and measures in India vary not only from district to district but also for different commodities.

The principal units in all the scales of weights are the maund, seer at d tola, and the standard weights for each of these are 82.28 lbs., 2.057 lbs. and 180 grains troy respectively.

The Indian tola is the same weight as the rupee, vi2., 180 grains troy; the standard or railway seer is equal to 2.057 lbs. while the standard or railway maund of 40 seers is equivalent to 82 lbs. 4 oz. 9 drams. There are numerous local variations.

#### COINAGE-RUPEE IN DOLLARS AND POUNDS

Re. 1 is approximately 1sh. 6d. or 30.05 cents.

Rs. 100 are approximately £7/9/6 or \$30.05.

Rs. 1,000 are approximately £7/4/1/10 or \$300.53.

Rs. 1,00,000 (a lakh) are approximately £7.473/19/2 or \$30,053.

Rs. 1,00,00,000 (a crore) are approximately £747.395/16/8 or \$3,005,259.

10,000,000 is one crore (1,00,00,000)

Dr. Mukerji, Minister for Industry and Supply, addressing the Industries Conference which opened in New Delhi on Dec. 15

## TRANSITION FROM COLONIAL TO NATIONAL ECONOMY

## Dr. S. P. Mukerji's Address to Industries Conference

the present industrial situation in the Indian Dominion was made by the Hon'ble Dr. Syama Prasad Mukerji, India's Minister for Industry and Supply, in his opening speech at the Industries Conference in New Delhi on Dec. 15. He made certain concrete proposals for the immediate expansion and long-term planning of Indian industries and concluded with an appeal to all the parties in the country to join together in a vigorous co-operative effort which would make possible a rapid transition "from our preponderating colonial economy of raw materials produced by exploited masses to a national economy of industrial goods produced in abundance by skilled workers fully enjoying the fruits of their labour".

#### Industrial Development

The Conference whose object, according to the Minister, was not merely to exchange views on the larger problems of industrial policy and planning, but to assist the Government of India in arriving at decisions for an immediate increase in production and industrial development on a short term, was attended by about 190 delegates. Members of the Indian Cabinet, officers and experts of the Government of India, Ministers and technical specialists representing Provincial and States Governments and representatives of commercial bodies, industrial organisations, individual industries, labour groups and the Central Legislature were present, prominent among whom were Sir M. Visvesvaraya, Mr. G. L. Mehta, Mr. J. R. D. Tata, Sir Homi Modi, Sir Shri Ram, Mr. G. D. Birla, Mr. Krishnaraj

M. D. Thackersey, Mr. N. R. Sarker and Dr. B. C. Roy.

After welcoming the delegates and referring to the unfortunate events in the country during the last four months, Dr. Mukerji said:

It is just four months since our country regained political freedom. I do not forget that partition of India which none of us liked, has brought in its train enormous problems, communal, political and economic, which almost baffle peaceful solution.

We cannot, however, minimise the fact that we have broken off the shackles of alien rule and are now in a position to dedicate ourselves to rebuilding the India of our dreams. It is not merely our self-respect which we regained on the 15th of August 1947, but also the freedom to secure whatever is our due in the community of nations on account of our initiative, our enterprise and our vast resources.

This Government is pledged to the proposition that the freedom we have gained will be used for the benefit of all, and accordingly it has been embodied in our constitution that this nation shall live and prosper as a Socialist Republic. It will be in the common interest of all to ensure that the transition from the present economic freedom to that ideal should be as smooth and speedy as possible and at every stage of our progress we shall utilise all available capital resources, man-power and talent

in business, administration and technology in the fullest extent possible for increasing the wealth and efficiency of our country.

Events beyond our control, specially arising out of the tragedy of the Punjab, have prevented Government from formulating a comprehensive plan for the economic advance of India. A Subcommittee of the Canbinet has been formed to draw up definite plans in respect of our future planning and expansion. The All India Congress Committee has also appointed an Economic Sub-committee which is examining the problems in their various aspects.

#### No Solid Progress

This conference, including as it does representatives of the Provinces and the States, of industry, commerce and of labour, will be in a fit position to advise Government as to the steps that are Government as to the steps that are to be taken for immediate improvement and for short-term and long-term expansion. We have also before us valuable data and proposals collected by various committees and gropus, official and non-official. The monumental work done by the National Planning Committee, which was sponsored and guided by two of the greatest sons and leaders of modern India, Netaji Subhas Chandra Bose and Pandit Jawaharlal Nehra, will serve as a valuable guide in the final shaping of our national policy.

Useful materials and schemes, covering a large number of industries, were also collected under the direction of the Government of India, according to a plan formulated by Sir Ardeshir Dalal, as Member-in-charge of Planning and Development. In October, 1946, the Interim Government appointed an Advisory Planning Board under the chairmanship of

Mr. k. C. Neogy to review the work previously done by various bodies, and its report is now engaging the active attention of Government.

It is now over two years since hostilities, into which India was drawn without her expressed cousent came to a close. We cannot look back to any solid progress in the industrial field during these two years. On the other hand, by comparison, the years of the war were more active industrially and fuller of achievement, although they were more concerned with war production, not necessarily designed to advance the permanent peace-time well-being of the people of India.

Let us not minimise the great danger of a feeling of frustration coming over the country. With your assistance, however, I am confident that we will emerge in the near future out of the stagnation of the last few months. The object of this Conference is not merely to exchange views on the larger problems of industrial policy and planning, but to assist the Government of India in arriving at decisions for an immediate increase in industrial production, and the development of our industries on a short-term plan. We have collected plenty of material and reports. The time is now fully ripe for action on lines best suited to our national advancement.

Almost since the end of the war, but more noticeably from August, 1946, there has been a steady decline in our industrial production. The decline has been so serious that some have wondered whether we should not for a while forget further industrial development in this country and concentrate our efforts in bringing installed capacity now lying idle up to its fullest possible working.

#### **Industrial Crisis**

A review of the recent fall in industrial production is indeed most disturbing. In cotton textiles for example, our production has fallen from round about 4,800 million yards in 1945—the production during the first two years of control—to 3,800 million yards. The causes of this decline are well known. In steel, the fall has been from 1,180,000 tons per year to 875,000 tons. It is the same with cement, the monthly production of which has dropped from 160,000 tons to 112,000 tons.

These examples are typical of the general fall in production right through the whole field of industry. Indeed the economic situation now is graver than during the last year. In every sense of the term we are now in an industrial crisis of a type we have never seen before.

Side by side with this unfortunate state of affairs is a worsening of the inflationary situation in the country. The gap between spendable income, which is growing, and the volume of goods, which is dwindling, is widening everyday. It is well known that our inflation is very largely due to the increase of currency in the country caused by the issue of rupee money by the Reserve Bank of India against sterling deposits in London. Although inflation due to this cause has ended and, in fact, currency circulation has been falling slightly, prices have

shown a progressive increase bringing in its train an enhancement of wages and salaries. This vicious circle of fall in production and rise in prices can only be broken by increasing our productive capacity through a sustained and planned effort.

We have examined a number of our most important industries with this objective. Of the many causes responsible for a fall in production the most important have been unsatisfactory relations between labour and industry, a shortage of raw materials and defects in their distribution, inadequacy of transport to meet present needs, difficulty in obtaining capital goods and constructional materials to instal them and supply and exchange limitation on the import of full requirements of industry.

The remedy for these defects will be the first major problems of Government. We depend on the collective wisdom and experience which this Conference represents for evolving practical measures which will speedily eliminate these bottlenecks in the way of full production of our industries.

#### Labour and Management

I should mention here that in view of its importance, the promotion of stable relations between labour and management, in particular by calling for a truce in lock-outs and strikes, until the present crisis is over, will be the subject of further discussions on Dec. 18. The Labour Minister is bestowing special attention on this matter. This is a vital part of the work of our Conference on which the ultimate success of our efforts depends.

I spoke earlier of the plans for expansion of industry, which were drawn up during the concluding years of the war. Brief summaries of the recommendations of these plans will be found in the little booklet of agenda and notes which has been distributed to you. These data could be the basis of our short-term planning during the next few years.

Government recognise that they have a special responsibility to discharge if these schemes are to materialise. For example, the capacity of rail transport should be increased to meet prospective demands of movement of constructional materials, fuel, raw materials and finished products; hydro-electric projects and ancilliary thermal stations to supply power to industry, should be speedily executed; the rapid growth of the coal industry on rational lines, has to ensured and for that purpose the recom-mendations of the Indian Coal Fields Committee have to be implemented soon. New steel plants have to be erected and brought into operation; and in the meantime, every effort should be made to import the country's essential requirements in steel and iron and other raw materials. The administrative machinery of Government at the Centre must also work in complete harmony with Pro-vincial Governments and the States with industry, labour and other interests so as to minimise delay and deadlocks and maximise progress and efficiency.

Government have not been altogether

idle in the meantime. They have already decided that two steel plants, each of 500,000 tons capacity with possibility of expansion to a milion tons, should be set up under the auspices of the State as early as possible. And this Conference will be followed immediately by the meeting of a Committee fully representative of our great Steel Works which will advise us on the lines to follow.

Government also intend to consider the possibility of utilizing the spare capacity of our Ordnance Factories, which were remodelled and expanded beyond recognition in war time for meeting the needs of industry. It has been decided to utilise the Mathematical Instruments Office in Calcutta for production of scientific apparatus and a committee has been appointed to advise Government on the matter. Expansion of the resources of the Alipore Test House is under active consideration. Quality control is considered essential for the stability of Indian Industry, and with this end in view, an Indian Standards Institute has already been established. Dr. Shewhart of the Bell Telephone Laboratories, a world authority in quality control technique, is now in this country as our guest. We will be having the benefit of an address by him on the morning of Dec. 17.

Government are also considering the manufacture by the State of penicillin, anti-malarial and sulpha drugs with the aim of achieving as soon as possible, sufficient production to meet India's vast requirements at the lowest possible price. If we succeed in this direction, we will be able to eradicate more than 90 per cent. of the diseases from which India suffers to-day.

#### Value of Research

Government are conscious of the value of research for improving the efficiency of technological processes, quality of raw materials and finished products, and funds on a generous scale have been placed at the disposal of the Council of Scientific and Industrial Research for this purpose. I have every hope that industry will utilise fully the technical knowledge available in the Council.

Government also intend to investigate the reasons why patents taken out by Indian nationals have not been exploited to anything like the same extent as in foreign countries and to consider a revision of the existing Patent Law, if necessary.

We hope that we may publish in the near future an annual digest of industrial statistics containing information similar to that published in the Monthly Digest of Statistics published in the U. K. Planning for resource development is a dynamic process, and unless accurate and up-to-date information is available targets fixed for achievement are bound to be very much off the mark. It is unfortunate that the Indian Statistical Act of 1942 has not yet been put into active operation. There cannot be two opinions about setting up an organisation, both in the Centre and in the Province, which will enable progress to be reviewed

and watched by the yard-stick of precise statistics.

To a limited extent we may be able to supply some machinery and raw materials from surplus goods held for disposal by the Government of India. There has been a feeling in recent months that surplus goods held for disposal have not been used as they might be. I have decided to set up a technical committee which will scrutinise the surplus plant and machinery held by us all over the country and investigate what can be made immediately available for industry. I invite your co-operation in this behalf.

Most of our industrial equipment will for some years have to come from abroad. Some of this will no doubt help towards the progressive liquidation of India's sterling resources built up at much human and material cost during the war. But plant has also to be imported from countries like the U. S. A. with whom our balance of trade is in consequence likely to be adverse for many years to come. Last May, the heavy liquidation of our foreign currency resources constrained us to reimpose the control over imports which we had relaxed a few months earlier in pursuance of Government's general policy of progressive decontrol of commodities at the appropriate moment.

India is of course no exception in the matter of currency difficulties which affect most of the countries of the world. Like them, we also have to look either to the export trade or to foreign loans or to regulated investment of foreign capital in industrial enterprise to remedy difficulties regarding balance of payments. My colleague in charge of the Commerce My colleague in charge of the Commerce of the Export Advisory Council in New Delhi last month, emphasised that the export policy of Government would be conditioned by two main factors: The need for conserving and increasing India's resources of foreign exchange and the consolidation of her position in the export markets of the world. The need for an export drive, therefore needs no emphasis.

#### **Technical Personnel**

One of the most important problems facing industry is the paucity of competent technical personnel. During the past three years considerable sums of public money have been spent in overseas training of Indian scholars. A committee, under the chairmanship of Dr. B. C. Roy, has examined this scheme and recommended steps for making such training more effective. The wastage in this respect has been enormous. There is also a great demand for the services of competent foreign technical personnel to improve the efficiency of Indian industries. The establishment of scientific and technical liaison offices abroad for the recruitment of such technologists and for making better arrangements for training of Indian students in industry is under consideration.

But these are mere palliatives. India should not heaitate to establish the most up-to-date technological institutions, and if necessary, invite experts of high standing from every part of the world for

Dr. Schewhart, Founder of the Quality Control Movement, who visited India under the joint auspices of the Indian Statistical Society and the Indian Standards Association, addresing the Industries Conference

affording equal opportunity to Indians of all classes to acquire the highest technical knowledge and skill in their own country. It pays better to engage a foreign expert on £2,000 a year to train a dozen talented young Indians in the country itself than to send the same dozen overseas for similar training at a cost of £8,000 a year. We are also taking steps for maintaining a register of technically qualified men whom industry may absorb. The success of this scheme will depend on the response we receive from industry.

The increase of production of existing industrial plants and the execution of our short-term plans are doubtless matters of immediate urgency. Nevertheless, I do not consider that we can evon for the moment neglect thinking of the future. The immediate and shortterm programme will in the process of completion merge smoothly into future long-term plans. Such plans are, however, of a fundamentally different character and should be based on the needs of the country for the achievement of maximum self-sufficiency, the maximum exploitation of indigenous resources, equitable distribution of goods and services and a higher standard of living of the people. The State should take a major share in such industrial planning which involves a wise and co-ordinated investment of saving from national income in industrial undertakings with a view to increasing the contribution of industry to the national wealth at a definite rate.

Private enterprise in Europe and America has taken between 50 to 100 years to develop their present economic system where the major part of the income of the people comes from industrial pursuite. With National Government in Delhi, it will probably take as many years for private enterprise in India to

arrive at a similar state of development. The fact remains that the private capital invested in our organised industries did not exceed Rs. 250 crores in 1935. Even under the stress of the war the index of industrial activity in 1946 increased by not more than 15 per cent. over the base year 1935. Such slow progress will not do in the New India which we hope to build.

It has often been argued that State management is far less efficient than private management, and hence it should be avoided. This is rather an argument really in favour of the State adopting the methods of private management and not for giving up industrial undertakings altogether. In the advanced countries of the West, owner-managers are rapidly yielding place to salaried Managing Directors who are experts in business administration and industrial production. Management of State-owned industries by statutory corporations may offer the correct solution.

In the statement of Industrial Policy which was issued by Government in 1945, a list was given of some industries of national importance which might be owned and operated by the State if adequate private capital were not forth-coming. The list included iron and steel, chemicals and dyes, automobiles and tractors, electro-chemical and non-ferrous metal industries. The Railways, the Ordnance Factories, the Hindustan Aircraft Ltd., and a number of public utilities are already State-owned and operated. The Fertilizer Factory in course of construction in Bihar and the large projects of power development are going to be executed as State enterprises. The National Planning Committee whose reports are now being gradually publised, has recommended that all defence and key industries should be owned and operated by the State.

The Advisory Planning Board, which met at the end of last year, recommended that, apart from Defence Industries, and any industry or branch thereof which it might be found desirable to start as a State enterprise through the reluctance of private capital to undertake it, the nationalisation of the following should be considered: Coal, Mineral Oils Iron and Steel, Motor, Air and River transport.

#### Central Planning

Leaving aside any theoretical discussion on the issues of State-ownership versus private enterprise, Central Planning for the basically important industries is essential from the point of view of conservation of limited capital resources and foreign exchange, avoiding wasteful competition and securing regional development which would advance the standard of living in the country as a whole and ensure a proper dispersal of industries throughout India.

Central planning necessarily involves certain controls, such as regulation of prices and profits and the wages and conditions of labour. A tentative list of the industries which appear suitable for Central planning will no doubt be considered by you. It is far you to recommend to Government which of them should be

Pandit Jawaharlal Nehru, Prime Minister, addressing the Conference

State-owned, partially State-owned or owned entirely by private enterprise. We have also to consider the nature and extent of the participation of foreign capital and management which will be allowed in our country by the central Government on conditions to be determined by them in the interests of our economic advancement and safety.

India is a land of villages, and Government must attach the greatest importance to the development of cottage and small-scale industries in order to ensure a balanced economy. From their very nature, the development of these industries must remain the responsibility of the Provincial and State Governments, but it should be the business of the Central Government to make continuous efforts to make them ancillary to large-scale industries. Their healthy expansion depends on the provision of cheap electrical power, provision of raw materials at economic prices, organised marketing of their produce and developing the latest skill in arts and crafts for which this land was once so famous.

#### Foreign Assistance

I would welcome suggestions from the Conference regarding the machinery it would expect Government to set up for advising them on some of the vital matters I have discussed, dealing with our immediate, short-term and long-term programme. I am most anxious that our long-term plans for industrial development will be ready in a precise and concrete form by April, 1948, so that we may be in a position to send out a special mission to visit foreign countries with a view quickly to obtaining assistance in regard to

(Continued on Page 109)

# FOR INDUSTRIAL TRUCE

DDRESSING the Industries Conference in New Delhi on Dec. 18, the Hou'ble Pandit Jawaharlal Nehru, Prime Minister of India, stressed the need for stepping up production in the country and for an industrial truce to avoid strikes and lock-outs.

Referring to the role of the State in the field of industries, Pandit Nehru expressed the view that, in many cases, existing basic industries might have to be nationalised. He added, however, that a far better apporach to the problem would be for the State to concentrate more and more on new industries of the latest type and to control them in a large measure.

Pandit Nehru also stressed the value of the river valley schemes to India. The Himalayas, he said, were the biggest source of power and, if properly utilised, would transform the whole of the country with exceeding rapidity.

Here is the text of the Prime Minister's speech:

Dr. Mukerji, friends and comrades; I venture to address you in this way, more specially on this occasion, because probably no other major subject that we have to tackle requires so much a spirit of friendly co-operation than this subject of industry, labour and the general economic set-up of the country. It is rather presumptuous for me to come here at this fairly last stage of this Conference and gatherings that you

have had during the last few days, not having taken part in them, and now presumably to offer you good advice.

Many of you are more or less experts in your fields, where it is Labour or Industry, and though I am very greatly interested in all these matters and perhaps sometimes have an advantage over the experts in the sense that a layman can see the whole picture in proper perspective more than a specialist in his special fields of activity, nevertheless, I would have liked to have had the chance and opportunity to have taken part in your discussions during the last few days and known more as to how the mind of this gathering, of those who are participating in these discussions, was working.

#### Differences of Approach

It is obvious that in these very vital matters there are differences of opinion—vital difference of opinion and approach. There are what are called ideologies, there is what is called the practical approach which, I have often found, is far removed from anything that might really be called practical or that can be practical. A practical approach need not necessarily be just looking one yard ahead of you, it requires looking further ahead also.

Well, in a way, there are these differences and it would be a little absurd to think that you can charm away those differences and find some complete unanimity by just pure goodwill and good

advice. Nevertheless, I think, without doing away with those differences of approach, if we do appreciate that in a certain context of events it is necessary and highly desirable to function together, well, we create an atmosphere which helps in coming to some (if you like, not permanent—at any rate, semi-permanent or temporary, conclusions.

"Now, why are these approaches different? I suppose partly because of some difference in one's outlook on life itself, on the objectives of life, etc. on the social set-up, and the rest; but to put it very crudely, leaving out these wider objectives, the differences arise because various groups aim at getting some prize or other, some benefit or other. Capital may want a certain prize; the consumer, the producer, everybody wantanaturally to benefit himself or his group.

But a time comes when it may well happen that while the conflicting groups are fighting against each other, the prize vanishes and there is no prize left for anybody to take hold of. So it becomes important at that time to moderate one's own ardour or one's own particular desire to hold the prize, and save the prize itself. It is not necessary to give up the hope of getting the prize but rather to put first things first, that is, to preserve the prize and then either in a friendly way come to future decisions or, if you even like that, have a conflict endangers the prize itself, then obviously it is an exceedingly unfortunate and foolish way of approaching anything.

You all know that the India of today for the last few months has passed through all manner of tremendous crises and we have had to face colossal problems; we have survived all manner of surgical operations of a major kind and we still may not have an operation of that type, but the consequences of that operation have been so tremendous that few of us realised previously that they would be so had.

We knew they would be bad; therefore we resisted the operation and resisted what might be called quack remedies. But, unfortunately, sometimes quacks succeed, even in the best regulated household. And the result is that we have had operations and you have seen what a tremendously upsetting consequence followed them. We have not got rid of that consequence and we have to face problems of colossal magnitude still.

#### **Economic Situation**

While we have had to do this, on the other hand, we see and we have seen a progressively deteriorating economic situation. We talk, and rightly so, of the problems of distribution. In fact most of our troubles and conflicts and vital ideologies are concerned with distribution. But important as that is, there must obviously be some thing substantial to distribute before you can start that process of distribution. Therefore, we come to the problem of production.

Production becomes the first essential,

but with it is intimately aligned distribution. You cannot really separate the two. Production depends on many factors and one of the most important of those factors is the psychology to produce, apart from the technical apparatus, etc., that we may have—and one should have the efficiency and there must be the capacity and the psychology to produce. If that psychology is lacking, then inevitably production goes down, as it has gone down.

#### Psychological Background

Now, you can analyse the past few months or few years as you like; there are so many factors. There are the consequences of the war-a tired feeling after hard work. There are the consequences of political upsets, of this partition, of communal troubles and the like. But I should say perhaps one of the major things we have to face in industrial relations is this psychological background, which makes labour feel that it does not get a square deal, that somehow it is overreached all the time, which makes the employer class feel that they are threatened with all manner of dangers and that labour is not pulling the weight and is only threatening strikes and slowing up of work and so on and so forth. So they approach each other not only with a complete lack of confidence but a spirit of extreme hostility.

How are we to get over this? On the one hand, I think it is perfectly true to say that there has been a tendency on the part of labour or certain labour groups to take advantage of certain difficulties which the nation has had to face, to have strikes and stoppages of work and slowing down of work at a time whon it meant hitting the nation. If that kind of thing continues with labour—which undoubtedly has and should have the sympathy of vast numbers of people in this country—a slight barrier begins to grow up between the large labour element and the rest of the country. And it is not good to have that kind of barrier grow up.

#### Behaviour of Employers

That is so far as labour is concerned. So far as the employers' side is concerned, I hope no one will challenge me when I say that during this last war a certain section of the employer class did not behave well; in fact, they behaved excessively badly. excessively egotistically and far from giving a square deal to anybody, they thought mostly of them selves and of little else. I have yet to understand how, in spite of tremendous and heavy taxation in India, these vast fortunes by certain individuals or groups were made. I just cannot understand it; and we have to find out some means and machinery to prevent this kind of shameful traffic with human beings and profiting at the expense of the nation and others.

So, it is easy to find fault with certain sections of labour or certain sections of the employing class. But what we have to do is not merely to find fault but to seek some remedy. You cannot turn everybody into angels on either side; there would be no problem if people were advanced enough to think and act in

that way. One remedy is to create conditions when—if T may say so—those who are not angelic do not find it easy to flourish and find difficulties in their way. That is, you have to create inducement to fair dealing and honesty and certain disadvantages attaching to any other course of action.

Leaving out the people who may be not up to the right standard in fair dealing and honesty, the real difficulty con es when honest people are in conflict. It they are completely honest, they hold different views and they come to conflict. Normally, people who are not honest sometimes make up their differences sooner because they have nothing strong to stick on to. They are not used to any anchorage but just float about, and so, under pressure of events, they come to terms. But honest people who hold opinions very stoutly do not come to terms because they think that any other way is the wrong way. Now I take it that most of us who are here are honest people and people who have thought about these matters and hold strong opinion about these matters and, therefore, find it a little difficult to accept the other person's view.

#### Perils Facing India

Nevertheless, the major fact confronts us; that all manner of perils face us in India today. And although other perils for the moment be at the forefront, the ultimate peril is the slow drying up of the capacity of the nation to produce. That affects us politically, economically and in every other way, and gradually our strength goes down to resist these very perils that face us. Therefore, you have to stop this drying up of our productive capacity.

I believe you have been thinking about this and you have also passed a number of resolutions on the subject. We must increase our production; we must increase our national wealth and the national dividend and only then can we really raise the standard of living of our people.

We may here and there make some adjustment by a more equitable distribution of existing wealth. That must be done really not so much because it makes too much of a difference in raising the standard of life—it does, but not very much-but it must be done because it creates conditions for advance; because, if that is not done, there is continually that feeling of not having a square deal and people do not put their heart and soul in the work they do, thinking that they are not being properly treated, and so on. Therefore. it be comes essential first of all to see that where there are gross inequalities at present we tend towards a rapid reduction of those inequalities. But ultimately more wealth can only come from more production of all types and kinds of

Presumably, many of you here represent big industries and the like, and I have no doubt that production through big industry is essential. But in the present context of events today, I should like to say that when a talk of increased production, whether of feod or of any

l'elegates to the Industries Conference were entertained at the Imperial Delhi Gymkhana Club on December 18. Picture shows Lord and Lady Mountbatten discussing a point with Mr. J. R. D. Tata (left) and Dr. S. P. Mukerji.

(Fight) Pandit Nehru in conversation with Sir Ardeshir Dalal (left) and Mr. J. R. D. Tata

other commodity, it is necessary for us to encourage small-scale production in a large way also.

This question is often considered as if there was an inherent conflict between large-scale production and small-scale production. Perhaps it might indicate a different approach. But, leaving that idea of conflict aside it seems to me obvious that, at the present moment, more specially, and possibly later, the two have to go on together. And especially as short-term planning, there must be large-scale small production today of all manner of things that can be produced in a small way, because all manner of commodities are lacking. But we are really concerned at the present moment with bringing about a psychological atmosphere and bringing about some kind of machinery wherewith to tackle any conflict that may arise.

#### **World Conflict**

Now, if we are facing some perils along with the rest of the world, with some special troubles of our own, how are we to proceed? The very first thought that comes to one's mind is that in this rather dissolving world, which is heading again for a big-scale conflict, the sooner we put India on its feet in every possible way, the more chance there is of our pulling our weight and surviving and having some influence in the near future. None, not even the very biggest expert, can say how long this very precarious peace in the world will last. We hope it will last many years, but it may break at any time. And if that happens, you will realise that all manner of unforeseen things will take place. It will shake up even more than anything has yet done.

And how should we face that emergency? By building up, before that happens, an economically strong and well-balanced India with a strong enough defence apparatus. And remember what defence apparatus means today. People

talk of the army and navy and air force, obviously, defence means these. But far more than the army and navy and air force, defence means industry and production. Not all the soldiers in the world will do any good to India otherwise. People talk about compulsory military service. From one point of view I am not in favour, generally speaking, of compulsory military service. But I am in favour of it in this sense, that it will make our people a little more disciplined, and also from the physical-culture point of view, and so on.

But this business of compulsory military service means nothing mportant from the defence point of view, because the real problem is not to make people war-minded but to give them the means of fighting. If you have millions and millions of men walking about with antique weapons and lathis, it is not much good. But you have to have production of all the essentials of warfare. In fact, in war, weapons and everything else and all manner of things are necessary. If you are industrially strong, you can build up your army and navy and air force at short notice. If you depend on buying your warships and everything else in a foreign country and that source dries up, it is all useless to have only a few thousand men shouting about war. So that, in the ultimate analysis, even this war business brings you down to production and the growth of industries, small and big.

Many things contributed to the winning of the last war, but I think the final reasons were two, the amazing capacity of American industry and scientific research. It is these which won the war, not so much the soldiers and others. Therefore, we must, from every point of view—external and internal—stop this slowing down of production and increase it rapidly by new industries; and also tackle problems of unemployment and of raising the standard of living. These can only be done if there is peace in industry; without peace

there, it simply cannot be done. And I take it that the object of this Conference is to have peace in industry for a certain period at least, which will give us some breathing time.

In a draft resolution that I have been reading, a period of three years is mentioned. I am not interested in any particular period, and for some time past my mind has hardly functioned in regard to long-distance objectives except in an idealistic kind of way. I can make no plan for myself a few days or a weeks ahead, I do not know where I shall be. So I am not very much interested in whether it is two years or three years.

#### Role of Government

The point is that it would be a tremendous thing for India if all of you and all those whom you represent came to the conclusion that you should give a chance to this and have a period of truce when there will be no strikes and no lock-outs, And how can you that? Of course, it is too much to expect this to be done unless there is some machinery and apparatus to settle disputes to the satisfaction of the people concerned, or more or less to their satisfaction because there cannot obviously be hundred per cent satisfaction when two parties are in dispute. I suppose it is not beyond the wit of men or even beyond the wit of this Government to produce some such machinery or scheme. Whenever there are such schemes, it is curious that opposition is taken to them on both sides.

The other day I was in Calcutta and the President of the Associated Chambers of Commerce there went on repeating and telling the audience that Gevernment should not interfere or intervene in any way. We thought that if Government stood aloof industry would flourish. It was very interesting for me to hear that, because I had thought that that particular viewpoint had almost vanish.

ed from the earth. But still it existed in Calcutta. At any rate, the labour people on the other hand want Government interference quite enough. But when you talk of arbitration and adjudication their idea of arbitration and adjudication often is that they should go into them; if they succeed well and good, otherwise they are free to do what they like.

That I can understand psychologically. It is a relic of old times, but practically speaking it becomes impossible to have arbitration and adjudication if you approach it in that spirit. So, if we can, as I think we can, have a proper impartial machinery—which machinery in the modern world is bound to incline towards labour rather than towards others—we can resolve these difficulties or such difficulties as may arise from time to time.

#### **New Industries**

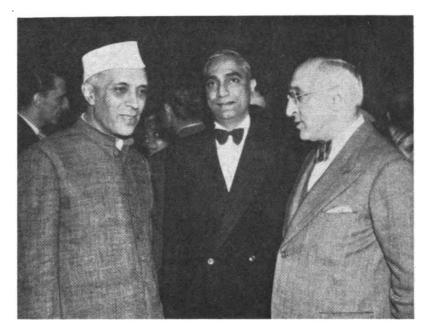

I am not for the moment talking about the final resolution, as to the future economic policy and the merits or otherwise of nationalisation, although inevitably they arise. For the present I think the first step should be a kind of adjustment of minor differences while we are considering major objectives of policy. With regard to the major objectives of policy, I have just said something in Calcutta and elsewhere and I will not repeat at them here.

Speaking as a person who is a believer in the socialisation of industry, I - should like to say this, that far too much attention is often paid to acquiring existing industries than to the building of new industries by the State or under State control. In many cases existing industries of the basic type may have to be acquired by the State and run by the State. But it seems to me a far better approach to the problem for the State to concentrate more and more on new industries of the latest type and to control them in a large measure, because then the resources of the State go toward, further progress and controlled progress instead of merely trying to get hold of something which exists. Of course one had sometimes got to do that.

#### Age of Transition

I say this because I am to some extent, if I may venture to say so, of a scientific bent of mind and I try to think more on dynamic terms than in static terms. The existing industry today that most people think of—capitalists, socialists or communists—is samething of which they think in static terms as if the thing is to go on and on, while as a matter of fact the thing is completely out of date and most of it should be scrapped.

If you think in a somewhat dynamic way, you can see that we are at one of the major ages of transition when completely new sources of power are being tapped, something of the nature of the industrial revolution or electrical revolution; but something even more far reaching than that. If somebody at the time of the industrial revolution was thinking in terms of the pre-industrial age and talking about acquiring this or that, he would be completely out of the

Pandit Nehru, Nr. S. A. Venkataraman (centre, Secretary of the Indu try and Supply A inistry, and Sir Homi Mody photographed at the reception

picture some time or later when a new age came and there were new resources of power.

In the same way we are on the verge of that and whether it takes ten, fifteen or twenty years-I doubt if it will take more than that-many of our methods of production will become completely out of date, and what you are thinking of acquiring today may have no value at all. That is a warning. I hope that does not frighten people and make them think that they should not invest money in any industry. But one has to be very wide awake today about these changes and one must think in terms of the future rather than the past, becuase the past is not only dead and gone, but we cannot go back to it, and even the present is rapidly changing present. If you approach it in terms of the future, then many of the present conflicts seem rather out of place or, at any rate they take on a new turn and you get out of the old ruts of your thoughts.

#### River Valley Schemes

These are some considerations for us to ponder over. But for the present I do hope that you, who represent great forces in the country industrial, labour and governmental, will come to an agreement on this period of peace and reconstruction and building up, and meanwhile we shall think of the larger policies for industrial and economic development and give effect to them fairly rapidly. For my part, I attach probably more importance to the development of our hig schemes—river valley schemes—than to anything else. I think it is out of those that new wealth is going to flow into this country.

When I see a map of India and I look at the Himalayan range, I like the Himalayas myself; I like mountains and all that, what I think of mostly today is the vast power concentrated there which is not being used, and which can be used, and which really can transform the whole of India with exceeding rapidity if it was properly utilised. It is an amazing source of power, probably the biggest source anywhere in the world—this Himalayan range, with its rivers, minerals and other things. Therefore, I attach more importance to the development of these big river valley schemes, dams, reservoirs, hydro-electric and thermal power and so forth, which, once released, will simply drive you forward. But before we release power we have to know how to control it and use it in the proper way.

#### **Industrial Peace**

We have been in some shape or other connected with this Government for the last sixteen months or so. One of the first things that I did when we came to this Government was to think of these economic plans and these various schemes, and we appointed an Advisory Planning Board for a rapid survey—not a detailed survey—of these schemes, so that we may consider some basic policies. The Planning Board reported fairly soon. It worked necessarily with some superficiality, but nevertheless it did well, and then immediately we got caught up in this business of approachig partition. After partition we got caught up with the business of the aftereffects of partition. So all these vital problems could not be solved. There they remained.

But part of the difficulty has also been this wrong psychology in the industrial field. So if we start at this end, governmentally, I hope, we shall approach this problem fairly soon, and I hope also that this procedure which my colleague, Dr. Mukerji, has initiated—that is, to confer with representatives of all shades

of opinion—will be adopted whenever necessary in the future policy. But in order to approach that properly, one has to have some breathing space. One cannot have it in this world with trouble all over the place. But let us have it in industry.

I do not ask you to give up any of your particular ideologies and beliefs. Stick to them. But just realise that even your particular ideology may have a greater chance of advancement if we have some peace and build up something now for the next year or two, and meanwhile we develop those other policies; and if you want a fight, let us have a fight afterwards, but at any rate let us have something worth fighting for, otherwise the thing we fight for vanishes and that is not good enough or wise enough.

#### Token Strikes

I heard last evening- I have not myself seen it in a newspaper-that in Bombay an announcement has been made that there will be what is called a token one-day strike against adjudication machinery and decontrol. I will not go into these two matters here. But it seems to me quite astoundingly irresponsible for any organisation, whatever its views and ideologies, to indulge in strike at this moment and in this way, even though they may be token one-day strikes. It shows a complete lack of understanding of the political situation or the international situation, of the national situation, of the economic national situation, of the situation, of the human situation, or for that matter of any situation.

I should not like to criticise any people without discussing the matter with them, but I confess that it passes my understanding how any responsible person can indulge in this kind of token strike at a moment when there is always a possibility of something like that giving rise even to bigger problems and bigger conflicts; when all of us here and all over the country are thinking in terms of finding some way out of this impasse, even though it may be a temporary way out. So just at this moment to indulge in this kind of token strikes seems to me to be very unfair and very unfortunate.

#### Policy on Controls

Now the strike, as I have just learnt, is against this compulsory adjudication and decontrol. Opinions may differ about either of these matters, but so far as decontrol is concerned, we have announced a policy which is a very cautious policy. The subject of control is of exceeding complexity and difficulty and opinions differ. The decision that Governmet has arrived at has been after the most careful thought. And even so, we have guarded ourselves that if anything tends to go wrong, we go back, or we reconsider our position. The whole machinery of control is being kept even where control is being withdrawn.

Now, whether we are right or wrong is another matter. We may be wrong, but the only way to proceed about such matters is to be always ready to correct an error as soon as one is convinced that it is an error. We are ready for that, but the point I wish to put before you is this. This Government is supposed to be a popular Government and to represent the wishes of a large

majority of people. If that is so and if that Government takes any measure like this, how do those who oppose that measure proceed? Either they are in a majority or in a minority. If they are in a majority it is very easy for them to put an end to that Government. If they are in a minority, any such action that they might want to take means that a minority is trying to coerce the majority and that inevitably leads—it may of course lead to a temporary success for the minority—to the majority getting angry and setting on the minority.

After all, if you start conflicts, two can play at that game of trying to coerce the other part of the community, or even from the narrowest point of view of a group, this business is unwise and does not pay; but it does a lot of harm to the community. I hope, therefore, that this type of token strikes, though they may be justified in expressing their wishes in any way they like, e.g., by meetings and peaceful demonstrations, that they disapprove of decontrol and adjudication, is not followed because not only does it mean loss of production for that day, but it may mean petty con-flicts. If someone does not go on strike then you pull him out and then there is trouble. Then someone is arrested by the police and immediately a vicious circle starts.

I would beg those who think in this

way to reconsider their decisions and try to think in a larger way or if I may say so, in a more rational way and consider the consequences of these actions. It may be that many of these things that occur happen because of some cause which does not appear on the surface. For instance, some kind of elections may be pending and people think that if they behave in a particular way they may have a pull in the elections—municipal, corporation, provincial. It is quite possible.

Ultimately, it becomes a question for all of us to consider whether we are to think in terms of some petty election or some permanent and larger interest. Of course if we are interested in the former, in the small things, then it is not much good talking about bigger things; they will escape us. I am sure there is quite enough determination and sense in this country to get over these petty difficulties and to face the larger issues.

Therefore, to come back, I hope that this conference will yield this very substantial result, namely, that we shall start in a friendly way, we shall decide on some kind of truce in industry for period and we shall devise means to see that every body gets a square deal as far as possible and, meanwhile, we shall sit down and think about our larger policies.

## THREE-YEAR TRUCE BETWEEN CAPITAL AND LABOUR

## Industries Conference Resolutions

RESOLUTION calling upon labour and management to maintain industrial peace and avert strikes, lock-outs and slowing down of production for a period of three years was adopted unaninously at the Industries Conference in New Delhi Dec. 18.

The Resolution says: This Conference considers that the increase in industrial production, which is so vital to the economy of the country, cannot be achieved without the fullest co-operation between labour and management and stable and friendly relations between The employer must recognise the proper role of labour in industry and the need to secure for labour fair wages and working conditions. Labour, for its part, must give equal recognition to its duty in contributing to the increase of the national income without which a permanent rise in the general standard of living cannot be achieved. discussion of all problems common to both and a determination to settle all disputes without recourse to interruption in or solwing down of production should be the common sim of employers and labour.

"The system of remuneration to capital as well as labour must be so devised that while, in the interests of the consumers, and the primary producers excessive profits should be prevented by suitable measures of taxation and otherwise, both will share the product of their common effort after making provision for payment of fair wages to labour a fair return on capital employed in the industry and reasonable reserves for the maintenance and expansion of the undertaking.

"For attaining these objectives, this Conference recommends:

- (a) "That the fullest use should be made of statutory and other machinery for the resolution of industrial disputes in a just and peaceful manner; where it does not exist, it should be created without delay. Such machinery should, as far as possible, be uniform throughout
- (b) "The establishment of machinery, Central, regional and functional, for the study and determination of fair wages and conditions of labour, and fair remuneration for capital; and methods for the association of labour in all matters concerning industrial production, such as the formation of Central, Regional and Unit Production Committees.
- (c) "The constitution in each industrial undertaking of Works Committee representing management and duly elected representatives of labour for the settlement of any dispute which may arise from day to day.
- (d) "That, as a first step towards This Conference recommendation the standard of living of following immediate measures:-

workers, immediate attention should be devoted to the problem of housing of industrial labour; the cost of such housing should be shared in suitable proportions between the Government, employers and labour, the share of labour being given in the shape of a reasonable

"The principles enunciated having been accepted, this Conference calls upon labour and management to agree to maintain industrial peace and to avert lock-cuts, strikes or slowing down of production during the next three years.

"This Conference invites labour and management to assist Government to secure, promote and guarantee such agreement between the parties as will usher in a period of contented and orderly advancement towards a co-operative Commonwealth".

#### Industrial Planning

The following eight resolutions bearing on subjects relating to immediate ex-pansion of industry and industrial planning, both short-term and long-term, were adopted by the Conference on

#### **RESOLUTION NO. 1**

SHORT-TERM AND IMMEDIATE, LONG-TERM OBJECTIVES.

Moved by Mr. J. R. D. Tata and seconded by Mr. M. A. Sriniwasan, Dewan of Gwalior.

- I. This Conference views with grave concern the continued decline in industrial producing which has occurred during the last two years.
- II. This Conference is of the view that the present inability of Industry to produce to its installed capacity and to expand as planned is mainly due to
- (a) inadequately of transport to meet present needs,
- (b) unsatisfactory relations between management and labour,
- (c) shortage of raw materials and defects in their procurement and distribution.
- (d) difficulty in obtaining capital goods and constructional materials to instal them.
- (e) supply and exchange limitations on the import of the full requirements of industry, and
  - (f) Paucity of technical personnel.

recommends the

#### (1) Transport:

- (a) The increase in the movement of coal by four million tons per annum over the existing level of 25 to 26 million tons per annum to enable existing requirements to be met. For this purpose, the fullest use should be made of present wagon availability, and every effort should be made to increase wagon availability and other railway facilities.
- (b) The assessment of the transport required for the movement of finished goods and raw materials necessary for full production: and arrangements to secure such transport through a reduction of less essential movements, whether of goods or passengers.
- (c) An examination of all possibilities of increasing total goods traffic such as rationalisation of line, power and wagon capacity, and fullest use of present resources.
- (d) The fullest utilisation of road river, sea and air transport.

#### (2) Raw Materials:

- (a) Special assistance for increased production in India of industrial raw materials like steel, cement, caustic soda and other chemicals, metals etc.
- (b) The increase of imports of essential raw materials in short supply, like steel, non-ferrous metals, caustic soda and other chemicals etc.
- (c) Foreign exchange difficulties should be overcome to the extent possible by limiting less essential imports, by increasing exports, including export for barter, and by arranging deferred payments and loans in cash or commodities on lines approved by Government.
- (d) The planned utilisation of industrial raw materials in critical short supply with a view to secure increased production. To the extent possible, such distribution of raw materials should be effected in consultation with representative Associations of industry in the case of organised industries and with Provincial and State Governments in other cases.

Provinces and States should be invited to consider, in consultation with industries in their areas, the possibilities of rationalising the use of raw materials in short supply so as to secure maximum production. For this purpose they should suggest standards of classification of units in an industry according to efficiency in production, so that all-India standards may be laid down.

#### (3) Technical Manpower:

- (a) The establishment of scientific and technical liaison offices abroad for the recruitment of technical personnel and the placing of advanced Indian students and technicians in foreign universities, technical institutions, and the acquisition of technical information.
- (b) The increase of facilities in India for the training of scientific and technical personnel, and the training of labour to increase its efficiency and skill.

- (c) The maintenance of a register of scientific and technical personnel.
- III. This Conference recommends that during the next three to five years the increase of capacity and production in certain industres for which plans have been approved and are under execution should be pressed forward with vigour. The essential pre-requisite for such expansion is the increase of production of commodities and provision of services which are basic to industry and without which any expansion would be impossible The following measures are, therefore, recommended:
- (a) Railways: The capacity of rail transport should be increased to meet prospective demands of movement of constructional materials, fuel, raw materials and finished products. The import of locomotives and wagons should be given high priority and existing capacity for manufacture should be developed so as to secure self-sufficincey at the end of this period.
- (b) Steel: New steel plants should be erected and brought into production and in the meantime every effort should be made to import the country's essential requirements in iton and steel.
- (c) Comment: The approved plan for the expansion of cement production should be hastened to an early comple-

- tion so that this important constructional material becomes available for the installation of new industrial plants.
- (d) Electric Power: Simultaneously with the preparation and execution of Hydroelectric projects like the Damodar Valley Scheme, which will take time, existing plans for the installation of ancillary Thermal power stations should be speedily implemented.
- (e) Ceal: The recommendations of the Indian Coalfields Committee regarding the acquisition of mineral right, planned and co-ordinated development of production in new areas, regulation of use and distribution and creation of suitable executive, machinery amongst other things, must be implemented early, so that, the growth of the coal industry on rational lines can be facilitated.
- (f) Oil: In order to reduce dependence on foreign sources, prospecting for oil should receive increased attention and the possibility of producing substitutes from coal should be investigated.
- In addition, legislation to secure the fullest utilisation of power alcohol produced in the country should be enacted.
- (g) In the light of the development anticipated under (a) to (f) above, targets

- for the next five years should be fixed in a realistic manner for other important industries like cotton textiles, paper and newsprint, chemicals, penicillin, sulpha drugs and anti-malarial, heavy, and light engineering, electric and other machinery should be established for watching and ensuring progress towards the targets.
- (h) Machinery for watching and ensuring the execution of immediate and short-term plans: The need for close consultation between the various Ministries concerned with industrial development needs no emphasis.
- It is also necessary to associate representatives of Provincial and States Governments, Industry and Labour in a periodical review of progress and the measures necessary to stimulate it. A Central Industrial Advisory Council should be set up with appropriate Sub-Committees for important groups of Industry and one Sub-Committee for reviewing and advising on problems of transport in relation to industry. Similar Industrial Advisory Committees should also be constituted in the Provinces.
- (j) To assist Government on the proper utilisation of scarce raw materials, capital goods, foreign exchange and other resources, a Priorities Board should immediately be set up.
  - IV. Current limitations of men and

Parts for hurricone lanterns being manufactured in the Steel and Metal Factory, Ishapore, near Calcutta

materials necessitate concentration en immediate and short-term measures fer increasing productive capacity. A long-term plan, however, should be based on the needs of the country for the achievement of maximum self-sufficiency, a higher standard of living and maximum exploitation of indigenous resources. The long-term plan, therefore, must be of a fundamentally different character. The Conference, therefore, recommends that separate machinery for long-term planning must be established very early so that completion of the immediate and short-term programme might merge smoothly into future plans for industrial development. A planning Commission or Development Board, free from the preoccupations of immediate problems of industrial development appears to be suitable.

V. This Conference recommends the creation of permanent machinery, both in the Centre and in the Provinces and States, for the regular collection and maintenance of accurate industrial statistics, as provided for in the Industrial Statistics Act of 1942.

#### **RESOLUTION NO. II**

#### NATIONAL POLICY

Moved by Pandit K. D. Malaviya, Minister of Industry, U. P., and seconded by Prof. D. R. Gadgil.

This Conference recommends to Government that while enunciating their national policy of industrial development, the following aspects among others, should be kept in view:—

- (1) The need for an equitable distribution of the country's wealth and production leading to rapid improvement of the standard of living and comfort of the masses of the Indian people, based on social justice.
- (2) The need for the fullest utilisation of the country's reurcesos without allowing wealth to accumulate in the hands of a section of the people.
- (3) The need for central planning, coordination and direction so as to obtain maximum efficiency and output, a fair and reasonable distribution of the industries throughout the country in relation to the potentialities of each area, and also to determine a fair basis of wages and profit.
- (4) The division of industries into three broad catagories:
- (a) Industries which should be under State ownership and management.
- (b) Industries which may be jointly ewned and managed by the State and privite enterprise.
- (c) Industries owned and managed by private enterprise.

In selecting the industries as aforesaid, which will be reviewed from time to time the parameunt considerations will be the country's basic economic and defence requirements on the hand and the possibility of quick and efficient production on the other.

#### RESOLUTION NO. III

#### FOREIGN CAPITAL

Moved by Dr. Alagappe Chettier and seconded by Mr. Anantasayanam Ayyangar.

This Conference, while recognising that participation of foreign capital and enterprise, particularly as regards industrial technique and knowledge, will be of value for the rapid industrialisation of the country, considers that the conditions under which they may participate in Indian Industry should be carefully regulated in the national interest, and that all arrangements between private industry: in India and abroad should have the prior approval of the Central Government.

#### **RESOLUTION NO. IV**

#### COTTAGE INDUSTRIES

Moved by Dr. Banerji, Minister, West Bengal, seconded by Mr. Ramalingam Chettier and supported by the Hon'ble Rajkumari Amrit Kaur.

This Conference recognises the importance of cottage and small-scale industries to the economy of the country. It is of the view that while the size and nature of these industries make it unavoidable that their proper development must remain the responsibility of Provincial and State Governments, the Central Government should investigate how far and in what manner these industries can be co-ordinated and integrated with large-scale industries. The healthy expansion of cottage industries depends on the provision of raw materials, technical advice and organised marketing of their produce. For this purpose the Central Government should establish a Cottage Industries Board.

#### RESOLUTION NO. V

#### SALES TAX

Moved by the Hon'ble Mr. H. Sitarama Reddy, Minister, Madras and seconded by Mr. K. D. Jalan.

This Conference recommends that the following suggestions be considered by the Central Government in consultation with the Provinces:—

- (a) that raw materials of vital importance to industry like coal, steel, cement and cotton should be exempted from the Sales Tax;
- (b) that the tax on other industrial raw materials should be low and at uniform rates;
- (c) that taxation of the same material more than once should be avoided; and
- (d) that the policies of Provincial and States Governments regarding the levy of Sales Tax should be co-ordinated.

Resolutions VI and VII were moved and seconded together).

#### **RESOLUTION NO. VI**

#### ALCOHOL PHARMACEUTICALS

Moved by the Hon'ble Mr. D. K. Mehta, Minister, Bombay, and seconded by Mr. H. Rahman, Representative of Hyderabad Government.

This Conference considers that the lack of a uniform policy in the matter of provincial excise has adversely affected indigenous manufacture of spirituous, medicinal and other preparations.

#### The Conference recommends:

- (a) that a uniform rate of excise duty be fixed on spirituous, medicinal and other preparations in all Provinces and States, and be collected at the point of manufacture for credit to the first importing Province or State; and
- (b) that all inter-provincial restrictions on the free movement of spirituous, medicinal and other preparations be abolished.

#### RESOLUTION NO. VII

This Conference is of the view that the expansion of the alcohol industry whether for power or for other industrial purposes is of national importance.

The Conference recommends;

- (a) that Central legislation to enforce admixture of power alcohol with petrol should be undertaken,
- (b) that the question of reducing the excise duty should be considered with a view to making the mixture of power alcohol and petrol available to the consumer at a reasonable price, and
- (c) restrictions on manufacture of by-products be removed.

#### **RESOLUTION NO. VIII**

#### STATISTICS

#### Moved by Dr. Radha Kamal Mukerjee.

This Conference notes with regret that the census of manufacturing industries for the years 1944 to 1946 has failed. It is of the view that this failure is largely due to the inadequacy of staff and organisation in the Provinces and States. It recommends that adequate machinery is necessary both at the Centre and in the Provinces and States for the regular collection and maintenance of accurate industrial statistics as provided for in the Industrial Statistics Act of 1942. It is also of the view that the existing statistical forms should be re-examined with a view to simplifying them, if possible.

There is a misapprehension in certain quarters that restrictions still exist on the exports of spices and condiments. All spices and condiments other than chillies, are no longer controlled and export is freely allowed, says a Press Note, issued by the Ministry of Food, on Dec. 23.

# FULL PRODUCTION UPTO EXISTING CAPACITY

## Immediate Action Urged in Selected Industries

THE economic situation now is as grave, if not graver, as during the war and it is obvious that increased production can be achieved only through a sustained and planned effort as during the war.

This warning was sounded in a memorandum prepared by the Ministry of Industry and Supply for consideration by the Industries Conference. The memorandum gives first priority to the problem of securing an immediate increase in industrial output up to full existing capacity.

For, said the memorandum, almost since the end of the war, but more noticeably from August, 1946, there had been a steady decline in industrial production with the result that considerable installed capacity was now lying idle. For example, while the peak production of ectton textiles in the period before 1944 was 4,826 million yards per year, the production estimated for 1947 was only 3,800 million yards. Of steel, though there is an installed capacity of 1,264,000 tons per year and as much as 1,160,000 tons was actually produced in 1943, production had declined up to 875,000 tons, as estimated for 1947. Similarly, the monthly capacity for cement in India was 173,000 tons, but the actual production estimated for the present year was 112,000 tons per month and while the annual capacity for paper production was 110,000 tons, only 86,000 tons would be produced in 1947, according to estimates.

#### Causes of Decline

The list of industries in which such a fall in production was so pronounced was a long one. But the Ministry had made a selection of some 30 items, in which they believed the problem of under-production was capable of being tackled and overcome immediately if proper measures were taken forthwith.

The following is the list of industries in which immediate action could be taken to step up production: Steel, cotton textiles, cement, drugs (tinctures and galenicals), sulphuric acid, superphosphates, caustic soda, alcohol, soap, glass, pottery, refractories, enamelware, abrasives, paper and boards, leather, plywood, diesel engines, iron castings, bicycles, machine tools, metals, electric lamps, dry cells, motor-car batteries, electric motors, transformers, electric fans, cables and wires, insulators, electrolyic black copper and belting.

The fall in production below installed capacity in all these cases was broadly ascribable to three causes: Transport difficulties, shortage of raw materials, both indigenous and imported, and labour unrest.

Though the railways in India now moving more goods than before the last war, there was yet a considerable gap between demand and supply and present level of movement was actually less than that attained during the war. The short fall in movement had reacted alike on the clearance of finished products and on the supply of raw materials to industry. Steel, coment and paper were three among the main industries suffering from this lack of adequate transport facilities, while chief among the materials affected was coal. For, while the railways were themselves taking about 50 per cent of all the coal being moved, they were moving less coal now than they did in 1945 or early 1946, while the demand from industry had increased by four to five million tons per year. If the indus-tries selected for immediate plan should be enabled to work up to capacity, the supply of coal would have to be increased by about 150,000 tons per month over the level that had been prevailing

The problems of [transport difficulties needed mainly a long-term solution, but meanwhile, it was hoped, with the co-operation of labour, rationalisation of available facilities and diversion of traffic through road, river and sea, a considerable improvement was still possible.

As for shortage of raw materials, though its incidence was very extensive, the main commodities in acute short supply impeding industrial examination in the country were besides coal, steel and cement. The demand for steel was well over two million tons per annum, but availability was less than one million tons and indigenous capacity only about 1½ million tons. Similarly, while the requirements of cement were between 200,000 and 250,000 tons per month, installed capacity was only 173,000 tons. Shortages in these commodities would persist even after full production of existing capacity was reached.

#### World Shortage

In a different category were raw materials such as caustic soda, soda ash and non-ferrous metals, for whose supply India was dependent mostly on imports but of which there was a world shortage. As measures to increase their imports could succeed only to a limited extent, there was a clear need for utilising their available supplies in a rational manner so as to yield maximum production.

For example, in soap industry there were three classes of factories, the first having an annual capacity of 64,000 tons, the second 96,000 tons and tho third 90,000 tons. The main bottleneck in the industry was caustic soda, of which only 12,000 tons, could be spared for

scap manufacture against the total annual demand of 28,000 tons. The present allocation of caustic sods, which was made more or less on a provata basis, had resulted in the production of scap to an extent of 85,000 tons, which quantity could easily be increased if the factories of the higher classes received preference in allocation.

Similar revision of allocation might step up glass production, in which case the main shortage was in soda ash, 22,500 tons being available against a demand of 30,000 tons.

Another category of shortages consisted of imported components, some of which were in world short supply. The main problem regarding the rest was however, that existing monetary ceilings and delays in licensing had created difficulties, which must be immediately rectified. It was, however, pointed out in this connection that certain machinery and raw materials might be immediately available in surplus stocks held by the Disposals Organisation.

In some ways, labour unrest had been the biggest cause of the decline in production, said the memorandum, which deplored that, though a supreme industrial effort was made possible during the war by the willing co-operation of labour, its post-war activities had had an adverse effect on industry. The effect had been most marked on the railways and on steel and textile production, to name the most important; but practically no industry had escaped.

"But surely", the memorandum concluded, "what labour gave to the war effort, it could and should give more freely now, when the crisis of the country's economic affairs is as grave, if not worse, than the war emergency".

## TECHNICAL CONSULTANTS FOR STEEL UNITS

The Hon'ble Dr. Syama Prasad Mukerji, Minister for Industry and Supply, held a meeting on Dec. 19 with the representatives of the main steel producers and other experts to discuss the steps to be taken to implement the decision of Government that one or more steel plants capable of producing a million tons of steel per year should be set up in India at the earliest possible time.

The meeting, it is learnt, was of the unanimous opinion that the first step should be to obtain the services either from the U. K. or the U. S. A. of expert technical consultants to make a rapid survey and to report to the Government of India on the location, design and construction of the plant.

A small committee, which will include representatives of the main steel producers, will be appointed to draw up the terms of reference to the consultants.

Telegrams are now accepted for Southern Korea at the same rate as to Japan and in plain English only. Transactional telegrams are subject to censorship. Senders of telegrams to Southern Korea desiring reply are advised to prepay, says a Press Note issued by the Directorate-General Posts and Telegraphs, on Dec. 16.

## COUNTRYWIDE DEVELOPMENT OF ELECTRICITY

## **Provisions of Electricity Supply Bill**

66 TVERY village in India is to have electric light and every home a radio," said the Hon'ble Mr. N. V. Gadgil, Minister of Works, Mines and Power, Government of India, while referring his Electricity (Supply) Bill, 1948, to a Select Committee of the Dominion Legislature. This widespread use of electricity is sought to be effected by the adoption of the "grid system" and the establishment of Provincial Electricity Boards—features which are perhaps novel in the history of electricity legislation in India.

The "grid system" is really the very antithesis of the state of affairs which exists today. A limited local area comprising one or more municipalities and, served as a rule, by one heensee, still represents by far the most dominant type of electric development in India, and it is to remedy the present defectswhich consist of extremely low production of electricity, uneven distribution and, from the consumers' point of view, uneconomic supply that the "grid system" is evoked in the Bill.

The 'grid system" means, in effect, regionally co-ordinated scheme of electrical development which transcends the geographical limits of a municipality, a Cantonnent Board or a Notified Area Committee; and in order that it

may be put into effect, it envisages the erection of large-scale power stations located at suitable centres within a particular region and the construction of a main transmission system with smaller secondary lines attached to it for tapping agricultural and other outlying areas.

The positive programme of electrical development which is implicit in the "grid system" necessarily calls for a body armed with the requisite authority and possessing the necessary financial resources for the stimulation by technical methods of electrical development in the country, and it is here that the Provincial Electricity Boards, which are to be set up under the Bill, will play their most important role.

#### Provincial Electricity Boards

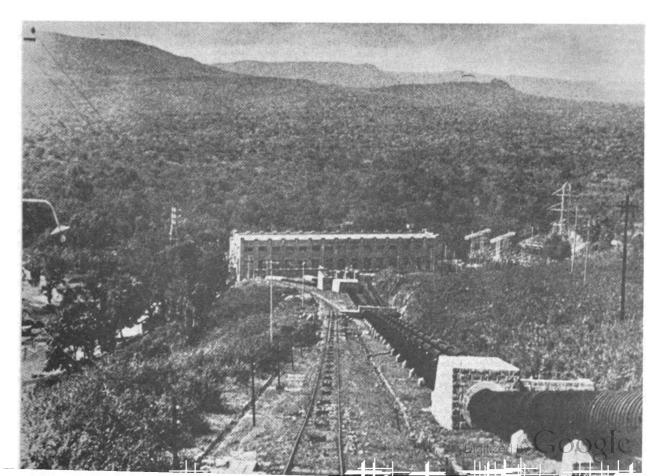

As pointed out by Mr. Gadgil, the Provincial Boards will perform a two-fold function. In the first place, they will be charged with the duty of promoting the all-round development of electricity within the limits of their jurisdiction and, in the second, to effect the rationalisation of the supply of power. The Board may establish new

proceed to interconnect the stations by means of main transmission lines. The Board may also buy electricity in bulk from the owners of "controlled" stations or sell it to them and to other licensees. In short, by ensuring that the generation of electric power is concentrated in the most efficient units distributed over the entire region and that the bulk supply is centralised under its own direction, the Provincial Boards will have the power to develop the "grid system" not only in new areas, but also in the areas of old licensees by controlling their operations.

Mr. Gadgil gave some striking figures which show only too clearly the vast possibilities that lie before this country in the direction of electrical development. For, while the possibilities in India from hydro-electric sources alone may exceed 35 million Kw.; the total installed capacity at present is below 2 million Kw. Again, the annual per capita consumption in India is 9.2 kw. hours as against 906 in England; 1,470 in the U.S.A.; 3,090 in Norway and in the C.S. A.; 3,000 in Norway and 3,510 in Canada. Further, even out of this low output and consumption of electric power nearly 50 per cent is concentrated in the four cities of Bombay, Calcutta, Kanpur and Ahmedabad, which together contain less than 11 per cent of the country's population.

It is intended that the Boards will exercise a form of financial control over commercially-owned undertakings with a view to ensuring the investor a reasongenerating stations or control existing table return and, at the same time, ones for the purpose of generating securing to the consumer as much reduc-electricity required by it, and then tion in the cost of electricity as possible.

The power house of the Pykara Hydro-electric scheme. The turbine pipes, taking water down the incline, can also be seen in the picture

A special Advisory Committee consti-A special Advisory Committee consti-tuted by the Government of India has recommended certain "Principles" of electricity supply finance, which define the form that this aspect of control must take. These "Principles" or rules proposed for the calculation of the capital, the standard rates of profits, the rate of depreciation and the requirethe rate of depreciation and the remuneration of managing agents, are intended to serve the interests of the consumer and the investor alike.

The consumer's interests are to be safeguarded by reducing the interest and the dividend payable by the undertakings to a level, below which they cannot be further forced except at the cost of diverting the flow of development capital from the industry. capital from the industry. And the interests of the invester will be safe-guarded by insisting on a properly devised system of compulsory depreciation and regulating the commission and expenses of managing agents.

#### Step towards Nationalisation

The Bill does not set out to nationalise the industry but only to control it at this stage. It enables the Provincial Boards to introduce many of the benefits of nationalisation without it being necessary to make prodigal use of public borrowing power to acquire assets already being efficiently operated by private enterprise. New undertakings will, however, be started mostly by the State and only when it is impossible for the State to come in, may private enterprise be allowed. As far as present undertakings are concerned, the measure of control on them contemplated by the Bill constitutes, according to the Hon'ble Minister, a reasonable compromise between nationalisation and private enterprise. Out of the 412 electricity undertakings in India, 30 belong to private companies, 249 of them in the Dominion and 51 in the States. Calculated in terms of installed capacity, 73.19 per cent of it belongs to privately-owned companies and the rest to municipalities and Government. of control on them contemplated by

It has been estimated that if Government were to transfer all private undertakings in this country to public ownership, it will cost the national exchequer nearly Rs. 150 crores. Meanwhile there is a proposal to amend the Electricity
Act of 1910 suitably with a view to
basing the appraisal of electricity undertakings on their book or written down value instead of the market rate, which is often inflated. It is the contention of the Hon'ble Minister that this proposal and the comprehensive powers vested in the Provincial Boards over private undertakings constitute a step towards nationalisation rather than an obstacle

The Government have decided to allow the export of 20 tons of chocolates of Indian manufacture. Applications for export licences should reach the Ministry of Food, New Delhi, by January 81, 1948. The applications should be supported by firm orders from bons fide traders in the countries to which export is intended, says a Press Note, issued by the Ministry of Food, on Dec. 30.

#### **AUSTRALIA** GOODS FROM CAPITAL

### Indian Government Trade Commissioner's Pamphlet

FEATURE of the industrial advance made by Australia during the war was the comparatively high output of the engineering industry, the value rising from £ (Australian) 274-6 million in 1938-39 to £ (A) 358.1 million in 1943-44. Substantial progress was also recorded in the textiles, food and chemical industries.

"Capital Goods from Australia", a pamphlet prepared by the Indian Government Trade Commissioner in Sydney, states that although the domestic demand in civilian industries for machine tools (an important component of the engineering industries) is great, there are certain items which Australia may at this stage be in a position to export.

The list, which may be of interest to Indian importers, includes grinding machines, surface grinders, radial drills, horizontal boring machines and lathes, turret lathes No. 7 (Comb No. 9B), heavy turret lathes No. 7 (Comb No. 98), heavy duty lathes, heavy centre lathes, S. S. and S. C. lathes, tool room lathes 2D (No. 4), shearing machines, boring and turning mill verticals, shaping machines, hacksaw machines, hydraulic presses, electric presses, hydraulic wheel presses, hydraulic pumps, electric motors, standard box type accumulator screw presses. planning machines. slotting presses, planning machines, slotting machines, bar turning and straightening machines.

#### Prospective Exports

From the long-term point of view Australia's prospective exports of machine tools range widely from precision watch makers' lathes to large wheel and shaft lathes. They may also include capstan and surret lathes, milling, drilling and gear generating machines, worm wheels of all sizes, boring mills and centreless grinding machines, mechanical and hydraulic presses, a full coverage of woodworking machines, box nailing, canister and canning, packing and processing machines.

Although Australia produces steel cheaper than any other country, observes the Trade Commissioner, comparative costs in the secondary fabrication tend to rise. Industrialists in Australia, however, believe that, with the application of modern production and quality control methods, there are many lines of specialised plant and equipment which Australia may be able to produce for foreign markets. Some major items of export of the iron and steel industry are wire-drawing, butt welding machines and die-polishing machines, electric melting and refining furnaces.

non-ferrous As regards Australia can fabricate complete sheet rolling and cold rolling mills. In the matter of power machines, the present export capacity is limited to various types of internal cumbustion engines,

diesel generating sets engines for power houses. and diesel

In the field of electric manufactures. Australian firms are interested in the export of alternators, transformers. four-engine D. C. generators, horizontal heavy face grinding machines, rotary traversing grinders, vertical grinders, universal milling machines, lead extension presses and hydraulic pumps, electric annealing equipment, electric furnaces and electric cranes. A list of smaller electrical goods includes household fittings, switches, plugs, electric-mechanical appliances and equipment for motor vehicles, cycles and stationary motors, electric stoves, ranges and cookers, refrigerators and heating apparatus and domestic cooking appliances.

Enquiries from India regarding agricultural machinery are limited to light types. Australia is capable of supplying such machinery and implements.

Jute, cotton, and other textile machinery, except some light wool machinery, is not made commercially in Australia. However, certain appliances used in the cotton textile industry are available for export, including hydraulic baling presses, grinding rollers, complete mercerising ranges, water tube boilers, drop valve steam engines (condensing type), hydraulic cotton presses and Lancashire boilers with economisers.

#### Woollen Industry

Regarding the woollen industry, Australia may be able to supply immediindustry, ately dyeing and scouring appliances, hydro-extractors and reduction gears.

For the hosiery industry, prospective items of export include knitting and pull-over machines, dyeing and bleaching machines, rib machines, linking machines, gauges, electrical dryers.

Chemical industry machinery available for export includes complete carburetted water gas plants, power plants, refrigeration equipment and machine tools for factory maintenance.

Machinery for the manufacture of processed food is generally imported, and only certain items of locally manufactured machinery are available for outside markets.

The designation of the Monitoring Office, All India Radio, has been changed to the Monitoring Service, All India Radio', says a Press Note, issued by the Ministry of Information and Broad-casting, on Dec. 23.

Sundaram, of the Ministry of Law, Mr. V. P. Menon, Secretary, Ministry of States, Sardar Patel, Mr. Mangaldas Pakwasa (Governor of C. P.) and Pandit Ravi Shanker Shukla Premier of C. P.

# SETTLEMENT WITH RULERS OF ORISSA AND CHHATTISGARH STATES

### Sardar Patel's Statement

T is the indisputable right of the people in these territories to modern amenities of Government which should be the governing consideration in everything that we do for them. It will also be the duty of the people concerned to help and co-operate wholeheartedly with the respective Provincial administrations in this process of unification and amelioration, so that they may derive the full benefit of this great achievement," said the Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister, in a statement on his settlement with the Rulers of Orissa and Chhattisgarh States on the problems of integration of those States with the neighbouring Provinces.

Here is the full text of Sar-lar Patel's statement:

The public has already received through the Press and over the radio a fairly clear and detailed picture of the settlement which I have reached, during the course of my visit to Orissa, and C. P. and Berer, with the Rulers of Orissa and Chhattisgarh States on the problem of integration of those States with their neighbouring Provinces. I feel, however, that for a correct appreciation of this important event, it is necessary for me to explain the background and the policy

underlying that settlement. Democratisation of the administration which has long been the keynote of Congress policy towards the States, has become a pressing problem since August 15. The Princes themselves have in many cases begun to realise the spirit of the times and have been gradually introducing measures in accord with that spirit. The progress has been in some States slow, in others it has been swift, but everywhere it has been sure.

It should be obvious to everyone, however, that even democracy and democratic institutions can function efficiently only where the unit to which these are applied can subsist in a fairly autonomous existence, where, on account of smallness of its size, isolation of its situation, the inseparable link with a neighbouring autonomous territory, be it a Province or a bigger State, in practically all economic matters of every-day life, the inadequacy of resources to open up its economic potentialities, the backwardness of its people and the sheer incapacity to shoulder a self-contained administration, a State is unable to afford a modern system of government, both democratisation and

integration are clearly and unmistakably indicated.

In the world of today where distances are fast shrinking and masses are being gradually brought into touch with latest administrative amenities, it is impossible to postpone for a day longer than necessary the introduction of measures which would make the people realise that their progress is also proceeding at least on the lines of their neighbouring areas. Delays inevitably lead to discontent, which in its turn results in lawlessness; the use of force may for a time check the popular urge for reform, but it can never succeed in eradicating it altogether. Indeed, in many of the States with which I had to hold discussions during the last two days large-scale unrest had already gripped the people; in others the numblings of the storm were being heard. In such circumstances, after careful and anxious thought, I came to the conclusion that for smaller States of this type, placed in circumstances which I have described above, there was no alternative to integration and democratisation:

At the same time I felt that their rulers had acquired by heredity and history certain claims on the people which the latter must honour. Their dignities and privileges and their means of subsistance on a reasonable standard must be assured. I have always held to the belief that the future of the Princes lies in the service of their people and their country and not in the continued assertion of their autocracy. In conformity with these ideas, I felt that on release from an increasingly onerous and awkward responsibility, but at the same time with

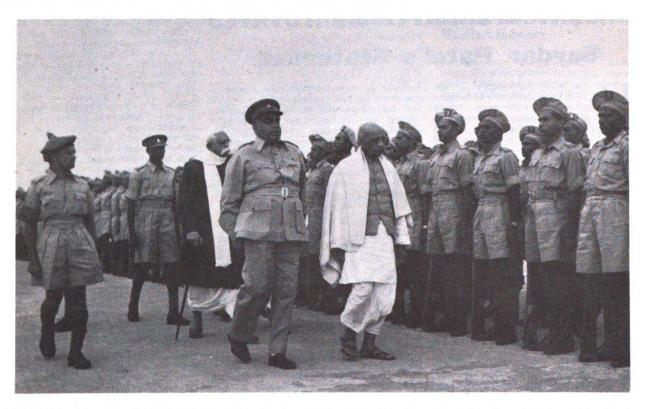

Sardar Patel photographed with the Rulers of "B" and "C" class States of Orissa after they had signed the Merger Agreement with the Indian Union at the Cuttack Government House. Picture shows (L. to R.) the Raja of Athgarh. Miss Maniben Patel, Sardar Patel, the Rani of Ranpura and Mr. Hare Krishna Mehtab, Premier of Orissa

their personal position and that of the ruling family fully safeguarded, they would have opportunities of service

and which many of them are genuinely longing for and genuinely arxious to

which have hitherto been denied to them and which many of them are genuinely targets of continuous bitter attacks and

Sardar Patel inspects C. P. Heme Guard's at Nagpur on December 16, during his visit there in connection with the Conference with Chhattisgarh Rulers

Digitized by Google

The settlement which we have reached at Cuttack and Nagpur is actuated by these motives, prompted by these considerations and governed by these principles. I have no doubt that it is in the best interests of the Rulers, the people and the country at large. I am particularly grateful to the Rulers of the States who showed a commendable appreciation of the realities of the situation and a benevolent regard for public good. To all of them, undoubtedly the decisions they have taken have involved considerable sacrifice of powers and fortuna. They have accepted this sacrifice cheerfully and voluntarily in the interests of their people and the country at large. I am sure their people will react favourably to this generous response to public interests.

Throughout my discussions with the Rulers I was careful to emphasise that the solution which we suggested for the difficult problems with which we and they were equally faced was for them to accept or reject of their own free will. There was no compulsion save that of events and of the circumstances and peculiar problems of their States. I also told them that in offering this solution we were actuated by nothing but the friendliest disposition towards them and had nothing but the ultimate good of the Princes and their people at heart. I also maintained that their voluntary surrender of most of the powers that they wielded so far would increase and not reduce the prestige that they have enjoyed and would create in the hearts of their people a place of lasting affection and regard which would redound to their glory. I am very glad that they all responded to these sentiments at would ask the people of these States to play their own part and to extend to each one of them unfailing cordiality and unstinted goodwill.

#### Tribute to Rulers

In future, if the people of these States have any grievances, they can only be against the popular representatives and leaders who would be charged with their interests and welfare, and not against the Princes. These Princes have by their act of abnegation purchased in perpetuity their right to claim the devotion of their people. I am sure that very soon the Provincial Governments who would be acting for the Dominion Government in discharging administrative functions in these States will turn their thoughts and energies to amoliorating the conditions of the people and to devising ways and means of associating representatives of States with the fashioning of administrative measures. Let them all realise the stakes involved—some 56,000 sq. miles of territory with a population of about eight millon, a gross revenue of about Rs. 2 crores and immense potentialities for the future.

It is the indisputable right of the people in these territories to modern amenities of Government which should be the governing consideration in everything that we do for them. It will also be the duty of the people concerned to help and co-operate wholeheartedly with the respective Provincial administrations in this process of unification and amelioration, so that they may derive the full benefit of this great achievement.

# ACCESSION OF STATES TO INDIA "A SOURCE OF STRENGTH TO BOTH"

## Lord Mountbatten's Speech at Gwalior

recall that Gwalior State took a leading part in the negotiations which so happily resulted in the accession of the Indian States. I have always been a believer in the unity of India. In all aspects of the national life, whether we take defence, agriculture, industry or the national economy, unity is the most essential prerequisite of progress", said H. E. Lord Mountbatten, Governor-General of India, in his speech at the Gwalior State dinner on Dec. 28.

Lord Mountbatten said: I thank Your Highness most warmly for the very cordial welcome accorded to us by Your Highness. It was indeed with great pleasure that we had looked forward to our visit to Gwalior.

I have the happiest memories of my first visit to Gwalier 28 years ago when I had the privilege of staying with His late Highness and of meeting Yeur Highness and your sister. I have never forgotten how smart you both were in perfect miniature uniform of the Gwalier State Forces.

Gwalior is fortunate in having in Your Highness a Ruler who has devoted himself to the task of efficient enlightened and progressive administration. The State has been blessed by nature with a large and fertile area; and Your Highness's Government has I know endeavoured ceaselessly to get the best out of the land by building new irrigation schemes, introducing improved methods of agriculture and better organisation. Nor does the State lag behind in industrial development.

The impressive list of industries established in the State, mentioned by Your Highness, is an indication of the success of the efforts made by you and your Government to ensure that Gwalior keeps pace with the rest of the country in this 'direction. In other fields of administration, too, the State has been making rapid progress, side by side with administrative efficiency, Your Highness has also initiated measures of constitutional reform and has already announced your intention of establishing responsible Government:

I am grateful to Your Highness for referring in such generous terms to what I have been able to do in the cause of the freedom of the country. I know that the steps which led up to the freedom of the country were put through with great speed and efficiency, but all this was possible because of the unstinted cooperation which I received from all alike.

I have particular personal reasons to be grateful to Your Highness and your Government, for when I was appointed Supreme Allied Commander, South-East Asia, in August 1942, the first thing I did was to arrange with the late Major-General Wingate, at the Qubec Conference for a special Long

Range Penetration Force to be set up, to operate behind the Japanese lines.

The Hotel de Gwalior, and the State Fair Grounds were generously placed at General Wingate's disposal for the Headquarters of this gallant force. The Commander-in-Chief of Your Highress's State Forces loaned transport and made ranges, etc., available for training. The old polo ground was lent as a Light Plane strip and I visited the airfield at Maharaipore where the Vengeance Squadron was being trained in co-operation duties with the force. The great success they achieved was in no small part due to the help we received from Your Highness.

Independence has brought with it new tasks, new problems of great magnitude, but we have proved ourselves equal to them. The States as well as the rest of India have presented a united front in facing these new difficulties and the result has been that we have been able to do a great deal and in a shorter time than at one time would have seemed possible.

I have always considered that the accession of the States to the Dominical of India would prove a great source of strength to both; and these months of trial and difficulty have fully justified my belief. It is with great pleasure that I recall that Gwalior State took a leading part in the negotiations which so happily resulted in the accession of the Indian States. I have always been a believer in the unity of India. In all aspects of the national life whether we take defence, agriculture, industry or the national prerequisite of progress.

I think, if I may say so, that the Rulers of India took a most wise and statesmanlike decision when they made up their mind to accede to the Dominion; and I am sure that its beneficial consequences will soon begin to show them: selves when India devotes her energies—as she will soon have to—to her urgent problems of economic and industrial reconstruction.

I thank Your Highness for the warm tribute which you have paid to the services which my wife has been able to render in this country.

Her Highness's personal interest in the education, health, and general welfare activities in the State are well known and have greatly contributed to progress in these directions.

And now, ladies and gentlemen, I ask you to join with me in drinking to the health of His Highness the Maharaja George Jivaji Rao Scindia and in wishing all prosperity to him and the State.

## SCIENCE CAN BE A BLESSING TO HUMANITY

## Lord Mountbatten Opens Research Laboratory at Gwalior

A S Your Highness has so fittingly said science can be a blessing to humanity by bringing peace and prosperity and raising the standard of life of the nation. This is the future to which we should look forward in India; this is the future to which this laboratory can, and I am sure, will make a great contribution; and I wish it every success in the years ahead", said H.E. Lord Mountbatten, Governor General of India, while opening the Jivaji Industrial Research and Development Laboratory at Gwalior, on Dec. 28.

#### Lord Mountbatten said :-

Your Highness, Ladies and Gentlemen-

It is a great pleasure to me to be asked by Your Highness to perform the opening ceremony of the Jivaji Industrial Research and Development Laboratory.

I do not suppose in this modern world that there are many these days who query the necessity for, and the value of research and development. I personally am fully convinced of the need for research and experiment in all directions. In my own small way I have had some experience of this, because during my naval career I was a technical Specialist in wireless communication. For a certain part of my time I was in the Experimental Establishments on shore and although I cannot pretend to have been concerned in all the later wireless developments such as radar, I saw enough to realise the necessity and value of our naval research and development work.

#### Industrial Development

Here in India the Government, as you know, are planning large-scale industrial development and there should be a rapid change in the economy of the country when in particular the planned hydro-electric works are completed. It is the policy of the Government not only to promote rapid industrial development but to ensure that it is spread over the country as widely as is economically feasible. It is, therefore very important that industrial development in States should be planned in such a way as to dovetail into the larger national plan, and my Government offer and invite in return co-operation to this end.

What applies to industrial development in general holds good, of course, with greater force regarding research, and here the pooling of knowledge and experience is even more important. It is, however, essential to ensure that there is economy in effort. For this purpose the Council of Scientific and Industrial Research has been formed, to ensure that individual schemes of research are drawn up in close collaboration with other organisations. I hope therefore, that this Laboratory will remain in close touch with this Council. It is also very desirable that there should be a

close liaison between research and industry to ensure that the value of research is applied as speedily as possible to industrial problems.

When I first visited Gwalior 26 years ago Your Highness's distinguished father was, as you have said, initiating progress in the Stato in the industrial field. I know he would have been proud to have seen the development of his ideas and the opening of this Laboratory. I congratulate Your Highness and your Government on the continued progress and foresight which are being shown in Gwalior and which are exemplified by this fine building.

#### Mineral Resources

I am also pleased to hear that Your Highness's Government is making a fresh survey of the mineral resources of the State. As is well known, India's mineral resources in power, are limited. There is also an urgent need for gypaum for use in fertiliser and cement industries. The present survey, therefore, comes at a most appropriate time and will, I hope, have even more valuable results than the one carried out under the auspices of His late Highness.

As Your Highness has so fittingly said science can be a blessing to humanity by bringing peace and prosperity and raising the standard of life of the nation. This is the future to which we should look forward in India; this is the future to which this Laboratory can, and I am sure will make a great contribution and I wish it every success in the years shead

#### RAW SILK FROM JAPAN

The Government of India have decided to purchase in Japan and import on Government account 3,000 bales of raw filature silk 13-15 denier and 20-22 denier, and 28 lakhs of pounds of rayon yarn of first quality in 120 and 150 deniers.

Rayon yarn and raw silk have arrived in Bombay, says a Press Note, issued by the Ministry of Industry and Supply, on Dec. 22.

The Government of India have decided that the rayon yarn should be made available to consumers through the distribution scheme which operated during the war. It will be offered directly to art silk mills through their recognised associations, where these exist, and to handlooms and cotton textile mills through the Textile Commissioner. A quantity of one lakh of pounds will be thrown open for sale by tender.

The raw silk will similarly be offered at a fixed price to the Governments of the Provinces and the States where the silk handloom industry is developed.

Facsimile of the Government of India's new Emblem and Seal

### India's Emhlem and Seal

The Government of India have now approved a design for their State Emblem and Seal, said a Press Communique, issued by the Ministry of Home Affairs, on Dec. 29. It has been decided that the State Emblem and Seal should consist of the Sarnath Lion Capital of Asoka as it exists at present, locked at from the side which shows the lions standing on an alcus which has a Dharna Chakra in the centre, a bull on the right and a horse on the left, and the outlines of the Dharna Chakra on the extreme right and left.

The bell-shaped lotus at the bottom of the Capital has been omitted as the Capital would become too long for effective use as a State Emblem or Seal.

A suitable motto will be included in due course as soon as one has been decided upon.

A meeting of the Standing Committee for Roads of the Constituent Assembly of India (Legislative) was held on Dec. 16, with the Hon'ble Dr. John Matthai, Minister-in-charge of Transport, in the chair.

The Committee considered the agenda placed before it. The discussions which centred largely round the progress of Post-War Road Planning, including National Highways, and the administration of the Central Road Fund during 1946-47 are to be continued at the next meeting of the Committee.

Other items considered by the Committee were of a formal nature relating to sanctions and excesses approved during the course of the year.

## LADY MOUNTBATTEN OPENS CENTRAL INSTITUTE OF EDUCATION

## "Model Teachers" for Provinces

cation will turn out teachers who will be model teachers' for Provinces; but over and above all this, this Institute will be a research centre for solving new educational problems of the country and will be a beacon light for the training institutions of the country, said the Hon'ble Maulana Abul Kalam Azad, Minister for Education, Government of India, welcoming H. E. the Countess Mountbatten of Burma, who opened the Institute in Delhi on Dec. 19.

#### Maulana Azad said:

"India which has taken its place in the comity of free nations of the world has to march forward in every field of her national life with alacrity, but you will agree that none of these fields is as important as the educational field. At present, the percentage of literacy in India is only 14.7, that is, out of every 100 nearly 85 persons are totally illiterate. Not counting the population of the Provinces which have ceded from the Indian Union, the remaining population according to the last census, is in the neighbourhood of 24,02,54,500. Of these, 2,93,72,000 are schoolgoing children—between the ages of 6 and 11. These statistics show that even if we ignore persons above the age of 11 we have still to make immediate arrangements for the education of about 3 crores of school-going children between the ages of 6 and 11.

"I am sure you will agree with me that this state of affairs is most deplorable and no civilized Government can tolerate it. If we are unable to make arrangements for the primary education of about 30 million of our children, all our nation building schemes will, ipso ficto, become valueless. The only way out, therefore, is to try and lift millions of these children from the depths of neglect and ignorance immediately.

#### Lack of Trained Teachers

"The question is how best to solve this problem. The greatest hurdle facing us is the lack of trained teachers. Suppose, we take three teachers per 100 children, we will require a minimum of 9 lakhs of trained teachers for 30 million school-going children. But if we want to break this vicious circle, we should not postpone our educational schemes simply because there are not sufficient trained teachers. Rather we should mobilise as teachers all the educated persons available, and at the same time carry on the training of teachers with the greatest possible speed, so that trained teachers can be made available in sufficient numbers in the shortest possible time.

Lady Mountbatten arrives a perform the opening ceremony of the Central Institute of Education, New Delhi, on December 19. Maulana Abul Kalam Azad (right) Education Minister, received Her Excellency. On the left is Sir Shanti Swarup Bhatangar, Secretary, Ministry of Education

"The former Government of India had set up a Central Advisory Board of Education which the present Government has also continued. This Board had in the year 1944 submitted a detailed report on the post-war educational development. One of the basic recommendations in this Report was the establishment of new training institutions for teachers both by the Central and the Provincial Governments. Accordingly all the Provincial Governments as well as the Central Government while formulating their five-year post-war programme had this recommendation in view. A number of such training institutions have already been opened and are still being opened in the various parts of the country.

"The educational plan of the Central Government included a proposal to establish a Central Institute of Education located at Delhi. In 1945, the details of this scheme were finalised and Rs. 18 lakhs for its buildings and Rs. 2,45,000 for equipment etc., were set aside. It was proposed that the building of the Institute should provide classroom accommodation for 300 students of both sexes and hostel accommodation for 150 students. It was also decided to have the Institute within the University grounds and regard it as a Faculty of Education of the Delhi University. It is estimated that when the scheme is in full operation, its annual recurring expenditure will be in the neighbourhood of Rs. 2 lakhs. This sum has been sanctioned by Government.

"It was decided in 1945 that this scheme should start from the year 1946-47, but it could not be taken in hand and a full year was thus wasted. The building pregramme was held up due to the non-availability of building materials, but the teaching work could have been started in a temporary building. This year, however, it was decided to start the institution in a rented building Accordingly, the house in which we

are at present assembled, was acquired in July last; but we could not proceed with this work earlier due to the recent unfortunate disturbances in Delhi. However, I am now happy that we have surmounted all our difficulties and that today this Institute is being opened by Your Excellency.

"The teachers trained at this Institute will naturally be employed in the teaching institutions in the Centrally-Administered Areas. But while gauging the real importance of the Institute, we should not give undue importance to this aspect of the Institute. The function of the Institute is something greater than this. It will turn out teachers who will be 'model teachers' for Provinces; but over and above all this, this Institute will be a research centre for solving new educational problems of the country and will be a beacon light for the training institutions of the country. The problems facing the Institute will be: how to correlate the different systems of Basic Education; how to reform the present system of examinations; and how to mould the primary education of a child so that he is given full opportunity to develop his individuality and also to equip himself to keep abreast of world affairs. This and similar other problems will come before the Institute and it will have to find ways and meens of solving them.

"We have had to start this Institute in a building which is hardly suitable for it but there was no alterative due to the acute shortage of suitable houses. This house, as Your Excellency can see for yourself, is not big enough for our requirements even with the two tents which we have had to pitch to supplement this accommodation. Because of this limited accommodation, our work and progress will necessarily be greatly hampered and restricted. We have every hope, however, that these difficulties will not hamper our progress for long and that soon this Institute will blossom forth and take its rightful place.

## Tribute to Lady Mountbatten

"Your Excellency, we are fully aware of the keen interest which you have evinced in the social and educational activities of this country. We are deeply grateful to you for the zeal, the promptness and the personal interest which you have shown in dealing with the relief of the unfortunate and the afflicted from the Punjab. To show our appreciation it was only natural that I should have asked you to perform the opening ceremony of this Institute. I am thankful to you for your kindness in accepting my invitation.

"I will now request Your Excellency to perform the ceremony of opening the Central Institute of Education, Delhi. By pressing the electric button you will open the doors of the Institute. May the gates of darkness and ignorance which have prevented light penetrating to the millions of my countrymen be thrown open very soon in the same manner."

# Lady Mountbatten's Speech

Opening the Institute H. E. the Countess Mountbatten of Burma said:

"I have great pleasure in now opening the doors of the Central Institute of Education.

"With this ceremony you are undoubtedly setting your hands to an historic enterprise. It is no exaggeration to say that on the quality of India's teachers will largely depend the importance of India's role in the future of civilisation.

"The Minister of Education in his speech has stressed the vital role which this Institute has to play and the urgency of the problems it is designed to tackle. I am most grateful to him for his kind personal remarks. India's educational development is a cause very near to my heart, and it is indeed fortunate for this country that a man of Maulana Azad's renowned scholarship and high reputation and integrity in public life should hold the Educational Portfolio at this time. His presence in the Cabinet is in itself a sufficient guarantee that education will receive its proper priority in the higher direction of the Nation's affairs.

## Long-Term Constructive Programme

"During the last three months our minds have naturally been concentrated on the primary problems of saving human lives, but with the launching of this Institute, the Central Government make it clear that they are not to be diverted by immediate difficulties from long-term constructive programmes. There can be no finer investment against the future than the establishment of an Institute of this kind. It is good to know that it will have the benefit of being under the wing of your fine University.

"'I was looking up the other day an address given by Lord Halifax at the convocation of the University some 20 years ago. He quoted on that occasion Cardinal Newman's definition of a university's purpose, which I think might eqally well apply as a guiding principle to the Institute. These were Cardinal Newman's words:

"It aims at raising the intellectual tone of society, at cultivating the public mind, at purifying the national taste, at supplying true principles to popular enthusiasms and fixed aims to popular aspirations, at giving enlargement and sobriety to the ideas of the age, at facilitating the exercise of political power, and refining the intercourse of public life.

"India has a great inheritance and has enriched the culture of the world, but cannot live on her history alone. Independent India is a new and creative force; perhaps the best symbol of its spirit is the emblem which my husband chose for his Command in South-East Asia during the war—the phoenix rising to new life from the fires of the past.

"The visits I have made to educational establishments in different parts of the country, as well as my personal contacts with large numbers of students, have convinced me that the thirst for knowledge in India is only matched by the amazing ability of her people to assimilate learning and to apply it to the best possible advantage. Every-where, I have been deeply impressed also by the outstanding enthusiasm of the teachers I have spoken to and of their great sense of responsibility. My personal hope is that with this new scheme for training teachers will come also a practical realisation of the high status which should be their right. Those, whose responsibility is to mould the character and impart knowledge to the future citizens of a great country, are in my mind deserving of the same special financial consideration as are those in the medical and nursing profession in whose hands the health and welfare of millions of human beings lie.

#### **Need for Trained Teachers**

"The Ministry has referred to the very great number of trained teachers that will be required if the primary education of some 30 million of India's children is to be properly provided for, and the need for mobilising all educated persons to fill the gap. Might I venture to suggest as well the full utilisation of the educational film and of the wireless as media for advancing education, including that of health, on a scale hitherto undreamt of. These services are still in their infancy, but will, before long provide tremendous intellectual reinforcement both for teachers and pupils. I am sure there is a great scope for their extension in India.

"They should be enlisted to deal with the tremendous problem of mass illiteracy to which the Ministry referred and which is blocking the light of knowledge, old and new, from helpless millions of India's people.

"The campaign has to be conducted on two fronts. First, there is the training of the mind. But we have learnt to our cost that mere factual knowledge and technical skill is not enough. Men cannot live by powers of reason only, and the training of character is equally vital. In this aspect of education teachers can influence their pupils not simply through what they know but through what they are. Their quality as human beings is not less important than their quality as scholars.

"They will go forward inspired by the knowledge that they are frontline fighters in the struggle for good citizenship.

"May I say once again what a privilege I feel it is to be taking part in this ceremony. I shall always follow the development of this Institute with the utmost interest and sympathy. A great future, I am convinced, awaits it, and all to whose service it is dedicated".

# PLEA FOR DIVERSIFIED TYPE OF INSTRUCTION

## Lord Mountbatten's Address at Bombay

NE of the prominent needs of our educational system is to provide a more diversified type of instruction suited to different capacities and aptitudes. This is desirable even from the point of view of giving full opportunities for self-expression and development of personality, "said H.E Lord Mountbatten, Governor-General of Irdia, in his address at the foundation stone laying ceremony of the Technical Department of the Robert Money School at Rombay on Dec. 17.

Lord Mountbatten said:

Ladies and Gentlemen,

When I was asked a few months ago whether I would lay the foundation stone of this extension of the Robert Money School, I acceded to the request with much pleasure, for the cause of education (and particulary technical education) is one which has always interested me intensely. I say this because most of my formative years were spent at the Royal Naval Colleges at Osborne and Dartmouth, where technical instruction is given in addition to ordinary scholastic subjects, and because in later years I found myself in charge of the technical wireless instruction of the Royal Navy.

Since I have been in India, I have in spite of my many preoccupations on political problems managed to find time to keep in touch with the Ministry of Education's plans for the future of education in India and have also visited and read reports of certain of the bigger schools. Whilst I have been much impressed with what I have seen and heard, it is clear to me that you cannot have too many facilities for education at the present time in a country like India.

#### Confidence in India's Future

I have great confidence in the future of India, but what India needs at the present time in every walk of life is leaders, men who have been trained and educated not only in ordinary scholastic matters, but whose qualities of character and leadership have also been developed. It is here that schools such as yours can play such a prominent part.

But your School in its new role can play an even bigger part in the technical sphere.

One of the prominent n eds of our educational system is to provide a more diversified type of instruction suited to different capacities and aptitudes. This is desirable even from the point of view of giving full opportunities for self-expression and development of personality. It becomes all the more imperative from the point view of building up a balanced and progressive economy. In this legard the greatest lacuna so far has been the lack of facilities for technical

education with the result that young men have been more or less forced to follow a uniform pattern of instruction clearly inadequate to the growing needs of the country.

It is, therefore, all the more fitting that a school which has been a pioneer in the field of secondary education of the acadenic type should now show the way to others in the field of technical education, particularly as the number of technical high schools in the country is small. I am told that although Bombay is one of the largest industrial centres in India, there are at present only two technical high schools in the city, and your School will therefore supply a badly felt need.

## Importance of Technical Education

I have stressed the importance of technical education because I personally have probably received as much technical and scientific training and experience as a Naval Officer can. I spent over 8 years as a wireless specialist serving continuously in wireless appointments. I have given many technical loctures and written technical handbooks on this subject for the seagoing fleet. This year I am President of the British Institution of Radio Engineers, and I qualified as an associate member of the Institute of Electrical Engineers more than 20 years ago; so I can assure you that I am not

speaking about these matters with purely superficial knowledge.

There is one final point which I want to make about the technical school. It can serve as a preparatory school for advanced technical training of the University standard and it can serve as a preparation for a career for those who have not the means to pursue their education any further.

I understand the tendency at present among students is to rigard a technical school merely as a stepping stone to higher technical education and when it fails to enable them to obtain entry into the portals of an Engineering College, students are apt to blame the educational authorities. In fact, there is plenty of employment for young people who have had the kind of elementary training in mechanical and electrical engineering and other branches of technological studies that the technical school has to offer. As industries develop, this type of employment will increase. Young Indians of average means and ability who cannot afford University education will therefore do well to demand and avail themselves increasingly of these schools which in the long run are bound to play a very significant part in the industrialisation of the country.

I should like to endorse all that your Prinicipal has said about the support which the Church Missionery Society has given in the conversion of this establishment into its new sphere as a technical school. I am sure that they will not regret the change over. I should also like to thank him most sincerely on behalf of my wife and myself for the very kind welcome he has given to us.

I shall now have great pleasure in laying the foundation stone.

## University Grants Committee Reconstituted

N view of the recent constitutional changes and the additional responsibility that the Central University Grants Committee will have to undertake in the co-ordinated development of University education in the country, the Government of India have reconstituted the University Grants Committee with an enlarged membership. The Rt. Hon. Dr. M. R. Jayakar will be the Chairman of the Committee. The members are Mrs. Hansa Mehta, Sir S. S. Bhatnagar, F. R. S., Dr. M. N. Saha, F.R.S., Sir Homi Mody, the Hon'ble Dr. P. Subbaroyan, Dr. Zakir Hussain, Mr. K. Zacharia, member Federal Public Service Commission and Dr. B. C. Roy. The term of appointment of the members of the Committee is for five years but they will be eligible for re-appointment.

The Committee will make enquiries and recommendations regarding (i) the lines on which the Universities and other institutions of higher learning should develop (ii) the additional amounts in the form of grants-in-aid from public funds required for them and (iii) the co-ordination of their activities with a view to avoiding unnecessary overlapping.

Since its inception in 1945, the Central University Grants Committee has done valuable work in helping the development of the three Central Universities, viz., Benares, Aligarh and Delhi. The basic annual grants to these Universities. have been nearly doubled.

For the advancement of Women's education in the country, the Committee recommended nearly Rs. 17 lakks as capital grant towards buildings, equipment, etc., and a sum of Rs. one lakh and a quarter per annum as recurring grant. In the case of the Benares Hindu University, the Committee also made certain recommendations for the Teachers' Training College and the Engineering College and also the necessary grants for its Agricultural College and that of Aligarh.

In the case of the Delhi University, grants have been provided for many-sided developments. A capital grant of nearly Rs. 40 lakhs was recommended for various building projects such as those of the Arts Faculty Building, the Women's College, the Biology Block, and the University Hall. The grant also provides

## Inter-Dominion Representatives Meet in New Delhi

## Agreements Reached on Important Matters

GREEMENTS reached between the Dominions of India and Pakistan as a result of the Secretariat level conference of the Inter-Dominion representatives in New Delhi, on Dec. 18, 19 and 20, are now released, says a Press Communique, issued by the Ministry of Relief and Rehabilitation, on Dec. 28.

This covered decisions on matters relating to Insurance Companies, Postal Savings Bank Deposits and Cash Certificates, pensions, removal of assets of trusts, educational, cultural and religious institutions, removal of holy volume of Garanth Sahib and other holy books, restoration of licensed arms and ammunition and payment of unpaid bills of contractors.

Here is the text of the agreements:

Insurance Companies:

- l. It is agreed that Companies which have moved their head offices to India will advise the Reserve Bank through the Government of India that 15 per cent. of the statutory deposits made by them with the Reserve Bank shall be deemed to be held on account of the policy-holders now resident in Pakistan until the Superintendent of Insurance has determined the appropriate percentage of policy liability pertaining to persons at present resident in Pakistan.
- 2. The Superintendent of Insurance is to be requested to report the appropriate percentage figure by Jan. 15, if possible.
- 3. On behalf of the Companies which have moved their head offices to India, an undertaking is given that their assets, other than statutory deposits with the Reserve Bank of India, will not be reduced or withdrawn from Pakistan to the detriment of Pakistan policy-

## **Reciprocal Facilities**

- 4. Insurance Companies, in particular, General Insurance Companies, will be accorded all reasonable facilities by the Pakistan Government in respect of protection and investigation of claims for their representatives who must go to investigate and appraise claims which have already arisen or may arise hereafter. The Government of India will accord reciprocal facilities. Agents of such companies should report to the Home Secretary. Government of West Punjab; and similarly, agents of companies in Pakistan should report to the Home Secretary, East Punjab, Jullundur. Both Governments will advise the companies concerned to send out agents and investigators, as far as possible, belonging to communities which prime facie would not require protection.
- 5. In respect of investigation of claims in N.-W. F. P. and Sind, the

procedure agreed upon in respect of West Punjab will apply and the agents of companies concerned will report to the Chief Secretary to the N.-W. F. P. and Home Secretary, Sind, for grant of necessary facilities. It is understood that reciprocal facilities will be accorded in the Delhi Province. Agents of Companies concerned will approach the Deputy Commissioner, Delhi, for grant of necessary facilities.

- 6. Complaints in regard to delay in settlement of claims will be referred by Pakistan to Mr. Ranganathan, Joint Secretary, Ministry of Commerce, Government of India, and complaints from India will be referred to Mr. Karamatullah, Joint Secretary, Ministry of Commerce, Pakistan, Karachi. It is recognised, however, that settlement of claims can be expedited only after the companies concerned get their records, equipment, furniture, etc.
- 7. It is agreed that as soon as the provisional allocation under para 1 has been made, the companies concerned may remove their head office records, equipment, furniture, fittings, etc., and for this purpose they should make application to the Custodian of Evacuees Property, West Punjab, Lahore.
- 8. The same procedure should apply in respect of any insurance companies in other parts of Pakistan, who may have removed their head offices to India.

## Savings Bank Deposits

- (a) (1) In regard to Post Office Savings Bank Accounts it is recognised that there are two categories:
  - (i) where the pass-books are available;
- (ii) where the pass-books have been lost or misplaced.

In regard to (i) it is understood that the Director-General Posts and Telegraphs, Pakistan, has been in correspondence with his opposite number in India and that a satisfactory procedure had been devised. It is agreed that the proper procedure should be for persons resident in Pakistan to hand over passbooks at Pakistan post offices and that the Director-General Posts and Telegraphs, Pakistan, should consolidate such cases and forward a list to the Director-General, Posts and Telegraphe in India who would arrange transfer of accounts without insisting on production of pass-books or on verification of signatures.

As to (ii), where pass-books have been lost or misplaced, persons resident in either Dominion should apply to the Directors-General, Posts and Telegraphs concerned, giving particulars of post offices where they had savings bank

accounts. Consolidated lists of such cases would be exchanged between the Director-General of the two Dominions, who would make the necessary investigations and have the accounts transferred. Once the accounts have been transferred, the responsibility of a particular Dominion towards the depositor will cease. The two Directors-General should clear legal and procedural difficulties between themselves.

2. It is agreed that the same procedure will apply to Post Office Five-Year Cash Certificates, Defence Savings Certificates and National Savings Certificates

It is agreed that consolidated lists on both these items, separately, should be exchanged by the two Directors-General at regular intervals weekly or fortnightly. This is a matter for the two Directors-General to arrange between themselves.

## Co-operative Societies

The Conference is of opinion that the question of deposits with Co-operative Societies, Co-operative Banks and Unions and of loans owing to these concerns is a complicated matter. It is, therefore, agreed that the Registrars of Co-operative Societies, East and West Punjab, should discuss the matter and submit joint recommendations to their own Governments as soon as possible. The Conference trusts that the two Registrars will make joint recommendations not later than Jan. 20, 1948.

1. It is agreed that all Provincial Governments in either Dominion should take definite measures to facilitate transfer of pension papers with the least possible delay. It is further agreed that all complaints of pensions in either Dominion should be made to the Auditor-General of the Dominion in which the pensioner is now residing and all such complaints will be cleared between the two Auditors-General. Pending transfer of pension papers the Conference agrees to accept the suggestion made in the Pakistan memorandum on this item.

The agreement is as follows:-

- "When a pensioner presents his half of the Pension Payment Order, the Auditor-General concerned will, after obtaining the following documents, authorise a Treasury Officer or Post Master to make provisional payment:—
- (a) A certificate from a Magistrate or a Gazetted officer, certifying the pensioner's identity.
- (b) An Indemnity bond from the pensioner, with two sureties, who should either be permanent Government servants or persons certified to be solvent by an officer not below the rank of Tehsildar, agreeing to refund any amount wrongly paid."
  - 2. Such payment should be autho-

rised for pensions due for the period ending Mar. 31, 1948.

- 3. In regard to pensioners who have lost their halves of the Pension Payment Order, the Conference agrees that following procedure be observed until the Treasury half of the Pension Order can be transferred from one Dominion to the other. It is understood that on receipt of the Treasury part of the Pension Payment Order the Auditor-General concerned will issue a fresh Order. Meanwhile, pensions should be paid for the period ending Mar. 31, 1948, on production of the following:—
- (a) Certificate from a Magistrate or a Gazetted Officer, certifying the pensioner's identity;
- (b) An Indemnity bond from the pensioner with two sureties, who should either be permanent Government servants or persons certified to be solvent by an Officer not below the rank of Tehsildar, agreeing to refund any amount wrongly paid;
- (c) Other corroborative evidence to show that he was in fact a pensioner and the Department, and Office from which he retired;
- (d) A declaration stating the amount of his monthly pension, the month up to which he had received payment and the name of the Treasury or Post Office from which he received payment;
- (e) The number of Pension Payment Order, if possible.
- 4. Under this procedure, pensions will be payable for the months of August, 1947, to March, 1948, inclusive.
- 5. In order that fresh permanent Payment Orders may be issued, the Auditors-General of the two Dominions will collect all cases in which Pension Payment Orders have been lost by persons now resident in their territories and refer such lists to each other so that the Treasury Halves of the Pension Payment Orders may be quickly transferred.
- 6. The procedure agreed upon above will apply to all Provinces of either Dominion.

## Assets of Institutions

- 1. The assets of the institutions concerned may be divided into two categories—(a) Movable and (b) Immovable.
- 2. In regard to Movable assets, it is agreed that on application being presented to the Custodian of Evacuees Property, West Punjab, a quick decision shall be made in regard to equipment, etc., which the Provincial Government wish to retain for their own purposes. In regard to the rest of the assets, the Custodian will grant a permit authorising removal by the party concerned. In making the decision for retention of a part of the Movable assets, due regard will be paid to mutual needs of equipment, furniture, fittings, etc. Above all, special consideration will be given to articles to which the institution attaches special cultural, sentimental or religious importance and, as

far as possible, such articles will be released.

3. In regard to immovable assets India requested that this category of property be taken up for special consideration apart from the general case of treatment of immovable property of non-Muslim evacuees and proposed that the Pakistan Government and Provincial Governments concerned consider the question of taking a quick decision in regard to acquisition of such property or its release so that the trustees or managers could liquidate it otherwise.

The Pakistan representatives said that as India's original memorandum did not raise this issue, there had been no occasion to consult the Governments concerned but agreed to put up India's suggestion and communicate decision at an early date.

## Restoration of Licensed Arms

There are two categories here:.-

- (a) Persons who hold receipts for licensed arms and ammunition taken away from them;
- (b) Persons who do not hold such receipts.

In regard to (a) the Conference is agreed that the two Dominion Governments should issue instructions to Provincial Governments to have such arms and ammunition restored. In regard to (b)

it is agreed that the Dominion Governments should furnish lists of cases to each other and all such cases should be promptly investigated.

The Pakistan representatives agree that facilities will be accorded for the removal of all Birs of Shri Guru Granth Sahib and all other religious books and books on the history of religion. India agreed to accord reciprocal facilities.

The Finance Secretary, East Punjab, explained that an agreement had already been reached between the Governments of East and West Punjab and a satisfactory procedure devised regarding unpaid Bills of Contractors.

A claimant puts in a claim in duplicate to the Chief Secretary of the Province where he is resident. The Chief Secretary forwards one copy of the claim to his opposite number who, after having the necessary verification made, replies whether payment may be made. Action is then taken accordingly. The principle is clear that authority to pay the claim must be given by the Government in whose territory the service or supply in respect of which the claim arises, was rendered or made.

The Conference agrees that this principle and practice are satisfactory and should be extended to all Provinces of either Dominion. In all Provinces the Officer to whom correspondence should be addressed is the Chief Secretary, unless the Provincial Government nominates some one else.

# Transfer of Bank Accounts

Pakistan have been considering the policy that should be followed in respect of operation of the safe deposit vaults and the transfer of bank accounts from one Dominion to another, says a Press Communique, issued by the Ministry of Relief and Rehabilitation on Dec. 24.

In regard to safe deposit vaults, the Communique adds, Government wish to make it clear that they are anxious to see that the valuables lodged in the vaults are restored to their rightful owners. In so far as West Popiab is concerned, in order to ensure that this is done on proper lines, it has been arranged by Pakistan Government that any person wishing to remove his valuables should apply to the Custodian of Evacues Property for a permit to operate his locker. In granting such permits the Custodian will satisfy himself that no claims against the applicant in respect of the valuables concerned are pending; this applies especially to removal of articles pledged with a pawnee.

As regards the transfer of bank accounts from one Dominion to the other, both the Dominion Governments have agreed not to place any restrictions on such transfers and to take reciprocal action for ensuring that they are made smoothly and expeditiously. Difficulties in this respect have been mainly due in the past to deficiency of staff

and communication delays. The two Dominion Governments are affording all reasonable facilities to the banks to enable them to function in a normal way.

A committee of six members, comprising of Government representatives, both Central and Provincial, as well as banking interests, is being constituted in order to investigate the difficulties of banks and to suggest measures to both Governments for restoring normal functioning of the banks. For the convenience of depositors wishing to get their accounts transferred from one Dominion to the other it has been decided that each bank should designate and notify in the Press one office in each Dominion to which applications for transfer should be addressed. It is hoped that these arrangements will facilitate transfers as soon as the banks' staff position and communications have improved.

Janab K. T. M. Ahmed Ibrahim, M. L. A., Tirunelveli, and Mr. M. Ruthnaswami, C. I. E., Vice-Chancellor, Annamalai University, Annamalainagar, have been appointed members of the Advisory Committee to the Trichinopoly station of All India Radio rice Rev. Fr. Sequeira and Moulvi Syed Murtuza Sahib, says a Press Note issued by the Ministry of Information and Broadcasting on Jan. 8.

Sardar Baldev Singh, Defence Minister, addressing Press correspondents on the nationalisation of India's Armed Forces

## NATIONALISATION OF ARMED FORCES

## Sardar Baldev Singh's Address

ATIONALISATION of Armed Forces has progressed at a rapid pace in spite of great difficulties that we had to face. Due care has been taken that the efficiency of the Armed Forces is not impaired. The results achieved are very satisfactory and by April 1, 1948, our Armed Forces will be officered almost entirely by Indians", said the Honble Sardar Baldev Singh, Minister for Defence, Government of India, at a Press Conference in Delhi, on Dec. 22 last.

The l'efence Minister said:

Rarely in peace time has a fighting force suffered such great vicissitudes during so short a period as the Indian Army in the last six months of this year. Following the decision to partition the country, the Army had to be divided and the reconstitution, which began immediately, meant the breaking up of battalions, regiments, installations, training institutions, etc.

## Call from Kashmir

"Very few realise how complicated a job this was and the difficulties entailed as it had to be done in the short period at our disposal. In addition to the difficult job of reconstitution, the Arnoy had also to take up the responsibility of the evacuation problem in the lumpab. The magnified of this task was tremendous and it has been magnificently handled. In all, nearly million Muslims were evacuated from India to West Pakistan and a little over 4 million Hindus and Sikhs from Western Takistan, to India. No army of any country in the world had to tackle a problem of such magnitude ever before.

"We had hardly finished the evacuation problem when all of a sudden we had to send troops to protect the people of Kashmir. Enormous effort had to be put in a short period and—thanks again to the efforts of the Armed Porces—the Indian Union territory in Kashmir is being well protected against the savage attacks of the raiders.

"The most important task of nationalisation also had to be carried out in spite of the great difficulties. This has not only proceeded well, but has gathered such a momentum during the last few months that, almost all the important posts will, in the near future, be held by Indians.

#### Indians to be in Command

"This rapid progress towards complete nationalisation has naturally necessitated a large number of transfers and each change inevitably involves a series of consequential changes. As the mere physical movement of officers from one post to another requires a certain amount of time, and as care must necessarily be taken to ensure that efficiency is not impaired in the process of transfers, the completion of the whole programme of transfers has had to be spread over a period of months.

The position today is that by Jan. 1, Indian Officers will be in command of all operational formations and units. Before Aug. 15 the united India Army had over 10,000 British Officers. On Aug. 15, this number fell to a little over 1200 for India. After Jan. 1, 1948,

that number will be further reduced to less than 300.

"On Aug. 15, 1947, less than 10 per cent. of the battalion Commanders and Regimental Commanders in the case of the Armoured Corps, were Indians. On Jan. 1, 1948, the position will have been reversed, and about 95 per cent. of the Commanders, including those of such Gurkha battalions as are to remain in our Army, still be Indians. The British Officers who will continue, will be in command of Regimental Training Centres. By April 1, 1948, all Commands in the Lieut-Colonel level will be held by Indians.

"Again, on Aug. 15, 1947, only 5 per cent of Brigade and Sub-Area Commanders were Indians. On Jan. 1, 1948, all Brigades will be commanded by Indians and only three out of thirteen Sub-Area Commanders will be British. There was no Indian Officer commanding a Division or an Area on August 15, 1947. By Jan. 1, 1948, only two Area Commanders will be British, all other Area Commanders will be British, all other Area Commands and Divisional Commands being held by Indians.

"In the Technical Arms such as Artillery and Signals no Indian held the rank of Brigadier on Aug. 15, 1947. It must be remembered that there is a great deficiency of the Indians in this branch. By Jan. 1, 1948, 60 per cent, of the posts will be held by Indians and by April 4, 80 per cent. Lastly, on Aug. 15, 1947, there was only one Indian Major-General holding a Staff appointment out of a total of 8 senior appointments. All the GOC-in-Cs of the Eastern, Southern, and D. E. P.

Digitized by Google

Commands will be Indians by the middle of January and 5 rosts of Major-General on the Staff will be held by Indians.

"It is clear thus that a great measure of nationalisation will have, in fact, been effected on Jan. 1. It was originally hoped that it would be possible to effect even more changes by that date, but the problems of nationalisation had inevitably to be subordinated to the problems arising from internal disturbances, protection and movement of refugees and evacuees, and operations in Kashmir.

"It was not until Nov. 20 that it became possible, as a result of successful negotiations with II. M. G. in the United Kingdom, to announce terms for British Officers whose services the Government of India wished to retain. The response from British Officers has been satisfactory although it has been greater in certain Arms than in others and there may be many vacancies left in the officers cadre of purely technical arms, such as Engineers. We hope to find suitable candidates in India, with the secessary engineering and other technical qualifications, to fill these vacancies. In some special categories, however, it will still be necessary to secure the temporary loan of certain number of specialist technical officers from the United Kingdom.

"Stated briefly, the policy of the Government of India for the future is to retain a certain number of British officers as advisers, staff officers and Instructors as commandants of certain training units and establishments and in certain technical units. I attach the greatest importance to training eastablishments, and every effort will be made to get the best possible instructors. The total number of such British officers is likely to be between two and three hundred.

#### Naval Training Establishments

"From Jan. 1, Gen. Sir Rob Lockhart is, for reasons of health, vacating the appointment of Commander-in-Chief. His place will be taken by Lieut. Gen. F. R. R. Bucher, at present Chief of Staff, Indian Army. Gen. Bucher will be relieved on April 1, 1948, and an Indian Officer will then occupy the highest office in our Army. Gen. Bucher will continue thereafter, however, as the Chief Adviser. His other colleagues as Advisers will be Lieut. Gen. D. Russell, Major Gens. H. Stable, Pert and O. Lentaigne.

"Naval training is a lengthy process and experience is a factor of great importance in the Sea Nervice. The pre-war I. I. N. was very small and although development during the war was rapid, the regular entry was not appreciably increased. The result is that the most of our naval officers have only 5 to 8 years' service. Out of a total cadre of 6:20 commissioned officers only 9 have more than 10 years' service. Covernment is pursuing a policy of developing and modernising the navy. We are acquiring new types, a cruiser and three destroyers, which India has never previously possessed, and have decided to set up modern naval training establishments.

Rapid progress is, nevertheless, being made in nationalisation. On Aug. 15, 1947, there were 200 British Commissioned and Warrant Officers serving in the R. I. N., out of a total cadre of 85%. During 1948, the total number of British Officers, who will be needed to assist in our programme for the development and modernisation of our Navy, will be about 60 Commissioned and 70 Warrant Officers, out of a total cadre of 620 tommissioned and 209 Warrant Officers. Indian Officers are being appointed to responsible positions as early as possible.

"All our ships are, at present, commanded and officered by Indians as are also several of our shore establishments. Of the Naval Headquarters staft of 75 Officers, all except 9 are Indians.

## Air Force Development

"Before the 15th of Aug. 15 the Indian Air Force was mixed with the R. A. F. and there were some 100 R. A. F. officers and 500 R. A. F. airman working in the R. I. A. F. units. Today, there are only six R. A. F. officers. These officers will continue to serve on in India for a further period. The dovernment of India attach the greatest importance to the development of the Air Force and are anxious to make every possible provision for its development. All the training institutions that are

necessary to train our officers and men, have now been sanctioned and steps are being taken to get them going as early as possible. Due to the partition, some training institutions were left in Pakistan and arrangements are in hand to build up these institutions in Indis.

"The Government of India are also obtaining on loan the services of 7 more R. A. F. officers for posts requiring specialized knowledge.

"This, in brief, is the comparative position before the Aug. 15, and new. Nationalisation, it will be seen, has progressed at a rapid pace in spite of great difficulties that we had to face. Lue care has been taken that the efficiency of the Armed Forces is not impaired. The results achieved are very satisfactory and by April 1, 1948, our Armed Forces will be officered almost entirely by Indians.

"The Government of India are anxious to bring our Armed Forces in line with our new intional status and I have every hope that Indian Officers, who take up now responsibilities, will not only maintain their previous proun record but will better it and show to the world that the antionals of this great country are capable of shouldering the heavy responsibility of management and command of our Forces.

## **CLASS II SERVICE ON RAILWAYS**

T their meeting held on Dec. 15, the Central Advisory Council for Railways have endorsed the proposal of the Railway Board to introduce Class II Service on railways where it does not exist at present. This is a complete reversal of the proposals which have been placed before the Railway. Standing Finance Committee since 1942, and to which the Committee have been opposed, that the Lower Gazetted Service should be abolished on the railways where it exists and that there should be only one gazetted service viz. Class I.

#### Lower Gazetted Service

The Lower Cazetted Service, as constituted at present on the Railways on which it exists consists almost entirely of men promoted from Class III Services. Now direct recruitment will also be permissible through the Railway Joint Services Commissions but only after all staff in Class III who come up to the requisite standard are premoted to Class II. After this system has been in force for two years, the Council will be asked to consider whether definite percentages for direct recruitment and for promotion from Class III should be laid down. The Council also agreed to continue for the present the practice of reserving 20 per cent of the vacancies in Class I for suitable officers from Class II.

The Council recommended that in regard to the European style refreshment rooms, seperate refreshment rooms for lat and 2nd class passengers should be abolished but different tariffs for the

two classes of passengers should continue for the present.

The Council recommended the establishment of a Local Advisory Committee for the Provinces of U.P., Delhi, and East Punjab on the B. B. and C. I. Railway, which will include representatives of the U.P. and E.P. Logislative Assemblies, Chambers of Commerce serving the area; and the U.P. and East Punjab Governments.

The Ministry of Relief and Rehabilitation, says a Press Note, has had under consideration the question of granting some relief to Central Government servants stationed in West Pakistan who opted for service in India and have suffered loss of personal effects in the course of their evacuation.

It has now been decided that Heads of Departments may, in deserving cases, grant special advances upto three months' salary, subject to a maximum of Rs. 2,500 to enable Government servants to provide themselves with personal equipment essential for their duties as Government servants.

These advances will be interest free and will be recoverable in not more than 36 monthly instalments.

This concession will also be admissible to Provincial Government servants who have come as refugees from areas in West Pakistan and have subsequent y been employed under the Central Government.

# INCOME-TAX INVESTIGATION COMMISSION

THE Government of India have recently appointed an Incometax Investigation Commission, which has been charged with the duty of investigating the methods and the extent of evasion practised by certain persons contrary to the provisions of the Indian Income-tax Act and the Excess Profits Tax. The Commission is presided over by a retired Judge of the Federal Court, and among its two other Members is a Judge of the Bombay High Court.

Experience of income-tax procedure is provided for by appointing a Member of the Income Tax Appellate Tribunal and an ex-Commissioner of Income Tax as the other Member.

## An Appeal

With such a composition and with requisite powers for calling for information, etc., the Commission is expected to inspire confidence that the scales will be held even between the tax-payer and the tax-gatherer. At the same time the Commission will deal with the tax-evader without fear or favour.

While the requisite machinery is thus provided for collecting as far as practicable the lost or evaded taxes, which may amount to a substantial sum, it is obvious that the machinery cannot hope to achieve its purpose without the co-operation of the public.

Whatever might have been the motives or reasons for the evasion, the interests of Independent India make it

the patriotic duty of every citizen to make good to the State what was held back under the old regime.

Government are prepared to assure the public that a lenient view would be taken of those cases in which the persons concerned spontaneously respond to this appeal.

To those others from the public, who, although not themselves evaders, have knowledge of the men who have evaded and of the methods of evasion practised, the duty is clear that they should place their knowledge at the disposal of the Commission and assist it in exposing the evaders and the evasion practised.

In doing so they will be assisting towards better Government by placing the State in funds to push forward the many schemes for the public good which the lack of funds has retarded or fcreed Government to abandon. They will be assisting themselves and the other honest tax-payers by reducing their burdens. The Government of India confidently hope that such assistance will be forthcoming and that the labours of the Commission will receive from every honest citizen the help and assistance ho is able to render to it.

The office of the Commission is situated in the Imperial Secretariat Buildings (North Block 1st floor), in the wing occupied by the Ministry of Finance (Revenue Division). The Secretary of the Commission will give every facility to whoever approaches him with the honest desire to help the Commission in its work.

## Customs Duty on Export of Jute

In their Communique of Nov. 23, the Government of India, while dealing with the imposition of a duty on raw jute by the Pakistan Government, stated that they were examining what measures they should take in order to protect the interests of the Indian Dominion. The matter has received further careful consideration of the Government of India and they have decided to declare forthwith the Dominion of Pakistan to be foreign territory for the purpose of levying Customs duty on the export of raw jute and jute manufactures, from India to Pakistan, says a Press Communique, issued by the Ministry of Finance (Rovenue Division) on Dcc. 23.

To implement this decision the Government of India have issued the necessary notifications under the Indian Tariff Act, the Sea Customs Act and Land Customs Act with immediate effect.

The Government of India are also taking suitable measures to ensure that sufficient

stocks of raw jute are kept available in the Indian Dominion.

The above decisions or any others that the Government of India may be called upon to take to cope with the situation caused by the levy of Customs duties by the imposition of export duty on raw jute by the Pakistan Government are, however, as already stated without prejudice to reconsideration of the position if an amicable and reasonably long-term settlement is reached over the entire field of freedem of trade and commerce between the two Dominions, levy of Customs and excise duties, their pooling and allied matters.

Telegraph Service to French and Russian Zones of Germany and to Berlin is restricted to full or urgent rate plair language telegrams, says a Press Note, issued by the Directorate-General Posts and Telegraphs, on Jan. 9.

## Negotiable Instrument Act Amended

TO meet the difficulties which are being experienced in dealing with bills drawn on firms and companies situated in disturbed areas, an Ordinance has been promulgated on Dec. 27, 1947 temporarily amending the Negotiable Instrument Act, says a Press Note, issued by the Ministry of Finance on the same day.

Banks have been given power to treat bills as dishonoured when presentment is impossible owing to the prevalence of disturbances.

The Ordinance also temporarily suspends operation of the Indian Limitation Act, and Courts are accordingly empowered, during the period of the Ordinance, to admit suits which became time-barred on and after Aug. 1, 1947, and whenever they are satisfied that owing to disturbed conditions the creditor was unable to institute the suit within the period of limitation.

These measures have been decided upon in consultation with the Government of Pakistan, and it is understood that they are taking parallel action.

#### Banks' Risks

Amondment of the Negotiable Instrument Act became necessary, because, as the law stands at present, bills are required to be precented for seceptance or payment before they can be treated as dishonoured, and there are no exceptions to cover cases where this is impossible owing to disturbed conditions. The result is that banks have to incur godown and insurance charges if they clear and store goods without presenting the documents for acceptance, and, not being authorised to sell the goods, they run the risk of their security being seriously reduced by these charges.

Apart from the question of affording protection to banks, the country's economy demands that these goods are quickly distributed. This is also in the interest of clients themselves since storage charges, which are high at present, may not only absorb all the profits on the eventual sale, but may also result in the drawes being asked to reimburse losses due to an indefinite pericd of storage.

#### The Amendment

The amendment makes it possible for banks to sell the goods after a reasonable period, keeping the proceeds for their constituents' benefits after deducting their own dues. In order, however, to prevent abuse of this power, banks will be required to make returns to the Reserve Bank of India. Importers are advised to contact the nearest offices of their bankers so that enquiries may be instituted as to the goods they are expecting.

Amendment of the Indian Limitation Act became necessary because banks, unable to function normally during the disturbances, were not in a position to take legal action in order to realize their claims. This problem also affects other creditors placed in a similar position.

ENDIAN INFORMATION, JANUARY 15 1948

# ENQUIRY INTO EX-MILL PRICES OF CLOTH AND YARN

## Tariff Board's Terms of Reference

THE Government of India, in their Resolution No. 88(2).—Text 1-47 dated Nov. 17, 1947, have entrusted the Tariff Board with an enquiry regarding (a) fair ex-mill prices to be paid for cloth and yarn with special reference to the changes created by the introduction of the Standardization Scheme (b) steps to secure the co-operation of labour in order to increase production and eliminate wastago or leakage and (c) the desirability of the existing system of control over production and distribution of cloth and yarn.

The following are the terms of reference of the Board:—

(i) To enquire into the cost of production of the various types of cloth and yarn produced, and to recommend fair ex-mill prices to be paid for cloth and yarn, with special reference to the changes created by the introduction of the Standardization Scheme.

#### **Production at Maximum Level**

In making their recommendations the Board will keep in mind the desirability of maintaining the production of all mills at the maximum level while at the same time ensuring that the profits of the more efficient units will not thereby become excessive. If the Board consider that it would be impracticable to settle a level of prices which would balance these two requirements, they may consider whether prices cannot be kept down to reasonable levels with a subsidy or similar relief to sections or units of the industry whose production cannot otherwise he maintained. If special circumstances apply to mills engaged in the production of yarn alone, the Board will take those circumstances into consideration when making their recommendations.

- (ii) To advise on the adjustment to be made from time to time to the ex-mill prices recommended by them for cloth and yarn, so as to allow for fluctuations in the prices of raw cotton and in other elements of the cost of production.
- (iii) In the event of subsidy or other relief being recommended for certain sections or units of the industry under (i) above, to suggest ways and means of finding the necessary funds.
- (iv) to recommend in what forms the co-operation of labour should be secured in order to increase production and eliminate waste or leakage.
- (v) To advise Government generally on the existing system of control over production and distribution of cloth and yarn, and on its continuation.

The Board are requested to submit their report in two parts the first relating to the terms of reference numbered (i) to (iii) above, and the second to the remaining terms of reference. The first of these reports should be submitted within a period of about three months subject of course to the Board being

satisfied that reasonable accurate findings can be arrived at within this period.

As required in the resolution the Board is first taking up the question of fair ex-mill prices of cloth and yarn. In order to facilitate the preparation and consideration of the case, the Board has prepared a questionnaire setting out points on which detailed information is required. Copies may be obtained from the Secretary, Indian Tariff Board, Contractor Buildings Road, Ballard Estate, Bombay.

Firms or persons who desire their views to be considered by the Board should address their representations (with 11 spare copies) to the Secretary, so as to reach the office of the Board before January 15, 1918. Dates for public examination of the witnesses will be notified in due course.

#### Dr. MUKERJI'S SPEECH

(Continued fram Page 86)

plant and machinery and technical personnel.

Meanwhile, every one of us, Government, industry, labour and the public, should do every thing possible to speed up production to the maximum of cur capacity and not allow any party or other extraneous consideration to sabotage this great and united effort. The efforts of those who are represented here will and must be harnessed with the programme of expansion, envisaged by the Ministrics of Food and Agriculture and Works, Mincs and Power, thus leading to a planned and progressive reconstruction of India's economic structure.

May I conclude with the appeal that at this dawn of a new era in India, we bury our differences, cease to fight on mere slogans, and with malice to none and charity for all, join together in a vigorous co-operative effort which will make possible a rapid transition from our preponderating colonial economy of raw materials produced by exploited masses, to a national economy of manufactured goods produced in abundance by skilled workers fully enjoying the fruits of their labour.

Let us agree to be judged by one test and one alone, and that is the raising of the standard of living of the common man and an end of exploitation for the benefit of a chosen few. I have every hope that with the active co-operation of the Governments of the Provinces and the States, of industry and labour, we shall soon be able to lay down an all-India policy and programme of industrial development which will enthusiastically rally all classes of the Indian people to a supreme endeavour to raise our country out of the morass of poverty and hunger, of disease and degradation.

## PAY OF PRE-1931 ENTRANTS IN GOVERNMENT SERVICE

COMPLAINTS have been received that the rules sanctioning the revision of pay on the recommendations of the Central Pay Commission operate unduly harshly in the case of pre-1931 employees of the Government of India who desire to elect the new scales, says a Press Communique, issued by the Ministry of Finance, on Dec. 23.

The rules referred to give every pre-1931 entrant the choice of getting whatever is more favourable of the following:

- (1) Retaining pay in the pre-1931 scale.
- (2) Opting to have his pay fixed under the new scales at an amount not exceeding the pay admissible if he had been a new entrant from the beginning of his service.

In view of the fact that the pre-1931 scales of pay were substantially more favourable than the post-1931 scales, and, might in some cases, be more favourable than even the latest scales based on the Pay Commission, it will be recognised that this is very fair to the Government servants since they can choose whichever is more favourable.

In certain cases, however, it is found that a pre-1931 entrant is discouraged from accepting the latest scale, even though it might be better in certain respects, as the initial pay, fixed under the rules, would involve a loss. In order to encourage as many pre-1931 entrants as possible to elect the latest prescribed scales and attain uniformity in pay scales sooner than would otherwise be the case, the Government of India have decided that the pre-1931 entrants electing the new scales should be protected against any immediate reduction in pay.

## Personal Pay

The Government of India have accordingly decided to grant protection to pre1931 entrants who finally elect the new scales, in the shape of personal pay equal to the difference between the pay they were actually drawing before election and the pay to which they would be entitled on fixation in the prescribed scales under the present rules (where it is lower). The personal pay is liable to be absorbed in future increments.

Since the scales prescribed under the Pay Commission are regarded as adequate consistent with post-war economic conditions, the latest decision secures that no Government servant, whether pre or post-1931, gets a scale of pay or initial emoluments lower than under the latest scales.

## NEARLY TWO MILLION REFUGES destinations in East Punjab for distribution amongst farmers as fertiliser. RESETTLED

## Further Scope in States and Provinces

EARLY two million rafugees have been resettled in East Punjab and Indian States. Of these over 1,500,000 have been resettled on more than two million acres of land in East Punjab, which has adopted a plan for the resettlement of another 550,000 refugees by internal dispersal from rafugee camps, particularly in the Ambala Division. Nearly 223,000 refugees have been settled in various States, including 123,000 in Patiala and 50,000 in Jodhpur.

Another 15,000 have secured employment through Employment Exchanges and the Government of India's Transfer Bureau. The average size of a family being five persons, this means resettlement of 75,000 refugees.

Further plans for the resettlement of refugees are indicated in the latest reports received from the Provinces and States. Patiala State proposes to resettle another 75,000 refugees or so, including five to ten per cent of urban refugees. A scheme has been drawn up in Holkar State for resettlement of agriculturist refugees and artisans in the Rampura, Bhanpura and Nemawar districts, the State authorities sanctioning a special advance of Rs. 500,000 for the purpose.

Alwar State, which has already settled 8,000 refugees, proposes to resettle

another 50,000 in villages where agricultural lands and houses will be provided. In Partabgarh State, rehabilitation plans include the allotment of ten bighas of land per family with no land revenue for five years and only half the assessment for the next five years, as well as taccavi loans for digging wells and buying bullocks. The State has also sanctioned a loan of Rs. 500,000 for building a colony of 1,100 plots for refugees.

## Import of Tractors

Efforts are being made by the Ministry of Agriculture to import 220 tractors by March, 1948, for a project which aims at-mechanical cultivation of land in East Punjab for the next kharif season. At the instance of the Government of India oil companies are arranging to supply sufficient quantities of high-speed diesel oil to the East Punjab Government for the tractors already supplied.

About 200,000 acres of fallow land could be secured and made available to agriculturist refugees for rehabilitation in East Punjab if tubewell irrigation could be arranged, and this matter is at present under consideration by the Government of India and the Government of the East Punjab. Meanwhile, a consignment of 1,000 tons of sulphate of ammonia is on its way from Bombay to various

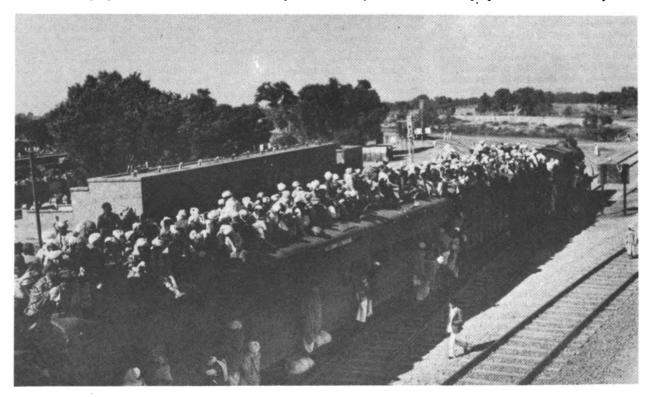

The absorption of urban refugees in trade, commerce and industry is under way. The question of affording facilities to refugee firms dealing in fruit preservation is under consideration, though licences are being issued by the Ministry of Agriculture to selected fruit preservers, some of whom have already established their activities here. These firms are being issued sugar permits after inspection on the basis of the normal quota of sugar which they used in Pakistan.

Field Officers of the Ministry of Industry and Supply have been deputed to Calcutta to investigate the capacity and other details relating to factories which have recently been put up there by refugees from West Punjub. On receipt of their reports supply of raw materials required by them will be arranged.

The Ministery of Railways has arranged for the speedy despatch of cotton and wool from the purchasing centres like Hansi, Fazilka, Rewari, etc., to the manufacturing stations, e.q., Rampur, Kanpur, Delhi, Indore, etc., where the raw material is used for making blankets and quilts.

#### Industrial Schemes

In the United Provinces the Government have carried out an occupational census for planned rehabilitation. A large number of refugees seeking paid employment are getting absorbed in the life of the Province. Special industrial schemes are being considered for the large number of petty traders. It is also proposed that facilities previously

Into the township which has grown up in Kurukshetra, a train steams in, carrying still more people, who need shelter first and the encouragement to start life anew

provided to ex-soldiers for the purpose of training in technical and vocational trades for resettlement on land and for production work at the workshops of vocational training centres should be extended to refugees.

Mysore State is willing to absorb about 5,000 refugees and provide them work on daily wages at the site of the reservoir under construction in the north-western part of the State.

Plans for rehabilitation in Baroda State include employment in State services of professional men like doctors, engineers, professors and skilled and semi-skilled workers, mechanics and artisans; allotment of residential plots, reclamation of jungle areas on a limited scale, and encouragement to industrialists and business men who wish to start their own industries.

#### Sites for New Colonies

Holkar State has sanctioned the construction of two roads at a cost of Rs. 750,000 to provide immediate work to refugees. In the city of Indore a list has been prepared of the various trades and professions to which refugees belong, and attempts are being made to absorb them in the trades concerned. A proposal for developing sites for new colonies farther away from the city is under consideration.

In Jodhpur State, 25,000 refugees have been settled in the town of Jodhpur, a number of them being employed in State Public Works Department, private industrial concerns, as well as business.

Almost all the gaps created by Muslim evacuee businessmen in Faridkot State have been filled by non-Muslim refugees. About 18,000 Muslim evacuees from Faridkot and Kotkapura have already been replaced by 15,617 non-Muslim refugees. About 300 teachers and artisans have been absorbed in the State Services and Works. The State proposes to employ another 2,000 semi-skilled and unskilled refugee labourers by restarting existing industries. It is also proposed to build two new grain markets at Jolewals and Romans Albebsingh to accommodate 1,000 business men and small traders.

## Quilts and Blankets

In Partapparh State suitable employment will be offered to technicians in State service and opportunities, afforded for a share in a cloth and grain syndicate, as well as in mineral, industrial and forest occupations.

Supply of quilts, blankets, garments and cloth to refugees, in camps is gathering momentum. Up to Dec.-14, 791,910 quilts and 266,703 blankets were despatched to East Punjab, Delhi and Kurukshetra. Other despatches to these centres include 954,507 shirts, shorts, great coats and the like and 108,595 yards of cloth.

There are more than 160 refugee camps all over the country providing accommodation to 1,250,000 refugees. In East Punjab alone 721,851 refugees are being looked after in 85 camps. Then there are 53,000 refugees in camps in the States of Faridkot. Udaipur, Indore, Gwalior, Alwar, Rewa, Kotah and Rutlam. Over 13,000 refugees have

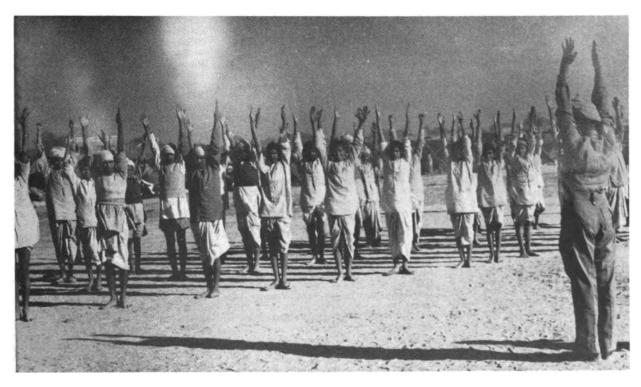

found shelter in 32 camps in the Bombay Presidency, 30,000 refugees in about 31 camps in the United Provinces, 600 refugees in three camps in Madras and 1,500 refugees in the Central Provinces. About 15,000 refugees are in camps in Delhi.

In almost all these camps food, clothing, medical and sanitary facilities are provided, quite a number of them being run by philanthropic organisations. In the United Provinces all the refugees in camps are lodged in buildings with proper shelter and are provided with a special quota of cloth at nine yards per refugee, where necessary at Government expense. Schools have been opened for children and the United Provinces Government are distributing 50,000 blankets and quilts and 20,000 fbs. of wool in addition to considerable quantities already distributed by private organisations.

#### Daily Expenditure

Daily expenditure on camps runs into several hundred thousands of rupees. During 1947-48 the Government of Irdia have made a budget provision of Rs. 100,000,000 for relief.

The total number of non-Muslim refugees evacuated up to December 14 from West Punjab, the N. W. F. P., Sind and Baluchistan came to 4,362,000. Organised evacuation on a large scale was completed by the Military Evacuation Organisation, India, in the first week of December, a week earlier than the date fixed. Pocket clearance and rescue of abducted women and forcibly converted persons is now in progress.

## MEDICAL FACILITIES AT KURUKSHETRA Supplies to Refugee **Progressive Decline in Rate of Mortality**

S a result of steady progress in the provision of medical relief and preventive health care to the people of Kurukshetra camp, there has been progressive decline in the rate of mortality. It is now in the neighbourhood of 30 per day or half of what it was some time earlier, with a smaller population.

The hospital accommodation has risen to about 800 beds for a population of 2,60,000—a ratio of over 3 beds per 1,000 or 12 times the average provision for the country as a whole.

## Anti-Plague Measures

The sanitation of the camp has greatly improved. Anti-plague measures are being taken in view of an outbreak of plague in areas not far from the Camp. Spraying with D.D.T. is carried out in respect of all vehicles coming into the camp. Delousing of the population has been completed and the process is being repeated periodically.

There has been some increase in the incidence of small pox, partly as a result of incoming refugees bringing in cases of this disease. A thorough examination of such persons and a search for patients in the Camp itself have been in progress and all cases that are discovered are segregated in the Infectious Disease Hospital. The resident popula-tion of the Camp has all been vaccinated. The new arrivals are also vaccinated.

Arrangements have been made for recruiting suitable girls from among the refugees for training as nurses.

The Hon'ble Rajkumari Amrit Kaur, Minister for Health, Government of India, visited the Camp on December 24. Mr. V. K. Krishna Menon, High Commissioner for India in London, also paid a visit to the Camp on December 28.

The Education Ministry has appointed a Special Officer, Mrs. E. Rudra, to assist refugee students who may have difficulty in continuing their previous courses of study in the Indian Dominion. The Special Officer will organise the planning of education for refugee students and will help them in getting admission in the various institutions in the country.

Applications in the prescribed form from refugee students, giving details of their previous study and the Colleges to which admission is now sought, should be sent to Mrs. E. Rudra, whose office is in Room No. 44, 'M' Block, near North Block, Ministry of Education, New Delhi.

# Camps

Truckloads of blankets, razais, cloth and ready-made clothes are being rushed daily to Kurukshetra and other camps in East Punjab, says a Press Note is ned on Dec. 20 by the Ministry of Relief and Rehabilitation. A large number of tents have also been sent by the Ministry of Relief and Rehabilitation to afford shelter to refugees.

Up to December 17, the Ministry had made available 266,703 blankets, 791,910 razais, 75,000 jersies and 70,000 bundies for distribution in Delhi, Kurukshetra and East Punjab Camps. In addition, over 99,523 yards of various kinds of cloth and ready-made clothes, including kurtos and trousers, numbering 955,507 have been sent to refugee camps. The Ministry has also despatched to Kurukshetra and other camps in East Punjab 31,548 large tents and 150,000 bivouc tents. A large number of these tents have already been pitched.

The Ministry is daily receiving large quantities of blankets and old and new garments from all over India.

In Delhi, the Clothes Collection Works Sub-Committee of the United Council for Relief and Welfare is collect-ing clothing and organising knitting parties.

Kurukshetra, being the largest camp with an approximate population of

His Excellency M. Motamedy (second from right) Iranian Ambassador in India, presented to Rajkumari Amrit Raur, Minister for Health, gifts of tinned food for refugees on behalf of the donors, The Asiatic and Atlantic Stores, an Iranian firm in Bombay

270,000, has received 164,835 blankets, 83,416 razais, 25,000 jerseys, 60,000 kurtas, 27,000 shorts, 13,000 yards of China sheeting, 2,476 yards of drill (bleached)

mand 10,000 yards of desuti.

Distribution to other camps at Amritsar, Phillaur, Ludhiana, Gurgaon, Panipat, Hissar, Karnal and Rohtak has been as follows: 100,638 blankets, 700,484 razais, 70,000 bundies, 50,000 jerseys and 75,000 yards of dasuti. Readymade clothes sent to these Camps in East Punjab include 400,000 kurias (cotton), 451,000 shorts and 10,000 great coats.

The Government of India have given full consideration to the question of resettlement and rehabilitation of Muslim citisens of Delhi city who have left their houses. This applies more especially to those evacues from Delhi who are at present in Humayun's Tomb Camp.

It has been decided that such persons

It has been decided that such persons in this category, who do not have their homes to return to or who cannot make arrangements to stay with friends and relations in Delhi city, will be allotted accommodation by the Custodian of Every Property in those areas which are at present occupied predominantly by Muslim citizens.

The Chief: Commissioner, Delhi, and the Custodian of Evacuees Property have been informed of this decision and given

necessary instructions.

# Iranian Gift For Refugees

A pleasant function was held on Dec. 23, in the office of the Hou'ble Rajkumari Amrit Kaur, Minister for Health, Government of India, when the Iranian Ambassador in India, H. E. Mons. Motamedy, formally presented to the Minister gifts of tinned food for the destitute refugees on behalf of the donors, The Asiatic and Atlantic Stores, an Iranian firm in Bombay.

The articles included 2,500 tins of meat and vegetable ration and 2,500 boxes of American cereals. 250 rugs and 10 bags of rice were also to be included among the articles but money had been given instead for their purchase.

The articles will be utilised for the refugees in the Kurukshetra and other camps, who are suffering from malnutrition.

The Health Minister thanked the Ambassador for the gift and expressed her great appreciation of this gesture of good will by Iranians for the refugees in India.

## DOMICILE RESTRICTIONS FOR REFUGEES WAIVED

All Provincial Governments have generally agreed to waive their demicile restrictions in the case of experienced Hindu and Sikh refugees, formerly serving in Pakistan, said a Press Note issued by the Ministry of Relief and Rehabilitation on Pres. 27.

This is in response to the request made by the Government of India to Provincial Governments to provide facilities of employment to refugees by waiving their domicile restrictions.

The Government of Assam, however, are absorbing Government personnel from Sylhet who opted for service in the Indian Union. In addition, there might be scope only for technical officers.

The Government of Bomoay are attempting to absorb in service refugees from Sind, including a large number of teachers. The Government of Madras will consider cases of technical men and men with special qualifications for posts where knowledge of a provincial language is not essential.

## LOANS TO REFUGEE STUDENTS

## Government of India's New Scheme

ON-MUSLIM students from Western Pakistan who are unable to pursue their studies or training for lack of funds and whose parents or guardians have settled down in Centrally Administered Areas may apply for loans to the Ministry of Relief and Rehabilitation, Government of India, for continuing their technical and collegiate education, says a Press Note.

Loans, which will be given only for studies in a recognised institution or college, will be strictly for completion of studies which a student is already pursuing and not for any further or higher education or training after completion of the present course. For instance, if a student was in the course of studies for graduation, his studies shall not be financed for a post-graduate course.

Loans will be given in instalments, monthly or otherwise, as may be considered fit in each individual case taking into account the recommendation of the head of the institute where the student is studying or receiving training. The loan shall be repayable on the rehabilitation of the student, or the parent or guardian of such student. For this purpose a half-yearly review shall be carried out of the financial position of the parent or guardian. The student as well as the parent or guardian or the surety shall sign the undertaking to repay the loan, whether in lump or by instalments, on the rehabilitation of either of them. Further, Government will have a prior lien on the service of the student under this scheme.

The loan instalment to any student under training will stop immediately on his failing to pass a recognised periodical examination.

Applications for loans should be sent to the Chief Commissioner through the head of the institution where the student expects to complete his studies or receive training. The head of the institution will forward the application to the Chief Commissioner with his recommendation and attach a schedule of the student's yearly expenses. The application will then come to the Ministry of Relief and Rehabilitation for final sanction.

Pending sanction of the Ministry of Relief and Rehabilitation of the loan applied for, interim relief may be paid by the head of the institution or college who may be authorised in this matter to advance up to a maximum of Rs. 100 per head.

Applicants should give the following particulars:

- (a) Full name, age and address of the student.
- (b) Full name and address of the parent or guardian in Indian Dominion as well as previous address in Pakistan.

- (c) The course of studies undertaken, name of the institute where studies undertaken and examinations already passed.
- (i) Students who have been granted admission to an Institution but have not been able to join due to lack of funds, should mention the name of the Institute and the course of studies for which definite admission has already been granted by the Institute. Evidence should be supplied to show that admission has been granted.
- (ii) Students whose studies have been terminated, but who have not been able to obtain admission in any institution should give the course of studies or training undertaken and examinations already passed at the Institutes where they had undertaken such studies prior to being displaced as refugees.
- (d) Minimum period required for completion of such studies.
- (e) Fees etc. payable to the Institution or Factory and when due (Items should be given separately wherever possible) e.g., Tuition fees, deposits for Laboratory or Library, games fees, examination fees etc.
- (f) Minimum allowances required for books, instruments, lodging boarding and outfit etc., each item to be given separately.
- (g) Any security or surety the student of his parent or guardian is able to put up for repayment of loan, if granted.
- (h) The manner in which the loan is desired to be repaid.
- (i) Any particulars regarding the parents or guardians of the student or trainee, that the applicant is in a position to furnish. These particulars should state properties, and assets, social standing of the parents or guardian or surety.
- (j) If the student or his guardian has registered as a refugee under any enactment that may be in force in the area, the registration number should be quoted.

Maj.-Gen. T. O. Thompson, British Red Cross Commissioner for refugee relief assistance to India and Pakistan, recently visited Delhi for discussions with the Indian Red Cross Society, the United Council for Relief and Welfare and Government departments in regard to relief needs which may be helped through the generosity of the British Red Cross Society and the Society's appeal to the public of Great Britain.

Gen. Thompson visited refugee camps at Kurukshetra, Karnal and Panipat on Dec. 29.

## **NEW BOMBAY GOVERNOR**

His Excellency Sir John Colville, who had at the time of the transfer of power been invited by the Government of India to continue to serve as Governor of Bombay and who had agreed to do so until the end of the year, demitted office on Jan. 6, 1948, says a Press Communique. His Excellency the Governor-General has on the advice of his Government appointed Raja Sir Maharaj Singh, C.I.E. to be Governor of Bombay in succession to Sir John Colville.

# Progress in Employment of Refugees

Of 10,429 refugees registered during the fortnight ending Nov. 30, 1947, at the Employment Exchanges and District Employment Offices in the Indian Union, 2,001, involving 8,840 dependants, were placed in employment. The number of refugees placed in employment is nearly double the number placed in the previous fortnight.

The total number of refugees registered by Exchanges up to Nov. 30 was 39,593, of whom 6,667, involving 31,645 dependants, were placed in employment.

Further resettlement is being hampered by such factors as lack of accommonation near the places of employment, ignorance of local languages, loss by retugees of documentary evidence regarding academic qualifications and experience, and rigid adherence on the part of some Provincial Governments to rules governing domicile.

Moreover, there is a general reluctance among refugees to accept manual work, as a result of which many jobs have to be filled by persons from the open market although employers are prepared to give first preference to refugees.

## REFUGEES' INCOME-TAX : INDO-PAKISTAN AGREEMENT

Refugees in India have feared that their income-tax assessments in Pakistan might be made ex parte in spite of the fact that they have not received notices issued to them at their old addresses, and in any case it is impossible for them to make arrangements for representing their cases before the Income-tax authorities under prevailing conditions. Apprehensions have also been expressed that their property in Pakistan might be attached and sold at very low prices in satisfaction of the tax demands.

The matter was taken up with the Government of Pakistan, says a Piess Note issued by the Ministry of Finance on Dec. 20, and the Government of India are glad to announce that an agreement has been arrived at whereby both Governments have undertaken to ensure that during the current financial year no exparte assessment will be made against absentee assessees and that property belonging to refugees in either Dominion will not be auctioned in pursuance of the demands of the Income-tax Department. Instructions to this effect are being issued in both the Dominions.

# SARDAR PATEL ON AJMER out in a procession for cremation. The procession was proceeding peacefully when on the way it was stopped by a crowd of Hindus who wanted it to go via a route close to the Dargah and not by the customery route. The

N assurance that adequate measures had been taken for the protection of the Dargah in Ajmer and that government will "strain every effort" to score its safety, was given by the Hor'ble Sardar Vallabhbhai Patel, Home Minster, Government of India, in a statement on the situation in Ajmer issued on Dcc. 19.

#### Sardar Patel said:

The recent disturbances in Ajmer City and its immediate vicinity have attracted a cortain amount of attention not so much on account of their intrinsic character but mostly because of the undoubted importance of the holy City, of Ajmer. Some misapprehension of the situation also appears to exist in certain quarters where rumours or exaggerated stories have gained some credence. I have now had fairly full reports of them from official and nonofficial sources as a result largely of personal discussions with the Chief Commissioners and two deputations from Ajmer. In order to allay these misaprehensions I feel it would be best to give to the public at large a somewhat detailed account of the various incidents.

After an unbroken peace since the rious of 1923, the first communal explosion in Ajmer took place on Aug. 27, 1947, when a crowd of Muslims, which had gathered in front of a mosque with the ostensible purpose of offering prayers but really with the set purpose of creating trouble, attacked a Hindu Mahabir Dal procession. Some bands of Muslims immediately after attacked a number of passers-by in about half a dozen Mohallas of the City resulting in 17 casualties, all Hindus with the exception of a Muslim who was dressed like a Hindu. The situation was immediately brought under control and no retaliatory attacks took piace. Nevertheless, this unprovoked attack combined with the influx of about 10,000 Muslim refugees from the neighbouring States kept tension somewhat alive and created among the Muslim population a feeling that trouble might brew up in retaliation for the previous incident.

#### Vigilant Attitude

Under the inspiration of local Muslim League leadership, a deliberate plan was put into force to evacuate Muslims from Ajmer to Pakistan and active propeganda was undertaken to see that Muslim personnel in the local administration opted for Pakistan and sent their families in advance. This was in the face of attempts on the part of the local administration to explain to them that it was not open to them to exercise any option and that the Indian Dominion would retain their services if they so wished and the local administration had no choice but to ask those who wished to leave for Pakistan to resign.

These activities not only resulted in depletions in the administrative ranks but in keeping the tension alive. In the meantime refugees poured from Sind in increasing numbers. At the same time the local Muslim leadership realised its mistake and a trek, back from Sind, of Muslims, who had left earlier, started. This produced some uneasiness, but calm still prevailed.

The local administration maintained a strong grip and a vigilant attitude and no untoward incident took place until Dec. 5 when peace was again disturbed over a trifling dispute on the sale of gramophone between a Muslim and a Sindhi boy in Dargah Bazar, a Muslim This resulted in injuries to locality. three Sindhis. But this clash followed up in other localities and shops of rival communities were attacked. Within the course of an hour 41 persons were injured of whom three Muslims died. Four Hindus were among the injured. The Riot scheme was at once introduced and some improvement was effected in the situation. Next day the curfew was lifted. Stray assaults again took place resulting in injuries to 16 and death of two Muslims; a Sindhi boy was also done to death. The curfew was reimposed. On Dec. 7, sporadic incidents teck place resulting in the death of six and injury to two Muslims. On Dec. 8, two Muslims were attacked in a village near Ajmer; there were two cases of arson and one grave was desecrated.

#### Collective Fines

But the gravest and most explosive incident was the disappearance of a Hindu Constable on duty in an exclusively Muslim locality. The Constable was believed to have been done to death and a research for the body in the locality resulted not in its recovery but in a haul of two cannon, one muzzleloading gun, one breach-loading gun, 10 swords, 4 daggers, 2 gun-powder bottles and 300 percussion caps. Collective fines of Rs. 75,000 and Rs. 3,000 were imposed on Hindus and Muslims respectively in different localities and immediate steps were taken to recover the amounts. Military were called out. As a result of the repressive measures adopted there was no further incident and the city was absolutely quiet during the period Dec. 9, to Dec. 13, except for some excitement on account of a twoday hartal by the Hindus to protest against the imposition of collective fines and a most ill-timed strike by local

On the evening of Dec. 13, on information furnished by some Muslims, the dead body of the constable in a mutilated condition was found buried in a Muslim grave-yard, and a collective fine of Rs. 10,000 was imposed on Muslims in the locality and realised. On Dec. 14, the body of the dead constable was taken

out in a procession for cremation. The procession was proceeding peacefully when on the way it was stopped by a crowd of Hindus who wanted it to go via a route close to the Dargah and not by the customery route. The motives were obvious and the Chief Commissioner quite properly refused permission. The crowd was recalcitrent and a lathi charge was made. Thereafter the dead body was taken by the usual route and was cremated but certain mischievous elements began to indulge in arson and looting of Muslim shops in different parts of the city. The area most effected was Mohalla Ghas Katla where determined fighting took place between the Hindus and Muslims. The Hindu crowd was stoned from a Muslim's house and a country-made homb was also thrown at it from the house of a prominent Muslim Lerguer.

The police came upon the scene but was also attacked by Muslims from the house-top; a bomb was thrown on a constable who died. Another constable received a gun-shot wound and subsequently died. Another Hindu was admitted in hospital with gunshot injuries. The Chief Commissioner himself visited the scene and found intermittent firing from Muslim houses. The area was cordoned off but the inmates of the house did not surrender until the next morning when six country-made bombs ready for firing were recovered together with many swords and daggers and one unexploded hand grenade.

From another Muslim house also stones were being thrown and shots were being fired. The police demand for surrender was met by a shot from the house. The police returned the fire and inmates surrendered. One D. B. B. L. gun and 25 cartridges were recovered; the right barrel appeared to have been used. The house was tenanted by Mirza Abdul Qadar Beg who had already left for Kotah and the gun was found to be his preperty.

#### Vigorous Action

Simultaneously looting and arson of Muslim property by refugees and local Hindus was going on in other localities. The Muslim shops in Mohalla Karakka Chowk, Dhanmandi, Nala Bazar, and Madar Gate were looted. Some big Muslim shops on Station and Imperial Roads were attacked and burnt. A mosque was set on fire after the Pesh Imam had been murdered. Attempts were made to set fire to three other mosques. Vigorous action was taken against the looters and the Police and military fired 238 rounds, of which 40 were fired by a party led by the Chief Commissioner himself. A number of rioters were arrested and a few were shot dead. Two persons were arrested when engaged in demolishing a mosque. Most fires were put out quickly largely due to the active measures taken by the Chief Commissioner himself. Many buildings clould have been saved but the local administration had only one fire-fighting engine at their disposal.

The night of Dec. 14-15 persed off quietly. But on the morning of Dec. 15, a Muslim family of 5 persons was attacked

and destroyed by Hindu raiders. Four Muslims were killed while raiding a house. Four Muslims and 7 Hindus were shot down when engaged in looting. Over 100 persons were arrested for substantive offences of arson and looting. On Dec. 16, six Hindus were arrested while looting some Muslim houses. The dead body of a Muslim was found on the Beawar Road. One country-made bomb was recovered from a deserted mosque. The situation had, however, shown rapid signs of improvement after the initial outburst on Dec. 14 and the curfew was lifted on Dec. 17. Since the midday of Dec. 15 and up to this morning no incident had happened and the city was showing signs of returning confidence.

The total number of casualties since Dec. 5 are as follows:—

		K illed	M, c	nunaea
Hine	dus M	Iuslims H	lindus M	uslime
By Rioters	5	31	21	62
By Police firing.	1	3	••	••
By military firing.	8	7	2	2

There has been severe loss of property but the prompt action of the local military and Police circumscribed the loss, the main losses being restricted to 8 big Muslim shops on Station and Imperial Roads. Others were petty shops stocking books, glass bangles, potatoes, coal, ctc. In all 41 shops were looted and 16 burnt of which only three are total wrecks. Intensive efforts are being made to recover the property and to arrest the offenders. A few truckloads of property worth thousands of rupees has already been recovered and deposited in the Kotwali.

I have received enquiries from influential Muslims about the Dargah. I am very glad to say that through all these disturbances the Dragah has escaped any damage whatsoever. I should like to assure its devotees everywhere that adequate measures have been taken for its protection and Government will strain every effort to secure its safety. Government also hope that peace and normal conditions will soon be restored in this historic city which enshrings an enviable tradition of communal concord and which is a standing testimony of all that is best in Indian culture.

In view of the complaints which are being received from certain text-book publishers that owing to the shortage of newsprint in sheets with dealers in certain areas at present they have not been able to secure newsprint either in part or in full against permits issued by the Newsprint Officer, the Government of India have decided to extend the time-limit or the purchase of newsprint against those permits up to March 31, 1948, says a Press Note, issued by the Ministry of Industry and Supply, on Dec. 27.

All dealers in newsprints are informed that permits authorising the purchase of newsprint issued to text-book publishers which were valid up to Dec. 31, 1947, stand automatically revalidated up to March 31, 1948.

## "U. N. O. LAST HOPE OF CIVILIZATION"

## Mr. Vellodi's Broadcast

R. M. K. Vellodi, Secretary-General of the Indian Delegation to the United Nations Organisation, giving his impressions of the meetings of the United Nations Organisation in a broadcast from the Delhi station of All India Radio on Dec. 17 said:

What is the United Nations? What happens at Lake Success and Flushing Meadows? What did the Indian Delegation accomplish? The answers to these questions can be clearly comprehended only if one knew the background of events that preceded the meeting of the Assembly.

Between Dec. 1946 when the 1st Session of the Assembly completed its work and Sept. 1947 a few things hap-pened. Early in 1947 Mr. Churchill made his memorable speech at Fulton. It was the first utterance after the end of the World War No. II of a world statesman in which the division was proclaimed of the world into two blocks-the Soviet block -- and those outside it, with an iron curtain in between. Not long after, the President of the United States expounded what has come to be known as the "Truman Doctrine." The economic and financial aid to Greece and Turkey followed. Meanwhile the repeated efforts made by the Council of the Foreign Ministers of U. S., U. K., France and Russia to solve the post-war problems of Europe ended in discomfiture. All efforts towards a co-ordinated control of atomic energy had failed.

#### The Marshall Plan

The Greek question after having been discussed at endless meetings of the Security Council had been finally removed from its Agenda. The Marshall Plan for the economic rehabilitation of Western and Central Europe, a genuine effort to put War-shattered Europe on its feet had become the subject of furious controversy. Everywhere one turned, one heard of 'dollar diplomacy' "containing Russia" and such other passionate outbursts. It was in this setting that the Second Session of the United Nations Assemgly opened at Flushing Meadows and it is against this background that its achievements should be measured.

Those of you who are not familiar with the set up of the United Nations Organization and have not visited New York would perhaps like to know something about the place of these meetings and the nature and the composition of the various Committees that form part of the General Assembly. The United Nations Organisation is at present housed in a very large building at what is known as the village of Lake Success—which actually derives its name from a Lake of that name in the vicinity. This place is 25 miles outside New York City and it is here that the United Nations' very large Secretariat has its headquarters.

Committee Meetings are held in this building. Hall way between New York and Lake Success is Flushing Meadows, where in a building which was originally constructed in connection with New York World Fair in 1935, the plenary sessions of the General Assembly are held. Every possible contrivance has been devised for the comfort of the delegates attending these two places and for the expeditious discounting of the work on which they are engaged. Almost all Delegations live in 1 otels in New York and have to proceed by car every day to these meeting places. The loss of time and inconvenience resulting from the location of these meetings so far away from residences of the delegates are prodigious. However, pending the construction of permanent buildings in New York City these discomforts and inconveniences will have to continue.

Fifty-seven Nations are now represented at the United Nations and each member State is allowed to send to these meetings five representatives and five alternates. Smaller countries that cannot afford to send large delegations find it difficult to be represented at all the Committees.

Arrangements have been made for the simultaneous interpretation of all speeches into five languages-English, French, Russian, Spanish and Chineseso that any one wishing to listen in any of these languages has only to adjust the indicator on his ear-phone to the particular language in which interpretation is desired. The proceedings of each day are printed and circulated the following day in the shape of a journal which is the most efficient condensation of material that I have yet come across. Apart from these journals a vast quantity of literature, such as the verbatim records of the proceedings of the Assembly, the precise of the proceedings of all the Committees and the huge number of documents such as Resolutions, amendments and so forth, are turned out by the Secretariat of the United Nations with a promptness and precision that is truly marvellous Both at Lake Success and at Flushing Meadows suittable arrangements exist for both solid and liquid refreshments.

### Work of Last Session

To go back to the work of the last session of the Assembly this may be divided into four parts. The first consists of the discussions in the plenary session of the Assembly on the report submitted by the Secretary-General of the United Nations on the work of the Organisation during the period that intervenes between the two sessions of the Assembly. This is made an occasion by all Delegations, for general observations on the state of the world in much the same way as the Budget Session of an Assembly or of a Parliament is made the occasion for observation

## INDIAN CHARGE D'AFFAIRES IN BELGIUM

Pending the appointment of an Ambassador the Government of India have appointed Mr. B. F. H. B. Tyabji, I.C.S., as Charge d'Affaires in Brussels, says a Press Communique issued by the Ministry of External Affairs and Commonwealth Relations on Dec. 24.

on the running of the governmental machinery.

The second part consists of elections of member States to the various permanent bodies of the United Nations Security Council, the Economic and Social Council and now the Trusteeship Council. The third part consists of the work in the various Standing Committees. There are six of these namely: Political and Security Committee; the Economic and Financial Committee; the Social and Humanitarian Committee; the Trusteeship Committee; the Administrative and Budgetory Committee; the Legal Committee and now the Headquarters Committees. Every member State is represented in each of these Committees.

The last and final stage is the concluding plenary session of the Assembly at which the reports of the work in the various committees are considered and the Assembly takes decisioms on those questions which had been discussed and on which recommendations had been made to the Assembly. It would take too long to describe in detail the various subjects that came up for consideration before the Committees and before the Assembly. The Political and Security matters assume an air of importance which their intrinsic values do not always justify. But such is the case.

## India's Prominent Part

Among the more important matters discussed during the last session were, the political integrity of Greece; the grant of Korean independence; the future of Palestine; the South African question; the extension of the trusteeship system to South West Africa; the creation of a permanent Committee of the Assembly to deal with questions that arise during the course of the year that intervene between the two sessions of the Assembly; the question of admission of certain States to the membership of United Nations and a vast number of equally important subjects relating to social, economic, legal and budgetory matters. It is significant that on almost every subject dealt with the political Security Committees the United States and U.S.S.R. were opposed to each other. The Latin American countries and some of the Western European countries were usually found on the side of the United States. The Slav States solidly and mostly on the side of U. S. S. R.

I think it is true to say that of all the countries represented at the United Nations Organisation, India alone invariably took an independent line, which in our present state of domestic and other difficulties nover ceased to be

a matter of surprise to many States. India's special concern was of courte the question of Indians in Scuth Africa but she took a very prominent part in many other important subjects and made very useful contributions towards their discussion.

I believe there has been some comment in our Press that the Indian Resolution on the South African question having failed to obtain the requisite 2.314 majority in the Assembly, which India was able to secure during the previous session of the Assembly, this should be regarded as a defeat. Apart from the fact that we failed to obtain the 2-3rd majority only by 3 votes, the fact is that at the last session of the Assemly the general feeling among the Delegation, particularly of South African countries and those of Western Europe, was not so enthusiastically in favour of a condemnation of South Africa as it was in the previous session; and to most members of the Indian delegation who had studied the trend of thought and feeling in the Assembly it was a matter for surprise that we did get the majority that we managed to secure.

## Mrs. Pandit's Speeches

On the Palestine question India consistently supported establishment on an Arab State with safeguards for the Jewish minority. On the Greek question we supported the Russain proposal for the evacuation of British troops from that country. We supported the formation of the Interim Committee which was sponsored by the United States whereas on the question of the admission of new members we followed the correct attitude of admitting only those countries as members of the United Nations whose applications had been recommended by the Security Council. India's attitude of complete impartiality has, I believe, won for her the respect of the member States.

Such in brief was the nature of the business transacted at the last Sessien of the Assembly. If I were asked to say who among the delegates were the most colourful individuals I would say Mr. Vishinsky, the representative of the U. S. S. R. young Mr. Boller, representative of Yugoslavia; and the Chairman of the Indian Delegation, Mrs. Pandit. For sheer eloquence measured in terms of flow of words, I doubt whether any one came within measurable distance of Vishinsky. But it was always a pleasure to watch and listen to young Boller, who very often spoke without notes, never faltered, never stepped for a word but in the most polished and refined French spoke for long periods. His wit and sarcasm were telling.

Mrs. Pandit's speeches always went down very well. They were carefully prepared and were delivered with an ease and charm that are peculiarly her own. I must confess I was disappointed with Mrs. Roosevelt, partly perhaps because the subjects that she bandled did not lend themselves to any great forensic effort.

Thus for well over 2 months we battled manfully over world problems of varying degrees of importence. Towards the end of the proceedings one noticed—cr

## INDIAN CHARGE D'AFFAIRES IN FRANCE

Pending the appointment of an Ambassador the Government of India have appointed Sir N. Raghavan Pillai, I.C.S., as Charye d'Affaires in Parie, says a Press Communique issued by the Ministry of External Affairs and Commonwealth Relations on Dec. 24.

was it only my imagination—a certain drawing tegether of the opposing groups, though the last subject that was discussed in the Assembly, namely, the question of Palestine has left in its train a load of trouble which has already begun to be felt all over the Middle East. In spite however of this unfortunate affair, and in spite of the various decisions taken by the Assembly which had been violently opposed by the U. S. S. R. and the Slav block, there is among all the member States of the United Nations a realization that the United Nations Organisation is indeed the last hope of civilization and it was with this feeling that I left Flushing Meadows on the last day of my stay with the Delegation.

With the flags of the 57 Nations fluttering in the gentle breeze outside the Assembly building I wended my way to New York to find the lights on 'Queen Mary' twinkling in the harbour.—the ship that was to carry me back to England on the following day en route to Delhi.

## UNIVERSITY GRANTS COMMITTEE

(Continued from Fage 103)

Rs. 11 lakhs as loan for the construction of staff quarters, Rs. 5 lakhs for equipping the science laboratory and Rs. 24 lakhs for bringing the library up-to-date. On the recurring side a considerable amount was sanctioned for starting new Readerships and for the revision of salary scales.

For this record in such a brief period the Committee owes a great deal to its former Chairman, Sir Mirza Ismail.

No awards of the Order of British India and Honorary Commissions as ICOS were made on Jan. 1, 1948, as the form which these awards would take in future was under active consideration. The decisions reached will be announced in due course, said a Press Note, issued by the Ministry of Defence, on Dec. 31.

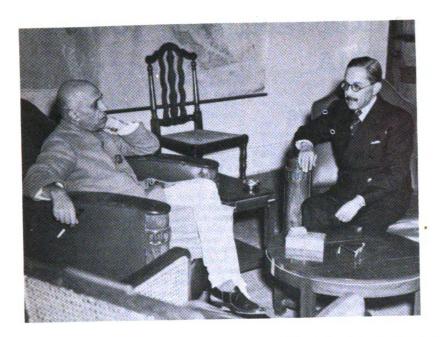

No awards of Jagirs, Meritorious Service Medal, or the Long Service and Good Conduct Medal were made as the future policy which was going to be adopted in making these awards was also under consideration.

# PANDIT NEHRU ENTERTAINS CEYLON PREMIER

The Hon'ble Pandit Jawaharlal Nehru, Prime Minister, gave a buffet dinner in honour of Mr. D. S. Senanayake, Prime Minister of Ceylon, during the latter's recent visit to Delhi. These pictures show (Top L. to R.) Mr. D. S. Senanayake, Mr. R. T. Chari, First Secretary to the Indian High Commissioner in Ceylon, Lady Elmhiret, wife of Air Marshal Sir Thomas Elmhirst, Begum Motamedy, wife of the Iranian Ambassador in India, and Pandit Nehru. (Centre) Sheikh Abdullah, the Kashmir Leader, Mr. R. T. Chari, Mr. V. V. Giri, Government of India's High Commissioner in Ceylon and Mr. D. S. Senanayake photographed at the dinner and (right) Miss Pandit, niece of Pandit Nehru, Mr. V. V. Giri and Mr. D. Senanayake at the dinner.

# FOREIGN AMBASSADORS CALL ON PANDIT NEHRU

Commanding General Shumshere Jang Bahadur Rana, Nepalese Ambassador to India, and M. Novikov, Soviet Ambassador to India, who arrived in Delhi] to take up their appointments last month, called on Pandit Nehru on December 24.

# CENTRAL ORGANISATION FOR INDIANS IN BURMA

## High Commissioner's Message

future independent Burma?
That is a vital question which each one of you is called upon to answer", said Dr. M. A. Rauf, High Commissioner for India in Burma, in a message to the All-Burma 'Indian Conference which met in Rangoon on Dec. 27.

The Conference was inaugurated by Sir B. N. Rao, Constitutional Adviser to the Government of India, and was addressed by Burma's Deputy Prime Minister, Bo Let Ya, and the Foreign Minister, U Tin Tut. It was attended by delegates from various parts of India, and Mr. M. A. Rashid presided

Here is the text of Dr. Rauf's message:—

"This Conference has met on the eve of the most important event in the history of modern Burma. After over a century of struggle against European political domination, Burma is to be free on January 4, 1948.

## **Vital Question**

- "During the last 79 years Indians had acquired a very important role in the economy and administration of this country and it is admitted on all hands that the services rendered by Indians have been of great value.
- "But that is of the past. What is to be the function of Indians in future independent Burma? That is a vital question which each one of you is called upon to answer.
- "The answer is to be sought not merely in the light of personal interests, but in full view of the fact that you are citizens of, or spiritually and culturally bound up with, a country of which you are proud and which wants you, her sons, I mean India. I am sure you will do nothing of which your motherland will be ashamed of.
- "Since my coming to Burma over a year ago, I have hoped Indians in Burma would get together and ponder over the problems facing the community as a whole. "Coday I am happy this conference has been made cossible by the hard work of some of your leaders."
- "It has been the misfortune of India for the past centuries that her sons could only very rarely be found to work in unison. Disunity among us has been the tragedy of Indian history. It was to be hoped that outside India, when freed from local disagreements, Indians would be united. Unfortunately that has not always been possible.
- "In the past we have, on occasions such as this, been able to put our heads together and come to a decision on what

Indians should do. Therefore, I hope this Conference will set an example of unity for Indians and that your decisions would be such as would keep in view the interests of the Indian community as a whole. I do not believe that the interests of the various sections and classes that go to form the Indian community of Burma are absolutely irreconciliable. But it is not enough to pass resolutions, even if they be unanimous.

"In Burma, as everywhere else, you must have a central organisation which would work all the year round. Day after day, new questions arise which cannot be anticipated. They must be resolved. The functions of this organisation would also be to undertake representations of the Indian point of view before the Government and the people of Burma. Also to reassure the community itself that they can lead useful and happy lives in Burma and to give them a lead in all important matters.

"I wish this Conference great success and I hope when you again meet, perhaps next year, you will have a record of achievement to which you may look back with pride. Jai Hind."

#### Burmese Premier's Message

An important announcement of policy towards Indians in Burma was made in the following message to the Conference by Premier Thakin Nu:

I tender to all of you assembled here on this happy occasion hearty greetings and good wishes of the people and the Government of Burma. Many of you were born in Burma, while others may have decided to make Burma their home. To all of you who elect Burma citizenship, let me assure you, on behalf of the Burmese people, of our determination to abide by the terms of our Constitution which guarantees equality between all citizens.

To those of you who prefer to retain their political connections with India and Pakistan, let me say that though you will not be entitled to the privileges pertaining to the citizens of this land, we shall, nevertheless, protect you to the best of our power and endeavour to assist in your lawful avocations.

Now that the Burmese people will be a free people you will, I am sure, find them as courteous and friendly to the nationals of other countries as they have ever been.

You must not resent such permanent immigration laws as we shall be estab-

lishing shortly, for no country can afford to leave immigration uncontrolled. We shall endeavour to make our immigration laws as little vexatious as possible and, while we must exclude from permanent entry into Burma all those not needed for Burmese economy, those that are allowed to join us in this country will be well treated and protected.

We, on our part, hope that the Indian and Pakistani communities in Burma will endeavour, while they are in this country, to be close to us and to try and understand our point of view.

All those who decide to reside permanently in Burma, we would expect them to indentify themselves with the people of Burma with whom they will be one politically. They will form an important ingredient in the composition of the new Burmese nation. The need for national unity is paramount and all races who make their homes in Burma must co-operate to that end.

The continuance of Burma's happy relations with India and Pakistan depends a great deal on the men and women of the Indian races who will reside in Burma. To a large extent it is with their eyes that India and Pakistan will see Burma, and to an equally large extent the people of Burma will form their ideas of the people of India and Pakistan from the Indians and Pakistanis that they meet in this country.

## Long-term Interests

The long-term interests of our three countries, the continuance of happy relationship between them, is of far greater moment than any immediate advantage or disadvantage that may ensue from any particular measure having application to the Indian and Pakistani residents of Burma. I beg all of you who are assembled here today, and all those whom you represent, to have ever in view the continued friendship of our three countries and to work and live in such a way that you will retain the friendship of the indigenous races of Burma, and also that in interpreting the Burmese people and the Burmese Government to your own countries you will endeavour to understand us and our difficulties, so that you may be able to convey a fair and just impression of our land.

Through you, may I and the people whom I represent, convey to the great Dominions of India and Pakistan the greetings and the good wishes of the people of Burma. May these two great Dominions be ever happy and prosperous and may they enjoy for ever the sovereignty that was restored to them last August.

India's progress in the fields of trade, industry and science will be demonstrated to the peoples of South-East Asia at an exhibition, to be held by the Government of India, in Singapore in the last week of January and the first week of February, 1948. For this purpose the exhibits supplied by Indian firms for the Bangkok Exhibition, which was arranged for early December but was cancelled owing to unsettled conditions in Siam, will be sent to Singapore.

## COMPOST DEVELOPMENT PLANS

from me," humorously remarked Mahatma Gandhi when the members attending the All-India Conference on Compost sought his blessings at the conclusion of their labours in New Delhi on Dec. 17. Sir Datar Singh presided over the Conference.

Some of the resolutions passed at the Conference are:—

This Conference is of the definite opinion that the compost programme offers vast potentialities for increasing food production in the country.

This Conference urges on the Provincial Governments the needs for accelerating the pace of the existing schemes, so that:—

- (a) under the urban compost scheme, all municipalities, notified areas and town committees are brought under the scheme within the next two years.
- (b) under the village compost scheme, at least 10 percent of the total number of villages in the Provinces are taken up during 1948-49 and an additional 10 percent are taken up in each succeeding year.

In regard to the Town Compost Scheme, this Conference makes the following recommendations:—

- (a) In view of the present food situation it should be made obligatory on all municipalities, notified areas and town committees that they should convert the whole of their refuse material into compost.
- (b) The Health Department of the Government of India is requested to issue a directive to Provincial Governments recommending to them the adoption of the Compost System in reference to other methods of disposal of refuse.

## Village Compost Scheme

Regarding the Village Compost Scheme, the Conference recommends that:—

- (a) The scheme should preferably be operated through Village Panchayats, Kisan Sabhas or Village Co-operative Societies; and a Compost Supervisor should be posted for each group of 10 villages.
- (b) Where the villagers possess insufficient or no land for preparing compost, a common land should be acquired by the Government for the purpose in the immediate vicinity of the village.
- (c) In order to popularise the composting habit among the younger generation of villagers, a practical course in composting should be included in the syllabus in all primary and secondary schools situated in villages.

This Conference is of the opinion that transport has been the chief limiting factor for rapid expansion of the compost

scheme and urges on the Government of India and on Provincial Governments to give all necessary help to composting organisations in getting sufficient number of motor trucks for the purpose. It also strongly urges that the trucks at present in use by different Government Departments should also be utilised whenever possible for compost distribution. Transport by canal may also be considered wherever possible.

## Intensive Propaganda

This Conference urges that intensive propaganda should be carried out among farmers to point out the value of compost manure and for this purpose it urges on the Central and Provincial Governments to arrange for carrying out the above propaganda through the medium of ballads, dramas, radio talks, lantern slides, films, posters, pamphlets, exhibition stalls, demonstration plots, lecture tours. etc. Existing field publicity vans, newspapers, journals and other media should also be utilised for this purpose.

The Conference suggested the formation of a Central Compost Development Committee consisting of non-officials and officials and comprising the delegates who attended the Conference as a nucleus, with Dr. C. N. Acharya as Secretary. This would act as an advisory body to the Central and Provincial Governments and meet periodically in different Provinces for the purpose.

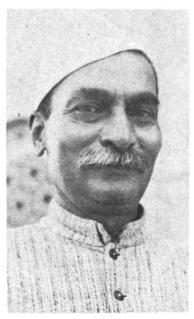

#### **PLANT PROTECTION SCHEMES**

To meet the challenge of food scarcity in the country, the Ministry of Agriculture is giving high priority in its "Grow More Food" campaign to the control of pests and diseases, which cause considerable damage to food crops. This loss is estimated at about Rs. 500 crores a year.

Provincial and Stato Governments have been advised regarding the urgency and importance of sanctioning and implementing plant protection schemes. The first step they are likely to take, is to appoint qualified mycologists and entomologists in their respective areas.

Another Royal Indian Air Force Ground Training School, known as No. 3 G. T. S. has been established at Arkonam, near Madras, under the command of Squadron Leader Rawel Singh, M.B.E., to raise the educational and service standards of airmen wishing to remuster to other RIAF trades.

This is the third Royal Indian Air Force Ground Training School to be set up, the other two being No. 1 G. T. S., at Jalahalli, commanded by Wing Commander R. Sitaram, which trains the non-technical personnel of the RIAF, and No. 2 G. T. S. at Tambaram, commanded by Group Captain S. N. Goyal, O.B.E., which provides all the technicians for the R. I. A. F.

Dr. Rajendra Prasad

## WORK OF FOOD MINISTRY OF NATIONAL IMPORTANCE

SINCE I took over the Food portfolio 16 months ago, political problems before the country have completely changed, but the work of the Food Ministry continues to be of the greatest national importance," said Dr. Rejendra Prasad, Food Minister, at a farewell function organised by the Ministry of Food on Dec. 19.

"The country's food position," continued the Food Minister, "has remained difficult right through these 16 months, and still continues to be so. If we have succeeded in resolving the crisis, even in a limited measure, the credit goes entirely to those who have co-operated with us in this task, and if any mistakes have been made, the fault is mine".

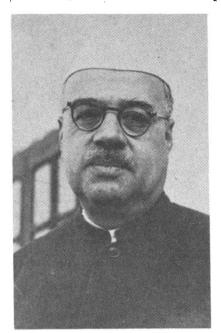

Referring to the policy of "gradual decontrol" adopted by the Government, Dr. Rajendra Prasad stated that this task was not easy, but the Government were guided by their desire to bring back the country into its pre-war position in food. The responsibility of the Food Ministry would therefore continue to be as great as in the past.

#### Land of Milk and Honey

Turning to the prime necessity of increasing food production, the Food Minister stated that the responsibility in this direction lay on the Ministry of Agriculture. India had once been famed as the "land of milk and honey"; they should strive to reach that position once again. "Although I am leaving the Ministries of Food and Agriculture," concluded Dr. Rajendra Prasad, "I shall continue to take the greatest interest in the problems of food."

Earlier Mr. B. R. Sen, who has taken over the Secretaryship of the Ministry of Agriculture, and Mr. R. A. Gopalaswami, Food Secretary, thanked Dr. Rajendra Prasad on behalf of their respective Ministries.

## NEW FOOD MINISTER

Mr. Jairamdas Daulatram

Mr. Jairamdas Dauiatram, who recently relinquished the Governorship of Bihar and who has been appointed by H<sub>is</sub> Excellency the Governor-General to be one of his Ministers assumed charge of his office on January 14.

The Hon'ble Mr. Jarramdas Daulatram, who has been allotted the portfol o of Food and Agriculture, was appointed in place of the Hon'ble Dr. Rajendra Prasad, who left the Cabinet to become Congress President.

Brig. P. N.Thapar has been appointed officiating Chief of the General Staff, Indian Army Headquarters, with the acting rank of Major-General, in place of Maj.-Gen. K. M. Cariappa, who has become General Officer Commanding-in-Chief, Eastern Command.

Commissioned 21 years ago from Sandhurst, he spent nearly ten years with the 1st Punjab Regiment. He later attended staff courses both at Quetta and Minley-Manor, England. During World War II he saw service in Burma in 1941 and two years afterwards was in the Middle East and Italy. After a spell of duty as Assistant Military Secretary at General Headquarters, India, he was selected to serve on the Army Reorganisation Committee. With the British Headquarters in Aden he was also for some time a first grade staff officer.

In early 1946 Gen. Thapar commanded the 1st Bn. 1st Punjab Regiment in Indonesia and later commanded 161st Indian Infantry Brigade in East Bengal. He took up the appointment of Director of Military Operations and Intelligence at Army Headquarters, India, on Aug. 15, 1947.

## Pandit Nehru's Appeal For Peaceful

## Settlement of Dutch-Indonesian Issue

PANDIT Nehru, Prime Minister of India, has appealed to the Indonesian Republic and the Netherlands Government for an early and peaceful settlement. Citing the example of the peaceful transfer of power from British to Indian hands, he urged them to work in a similar spirit for a similar consummation.

The message was conveyed during a party given at Batavia by Mr. N. Raghavan, Consul-General for India in Batavia, at which were present both the Dutch and Indonesian Delegations to the "Renville Talks"—their first social meeting since the July hostilities.

Among the guests were the Netherlands East Indies Governor-General and Mrs. Van Mook, the Dutch Minister for Reconstruction, members of the U.N. O. Good Offices Committee, the Indonesian Premier and Chairman of the Indonesian Delegation, the Chairman of the Netherlands Delegation and members of the Consular Corps in Batavia.

Pandit Nehru's message, received

during the party, was read out. It said:

"I am happy that representatives of the Netherlands Government and the Indonesian Republic are meeting tonight as your guests at a party. India's sympathy for Indonesia's freedom is well known. As a lover of peace, India earnestly desires that differences, which unhappily have arisen between the Governments of Netherlands and the Republic of Indonesia, and which have led to armed conflict between the two, should be settled without further bloodshed, as quickly as possible.

"In India the transfer of power from the British to Indian hands has been achieved without strife by the exercise of understanding and the spirit of give and take. I would appeal to our Indonesian and Dutch friends to work for a similar consummation in a similar spirit.

"India will watch the negotiations now in progress under the auspices of the Sub-Committee of U. N. with interest and hope".

## Standing Finance Committee for Railways

The first meeting of the Railway Standing Finance Committee of Indian Parliament, was held on December 16, under the Chairmanship of Dr. John Matthai, Minister for Railways. Eight out of 11 members attended.

The Committee confirmed the action of Government in having given notice of special purchase of the Darjeeling Himalayan Railway Extensions as a preliminary to the conversion of the line from Kishanganj to Panchanai, as part of the through direct link to Assam. The purchase price is expected to be approximately Rs. 70 lakhs. The Committee also approved of the preliminary action taken by the Railway Board to set up the organisation necessary for constructing the link, which will involve the building of two major bridges on the Tista and Torsa Rivers.

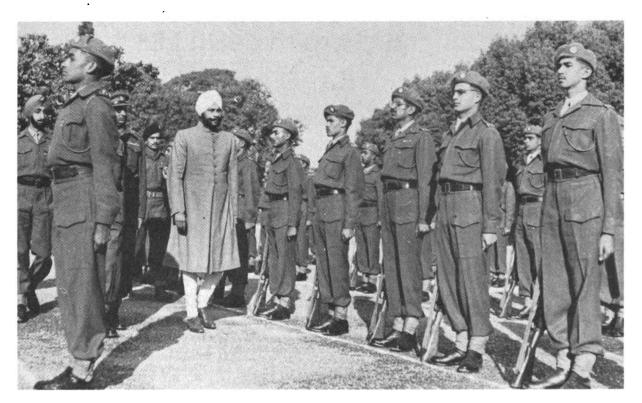

The Committee approved of the Rolling Stock and Machinery Programmes for 1948-49, involving a total expenditure of Rs. 26.7 crores, out of which Rs. 19.14 crores will be charged to the Depreciation Fund. The Machinery Programme is the fourth annual programme of the 5-year Post-War Machinery and Plant Rehabilitation Programme framed in July 1944, but it is very likely that the Programme will extend beyond the five years. The Rolling Stock Programme provides for the purchase of 243 loco-

motovies and 109 boilers, and the building of 58 metre-gauge locomotives in the B. B. and C. I. Railway Workshop will be taken in hand at Ajmer. There is provision for 1,100 coaching vehicles, including 648 thrown forward from the previous programme, and for 6,359 wagons including 1,000 thrown forward. Of the coaching stock, 350 Bogie Broad-Gauge coaches will be obtained from coach building firms in India and the rest will be built in Railway Workshops. The 350 broad-gauge coaches to be obtained from manufacturers in India will be all steel coaches 10' wide, while the coaches to be built in Railway Workshops will be to conventional design.

It is expected that a start will be made with the manufacture at Bangalore of the under coaching stock the Railway Board have been engaged in designing, and if the prototypes stand the necessary tests, 250 such coaches (150 Broad-Gauge and 100 Metre-Gauge) may be built during 1948-49.

The pilgrim ship "Akpar" sailed from Jedda on Jan. 4, with 1,373 pilgrims. She will disembark about 340 pilgrims at Karachi and the remainder at Bombay, says a Press Note, issued by the Ministry of External Affairs and Commonwealth Relations, on Jan. 9.

Sarder Baldev Singh, Defence Minister, took the salute at the Passing Out Parade of Officer cadets at the Indian Military Academy, Dehra Dun, on December 20. Picture shows the Defence Minister inspecting the cadets on parade

## KEEP INDIA'S FLAG FLYING

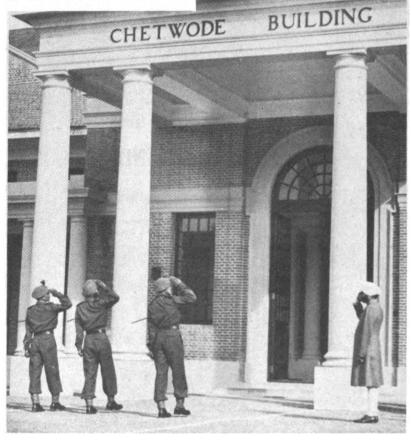

# Defence Minister's Address to Military Cadets

No army can be efficient without sound training. The Government of India is determined to do everything possible to get the best instructors, equipment and anything else required for this purpose", said the Hon'ble Sardar Baldev Singh, India's Defence Minister, addressing the cadets of the Indian Military Academy, Delra Dun, at the passing out parade on Dcc. 20. One hundred and eighty-nine cadets who passed out that day would be Commissioned in the Indian Army.

Speaking to the cadets, Sardar Baldev Singh said: "I am today addressing you as a free Indian, in a free India—a status we have attained after making great sacrifices. You are the builders of our nation. It will be your foremost duty to keep India's flag flying.

"It is the first time you have, as Commandant, an Indian, Brigadier Thakur Madho Singh, D. S. O., in charge of this great institution. British officers did a good job here in raising the standard of this institution and it is now for you to maintain the high standard, if not raise it still higher.

"No army can be efficient without sound training. The Government of India is determined to give all possible

The Defence Minister taking the salute with the cadets marching past from the parade ground into Chetwode Building

help to get the best instructors, equipment and anything else required for this purpose.

"The Indian Army is being nationalised very rapidly and you have to shoulder a much greater responsibility now. No Indian can tolerate any foreign power looking at India with an evil eye".

"I appeal to you all young officers," concluded Sardar Baldev Singh, "to be above politics and to remain loyal to the Government".

#### Commandant's Address

"The unique distinction of being the first batch of Cadets to pass out under your own flag and be admitted to the Officer ranks of the Army of free is yours", said Brigadier Madho Singh the Commandant of the Acadeux.

He added: "You are the custodian of India's flag which is the dearest thing we have. To safeguard the honour of this flag it may even call for a supreme sacrifice which must be paid when occasion demands it. The division of the country has made the partition of the armed forces inevitable and has resulted in the establishment of another Pakistan Military Academy which is being formed in Kakul with a nucleus of staff from this Academy".

The Commandant reminded the cadets of the motto of the Academy: "the Honour, Welfare and Safety of the country comes first always and everytime; the honour, welfare and safety of the men you command come next and finally your own safety and welfare.

"Go forward to serve this great land of yours which needs the services, of a soldier more than it has ever done before in its long history", concluded Brig. Madho Singh.

Sardar Baldev Singh decorated Lt. Col. Kanwar Zorawar Singh with the ribbon of the Military Cross and Submaj. Hoshiar Singh Gurung Bahadur with the ribbons of OBI 2nd Class. Senior Under Officer, Cadet Harbhajan Singh Grewal was the recipient of a gold medal and Senior Under Officer, Cadet Jai Krishen won a silver medal.

The Defence Minister on Dec. 19, visited St. Dunstan's School for the war-blinded and Gurkha Rifles' Regimental centres. He also inspected the Technical Development establishment and an army formation.

The question of awards for acts of gallantry, is under review by Government of India and recognition of valour in the Kashmir operations will include issue of Certificates of Gallantry. These will, for the present, be in the form of Commendation Cards and issued by the Commander-in-Chief, Indian Army, in respect of Army personnel and Air Marshal Commanding R. I. A. F., in respect of R. I. A. F. personnel, says a Press Note, issued by the Ministry of Defence on Dec. 30.

# H. M. S. "ACHILLES" TO BE TRANSFERRED TO R. I. N.

## Three Modern Destroyers to be Purchased

THE Government of India have agreed with His Majesty's Government in the United Kingdom that H. M. S. Achilles, a Leander class Cruiser of 7,000 tons, should be transferred to the Royal Indian Navy, said a Press Communique, issued by the Ministry of Defence on Dec. 27.

H. M. S. Achilles was completed in 1933 and has a main armament of six 6-inch guns and a secondary armament of eight 4-inch anti-aircraft guns. The torpedo armament comprises eight 21-inch torpedo tubes. The designed speed of Leander Class Cruisers is 32 5 knots.

The cost of this ship, when constructed was Rs. 2 crores. The complement of H. M. S. Achilles will be about 30 officers and 750 ratings. Some of the officers and ratings forming the crew of this ship are already in the United Kingdom where they have been undergoing courses of instruction and the balance of the crew will be despatched to the United Kingdom within the next few weeks.

## Purchase of Destroyers

It is hoped that H. M. S. Achilles will reach Indian Waters in the autumn of 1948.

Except for 4 officers and 16 warrant officers the whole of the ships company of H. M. S. Achilles will be composed of Indians.

Negotiations are also in progress for the purchase of three modern Destroyers, which it is hoped to take over towards the end of 1948. The Covernment of India intend to build modern naval training establishments in India but it will be some time before these are ready for use. Arrangements have been made with the Admiralty to undertake the training of a large number of R.I.N. officers and ratings in the United Kingdom during 1948 and a party of 18 officers and 60 ratings left for the United Kingdom in the hired transport Francon on Dec. 13.

Two sloops of the R. I. N., H. M. I. S. Kistna, and H. M. I. S. Cauvery left India on Dec. 23, with a contingent of 400 ratings for training in the United Kingdom and a further 30 officers will be leaving India for the United Kingdom in the near future. These officers and men will be trained in the Royal Naval Gunnery School (H. M. S. Excellent) the R. M. Electrical School (H. M. S. Collingwood) the R.N. Navigation School (H. M. S. Dryad) and the R. N. Torpedo School (R. M. S. Defiance).

The two schools are entirely manned by Indians, the Commanding officers being Commander R. D. Katari, R. I. N. and Lieut-Commander Sawhny, R. I. N.

The admiralty have also agreed to accept 36 Indian cadets for training each year for the next three years in place of the 16 per year who have been sent previously. The Government of India are grateful to H. M. G. for the facilities which have been afforded for the training of their personnel during the period their own establishments are under construction.

## STANDING COMMITTEE FOR DEFENCE

In place of the Defence Consultative Committee, which ceased to function from Aug. 15, 1947, a Standing Committee of the Legislature for the Ministry of Defence has been constitued.

The following ten members have been declared duly elected by the Constituent Assembly of India (Legislative) to serve on this committee until the end of the next financial year.

Ministry intend to undertake. Major questions of general policy and financial matters and any other topic of public importance within the field of the Committee, which the members of the Committee may propose for discussion, will also be included in the agenda.

legislative proposals which the Defence

The functions of this Committee will be purely advisory.

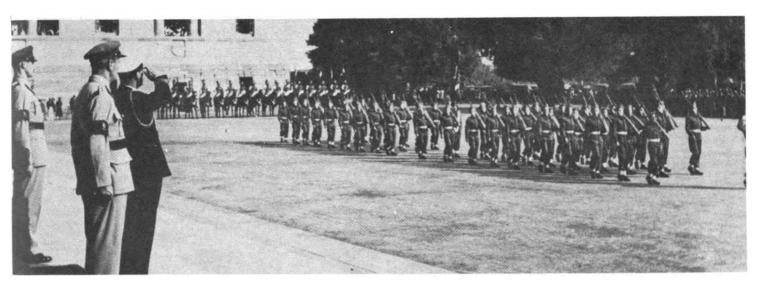

## Members

(1) Pandit Hirday Nath Kunzru, (2) Sardar Jogindra Singh, (3) Mr. Manikyalal Verma, (4) Mr. Mohahlal Gautam, (5) Mr. C. M. Poonacha, (6) Mr. Hari Vishnu Kamath, (7) Maj. Gen. Maharaja Himmat Singhji, (8) Pandit Thakardas Bhargava, (9) Mr. S. M. Patil and (10) Mr. Hussain Imam.

Among the subjects which will be laid before the Standing Committee will be non-official bills introduced or proposed to be introduced in the Assembly and The Ministry of Health, Government of India supplied up to December 15, one million doses of vaccine lymph for vaccination against small-pox. Of these \$56,045 doses were sent to East Punjab, 212,720 doses to Kurukshetra; 10,100 to Kashmir; 5,800 doses were given to the Delhi Province and 2,500 doses for the use of non-Muslims in Pakistan.

The vaccine was prepared at the various Institutes in Belgam, Nagpur, Calcutta, Madras, Ranchi and Nainital.

From the steps of Government House, New Delhi, Lord Mountbatten, Governor-General of India, bids farewell to the contingent of the last British troops to leave Delhi—the First Royal Fusiliers and the Second East Lancashire Regiment

# LORD MOUNTBATTEN'S FAREWELL TO BRITISH TROOPS

BIDDING farewell to contingents of lst Bn. Royal Scot Fusiliers and 2nd Bn. East Lancashire Regiment at a parade on Dec 19, at Government House, H. E. Lord Mountbatten, Governor-General of India, said:—

"I am very glad to have the opportunity of saying goodbye to representatives of the last British Brigade to leave Delhi. There are no two battalions in the whole of the British Army whom I would sooner see represented on parade today than your two, not only because of your ancient history and long association with India, but particularly because we were associated together in the war.

"The first battalion, Royal Scots Fusiliers, which was raised 270 years ago, first came to service in India nearly a hundred-and-fifty years ago.

"The second Battalion, East Lancashire Regiment, which was raised 200 years ago, first came more than 120 years ago for service in India. But it is your last tour of service which is the most important and which should make the most lasting impression.

## Tribute to 36th Division

"After both your Battalions had carried out the Madagascar landings, with the planning of which my Combined Operations Headquarters in London were associated, you formed part of the 36th Division. In February, 1944, during the crucial phase of the battle for Arakan, the 36th Division came in and made pertain of the first victory which the Allies won in South-East Asia.

"Later, when the famous American General, Joe Stilwell asked for a British Division to help him with his five Chinese Divisions and his American Brigade on the North-East front of Burma, I personally selected the 36th Division as being the ideal unit for the job, under Maj.-Gen. Frankie Festing. Your Division covered itself with glory in the difficult fighting, and even got a high measure of praise from Gen. Stilwell,

who was not known as Vinggar Joe for nothing.

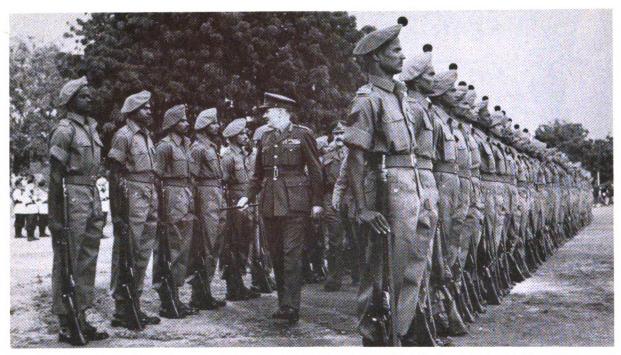

"After the war there came these great changes. As you know, with the passing of the Indian Independence Act and since the transfer of power on the 15th August, relationships between the United Kingdom and India rest now on only two factors—friendship and trust. There are no better factors in

Admiral Sir Arthur Palliser, British East Indias Naval C.-ir.-C. met Lord Mounthatten at Government House, New Delhi, on December 18. Many senior officers of the Armed Services were present at the New Dethi Railway Station on December 30, to bid farewell to General Sir Rob Lockhart, Commander-in-Chief, Indian Army, who left for Bombay on relinquishing his appointment. Picture shows General Lockhart inspecting a Guard of Honour provided by a detachment of 4th Bn. The Madras Regiment

the world on which relationships can be based.

"You were in Delhi when the troubles started, and the Government of India, I am certain, decided correctly when they did not ask any British forces to come and assist the very small garrison that was left in Delhi, in dealing with the riots.

#### Noble Work

"I am proud to think, however, that Tommy Atkins was not prepared to sit down and do nothing while there was trouble all round, and the battalions of these Brigades, including the Bcd-fordshires and Hertfordshires, who have already left, volunteered their service to help with any of the refugee camps, Muslim or non-Muslim in Delhi.

"The Delhi Emergency Committee decided to accept their ofter, and as you know, the Battalions worked in the Purana Qila and Humayun's Tomb camps, where they did noble work, work which will not be easily forgotten, and which contributed greatly to that state of friendship on which our future relations between the two countries will depend.

"The Prime Minister, Pandit Nehru, asked me personally to give a message to you on behalf of the Government of India, and to ask you to pass it on to the rest of the Brigade when you meet them on board ship. It is that the Government of India is grateful for what the 16th Brigade did in assisting them in Delhi and have charged me in bidding them farewell, to wish you a happy voyage home and the best of luck in the future".

## GEN. SIR ROB LOCKHART LEAVES DELHI

ANY senior officers of the Armed Services were present at the New Delhi Railway Station on Dec. 30 to bid farewell to General Sir Rob Lockhart, K. C. B., C.I.E., M.C. Commander-in-Chief, Indian Army, who left by train for Bombay on relinquishing his appointment.

A guard of honour composed of detachments from the 4th Battalion the Madras Regiment and the 1st Battalion 5th Royal Gurkha Rifles gave the general salute when the Commander-in-Chief arrived on the platform. General Lockhart inspected the guard of honour and talked to officers and men. As the train steemed away the guard presented arms and the band of the Rajputana Rifles, which was in attendance, played "Aud Lang Syne".

## 34 Years' Service

Among those who were present on the platform were Colonel Currie, Military Secretary to the Governor-General, representing His Excellency, Lieut.-General F. R. R. Bucher, Chief of the Staff, Indian Army, Lieut.-General D. Russell, G. O. C.-in-C., D.E.P. Command, Lieut.-General Sir Arthur Smith, Commanding British Forces, in India and Pakistan, Major-General Rajendrasinghji commanding Delhi Area, Air Marshal Sir Thomas Elmhirst, A.O.C.-in-C. and Major Generals Srinagesh, Swinburn, Dhillon, Rudra, Stable, Steadman and Thapar.

General Lockhart is retiring after over 34 years' service in the Indian Army.

Commissioned in 1913, after Marlborough and Sandhurst, he was posted to 51st Sikhs (Frontier Force) in March 1914 and fought with them in Egypt and Mesopotamia in World War 1, winning the M. C. and being mentioned in despatches.

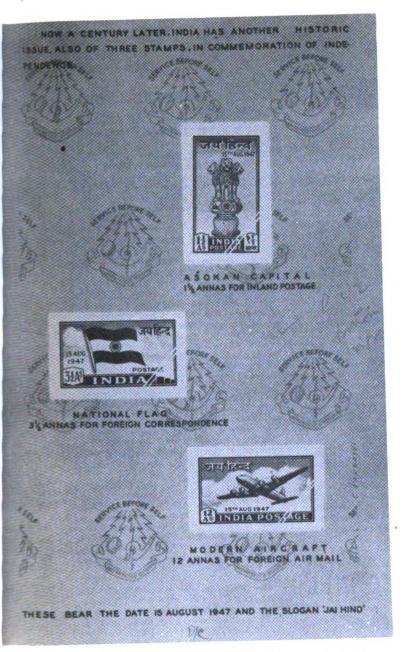

He graduated from the Staff College at Chamberley in 1927 and was Brigade Major at Kohat and General Staff Officer (Intelligence) at Army Headquarters, as it was then called, before being appointed Military Attache in Afghanistan in 1934. He became Commanding Officer of his battalion in 1936 and in 1937 he officiated in command of the Jubbulpore Brigade and in 1938-39 the Vana Brigade.

In February, 1939, General Lockhart was appointed Deputy Director of Staff Duties and in March became Director, an appointment which he held with an interval of two months until September 1941.

In 1941 he became Major-General and was appointed Secretary of the Military Department at the India Office in London, a post he held for two years, when he assumed command of the L. of C. Area at Ranchi. He became Deputy Chief of General Staff in May 1944.

In April, 1945, he was appointed General Officer Commanding-in-Chief, Southern Command, where he remained until June, 1947, when he was made Governor of the North-West Frontier Province at the time of the referendum. He successfully fulfilled his mission as Governor during the historical period in August 1947. General Lockhart assumed his present appointment on August 15, 1947.

## India's Commemoration · Stamps

The postal system in India is, perhaps ancient as her temples. For, like all postal systems, it was born of the necessity of maintaining communication, so that the emperor keep in touch with the officers in charge of provinces at a distance from the capital; and himself, be kept informed of what was taking place.

Ibn Batuta, travelling in India, in the time of Mohamed Bin Tughlak, in the

middle of the fourteenth century says:-

"There are in Hindustan, two kinds of couriers, horse and foot; these are generally termed "El Wolak", the horse-courier which is generally a part of the Sultan's cavalry, is stationed at a distance of every four miles. As to the foot-couriers there will be one at a distance of every mile occupying stations which they call "El Davah" and making on the whole three miles; so that there is, at the distance of every three miles, an inhabited village, and without this, three sentry boxes where the couriers sit prepared for motion with their loins girded. In the hands of each is a whip with their loins girded. In the hands of each is a whip about two cubits long, and upon the head of this are small hells. Whenever, therefore, one of the couriers leaves any city he takes his despatches in one hand and the whip, which he keeps constantly shaking, in the other. In this manuer he proceeds to the nearest foot courier and, as he approaches, shakes his whip. Upon this, out comes another who takes the despatches and so proceeds to the next. For this reason it is that the Sultan receives his despatches in so short a time".

Fecsimile of world's first air mail letter

The postal service in India was first thrown open to the public in 1837, charges were levied in cash, and the lowest rate being two annas for every hundred miles, copper tokens of the value of two annas were struck and made available for the payment of postage.

The first issue of postage stamps in India, was made in Sindh

in 1852. They were of three kinds.

1. The design embossed on white paper, without colour.

Blue, embossed on white paper. The design embossed on vermilion wafers.

The first official air mail flight ever undertaken was on the 18th February, 1911 when 6500 letters and postcards were flown from the U. P. Industrial and Agricultural Exhibition grounds in Allahabad to Naini Junction by M. Pequet, a French aviator. A souvenir postmark was provided by the Postmaster-General U. P. for the occasion, the seal being destroyed immediately after flight.

## Vaccination Certificates for Passengers Health Minister Visits Going Abroad

ONSIDERABLE difficulty been experienced recently by Indian passengers going abroad, on account of their inoculation and vaccination certificates being found defective by the countries of their destination, says a Press Note, issued by the Director te-General of Health Services, on Dec. 14.

The Government of India, therefore, want to bring to the notice of passengers proceeding abroad, and of the medical profession generally, that according to international requirements certificates of inoculation and vaccination against cholera, small-pox, typhus and yellow fever must be in the internationally prescribed form.

#### Yellow Fever

Copies of prescribed forms can be obtained from the nearest Administrative Medical Officer. These forms should be filled in by the passengers doctor very carefully, to see that all items have been accurately completed as any defective of incomplete answers to the various items may result in the certificate not being recognised by the countries of transit and destination, and the passenger may, in consequence, he placed in quarantine.

As regards certificates of inoculation against yellow fever, the medical profession

and the public are hereby warned that on account of certain technical difficulties in the storage and administration of yellow fever vaccine, this vaccine is not available to the doctors or the public and certificate cannot be issued in India by anyone except by the following five Government centres of inoculation:

- 1. Haffkine Institute, Bcmbay.
- 2. All-India Institute of Hygiene and Public Health, Calcutta.
- 3. King Institute of Preventive Medicine, Guindy, Madras.
- 4. Central Research Institute, Kasauli.
- 5. The Provincial Public Health Laboratory, New Delhi.

Vaccinations should be arranged, by appointment, with the nearest of these] centres where internationally recognised certificates on the prescribed form will also be issued.

The Government of India propose to take legal action against any unauthorised issue of yellow fever certificates. The medical profession are, therefore, warned not to issue yellow fever vaccination certificates under any circumstances whatsoever and to direct passengers requiring such certificates to one of the above-mentioned centres.

## DEMOBILISED MEDICAL PERSONNEL **Employment and Training Facilities**

Medical Resettlement Organisations at the Centre, in the Provinces and in the States have, up to end of November, 1947, placed 1,253 ex-service medical, nursing and ancillary personnel in employment and 467 in training, out of 5,533 and 1,338 applications for employment and training respectively, says a Press Note, issued by the Directorate General of Health Services, on Dec. 20.

These resettlement organisations consist of a Central Medical Employment Bureau in the office of the Director-General of Health Services, New Delhi, and Provincial or State Medical Employment Bureau in Provinces and States. The bureaux are attached to the offices of Surgeons-General, Inspectors-General of Civil Hospitals in various Provinces and to the offices of the administrative medical officers of the various States.

Medical, nursing and ancillary personnel who have done war service, are given assistance in securing suitable employment, or in arranging appropriate training in medical, nursing and allied sbjects. They have been granted several concessions in such matters as increased grades, counting of war service towards increments, re-

servation of vacancies, etc. Candidates undergoing training are entitled to financial concession in the shape of free education, including tuition and examination fees, books and equipment and a maintenance allowance, based on conditions prevailing in the district, province or area concerned.

These bureaux also meet the requirements of factories or institutions, who may require the services of medical or public health officers, nursing personnel and technicians. They should contact the nearest medical employment bureaux.

All ex-members of the Armed Forces, or their dependents or representatives, who have preferred appeals against the decision of the Government of India rejecting their pension claims should communicate their present addresses to the joint Secretary, Ministry of Defence (Pensions Branch), Delhi. Defence (Pensions Branch), Delhi, immediately, says a Press Note, issued by the Ministry of Defence on Jan. 7.

The disposal of their pensions appeals is being held up for want of information regarding their a hereabouts.

# Eye Hospital

The Hon'ble Rajkumari Amrit Kaur, Minister for Health, Government of India, minister for fleath, Government of Irale, paid a visit to Shroff's Charity Eye Hospital in Daryaguni, Delhi, on Dec. 22. She spent about an hour there going round the various wards, operation theatres, etc.

The hospital is housed in a spacious building and has a normal strength of 104 beds. The months of March and April in the beginning of the year and October and November towards the end are rush periods when large numbers of people come from rural areas for cataract operation. To meet this emergency, 46 additional beds are provided in verandahs and tents are verandahs and tents are pitched to accommodate another 50, if necessary. There is an Out-Patient Department where a large number of patients are attended to every day.

The treatment of patients is entirely free. They are also fed and given clothes at hospital expense, while those requiring eye-glasses get them without payment. This has put a severe strain on the finances of the hospital, resulting in a deficit of Rs. 5,000 in this year's budget.

The hospital gets an annual grant of Rs. 10,000 from Government and Rs. 1,400 per month from the Delhi Municipality. It also receives donations from philanthropists occasionally. The entire requirement of hospital linen is met free of cost by two mills in Delhi, while some blankets are provided every year by a third.

The Minister was pleased with the arrangements. She said the hospital was doing good work and deserved every help from Government and the public alike.

## EMPLOYMENT FOR WOMEN

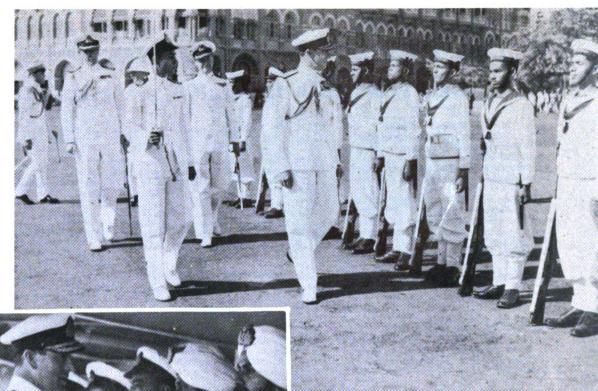

Facilities for employment assistance to women have now been extended by the Ministry of Labour. Women can new be registered at all Employment Exchanges and District Offices besides the Regional Exchanges, where there are special women's sections.

Up to November, 1947, nearly 7,300 women were registered, of whom over 1,750 were found work in large variety of occupations such as typists, stenographers, clerks and telephone operators.

During the last six months between 300 and 400 employers have notified demands specifically for women workers. As a rule, however, women are considered equally with men for all vacancies notified except when they are for male workers cnlv.

Over 860 women are at present being trained in the technical and vocational training centres set up by the Labour Ministry. The trades taught include stenography, typing, hair-dress ng, commercial and clerical work, tailoring, telegraphy and teleplone operating, interior decoration, domestic science and labour welfare.

H. E. Lord Mount-batten, Governor-General of India, accompanied by H. E. Sir John Colville, the then Governor of Bombay returned calls on the Commander-in-Chief, East Indies Station, and Flag Officer Commanding R. I. N. on H. M. S. "Norfolk" during his recent visit to Bombay. (Right) Lord Mount-batten inspecting a Guard of Honour provided by the R. I. N. at the Gateway of India

## R. I. N. OFFICERS AND MEN TO BE TRAINED IN U. K.

M. I. Sloops "Kistna" and "Cauvery" are leaving shortly for the United Kingdom to transport about 300 officers and men of the R.I.N. who have been detailed to undergo training in the United Kingdom.

The majority of these officers and men will undergo training at Portsmouth and the remainder will go to Plymouth and Chatham. Some of these officers and ratings will do cruiser training and the others, training in Special Branches.

#### Training Courses

The courses vary in length. Some are only for four weeks and others for so long as nine months. More efficers and men will have to be sent later to complete the cruiser complement for H. M. S. "Achilles," which the Government of India is acquiring from the Admiralty.

Already there are 90 officers and men who have done training in a cruiser, or are doing it, or are standing by H.M.S. "Achilles". which will have a complement of 800. A number of the men now proceeding to the U.K. will be attached to the R. N. ships. When a sufficient number of officers and men have been trained in cruiser work they will man

H. M. S. "Achilles" and bring it to India

The class of Destroyers, which the Government of India are buying from H. M. G. is still under consideration.

Air Commodore Mehr Singh, D.S.O., has taken over command of No. 1 Operational Group of the Royal Indian Air Force located at Palam aerodrome (New Delhi).

The Air Officer Commanding the new R. I. A. F. Operational Group who is the first R. I. A. F. officer to be awarded the Distinguished Service Order gained this distinction while commadning an R. I. A. F. Fighter Squadron on the Burma Front during the battles of the Arakan when he personally completed 82 operational sorties in just under three months.

Air Commodore Mehr Singh was in personal charge of air operations in Kashmir when the raiders started infiltrating into the State committing arson, loot and murder. As Air Officer Commanding the Operational Group, all air operations of the Royal Indian Air Force are in his charge, including the present operations in Kashmir.

## RADAR FACILITIES IN R.I.A.F.

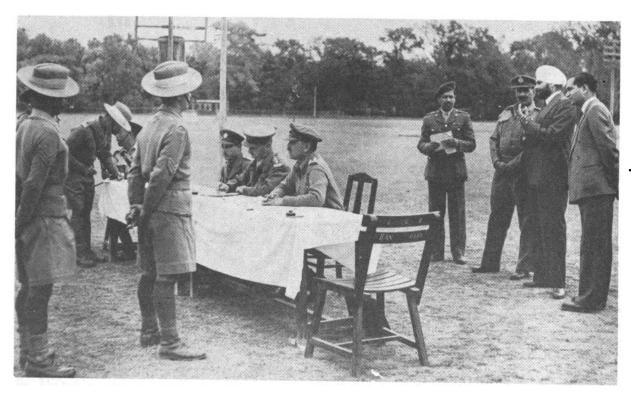

Royal Indian Air Force has an elaborate scheme for the development of Radar. Already Radar beacons are fitted on all R. I. A. F. airfields as a navigational aid to Service and radar-fitted civil aircraft. Other Radar facilities, such as blind landing aids are to be fitted in the near future. Radar method of detecting storms and finding upper air wind velocity are also in operation and are of considerable help to the Meteorological Branch of the Air Force.

The latest type of Radar equipment to train fighter pilots in the art of interception of enemy aircraft has been installed in one of the R. I. A. F. airfields. More such stations will be opened soon.

## **Bomber Squadrons**

Radar also provides facilities for bombing through clouds absolutely blindly. This method was considerably used by R. A. F. over Germany during the closing months of the war. R.I.A. F. Bomber squadrons will be fitted with the latest type of blind bombing Radar.

The authorities are planning for Radar coverage of the long coast line of India so as to detect enemy aircraft and surface vessels in case of enemy attack. In peacetime, this facility can help in the navigation of ships and aircraft.

A referendum was held at the 6th Gurkha Regimental Training Centre (one of the two centres earmarked for H. M. G. according to the tripartite agreement between the Governments of Nepal,' India and the United Kingdom) to enable Gurkha officers and men to opt for service in the Indian Army or British Army. The referendum was held under the supervision of a Nepalese. a British and au Indian officer. Picture shows Sardar Baldev Singh (second from right)

# UTILISATION OF LAC IN VARNISH AND PAINT INDUSTRIES

## Results of Recent Investigations

RECENT investigations on lac have succeeded in opening out new and extensive scope for the utilisation of that product in varnish and paint industries.

The usefulness of lac, which has been traditionally employed in the varnish industry, can be greatly augmented, if the nardness and gloss of lac is combined with the film-forming and plasticizing properties of oils. The practicability of formulating lac-lineed oil compositions with a view to obtaining varnishes satisfying the exacting demands of modern industry, has been the subject of extensive research over a number of years.

A satisfactory formulation has been achieved as a result of investigations carried out at the Indian Lac Research Institute, the details of which have been published in a recent issue of the Journal of Scientific and Industrial Research. Drying on glycerides with which has is compatible, have been prepared and their properties studied.

## Insulating Properties

Tranted linseed oil is a slimy semisolid completely soluble in alcohol, and a satisfactory spirit varnish giving a transparent isomim can be secured by cooking the oil giveeride with line at 185°-180° C. for 15 minutes. Excellent results have been obtained when 150 parts of dewaxed lac and 150 parts of the oil giveeride are descrived in 200 cc. of methylated spirit. The film, on baking at 30°-35° for two nours, possesses excellent insulating properties.

The washed and dried glyceride

mixture may be chemically combined with iac by cooking in the ratio of 100 parts of glyceride to 60 parts of lac at 250°C. for half an hour, and thinning the product with white spirit or turpentine. A clear baking insulating varnish is thereby obtained. By varying the cooking conditions, air-drying varnishes, too, can be secured. Shellac-oil paints can be made by combining the air-drying product with suitable pigments.

#### Carborundum Production

A high temperature resistance furnace has been designed and constructed in the department of Chemical Technology, University of Bombay, and employed in experimental investigations on carborundum production. The details relating to the construction and operation of the lurnace have been described in the September number of the Journal of Sectentific and Industrial Research.

Using this furnace, the optimum conditions for the economic production of carporundum, starting from quartz sand, coke, common salt and saw dust, have been worked out. The particle size of sand is impurtant in securing the optimum yield of the final product. Best results are obtained when the size range is -10, -1-40, which is also the size range of the coke employed. The optimum conversion into silicon carbide is secured in 12 hours at 2,500°C.

Among the other articles appearing in the Journal are: a world standard for screw, threads, Sunspot activity during the current cycle and petroleum resources of India. The editorial discusses the problem of scientific manpower in India.

## Committee to Reorganise Alipore Test: House

TWO committees, one for reorganising the work of Alipore Test House, Calcutta, and the other for expanding the scope and activities of the Mathematical Instruments Office, Calcutta, have been appointed by the Government of India in the Ministry of Indiatry and Supply.

The Government of India, it is understood, have appointed a Committee, under the chairmanship of Dr. B. C. Roy, to examine the existing organisation and the possibilities of expansion of the Government Test House, Alipore. Dr. K. S. Krishnan, Dr. B. C. Guha of the Calcutta University and Mr. K.N. Sharma, Director of Inspection, Directorate-General of Industry and Supply, have been invited to serve on the Committee.

The Government of India have also appointed a Committee under the chairmanship of Dr. G. R. Paranjpe to review

the organisation of the Mathematical Instruments Office, Calcutta. The [terms of reference include:

- (i) the formulation of concrete plans, both short-term and long-term for the development of the manufacture of scientific instruments and photographic, electronic and electro-acoustic equipments;
- (ii) an examination of the possibility of using the Mathematical Instruments Office as a training centre for instrument makers, mechanics, etc; and
- (iii) a review of the terms and conditions of service of the employees there.

Prof. Satyendra Nath Bose of the Calcutta University and Mr. H. P. Bhaumik, retired Post-Master-General, have been invited to serve on the Committee.

# BIGGER AND BETTER AIRPORTS FOR INDIA

India, across which the world's sky routes pass, will soon have bigger and better airports.

A sum of approximately Rs. 2 crores for the improvement of twelve aerodromes up to international standards was agreed to by the Standing Finance Committee when it met recently in New Delhi. The aerodromes are in Delhi, (aloutta, Bombay, Mardas, Allahabad, Gays, Lucknow, Nagput, Ahmedabad, Bhubaneshwai and Vizagapatam.

The runways and hangars of India's major airports when completed would meet the requirements of larger and heavier aircrait now in use by operating sirlines. Aeronautical communication service will also be improved in accordance with the plans for the development of aviation.

The need for larger hangars and stronger runways arose with the increasing use of heavier aircraft by airlines. Some progress has already been made in the erection of steel hangars in bombey and Delhi.

Government's plans now include the erection of such hangars in Calcutta and Madras also, strengthening of runways, construction of residential quarters, installation of obstruction lights and the purchase of radio communication equipment and vehicles from Disposals.

The work will be speeded up by the Civil Aviation Wing of the C. P. W. D., who will buy and use mechanised plant and equipment, such as bulldozers, pump sets, tractors and diesel engines for construction purposes. A portion of the pre-fabricated parts of hangars and roofing material will be available from the surplus assets of the Defence Ministry.

- In pursuance of agreement, says a Press Note, issued by the Ministry of Relief and Rehabilitation on Dec. 30, reached between the Dominions of Inc.s and Pakistan as a result of the Secretariat-level Conference of the Inter-Dominion representatives in New Delhi on December 18, 19 and 20, persons dearing restrictation of licensed arms and ammunition taken away from them in Pakistan should adopt the following procedure:
- (a) Persons who hold receipts for licensed arms and ammunition taken away from them should apply to the Provincial Governments calceined. The two Dominion Governments have issued instructions to Provincial Governments to have such arms and ammunition restored.
- (b) Persons who do not hold such receipts should apply to the Director. Information Bureau, Ministry of Keher and Rehabilitation, 'P' Block, Kaisins Road, New Delhi. In such cases, it has been agreed that the Dominion Governments would furnish lists of cases to each other and all such cases would be promptly investigated.

## IN MEMORIAM

We pay our respectful homage to the sacred memory of the Father of the Nation, Mahatma Gandhi, who died at his prayer meeting on January 30, 1948. He served the Motherland and humanity for half a century and led India to freedom.

## INDIA'S REFERENCE TO U. N. O.

## MEMORANDUM ON KASHMIR

The following is the text of the Government of India's Memorandum on Kashmir submitted to the Security Council at Lake Success:—

1. Under Article 25 of the Charter of the United Nations, any member may bring any situation, whose continuance is likely to endanger the maintenance of international peace and security, to the attention of the Security Council. Such a situation now exists between India and Pakistan owing to the aid which invaders, consisting of nationals of Pakistan and of tribesmen from the territory immediately adjoining Pakistan on the North-West, are drawing from Pakistan for operations against Jammu and Kashmir, a State which has acceded to the Dominion of India and is part of India.

The circumstances of the accession, the activities of the invaders which led the Government of India to take military action against them and the assistance which the attackers have received and are still receiving from Pakistan are explained later in this memorandum.

The Government of India request the Security Council to call upon Pakistan to put an end immediately to the giving of such assistance which is an act of aggression against India. If Pakistan does not do so, the Government of India may be compelled, in self-defence, to enter Pakistan territory in order to take military action against the invaders. The matter is therefore one of extreme urgency and calls for immediate action by the Security Council for avoiding a breach of international peace.

2. From the middle of Sept. 1947, the Government of India had received reports of infiltration of armed raiders into the western parts of the Jammu Province of the Jammu and Kashmir State; Jammu adjoins West Punjab which is a part of the Dominion of Pakistan. These raiders had done a great deal of damage in that area and taken possession of part of the territory of the State.

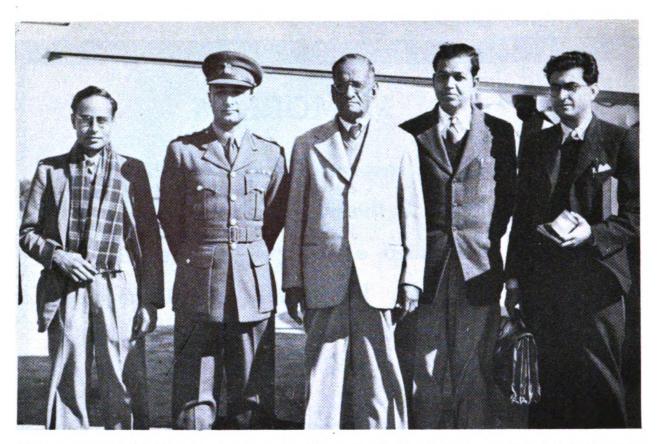

## Raid from Frontier Province

On Oct. 24, the Government of India heard of a major roid from the Frontier Province of the Dominion of Pakistan into the Valley of Kushmir. Some 2,000 or more fully armed and equipped men came in motor transport, crossed over to the territory of the State of Jammu and Kashmir, sacked the town of Muzaffar-

abad, killing many people, and proceeded along the Jhelum Valley Road towards Srinagar, the summer capital of the Jammu and Kashmir State. Intermediate towns and villages were sacked and burnt, and many people killed. These raiders were stopped by Kashmir State troops near Uri, a town some CC miles from Srinagar, for some time, but the invaders got round them and burnt the powerhouse at Mahora, which supplies electricity to the whole of Kashmir.

3. The position, on the morning of Oct. 26 was that these raiders had been held by Kashmir State troops and part of the civil population who had been armed, at a town called Baramula. Peyond Baramula there was no major obstruction up to Srinagar. There was immediate danger of these raiders reaching Srinagar, destroying and sacking the capital and massacring, large numbers of people, both Hindus and Muslims. The state troops were spread out all over the State and most of them were deployed along the western border of Jammu Province. They had been split up into small isolated groups and were incapable of offering effective resistance to the raiders. Most of the State officials had left the threatened area and civil administration had ceased to function. All that stood between Srinagar and the fate which had overtaken places on the route followed by the raiders was the

Principal Private Secretary to the Prime Minister

determination of the inhabitants of Srinagar, of all communities, practically without arms, to defend themselves. At this time, Srinagar had also a large population of Hindu and Sikh refugees who had fled there from West Punjab, owing to communal disturbances in that area. There was little doubt that the refugees would be massacred if the raiders reached Srinagar.

### Appeal for Military Help

- 4. Immediately after the raids into Jamus and Kashmir State commenced, approaches were informally made to the Government of India for the acceptance of the accession of the State to the Indian Dominion. (It might be explained, in paranthesis that Jaminu and Kashmir form a State whose Ruler, prior to the transfer of power by Britain to the Dominions of India and Pakistan, had been in Treaty relations with the British Crown which controlled its foreign relations and was responsible for its defence. The Trenty relations censed with the transfer of power on Agu. 15 last. and Jammu and Kashmir, like other States, acquired the right to accede to either Dominion.)
- 5. Events moved with great rapidity and the threat to the Valley of Kashmir became grave. On Oct. 20, the Ruler of the State, His Highness Maharaja Sir Hari Singh appealed urgently to the

Government of India for military help. He also requested that the Jammu and Kashmir State should be allowed to accede to the Indian Dominion. An appeal for help was also simultaneously received by the Government of India from the largest popular organisation in Kashmir, the National Conference, heeded by Sheikh Abdullah. The Conference further strongly supported the request for the State's accession to the Indian Dominion. The Government of India were, thus, approached not only officially by the State authorities, but also on behalf of the people of Kashmir, both for military aid and for the accession of the State to India.

6. The grave threat to the life and property of innocent people in the Kashmir Valley and the security of the State of Janiniu and Kashmir that had developed as a result of the invasion of the Valley demanded immediate decisions by the Government of India on both requests. It was imperative, on account of the emergency, that the responsibility for the defence of the Jammu and Kashmir State should be taken over by a Government capable of disolarging it. But, in order to avoid any possible suggestion that India had taken adventage of the State's immediate peril for her own political advantage, the Dominion Government made it clear that, once the soil of the State had been cleared of the invader and normal conditions restored, its people would be free to decide their future by the recognised democratic method of a plebiscite or referendum which, in order to ensure complete impartiality, might be held under international auspices.

- 7. The Government of India felt it their duty to respond to the appeal for armed resistance because:
  - (1) they could not allow a neighbouring and friendly State to be compelled by force to determine either its internal affairs or its external relations;
  - (2) the accession of Jan.mu and Kashmir State to the Dominion of India made India legally responsible for the defence of the State.
- 8. The intervention of the Government of India resulted in saving Srinagar. The raiders were driven back from Baranula to Uri and are neld there by Indian troops. Nearly 19,000 raiders face the Dominion Forces in this area. Since the operations in the Valley of Kashmir started, pressure by the raiders against the Western and South-Western border of the Jammu and Kashmir State has been intensified. Exact figures are not available. It is understood, however, that nearly 15,000 raiders are operating against this part of the State. State troops are besieged in certain areas.

Incursions by the raiders into the State territory involving murder, arson, loot and the abduction of women continues.

The booty is collected and carried over to the tribal areas to serve as an inducement to the further recruitment of tribesmen to the ranks of the raiders. In addition to those actively participating in the raids, a large number of tribesmen and others, estimated at 100,000, have been collected in different places in the districts of West Punjab bordering the Jamuu and Kashmir State and many of them are receiving military training under Pakistan nationals including officers of the Pakistan army. They are looked after in Pakistan territory, fed, clothed, armed and otherwise equipped, and transported to the territory of the Jammu and Kashmir State with the help, direct and indirect of Pakistan officials, both military and civil.

9. As already stated, raiders who entered the Kashmir Valley in October came mainly from the Tribal Areas to the North-West of Pakistan, and, in order to reach Kashmir, passed through Pakistan territory. The raids along the south-west border of the State, which had preceded the invasion of the valley proper, had actually been conducted from Pakistan territory and Pakistan nationals had taken part in them. This process of transit across Pakistan territory and the utilisation of that territory as a base of operations against Jamma and Kashmir State continue.

Recently, military operations against the Western and South-western borders of the State have been intensited and the attackers consist of nationals of Pakistan Wives of senior Indian Armed Forces officers recently visited the Indian Military Hospital at Delhi Cantonment, where the wounded from Jammu and Kashmir are receiving treatment. Picture (above) shows Mrs. F.R.R. Bucher, wife of the Commandur-in-Chief. Indian Army and Mrs. Kulwant Singh, wife of the Commanding Officer, Jakdiv, talking to a patient. (Below) Mrs. Russell, wife of the General Officer Commanding-in-Chief? Delhi and East Punjab Command and Mrs. Kalyani Sei, wife of Brig. Sen. photographed in a ward of the Hospital.

#### INDIA'S REPRESENTATIVES

The Government of India's Representatives before the Security Council for consideration of their reference on Kashmir are: The Hon'ble Mr. Gopalaswami Ayyangar, Minister without Portfolio, Mr. M. C. Setalvad, and Sheikh Mohammad Abdullah, Head of the Interim Government of Kashmir.

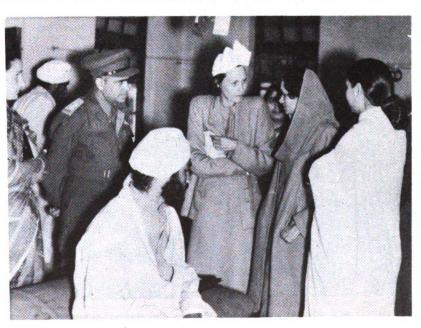

Colonel B. K. Kaul, Military Attache at the Indian Embassy, Washington, and Mr. P. N. Haksar, Bar-at-Law, of the Ministry of External Affairs and Commonwealth Relations, and Mr. M. K. Vellodi will act as Advisers.

as well as tribesmen. These invaders are armed with modern weapons, including mortars and medium machine-guns, wear the battledress of regular soldiers and, in recent engagements, have fought in regular battle-formation and are using the tactics of modern wartare. Man-pack wireless sets are in regular use and even Mark V.—mines have been employed. For their transport the invaders have all along used motor vehicles. They are undoubtedly being trained and, to some extent, led by regular officers of the Pakisian Army. Their ratious and other supplies are obtained from Pakistan territory.

10. These facts point indisputably to the conclusions:

- (a) that the invaders are allowed transit across Pakistan territory;
- (b) that they are allowed to use Pakistan territory as a base of operations;
- (c) that they include Pakistan nationals;
- (d) that they draw much of their military equipment, transport and supplies (including petrol) from Pakistan; and
- (e) that Pakistan officers are training, guiding and otherwise actively helping them.

There is no source other than Pakistan from which they could obtain such

quantities of modern military equipment training and guidance. More than once the Government of India had asked the Pakistan Government to deny to the invaders facilities which constitute, an act of aggression and hostility against India, but without any response. The last occasion on which this request was made was on Dcc. 22, when the Prime Minister of India handed over personally to the Prime Minister of Pakistan a lotter in which the various forms of and given by Pakistan to the invaders were briefly recounted and the Covernment of Pakistan were asked to put an end to such aid promptly and without reserve. No reply to this letter has yet been received, in spite of a telegraphic reminder sent on Dec 26.

### **Active Aggression**

- 11. It should be clear from the foregoing recital that the Government of Pakistan are unwilling to stop the assistance in material and men which the invaders are receiving from their territory and from their nationals including Pakistan Government personnel, both military and civil. This attitude is not only unnatural but constitutes active aggression against India, of which the State of Jammu and Kashmir forms a part.
- 12. The Government of India have exerted persuasion and exercised patience to bring about a change in the attitude of Pakistan. But they have failed, and are, in consequence, confronted with a situation in which their defence of the Jammu and Kashmir State is hampered and their measures to drive the invadors from the territory of the State are gravely impeded by the support which the raiders derive from Pakistan.

The invaders are still on the soil of Jammu and Kashmir, and the inhabitants of the State are exposed to all the atrocities of which a barbarous foe is

capable. The presence, in large numbers of the invaders in those portions of Pakistan territory which adjoin parts of Indian territory other than the Jamunu and Kashmir State is a menace to the rest of India. I'he Government of India have no option, therefore but to take more effective military action in order to rid Jammu and Kashmir State of the invader. Indefinite continuance of the present operations prolongs the agony of the people of Jammu and Kashmir, is a drain on India's resources and constant throat to the maintenance of peace between India and Pakistan.

13. In order that the objective of expelling the invader from Indian territory and preventing him from launching fresh attacks should be quickly achieved, Indian troops would have to enter Pakistan territory; only thus could the invaders be denied the use of bases and out off from their sources of supplies, and reinforcements in Pakistan.

Since the aid which the invaders are receiving from Pakistan is an act of aggression against India, the Government of India are entitled, in international law, to send their armed forces across Pakistan territory for dealing effectively with the invaders. However, as such action might involve armed conflict with Pakistan, the Government of India, are anxious to proceed according to the spirit of the Charter of the United Nations, desire to report the situation to the Security Council in accordance with the provisions of article 35 of the Charter. They, therefore, feel justified in requesting the Council to ask the Covernment of Pakistan:

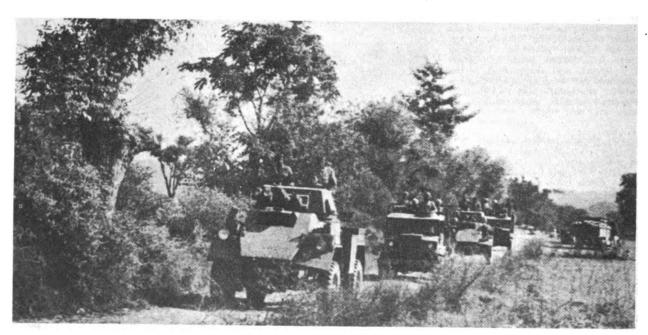

- (1) to prevent Pakistan Government personnel, military and civil, participating in or assisting the invasion of Jammu and Kashmir State;
- (2) to call upon other Pakistan nationals to desist from taking any

part in the fighting in Jammu and Kashmir State;

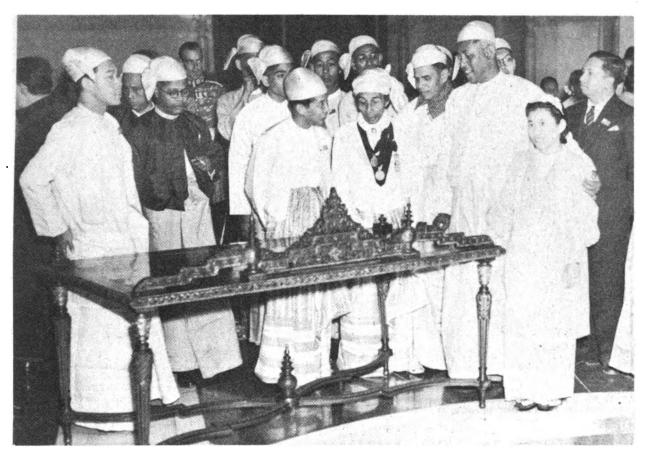

- (3) to demy to the invaders:
  - (a) access to and use of its territory for operations against Kashmir;
  - (b) military and other supplies;
  - (c) all other kinds of aid that might tend to prolong the present struggle.
- 14. The Government of India would stress the special urgency of the Security Council taking immediate action on their request. They desire to add that the military operations in the invaded area have, in the past few days, been developing so rapidly that they must, in self-defence, reserve to themselves the freedom to take, at any time when it may become necessary, such military action as, they may consider, the situation requires.

#### Common Interests

15. The Government of India deeply regret that a serious crisis should have been reached in their relations with Pakistan. Not only is Pakistan a neighbour, but, in spite of the recent separation, India and Pakistan have many common ties and many common interests. India desires nothing more earnestly than to live with her neighbour State on terms of close and lasting friendship. Peace is to the interest of both States; indeed to the interest of the world. The Government of India's approach to the Security Council is inspired by the sincere hope that, through the prompt action of the Council, peace may be preserved.

Indian armed forces have been operating in Jummu Province against armed bands of men who raided the Province, losting, burning and killing. Picture shows an Indian Army Convoy on the move in Jammu

# INDIA GREETS INDEPENDENT BURMA

# Event of Great Significance to Asia

-Pandit Nehru

NDIA greeted Independent Burma on January 4. In a missage to Burma the Prime Minister, Pandit Jawaharlal Nehru, expressed on behalf of the Government and the people of India, deep satisfaction at the consummation of Burma's struggle for freedom. Other Members of the Indian Cabinet also conveyed their greetings. These missages were brought out in a "Burma Souvenir" issued by the Ministry of Information and Broadcasting.

A Burmese Independence Day ceremony was held at Government House at which His Excellency Lord Mountbatten, the Governor-General, presented to Burma the throne once used by the Burmese King Theebaw and takhtaposh which also belonged to the King, as a symbolic gift.

#### Dr. Rajendra Presad represented India at the celebrations in Rangoon and tendered India's felicitations to Free Borma at a special ceremosy.

"India and Burma", Pandit Nehru said in his message: "have been so closely associated in the past that anything that happens in either country affects the other. In

the future I have no doubt that our association will be even closer. Not only our common sentiments demand it but the whole trend of events in the world and in Asia point towards this closer association. A time will, no doubt, come before very long when we may develop in common with other nearby countries machinery for this close coperation".

#### Comradeship in Freedom

"We all realise and genuinely feel," said Sardar Patel, Deputy Prime Minister, in his message, "that India's independence is merely a prelude to the independence of other Asian countries, which are still under foreign domination".

He added: "India's ties with Burma have throughout history been close and intimate. For well-nigh a century, India and Burma have shared together the burden of foreign yoke. The part which Indians have played in the economic life of Burma is considerable. We have also throughout extended our heart-felt sympathy to Burma's struggle for independence."

Hoping that as years roll on the bonds of friendship between the two countries may create a sense of contradethip in freedom, "as strongly as they had a common outlook in bondage", Sardar Patel wished Burma "God-speed in the new tasks of reconstruction and rehabilitation which await her".

### Dr. Rajendra Prasad's Message

Dr. Rajendra Prasad extended his congratulations to the Burmese people "on behalf of the Indian National Congress, also of Bihar where the Bodhisattva attained Enlightenment, on behalf of the whole of India, of the Constituent Assembly and finally of myself".

Other messages in the Souvenir include greetings from Sardar Baldev Singh, Dr. Syama Prasad Mookerji, Dr. B. R. Ambedkar. Rajkumari Amrit Kaur, Sri Jagjivan Ram, Dr. John Matthai, Mr. N. Gopalaswami Ayyangar, Dr. Rauf, Indian High Commissioner in Burma, Prof. S. Radhakrishnan, Sir C. V. Raman, Dr. Kalidas Nag, the historian and founder Sceretary of Greater India Society and Prof. B. M. Barua.

The Souvenir includes photographs of Indo-Burma cultural interest, photographs of the Burmese Premier, Thakin Nu, with Pandit Nehru and Mahatma Gandhi and Pandit Nehru with the late Gen. U. Aung San.

INDIAN INFORMATION, FEBRUARY 1.

To celebrate Burma's Independence, a ceremony was held in Government House, New Delhi, on January 4. Here, U Win, the first Burmese Ambassador to India, is presenting his credentials to H. E. Lord Mountbatten, Governor-General of India

# BURMESE INDEPENDENCE DAY CELEBRATIONS

# India Presents Historic Throne

"In presenting this throne and Takhtaposh may I say that they come with the warmest wishes and goodwill of all of us in India, and with them go our fervent hope and firm belief that Burma will enjoy the fruits of peace and freedom in the years to come," observed H. E. Lord Mounthatten, Governor-General of India, while presenting the Mandalay Hlutdaw throne and King Theebaw's Takhtaposh to the people of Burma on the occasion of Burmese Independence Day celebratine, held at Government House, New Delhi, on January 4.

Here is the text of Lord Mountbatten's speech.

LADIES AND GENTLEMEN,-

This, as you all know, is Burma's Independence Day. I am glad it has followed so soon on our own Independence Day here.

For the last four years I have taken a close and continuous interest in Burmese affairs and so have developed a real affection for the country and its people. With the formation of the South-East Asia Command, I was given full responsibility for the administration of the ever-increasing area of Burma from which we were evicting the Japanese. I was virtually the Military Governor of Burma throughout the campaigns leading to the final liberation of Burmese

territory, and during the first few difficult months of transition from war to peace.

During those twenty-one months there can have been few parts of the country I did not see—from north to south and east to west. I was shocked and grieved at the state I found the country in. The whole of Burma had been a battlefield twice in three years and the devastation every where was unspeakable. In fact, I found Mandalay, that lovely city of the Kings, which had so thrilled me on my first visit in 1922, almost unrecognisable when I entered it again in April 1945.

#### Tribute to General Aung San

Since then the country has made brave strides towards recovery. I have been kept in the Burmese picture by my friend, the Governor, Maj.-Gen. Sir Hubert Rance, who did splendid work as my Chief Civil Affairs Officer for Burma while I was Supreme Allied Commander. I was glad to hear from the Prime Minister of Burma, Thakin Nu on his recent visit, how much beloved Gen. Rance had

I should like to take this opportunity to pay a tribute to the memory of General Aung San. Here was a young Burmese patriot, whose burning desire, I am sincerely convinced, was at all times

that his country should be free, and this was the reason why he placed himself and his Burmese Patriot Forces under my Command to fight alongside the British and Indian Forces against the Japanese during the final months of the war.

The assistance which he and his Forces gave to our advancing army was most welcome and after the successful liberation of the country he showed statesmanship of a high order. The many meetings I had with him. both in Rangoon and at my Headquarters in Kandy, convinced me that here was a man who would prove a great leader of the people and I hoped that he would be spared to guide the destiny of Burma for many years to come. His dastardly murder was indeed a shocking loss.

#### King Theebaw's Throne

With my close connections with the country, whose name, I have the honour to bear in my title, I was most anxious that this great day should be marked in some special way. I felt that a symbolic gift should be given by India to Burma.

The Mandalay Hlutdaw throne, last used by King Theebaw of Burma when he visited the Hlutdaw, that is the Burmese High Court in Mandalay, is now in the Indian Museum at Calcutta. The throne is a towering structure of teakwood, richly gilt and is a replica of the famous Lion Throne of King Theebaw which used to stand in the great Hall of Audience in the Palace of Mandalay now, alas, burnt to the ground.

When I visited London recently, I consulted the King who was very glad

"As in the past, so in the future, the people of India will stand shoulder to shoulder with the people of Burma, and whether we have to share good fortune or ill fortune, we shall share it together." This was the cordial assurance given to Independent Burma by Pandit Jawaharlel Nehru, Prime Minister, in his speech in the Durbar Hall, Government House, New Delhi, on January 4, during the ceremony in connection with Burma's Independence Day

to agree to the proposal of the Government of India that this throne should be presented to the people of Burma on the occasion of their independence. The throne itself is too large and imposing a structure to be brought here first; it will have to be dismantled and packed carefully and sent direct to Rangoon.

I am glad to say that I hope it may be possible for me to accept the invitation of the Prime Minister of Burma to visit the country in March in which event I shall look forward to presenting the Throne personally at that time.

But fortunately in Government House, Calcutta, there was at the west end of the throne room asmall Takhtaposh, which also belonged to King Theebaw and was taken from the Palace at Mandalay in the 3rd Burmese War of 1885. This is the Takhtaposh which you now see before you and which I am presenting to the people of Burma through the Burmese Ambassador on behalf of His Majesty and of the Government and People of India, in addition to and in advance of the throne now in Calcutta.

In presenting this throne and Takhtaposh may I say that they come with the
warmest wishes and goodwill of all of us
in India, and with them go our fervent
hope and firm belief that Burma will
enjoy the fruits of peace and freedom
in the years to come.

# GREAT DAY FOR ASIA, SAYS PANDIT NEHRU

"This is a great and solemn day, not only for Burma but for India and for the whole of Asia", said the Hon'ble Pandit Jawaharlal Nehru, Prime Minister of India, welcoming Independent Burma.

Following is the text of his speech:

Your Excellencies, Ladies and Gentlemen.

On this auspicious day I should like to add, on behalf of the Government and people of India, their greetings to the Republic of the Union of Burma. This is a great and solemn day, not only for Burma, but for India and for the whole of Asia.

We, in India, are particularly affected by it because we have been bound in many ways to Burma for immemorial ages. Long ago in our ancient past our books referred to Burma as Swaran Desha—The Land of Gold. Long ago also—but in a somewhat later age—we sent a message to Burma, the message of the greatest of the sons of India—Gautam Budha—and that message has tied us together during these 2,000 years and more. Apart from many other things, that message was of peace and righteousness and perhaps today that message of peace and righteousness is more needed than anything else.

# Common Partners

We have had these bonds. They have been in the past, political ties and bonds, but the real bond that has existed between India and Burma has been a silken bond of the spirit often of mutual interest, often of common ideals; something that even political changes cannot break. And so today we welcome the advent of the Republic of Burma.

In the past we have travelled together through the valley of the shadow. We have been partakers of joy and sorrow slike and now on the eve of freedom we have had to face many other travails

for freedom and any birth apparently, must be preceded by travail.

Still, out of travail comes the birth, comes freedom and comes good, and I hope that travail of Burma has passed and I hope that the future is going to be one of construction and creation for the common good of the people of Burma. As in the past, so in the future, the people of India will stand shoulder to shoulder with the people of Burma, and whether we have to share good fortune or ill fortune, we shall share it together.

# AT THE BURMESE EMBASSY

Speaking at the Burmese Embassy on the occasion of Flag-hoisting ceremony on Burma Independence Day, H.E. Lord Mountbatten, Covernor-General of India, said:

I am very glad to have the opporturity of being present here at the new Burmese Embassy on such a very historic occasion and I feel very privileged to have been invited by the Ambassador-designate to say a few words.

The Ambassador-designate, who is shortly to present his credentials, has explained to us all the meaning of the new flag of Burma which proudly floats above my head. And as the ex-Commander of the South-East. Asia Command I probably know as well as anyone here—probably better than most—the full significance of that flag.

During my time as the Military Commander in Burma I made many friends, and for their sake I rejoice to see today the achievement of all they have struggled

# BRANCH OF SACRED "BO" TREE FLOWN TO BURMA

A sapling from the holy" Bo" tree at Budh Gaya was flown to Rangoon on the occasion of the celebration of Burma's independence, on Jan. 4.

As a mark of goodwill and of the ancient cultural ties betweeen the two countries. the Government of India sent Bhikku Jagdish Kasyap of Saranath to Rangoon with the sapling for presentation to the Government of Burma. Bhikku Kasyap left Calcutta for Rangoon by air on Jan. 3, along with Dr. Rajendra Prasad, who represented the Government of 'ndia at the celebration at Rangoon on Jan. 4.

for. I should like to join in the tribute which the Ambassador-designate has paid to the late Gen. U. Aung San and his comrades and I should like, on behalf of the Government and people of India, to extend to the Government and people of Burma their warmest good wishes for the future and their certainty that Burma will prosper.

I am not going to make a speech here since in a few moments I shall be making a speech at Government House, but I cannot close without adding my own warm personal feelings, and personal good wishes to all my friends in Burma.

# SPECIAL CEREMONY IN RANGOON

India's felicitations to free Burms were officially tendered to the Burma Union President at special ceremony at Government House in Rangoon on Jan. 4, when all diplomatic representatives and heads of Missions were introduced to the President.

Dr. Rajendra Prasad congratulated the President and conveyed to him a personal message from the Prime Minister, Pandit Nehru and his Government.

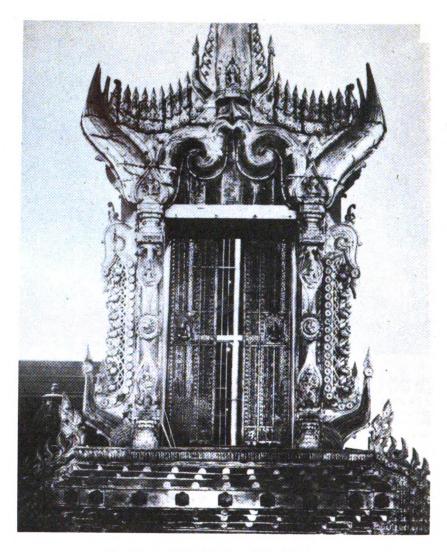

The Burmese Prime Minister, Thakin Nu called on Dr. Rajendra Prasad at his residence on Jan. 5 and was with him for half an hour. A number of receptions had been arranged in honour of Dr. Prasad.

# Dr. Prasad's Farewell Message

Brondcasting from Rangoon Radio, Dr. Rajendra Prasad, who represented India at the Burma Independence celebrations, in a farewell message said that the relationship between India and Burma will be a relationship of friendship and co-operation and the two countries will march together in service, not only of them selves but of the world at large.

"Relationship between India and Burma", said Dr. Rajendra Prasad, "is centuries-old. It was started not by way of political or economic relationship. It was a relationship of spirit, and it is to renew the same kind of relationship that I brought with me saplings from Bodhi tree and water from sacred Ganga".

He referred to prolonged struggles

The throne of Theebaw, last King of Burma

after which India and Burma attained their independence and said: India we appreciate the great sacrifices which have been made because we have ourselves gone through something of the same sort". Freedom, which had come, . Freedom, which had come, had brought its own responsibilities, responsibilities of reconstruction work.
"My own feeling is that this work is more difficult than work which we have had to do when we were carrying on the struggle. We have to bring to our service all our resources of imagination, of intelligence and of whole-hearted devotion to duty and work which we can master, and it is in the hope that our country and Burma will be able to do all that that we are sustained in spite of the obstacles and the difficulties that

Dr. Rajendra Prasad said that he was carrying back with him most pleasant memories of his short visit. He had received goodwill, even affection all round. "Burmans have been kind and hospitable, that is their nature, but I have experienced more than that".

Addressing Indians in Burma Dr. Rajendra Prasad said: "They are here in Burma on business, but there are others who are settled here and who have

got no other place to go to". "Many of them", he said, have been cut off from India altogether. But whether one is here on business or one is here permanently without having any other root else where, all Indians must realise their responsibilities and their obligations to Burma.

They must cease to think in terms of themselves alone or of their own country alone. They must try to get assimilated with Burma and to place the interests of Burma in the forefront, even in preference to the interest of India. It is only in this spirit that the kind of cooperation and goodwill that we need can be created, and I hope and trust that whatever differences Indians may have amongst themselves in India, here in Burma, they will all unite in offering this goodwill to Burma.

Moreover, they must also unite for their own benefit and for their own purposes, and I hope that when it falls to my lot to pay a visit again I shall see the people of Burma and the people of India living in Burma, mingling with one another and living as brothers and sisters, having one common purpose, and that purpose is the service and prosperity of Burma."

N INFORMATION, FEBRUARY 1, 1948

Sordar Patel, Deputy Prime Minister, and Mr. Shapmukhem Chetty, Finance Minister, addressed a Press Conference on Financial Settlement with Pakistan, in New Delhi on Jan. 12:

# PAYMENT OF CASH BALANCES TO PAKISTAN

# Deputy Prime Minister's Statement

HE following statement was made by the Hon'ble Sardar Vallabhbhai the Hon'ble Sardar Vallabhbhai Patel, Deputy Prine Minister of India at a Press Conference in New Belhi on Jan. 12: Friends, I am aire all of you have read the Press statement of Mr. Ghulam Mohammad, the Finance Minister of Pakistan, on the payment of cash balances to the Pakistan Government. The Finance Minister of Pakistan has had a Finance Minister of Pakistan has had a varied career of responsibility as a civil servant, Finance Minister of Hyderabad State, and a participant in "big business." One would not normally expect in his statement the defects of suppressio veri and suggestio falsi. But I regret to observe that not only does his statement abound in these, but in his utter desperation at seeing his financial anticipations wrecked by the actions of his own Government in regard to Kashmir, he has cast discretion and judgment to the winds and descended down to the familiar arts of a bully and a blackmailer.

### Little Regard for Facts

I use these epithets deliberately for to any one reading his statement dispassionately it would be obvious that he has tried to browbeat the Reserve Bank of India into submission by a liberal use of threats and insinuations, has charged the Government of India with had faith in the hope that the charge would gain for him his coveted ransom, and has tried to invoke the assistance of international opinion in the expectation that the threatened exposure before the world would make the Government of India bend in its attitude on this subject. I quite concede that the desperate situation in which he finds himself calls for rather trastic remedies but we are entitled to expect of him a balanced approach to this problem rather than those filibustering tactics,

the failure of which is as certain as daylight. Further, in his overzeal to achieve his object by all manner or means, the Pakistan Finance Minister has, as I would presently show, paid little attention to truth and shown little regard for

Let us first deal with his statement that "none of us had the slightest indication that the Kashmir problem would be dragged in", his accusation of bad faith and similar other statements of an accusatory nature. To deal with those I would give in brief a resume of the course of negotiations. The series of meetings held between the representatives of the Pakistan and Indian Governments in the last week of November were intended to iron out all our differences including the question of Kashmir. The discussions held were not confined to mere partition issues, but covered Kashmir, refugees and other important evacuation matters as well. On the 26th talks on Kashmir were held in an atmosphere of hope, goodwill and cordiality, and were continued simultaneously with the discussions on financial and other questions on subsequent days. On the 27th November, informal and provisional agreement was reached on the two issues of division of cash balances and the sharing of the uncovered debt. The Pakistan representatives were in some haste and tried to hustle us into agreeing to announce those agreements. We resisted it. Indeed, on the 27th evening, I issued a statement to the Press asking them not to speculate on the nature of the talks, but to wait until an authoritative statement was issued after talks had concluded. Here is what I said then :-

"All-out efforts are being made for a settlement on all outstanding matters, but any speculations on the nature of the talks would do more narm than good. All that I can say at present is that discussions are being held in a friendly and cordial atmosphere and the Prime Minister and the Finance Minister of Prkistan Government are staying on till Saturday.

A detailed statement will be issued when the talks are concluded. Till then reports about any settlement on any individual item or issue between the two Governments must be regarded as premature and lacking authority."

### Settlement Not Final

The next morning I made it clear in my statement which was read at the meeting at Government House at which both the Prime Minister and the Finance Minister of Pakistan were present, that we would not regard the settlement of these issues as final until agreement had been reached on all the outstanding issues. I made it quite clear then that we would not agree to any payment until the Kashmir affair was settled. Accordingly, no announcement of the agreement was made. In the meantime, Pakistan representatives postponed their departure and talks on Kashmir and other matters were continued with rather varying results on different issues. Working in this somewhat improved atmosphere, we reached a settlement on all other outstanding issues relating on an other outstanding issues relating to partition, and the informal agree-ment was reported to the Partition Council at its meeting on the 1st December, though they were to be reduced to writing later. This was completed on the 2nd December, but it was agreed even then not to make an announcement on the subject until after the Lahore discussions on Kashmir and other outstanding issues had been, as was then hoped, successfully concluded.

This position was further confirmed by the submission made on the 3rd December by both the parties before he Arbitral Tribunal that the prospects of all the references being settled were very good, that a further meeting was to be held on the 8th and 9th at Lahore and the situation would then be clearer. The discussions were resumed at Lahore on the 8th and 9th December. But in the

meantime, it was found that feverish attempts were being made by the Pakistan Government to secure the payment of Rs. 55 crores which it had been agreed to allocate to Pakistan out of the cash balances. We resisted these attempts. Nevertheless, evidently in an attempt to isolate the issue and force our hands and contrary to the understanding reached, the Pakistan High Commissioner on the 7th December gave a Press interview announcing the agreement reached on the financial issues. We, however, stuck to our previous position and reiterated it during the Lahore discussions, though, in deference to Pakistan's insistence on the announcement of the agreement on financial issues, we agreed to make a short statement on the 9th December in the Legislature which was then sitting in Delhi. The Pakistan Finance Minister showed also such indecent haste in rushing to the Press in this matter that he actually gave an interview on the subject on the 7th December itself. Pakistan's game was by then quite clear.

Armed with this understanding on the question of public announcement by us of the agreement on financial issues, their attitude on Kashmir stiffened and the prospect of agreement which seemed so near at Delhi receded. I then felt it necessary in my statement to the Assembly on the 9th December to make it quite clear that the implementation of this agreement was to be as far as possible simultaneous with the settlement of the Kashmir issue. The Pakistan Government did not take any exception to this statement at the time. In the subsequent detailed statement which I made on the 12th in the presence of the Pakistan High Commissioner, I again repeated that the successful implementation of this agreement depended on the continuation of goodwill, spirit of ac-commodation and conciliation on other many vital issues. Quite obviously, Kashmir was one such issue. Pakistan still made no protest. To all approaches for payment of the 55 crores, we returned a negative answer. Then came the final talks on Kashmir issues on the 22nd December. It was then for the first time during these discussions that the Pakistan Prime Minister took exception to our stand that the financial and Kashmir issues stood together as regards implementation and asked for immediate implementation of the payment of Rs. 55 crores. We made it clear to him then and subsequently in our telegram dated the 30th December that we stood by the agreement but that in view of the hostile attitude of the Pakistan Government in regard to Kashmir the payment of the amount would have to be postponed in accordance with our stand throughout the negotiations.

Thus, it is our case that far from our having done anything unfair to Pakistan or in breach of any agreement, it is the Pakistan representatives who were all the time trying to soft-pedal the Kashmir issue in order to secure concessions from us on the financial issues and to manoeuvre us into making an isolated public announcement on the subject without reference to other vital issues between the Governments. We consistently and successfully resisted this despite attempts of the Pakistan High Commissioner and Finance Minister to force our hands, Far

# REFERENDÚM TO BE HELD IN JUNAGADH

In pursuance of the decision that the question of accession of Junagadh, Babariawad, Mangrol, Manavadar, Bantwa and Sardargarh should be decided by the free expression of the wishes of their people, the Government of India will be holding a referendum in these areas in the third week of February, 1948, says a Press Communique, issued by the Ministry of States, on Jan. 15.

Mr. Nagarkar, I. C. S., Judicial Commissioner, Western India and Gujarat States Region, has been appointed to supervise the holding of the referendum.

from there being bad faith on our part, we genuinely and sincerely meant this settlement as part of an overall settlement which would have been conducive to the maintenance of friendly and peaceful relations between the two sister dominions.

It is also our claim that in agreeing to these terms of the financial settlement we were actuated by generous sentiments towards Pakistan and a sincere desire, as I made clear in the Partition Council, "to see Pakistan grow into a pros-perous neighbour". We hoped that Pakistan would reciprocate on other issues which unfortunately still divided us. That the financial settlement was attractive to Pakistan and would be a great asset to Pakistan's economy is clear from the statements issued by the Pakistan High Commissioner and Sir Archibald Rowlands. It is, therefore, quite plain that having secure terms which were essential to hold Pakistan's finances together, the Pakistan Government failed in their obligation to respond to India's gesture on other issues.

#### Pakistan's Debt to India

I would also point out that the Government of India took a more comprehensive view of our obligation to the securing of a just and peaceful settlement than the Pakistan Government. We realised throughout that neighbourly relations between ourselves and Pakistan could be restored and maintained only if the spirit of amity, tolerance and goodwill pervaded throughout the entire field of controversy; the Pakistan Govern-ment obviously intended to take undue advantage of our generous attitude and exhibit these virtues in a narrow, restricted and selfish sphere. The need for a comprehensive view was and still is quite clear. Apart from other factors, India has taken over the entire debt of undivided India and depends on Pakistan's bona fides and goodwill to make equated payment by easy and long-term instalments of its debt to India after a four-year's moratorium period. We cannot, therefore, afford to let conflicts endanger our credit and security and throw into the melting pot some of the vital points in the financial agreement itself. Obviously, therefore, India must provide against strained relations worsening into open breach and, thereby, as I was careful to point out in my statement of

the 12th December, "placing all the good work achieved in jeopardy".

We were, therefore, fully justified in providing against Pakistan's possible continuance of aggressive actions in regard to Kashmir by postponing the implementation of the agreement. We have made it clear to the Pakistan Government more than once that we stand by the agreement which we reached. The agreement does not bind the Government of India to any fixed date for payment and we cannot reasonably be asked to make a payment of cash balances to Pakistan when an armed conflict with its forces is in progress and threatens to assume even a more dangerous character, which would be likely to destroy the whole basis of the financial agreement and would endanger other parts of the agreement, such as arrangements for taking over of debt, division of stores etc.

#### Pakistan's Claim for Rs. 55 Crores

The Pakistan Finance Minister claimd the amount of Rs. 55 crores as belonging to Pakistan. He has apparently overlooked the fact that on the 14th of August 1947 after the Partition Council had decided to allocate the working balance of Rs. 20 crores to the Pakistan Government, the then undivided Government of India issued an order in the following terms to the Reserve Bank:—

"Please transfer twenty half of forty crores from Central closing cash balence on the 14th instant to Pakistan and balence to Indian Dominion as opening balance on the 15th"

A copy of this telegram was endorsed to the Pakistan wing of the then Finance Department, and no objection was, or has been since raised to this accounting. It follows from this that so far as the Bank accounts are concerned, there is no balance of the old undivided Government to be operated upon; the money stands in the name of the Indian Dominion and it is only on the authority of the Indian Dominion that any share can be allocated to the Government of Pakistan. The relevant portion of the Partition Council minutes also runs thus:—

"In addition to the 20 crores already made over to Pakistan 55 crores will be allocated to Pakistan in full and final settlement of its claim for a share of the undivided Government's cash balance and of the cash balance investment account". It is clear, therefore, that nothing belongs to Pakistan until the Government of India transfer the amount to its account.

This clear-cut position makes the Pakistan Finance Minister's outburst against the Reserve Bank appear somewhat hysterical and hectoring. Obviously the Reserve Bank cannot do anything without the specific instructions of the Government of India who are the only competent authority to operate the account. He has accused the Government of India of interfering in the discharge of its duties towards the Pakistan Government and has characterised this alleged interference not only as an unfriendly act, but as an act of aggression. I wish to say in the most

INFORMATION FEBRUARY 1, 1948
Digitized by GOOGIC

amphatic terms that this accusation is completely baseless and devoid of any element of truth whatsoever. I understand that the Reserve Bank of India first received the demand for the payment of Rs. 55 crores on the 6th of this month in a memorandum handed over to the Deputy Governor of the Reserve Bank at Karachi. I also understand that the Governor to whom this memorandum was telegraphed by the Deputy Governor has sent an appropriate reply.

So far as the Government of India are concerned, I could say that when the Reserve Bank mentioned an approach by the Pakistan Government for temporary accommodation from the Bank, the Government of India made it clear to the Bank that it was matter for the Bank alone to decide. Indeed, the Government of India have made every effort to avoid dragging the Reserve Bank into the controversy. The blame for attempting to force the Reserve Bank into taking sides must rest with the Pakistan Finance Minister. Neither the manner nor the nature of the attempt reflects creditably on the honesty of purpose and motives of the Pakistan Government.

### Allegations "Unfounded"

Gentlemen, I think I have said enough to prove how unfounded and insubstantial are the allegations made by the Pakistan Finance Minister against the Government of India. We have also shown how we have held consistently to the position that the settlement of financial issues cannot be isolated from that of other vital issues and has to be implemented simultaneously. There can be no question of our repudiating the agreement reached. We only desire that appropriate atmosphere conditioned by the agreement must be created for its implementation. If the Pakistan Government press for payment of cash balance in advance, it is ovbious that they are motivated by factors wholly opposed to the spirit underlying the agreement. We are thus fully justified in resisting those machinations which, if successful, would vitiate the very basis of the agreement and adversely affect, by facilitating Pakistan's aggressive designs on India, the implementation of other vital parts of the agreement.

# FINANCE MINISTER'S ACCOUNT OF NEGOTIATIONS

The Hon'ble Mr. R. K. Shanmukham Chetty, Finance Minister, also made a statement at the conference which is as full jws:

With regard to the recent arrangements between India and Pakistan about the outstanding financia! problems between the two Governments, the Finance Minister of Pakistan at a Press Conference held by him at Karachi has made some astounding statements and has accused the Government of India and the Reserve Bank of breach of faith and improper conduct. It is very surprising that a responsible Minister of Pakistan should have thought fit to give expression to such wild statement and sentiments. My purpose today will be to give a plain and unvarnished account of these negotiations leaving it to the world to

judge whether the Government of India has not acted in the most honourable, generous and friendly spirit and to what extent Pakistan has responded to this.

I shall first attempt to give categorical answers to some of the untenable statements made by the Pakistan Finance Minister. Mr. Ghulam Mohammed has stated that "while the Government of India were operating on their share of the cash balances they had asked the Reserve Bank of India not to credit the Pakistan Government with Rs. 55 crores of the cash balances that belonged to the Pakistan Government". He then goes on to say "that these cash balances vest in His Majesty for the purpose of the two Dominions". Having made these two astounding statements he goes on to accuse the Reserve Bank of partiality in having failed in its duty to transfer Rs. 55 crores from cash balance of the Government of India to the credit of the Pakistan Government.

#### No Instructions to Reserve Bank

With regard to the first charge, I can say in the most categorical terms that the Government of India have not given any instructions to the Reserve Bank of India regarding the transfer of any amount from our cash balances to the credit of the Government of Pakistan. The statement of Mr. Ghulam Mohammad has therefore, no relation to fact or truth. There was no occasion for the Reserve Bank to make any reference to the Government of India about the question of cash balance and consequently no occasion for the Government of India to give any instructions in this matter. I understand that the Reserve Bank received the first demand in this matter from the Pakistan Government only on the 6th of this month in a menorandum handed over to the Deputy Governor of the Reserve Bank at Karachi. I also understand that the Governor to whom this memorandum was telegraphed by the Deputy Governor has sent an appropriate reply. So far as the Government of India are concerned, the only reference that came from the Reserve Bank regarding any transaction between the Bank and the Government of Pakistan was in relation to a request from the Pakistan Government for temporary accommodation from the Bank. The Government of India made it clear to the bank that it was a matter for the Bank alone to decide. I understand that the Reserve Bank has already given Rs. 5 crores as ways and means advance to the Pakistan Government and that the Bank was also going to give a further advance of Rs. 5 crores on this account. From this plain statement of fact, the world can judge the propriety of a responsible Minister of a Government making an unfounded charge against another Government.

With regard to Mr. Ghulam Mohammd's statement that the cash balances vest in His Majesty for the purpose of the two Dominions, I can only express my surprise that an experienced Minister should make such an irresponsible statement without ascertaining the facts. The position regarding cash balances is as follows: Before the partition the cash

# SERAIKELLA AND KHARSAWAN TRIBUNAL TO BE APPOINTED

The Government of India have decided to appoint an impartial Tribunal to report on the question whether the States of Seraikella and Kharsawan, which have been temporarily attached to the Orissa Province, should remain with that Province or should be integrated with Bihar, says a Press Communique issued by the Ministry of States on Jan. 10.

It is expected that the Tribunal will consist of a senior Judge of a High Court. His name will be announced shortly.

balance of the then Government of India with the Reserve Bank was Rs. 375 crores. On the 14th August 1947, after the Partition Council had decided that a working balance of Rs. 20 crores should be allocated to the Pakistan Government, the then undivided Government of India issued an order to the Reserve Bank allocating the balance between the two Dominions, as men-tioned by the Deputy Prime Minister. We also made it clear that the allocation was provisional and subject to readjustment when the balance to be transferred to Pakistan had been finally decided. A copy of this order was endorsed to the Pakistan wing of the then Finance Department and so far no objection has been raised to this allocation on the date of partition. It follows from this arrangement that there is no balance of the old undivided Government with the Bank. The practical issue is, who is competent to operate upon the Cash Balance. It is plain that after transferring 20 crores to Pakistan as Pakistan's opening Cash Balance on 15th August 1947, the remainder of the cash balance of the undivided Government of India was credited as the opening cash balance of the Dominion of India, and the only party competent to operate upon that cash balance is the Dominion of India and it is not open to the Reserve Bank of India to deal with that balance otherwise than in accordance with the instructions of the Government of India.

The Finance Minister of Pakistan seems to be under the impression that the Reserve Bank has failed in its duty i not transferring Rs. 55 crores out or our cash balance to the credit of the Government of Pakistan on the basis of a settlement supposed to have been arrived at between the two Governments on this matter. Assuming that the settlement between the two Governments is a final and unconditional settlement how is the Reserve Bank to take legal notice of such a settlement? If two clients of a Bank come to an agreement amongst themselves regarding their financial transactions, is the Bank under such circumstances to take notice of the agreement of its own accord and make adjustments in the accounts of its clients without any positive instruction from the client affected by such transfers? Even a novice in financial matters will not expect a Bank to act in such an irregular and illegal manner. The Government of India has certain cash balances with the Reserve Bank and it

is the Government of India alone and no other authority that can issue instructions to the Reserve Bank about the operation of these balances.

The whole matter to my mind is so ridiculously simple that any further explanation or elaboration is unnecessary. The Reserve Bank would be acting in an illegal manner if it transferred any part of our cash balances to anybody's credit without a definite instruction from us.

Let me now take this opportunity of explaining the exact legal and constitutional position of the Keserve Bank of The Reserve Bank is an inde-India. pendent Corporation created by an Act of the Indian legislature and is bound only by the Act constituting it. Its relations to the present Government of India are governed by the provisions of the Reserve Bank Act. The only modification that has been made in this matter is contained in section 15 (i) of the Pakistan (Monetary system and Reserve Bank) Order 1947. The wording of this section is as follows: "The Reserve Bank Act shall cease to be part of the law of Pakistan and the status of the Bank in Pakistan shall be that of a corporation existing only by virtue of the law of India and capable of suing and being sued as such in Pakistan; and accordingly effect shall be given to the said Act by courts in Pakistan only in so far as under the rules and principles of law determining the cases in which law other than Pakistan law is to be applied in Pakistan, the proper law to be applied is the law of India While the Reserve Bank is no doubt acting in its banking side as the common bankers for the two Dominions, the legal and constitutional relation of the Bank with the Pakistan Government is not by any means the same as the Bank's relation with the Government of India. It is, of course, no part of the policy of the Indian Government to interfere in any way with the relations of the Bank with Pakistan so long as the Bank acts in accordance with the provisions of the law governing the activities of the Bank. I can say categorically that in fact there has been no interterence.

#### **Tentative Conclusions**

I hope the statement both of law and fact that I have made will make it clear that the Finance Minister of Pakistan is not sure of the legal position and very wrong in his statement of facts. I shull now say a few words in connection with his charge that the Government of India have been guilty of a breach of taith in not implementing the terms of the tinancial settlement recently arrived at. My Hon'ble colleague the Deputy Prime Minister who was directly concerned with these negotiations as the representative of India on the Partition Council has already given you a detailed account of the negotiations. So far as I am concerned there was a meeting of the representatives of the two Dominions on the 27th November, 1947, in which I took part. These discussions related to the allocation of the cash balances, the sharing of the uncovered debt, and other financial arrangements outstanding

between the two Dominions. I found that there was a genuine desire on both sides to settle these matters without the necessity of protracted proceedings before the Arbitral Tribunal. Within a few hours, we reached certain tentative conclusions regarding the allocation of the cash balances and the sharing of the uncovered debt. On the following day, namely, the 28th November 1947 there was a meeting at Government House at which H. E. the Governor-General and the Prime Minister of Pakistan were present. At this meeting a note by Sardar Patel was read out on these negotiations. In this statement it was stated specifically that "the object of our present discussions is to iron out all our differences. We should not therefore regard the settlement on these two issues as final until a settlement is reached on all the outstanding partition and other matters. No announcement should therefore be made until such an overall settlement is reached. I referred to matters other than partition matters. I did so advisedly".

The meeting naturally took note of Sardar Patel's caveat and it was with the full knowledge of this statement that the negotiations were resumed. By the 1st of December agreement on all the major financial issues was reached and the agreed conclusions were reported at a meeting of the Partition Council which was held on that day. The Partition Council decided that an agreed record should be prepared by Mr. H. M. Patel and Mr. Mohammad Ali, and treated as part of the proceedings of the Council. The agreed note of conclusion was finalised on the 2nd December. In the meantime discussions on Kashmir and evacuee property continued at the Ministerial level.

#### Statement before Arbitral Tribunal

On the 3rd December, 1947, the Arbitral Tribunal met and the representatives of Pakistan and India made a statement that the prospects of all the references being settled were very good and that a further meeting of the Partition Council was to be held on the 8th and 9th December 1947 at Lahore and that thereafter the situation would be clearer. I would invite you to make a special note of the language used by the representatives of the two Governments before the Arbitral Tribunal. They said that "the prospects of all the references being settled were very good". If the details regarding the financial matters were really settled in a final form on the 2nd December, why should the representatives of the two Governments not have stated that the matters have been settled finally? Far from saying that, they have stated that the prospects of settlement were very good. It is obvious from this statement that it was understood by both the Governments that the decisions reached the previous day were only tentative and that something more remained to be done to give them finality. What really held up a final announcement of this settlement was the Kashmir issue on which agreement had not yet been reached. The Kashmir issue was set down for discussion at the Lahore meeting.

The discussions on Kashmir were resumed at Lahore and it looked as if

an agreement might still be reached, a view which I notice was then shared by Mr. Liaquat Ali Khan also. On the 9th December Sardar Patel briefly mentioned the result of these negotiations on the floor of the Indian Parliament. He made it clear that these agreements did not stand alone. He said: "I know there is considerable anxiety in the House and outside about the main question that gives us trouble, that is the question of Kashmir. That question is not before the Partition Committee and it is no part of this reference, but the manner and the method and the time by which these will be executed will be decided later. I can only announce this today that we are all anxious that if it is possible all issues should be settled, including that of Kashmir, so far as possible simultaneously. Every effort will be made to that end. If it is not successful, we shall act in a manner which is to the best interest of the Dominion of India".

#### Vital Issues

On the 12th December Sardar Patel mane a fulier statement on the financial settlement on the floor of the House. He again emphasised: "The successful implementation of these conclusions obviously depends on the continuation of the spirit of accommodation and conclusion on both sides. Discord and estrangement on any vital issue—we have many vital issues yet to settle—is bound to place the good work which we have achieved in jeopardy". It should be noted that the l'akistan High Commissioner was present in the gailery of the House when this statement was made by Sardar Patel.

On the 13th December there was another meeting of the Arbitral Tribunal and the representatives of both the Dominions mentioned before the Iribunal that all references from the Centre to the Tribunal had been settled and that notices of withdrawal would be handed in due course. It should again be noted that the Pakistan High Commissioner was present when this statement was made before the Arbitral Tribunal. If really the Pakistan Government objected to the linking up of the financial issues with that of Kashmir, why did they make this statement before the Arbitral Tribunal on the 13th December when they knew that Sarda: Patel in both his statement on the subject had made it clear on the floor of the Parliament that the implementation of the financial settlement will depend on the amicable settlement of other issues including that of Kashmir. The only inference that can be made in the light of this sequence of events is that the Pakistan Government knew from the very outset of the negotiations that the Indian Government would implement any financial agreement only if there was a satisfactory settlement on the Kashmir and other issues. It was with the full knowledge of this unambiguous attitude of the Indian Government that the representatives of the Pakistan Government made a statement before the Arbitral Tribunal on the 13th December, 1947. In the light of what I have stated, the world can judge what value should be given to the statement of the Finance

Minister of Pakistan that "none of us had the slightest indication that the Kashmir problem would be dragged in. If this agreement depended on Kashmir we would not have signed it."

It is not necessary for me to dwell upon the subsequent correspondence that has passed between the two Prime Ministers on this matter. The Finance Minister of Pakistan has accused us of bad faith and has stated that the Government of India want to achieve their end of economically strangling Pakistan. If we had the slightest intention of economically strangling Pakistan we would not have been so generous in the matter of the financial generous in the matter of the financial settlement. Our generosity in this respect has been appreciated by a journal of the standing of the ECONOMIST of London. In its issue of 3rd January, 1948, the ECONOMIST has observed that "India showed a very generous lead in the result financial" lead in the recent financial negotiations and it was no doubt expected that Pakistan would reciprocate over jute. But that reciprocity is evidently not forthcoming". The Pakistan High Commissioner himself in an interview to to the STATESMAN dated the 7th December, 1947 has expressed satisfaction at the financial settlement reached between the inancial settlement reached between the two Dominions. Asked what Pakistan's main gains were, he said "Cash balances and time. Pakistan's share of the cash balance was reasonable, he explained. "It would help us to settle down. It was bound to have a psychological effect which would reastore confidence. Pakistan had also restore confidence. Pakistan had also gained time as the liabilities were to be paid in annual instalments over a period of 50 years". That was the immediate reaction of the Pakistan High Commissioner to the terms that we had so generously agreed to. Commenting on the settlement Sir Archibald Rowlands, the Financial Adviser to the Pakistan Government, said: "With the cash balances agreed on in Delhi alone the country could manage for an indefinite time".

It would appear in the light of subsequent events that our generosity has been il! placed. The accusation of political blackmail which Mr. Ghulam Mohammad has levelled against us is perhaps only a cheap way of gaining sympathy for Pakistan. Notwithstanding all these provocations our position is absolutely clear. There is no question on our part of repudiation of the agreements which have been reached between the two Dominions. As we have already made it clear from the very outset, these agreements are a part of a wider settlement and we shall implement the agreement as soon as a settlement is made on the other issues. Meanwhile we will not be deterred from what we consider to be the right path by any campaign of hectoring, bullying and scandalising on the part of responsible Ministers of a neighbouring country.

Released A. I. R. O. s and I. E. C. Os are eligible for the grant of a new type of Short Service Commission in the Indian Army for one year, says a Press Note issued by the Ministry of Defence on Jan. 27. Full particulars and application forms may be obtained from Army Headquarters, India, Adjutant General's Branch, (A. G. ORG. 2(a), New Delhi.

# INDIA'S SPONTANEOUS GESTURE OF GOODWILL

# Indo-Pakistan Financial Agreement to be Implemented Forthwith

THE Government of India have fully clarified their position in regard to the financial settlement arrived at between them and the Government of Pakistan, says a Press Communique issued by the Prime Minister's Secretariat on Jan. 15. They have declared that they abide by that settlement, but that the implementation of it, in ragard to the cash balances, must be considered as a part of an overall settlement of outstanding questions in issue between India and Pakistan.

They regret that the Finance Minister of the Pakistan Government should have advanced arguments which are unsupported by facts and which they cannot accept. The factual position has been clearly stated in the statements issued by the Deputy Prime Minister and the Finance Minister of the Government of India. The facts and arguments contained in these statements represent the deliberate and unanimous opinion of the Cabinet. They regret that the Finance Minister of the Pakistan Government should have again challenged these incontrovertible facts, which justify fully the position taken up by the Government of India both on legal and other grounds.

#### Mahatma Gandhi's Fast

The Government have, however, shared the worldwide anxiety over the fast undertaken by Gandhiji, the Father of the Nation. In common with him they have anxiously searched for ways and means to remove ill-will, prejudice and suspicion, which have poisoned the relations of India and Pakistan.

Impelled by the earnest desire to help in every way open to them in the object which Gandhiji has at heart, the Government have sought for some tangible and striking contribution to the movement for ending the physical suffering of the Nation's soul and to turn the nation's mind from the present distemper, bitterness and suspicion to constructive and creative effort. The Government are anxious to remove as far as possible, without detriment to the national good, every case, which leads to friction between India and Pakistan.

In view of the appeal made by Gandhiji to the nation, the Government have decided to remove the one cause of suspicion and friction between the two States which, consistently with national honour and interest, it is in their power to remove.

They make this spontaneous gesture in the earnest hope that it will be appreciated in the spirit in which it is made and that it will help in producing an atmosphere of goodwill for which Gandhiji is suffering crucifixion of the flesh and thereby lead this great servant of the nation to end his fast and add still further to his unparalleled services to India.

The Government have decided to implement immediately the financial agreement with Pakistan in regard to the cash balances. The amount due to Pakistan on the basis of this agreement, i.e., Rupees fifty-five crores, minus the expenditure incurred by the Government of India since the 15th August on Pakistan account, will therefore, be paid to the Government of Pakistan.

This decision is the Government's contribution, to the best of their ability, to the non-violent and noble effort made by Gandhiji, in accordance with the glorious traditions of this great country, for peace and goodwill.

# PRIME MINISTER'S STATEMENT

The Hon'ble Pandit Jawaharlal Nehru, Prime Minister, has issued the following statement.

The Government's decision in regard to the payment of the cash balances to Pakistan has been taken after the most careful thought and after consultation with Gandhiji. I should like to make it clear that this does not mean any change in our unanimous view about the strength and validity of the Government's position as set out in various statements made by distinguished colleagues of mine. Nor do we accept the facts or arguments advanced in the latest statement of the Finance Minister of Pakistan.

We have come to this decision in the hope that this generous gesture, in accord with India's high ideals and Gendhiji's not le standards, will convince the world of our earnest desire for peace the goodwill. We eanestly trust also that this will go a long way towards producing a situation which will induce Gandhiji to break his fast. That fast of course had nothing to do with this particular matter, and we have thought of it because of our desire to help in every way in easing the present tension.

Six months ago we witnessed a miracle in Calcutta where ill-will changed overnight into goodwill through the alchemy of a similar fast. The alchemist, who worked this change, was described by

Formal talk, on Sterling Balances between the Government of India and the United Kingdom Government opened in a Conference in New Delhi on January 9. Sir Jeremy Raisman, Leader of U. K. Delegation is second from left and Mr. V. Narahari Rao, Leader of the Government of India's Delegation, is second from right

Sir Jeremy Raisman (left) photographed with Mr. V. Narahari Rao, on his arrival at the Willingdon Aerodrome on January 8

# **NEW DELHI TALKS ON STERLING** BALANCES

■ALKS on Sterling Balances, between Delegations representing the Government of India and the the United Kingdom Government opened in New Delhi on Jan. 9.

India was represented by Mr. V. Narahari Rao, Leader of the Delegation, Mr. B. K. Nehru, and Mr. Keith C. Roy. Mr. D. Cayley of the Reserve Bank of India served as adviser to the Delega-

Members of the U. K. Delegation. were: Sir Jeremy Raisman (Leader)

Mr. P. S. Beale of the Bank of England. Mr. A. W. France of H. M. G. Treasury, Mr. L. B. Walsh Atkins of the Commonwealth Relations Office, Mr. P. Harris and Mr. B. C. O. Murphy.

The purpose of the Conference was to negotiate a further interim agreement relating to the amount to be released by H. M. G. from India's accumulated sterling resources for a further period of 6 months from Jan. 1, 1948.

The previous agreement, which was signed in London on Aug. 14, 1947, by Mr.

V. Narhari Rao for India and Sir William Eady for H. M. G., made available to India £35 million for expenditure in any currency area up to Dec. 31, 1947. In addition a further £30 million of multilaterally convertible currency was placed at the disposal of India as a working balance.

The remainder of the sterling assets of the Reserve Bank estimated on Aug. 14, 1947, at f. 1,160 million was placed in a separate account and ccula only be operated on for agreed transactions.

# N ATIONAL SAVINGS FORTNIGHT , Finance Minister's Message

The Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance, issued the following message on Jan. 13, in connection with the National Savings Fortnight, which began in Delhi on Jan. 8:

"I am glad the Delhi Province is holding its National Savings Fortnight for fourth successive year. It is, however, the first fortnight which is being held since India became free and independent, and I entertain the hope that this year the response by every one, big and small, to the appeal of the organisers will be many times greater than it has been in the past. I would like to emphasise that saving to lend to Government is not only for the benefit of the individual, but it subserves national interests also.

In my opinion there is no better way of showing our appreciation of our recently-won freedom than by inculcating the habit of thrift on a national scale. Government have under consideration a complete reorganisation of the National Savings Movement to fit in with the new status and responsibilities of the country and its people. An announcement will be made shortly to this effect, but, in the meantime, I have every hope that you will co-operate with the Government and invest at least twice as much as you did last year".

H. E. Dr. Chia-Luen Lo, Chinese Ambassador in India, shaking hands with H. E. Lady Mountbatten, after investing her with the Decoration of the Brilliant Star. The ceremony took place at the Chinese Embassy, New Delhi, on January 7.

Pandit Nehru is seen sitting at right

# CHINESE DECORATION FOR LADY MOUNTBATTEN

CEREMONY was held at the Chinese Embassy at Lytton Road, New Delhi, on Jan 7, when His Excellency Dr Chia-Luen Lo, the Chinese Ambassador, presented on behalf of the Chinese Government, the Decoration of the Brilliant Star to Her Excellency the Countess Mountbatten of Burma.

Among those present were the Governor-General, Pandit Nehru, Sardar Patel, other Ministers of the Government of India, Chiefs of Diplomatic Missions, Staff Officers of Government House. A reception in honour of Lady Mountbatten followed the ceremony.

In his speech, the Chinese Ambassador paid a tribute to Lady Mountbatten for the services she had rendered to sick and wounded Chinese soldiers in Burma and Yunnan Province.

He said:

No occasion has ever before made me happier than this when on behalf of my Government I am presenting the distinguished Chinese Order of the Brilliant Star to a most distinguished lady with such a brilliant career of her own. Words in praise of Her Excellency the Countess Mountbatten of Burma seem quite superfluous when her charming personality eloquently speaks for her.

She is so noble and yet so affable, so tender-minded and yet so hard-working, so debonair and yet so vigilant. She carries in her the best traditions of British aristocracy and adapts them to the functions of modern democracy.

On this occasion it behaves me to tell briefly her services in connection with China as part of her contributions to the allied cause during the war years, which could only be successfully rendered with her abundant energy, remarkable courage and unswerving devotion. China is particularly grateful to her, for she was so kindly concerned with and so generously gave help to the sick and wounded among the rank and file of the victorious 1st and oth Chinese Armies then operating under Lord Mountbatten's illustrious command in the North-east Burina theatre, and the Chinese Expeditionary Force operating in the Province of Yunnan, which finally succeeded in clearing that province of the most obstinate invadors. Penetrating into all the topographically hazardous and climatically unhealthy regions, from Burma up to Paoshan and Tali in China, Her Excellency visited in person the medical units of the Chinese, British, Indian, and American Forces. Not only wounded soldiers but also sick refugees were the beneficiaries of her care and attention. All of us can imagine that to those in

distress in the desolated war areas Her Excellency's visit was an angelic appearance and Her Excellency's cheering and inspiring work was grace abounding.

Her Excellency and His Excellency Lord Mountbatten, in 1945, flew over the Hump, amidst the thick war clouds, to Chungking, where they cultivated very genuine friendships with Chinese leaders and people alike. She is respected, admired, and, may I have His Excellency's permission to say, loved by all her friends near and far.

In recognition of her noble humanitarian work in wartime, the Government of the Republic of China has conferred the Order of the Brilliant Star upon the Countess Mountbatten of Burma, and today it is my honour and privilege to present this distinguished Decoration to Her Excellency, who, I am happy to recall, has very recently been created a Dame Grand Cross of the British Empire.

Her Excellency Lady Mountbatten said in reply:

Your Excellencies, Mr. Prime Minister and Friends:—

I am so very grateful, Your Excellency, for your kind and far too generous remarks, and may I say how deeply honoured I do feel at the high distinction which you have just so kindly conferred on me on behalf of the Government of China. It was the greatest privilege for me, Your Excellency, to be associated

with the care of the wounded and sick, the men of the gallant 1st and 6th Chinese Armies operating in Burma and those of the Expeditionary Forces in China who linked up and joined hands on the Burma China front. And it was a privilege to have been able to do what I could to help in their care, to visit I could to see also the refugees and to assist in any way that I could.

I would, Your Excellency, like to pay the highest tribute to the courage, fortitude and patience of the mon and women and the children in China with whom I had the privilege to come in contact: It is a tribute also, I know my husband has always paid, to the gallantry of the Chinese soldier; the soldier who is a Chinese soldier; the soldier who is a magnificent fighter given proper training and proper equipment. So, Your Excellency, may I ask you to convey to His Excellency the President, Generalisaimo Chiang Kai-shek, whom we had the great privilege and honour of meeting and staying with in China. my deep sense of the great honour which has been done to me by the award of this very great distinction. I would like to mention distinction. I would like to mention that when we were in China we were accompanied by the head of my husband's Chinese Staff, General Feng Yee, and my husband was kind enough to let him remain with me on these visits, and I would like to say how immensely grateful I was to him for his unfailing help in every possible way. So thank you, Your Excellency, once again for this great honour and may I say that there is no one at whose hands I would rather have received it than from Your Excellency, because since your arrival in India you have won the admiration, and may I say the affection, of each one of us.

# LADY MOUNTBATTEN IN GWALIOR

Her Excellency the Countess Mountbatten of Burma, accompanied by the Hon'ble Mr. Syed Hamid Shah, Health Minister, Qpl. Dr. Shanker Lal. Gargya, Chief Medical Officer and Dr. Bhagwat Sahai, Principal and Superintendent, visited the Jayarogya Hospital, Gajra Raja Medical College and Nurses' Home at Gwalior on Dec. 30.

Her Excellency visited all the Wards and Departments, including the Maternity and Tuberculosis Wings, and expressed her admiration for the excellent administration, the high standard of accommodation, equipment and work undertaken.

Later Her Excellency visited the Shishu Mandir, the Padma Vidyalaya and the Kamla Raja Girls' College, accompanied by Her Highness, the Maharani Scindia of Gwalior, who is personally and actively associated with these three institutions and has played a leading part in the promotion of girls' education in the State.

Her Excellency watched a short entertainment given by the pupils and students and congratulated them all on excellent performance.

# STATES ARE INTERLOCKED WITH PROVINCES

# Lord Mountbatten's Speech at Bikaner

NEED not dilate here on the importance of the position which the Indian States have always occupied in the life of India. They cannot be treated separately from the rest of India for the States are completely interlocked with the Provinces, with whose inhabitants the people of the States inevitably form an overall entity", said H. E. Lord Mountabtten, Governor-General of India, in his speech at Bikaner on Jan. 15.

Lord Mountbatten said:

YOUR HIGHNESS, LADIES and GENTLEMEN,

I am particularly pleased to have the opportunity of speaking on this occasion, not only because I want to thank His Highness at once for the very kind way he has spoken of my wife and myself, but because I have long wanted to pay a tribute to that worthy successor of a great father, the present Ruler of Bikaner.

I am speaking in rather different circumstances from those which I had envisaged in the first instance, and I cannot open this speech without a reference to Mahatma Gandhi and the fast which he is now undertaking in Delhi. I am sure we all appreciate and deeply sympathise with the high motives which have led him to undertake this fast and we much hope that it will be successful in its object at as early a date as possible.

The problem of how to transfer power from British to Indian hands divided itself very obviously into two separate problems. The first was how to transfer power in British India and the second was how to fit the Indian States into the resulting pattern.

I need not dilate here on the importance of the position which the Indian States have always occupied in the life of India. They cannot be treated separately from the rest of India for the States are completely interlocked with the Province, with whose inhabitants the people of the States inevitably form an overall entity.

#### Federation Scheme

This basic fact has clearly been realised by the Rulers themselves, for in the past they were always ready to co-operate with the Government of India in common plans, and policies. It was the object of the Federation Scheme contained in that remarkable Government of India Act of 1935, to replace this somewhat haphazard co-operation by a legal structure of unity in essential matters. I knew that this federal plan of 1935 was popular neither with the States nor the political parties; but personally I cannot help feeling that it was a great misfortune that circumstances did not permit of that plan being put into operation before

the outbreak of war in 1939. Had this been possible, a suitable political structure would have been in existence in India during the difficult years of the war, and it is very possible that the events in the country in recent years might have proceeded on entirely different lines. I have no doubt that this will be the verdict of history.

Only two years elapsed between the defeat of Japan on Aug. 15, 1945, and the transfer of power on Aug. 15, 1947, but in those two years events moved at an ever-increasing pace. Almost the first official interview I had on my arrival last March was with the Maharaja of Bikaner; and the wise co-operative and helpful attitude he then displayed gave me a new confidence that the problem of fitting the States into the future free India was capable of a quick and satisfactory solution.

# Princes' Part

His Highness was the first Ruler who realised the part which the Princes could play in the future by sending representatives to the Constituent Assembly to help frame the new constitution of India. Likewise His Highness was the first Ruler to support my proposals for obtaining the accession of the State to their neighbouring Dominions.

It must be remembered that on the day of transfer of power the tie that previously held the States in British India was removed; for that tie had depended on the paramountcy of the British Crown. On that day I gave up two entirely separate functions, namely that of Viceroy and that of Crown Representative. In the first capacity I dealt with British India; in the second, with the States, and it was the fact that both these offices were always held by one and the same man that had really linked the States with British India. With the disappearance of both these offices, India was in imminent danger of fragmentation. Fortunately both the political leaders of British India and the Rulers of the States in general recognised that their common security and welfare depended upon the stablishment of a strong modern India, to whom the States could accede.

The fact that I was compelled to transfer power to two separate Dominions did not invalidate this principle. Following on negotiations in July, some 550 out of the 565 Indian States acceded to the Dominion of India on the transfer of power. The remaining States (except for Hyderabad with whou, a separate standstill agreement was concluded) acceded to Pakistan.

In negotiations like these, their success turns very largely upon the quality and nature of the example and advice which is given; the statesmanship and patrio-

INDIAN INFORMATION, FEBRUARY 1, 1948

Digitized by GOOGLE

tism displayed by the Maharaja of Bikaner in giving a lead in announcing his accession to the Dominion of India, without a moment of doubt or suspicion, cannot therefore be praised too highly.

My Government have been particularly appreciative of His Highness's statesmanlike actions, and I am more than delighted that His Majesty the King, in view of these actions as well as the past record of His Highness was pleased to make him a Knight Grand Commander of the Most Exalted Order of the Star of India. You can imagine what a pleasure it has been to me to have been the one privileged to invest His Highness with the Insignia of this Order.

# Tribute to Maharaja

It was not on the question of accession alone that the true quality of His Highness's statesmanship has been revealed. The attainment of independence by India was followed by dark days when even normally sane and healthy minds lost their poise. From the Punjab, where the trouble started the conflagration threatened to spread all over the country. The immediate task was to localise the danger and to keep from contamination the parts of India which were not yet affected. I know that I am voicing the feelings of my Government when I say how very grateful we are for His Highness's assistance and example in restraining mob violence. When the mass migrations started, colossal convoys of refugees had to pass through Bikaner, and it is a tribute to the strength and efficiency of the State's administration that these convoys passed through in safety with adequate water and food. I am very glad to have this opportunity of acknowledging His Highness's magnificent contribution and assistance in the repatriation of these refugees.

But good administration does not lie alone in the adoption of wise and inspired policies in moments of crisis. It consists also in good and sound day-to-day government in all things which affect the daily life of the people. It has given me great pleasure to hear of the many steps which have been taken in Bikaner to stimulate agriculture and afforestation and to obtain for the State the benefits of modern technical methods. Bikaner, understand, is a participant in the Bhakra dam project and expects to derive considerable advantage from its completion. I have no doubt that the adoption of progressive measures in matters like this is as important as the modernisation of government according to democratic principles, for in the last resort, in the conditions of the modern world, no State can expect to stand alone and survive which has not in itself sufficient resources, material and moral, to assure to its people the essential conditions of modern civilised existence.

His Highness has also taken a keen interest in constitutional reforms in his State and here again he was one of the first to announce his intentions. It is clear that progess in this direction cannot be regulated by any set standard. What should be aimed at is to evolve a scheme suitable to the particular State and in conformity with the wishes of the people. I understand that the constitutional reforms initiated by His Highness fulfil this test and I wish them all success,

because in the contentment of the people lies the security of the State and its Ruler.

As the late Supreme Allied Commander South-East Asia, it will be a particular pleasure to me to see the State Forces on parade tomorrow morning. His Highness has referred to the Bikaner Bijey Battery which served under my command on the Burma front, and I should like to pay a tribute here to the high standards they achieved and the credit which they brought to His Highness and the State.

I should also like to express my gratitude to His Highness for placing Bikaner House in Delhi at the disposal, through the Government of India, of the South-East Asia Command. It was used as a mess for senior allied officers of the rank of Brigadier and above of my Rear-Headquarters.

As His Highness has reminded you in his speech, he and I have been lifelong friends, for we first met when his father was visiting my family 40 years ago, when he was five and I was seven. We met again at the Coronation of King George V, in 1911, and ten years later we served together on the staff of the Prince of Wales during His Royal Highnesa's visit to India. It was then that I paid my first visit, more than 26 years ago, to Bikaner; a visit which I am sorry to say there was no opportunity to repeat until 1945.

Finally, may I once more express the deep appreciation of my wife and myself for the kind way in which His Highness has referred to us, and to thank him for the magnificent welcome and the splendid hospitality which he has given to my family here.

# Warning Against Sending Letters Through Air Passengers

It has come to the notice of the Director General, Posts and Telegraphs, that there is a growing practice on the part of the public to send letters from one place to another through passengers travelling by air, says a Press Note, issued by the Directorate General, Posts and Telegraphs, on Jan. 3.

It is notified that Section 4 of the Indian Post Office Act confers on the Indian Post Office the exclusive privilege of conveying letters (which includes post cards); also that subject to the exceptions specified below, no person is allowed to send letters except through the Post Office, or to carry letters for the purpose of delivering them at destination. Any person who sends or carries letters in contravention of this Section renders himself liable to prosecution under Sec. 58 of the Indian Post Office Act. The exceptions referred to above are:

(1) letters sent by a private friend in his way, journey or travel to be delivered by him to the addresse without any hire, reward or other profit or advantage for receiving, carrying or delivering them, and

(4) letters solely concerning the affairs of the sender and receiver thereof, sent by messenger on purpose.

The public are warned that they should not do anything which will infringe Sec. 4 of the Indian Post Office Act.

# New Tele-Communication Link With Assam

Assam is now in direct telegraphic and telephonic link with the rest of India. Formerly all telegrams and trunk telephone calls to Assam used to pass via Parbatipur and Lalmonirhat which, with the partition of Bengal ceased to be parts of India.

Immediately after August 15, 1947, the Dominion Cabinet in Delhi sanctioned the erection of a new tele-communication link at a cost of Rs. 25,00,000 from Patna to Gauhati through Bihar, West Bengal, and Northwest Assam, covering a distance of 625 miles. The project which received very high priority in the list of Communication Ministry's expansion schemes was taken up in hand in the second week of October last. The first half of the link connecting Patna with Siliguri which incidentally brings Darjeeling and Jalpaiguri districts in direct touch with Calcutta was completed on December 31, within 75 days from the date of commencement of work.

### New Lines

According to a high official in charge of the project, the work involved the laying of 4,000 yards of underwater cable across the Ganges in addition to running new lines. The speedy materialisation of the project was due to the devoted service of over 1,000 workers some of whom had to work hours together in waist-deep water in flooded areas of Northern Bihar. Besides transhipment of 300 wagons across the Ganges, Railways had to run three special trains from Jubbulpore to move 1,60,000 maunds of engineering stores required, mostly by curcuitous routes in order to avoid transportation through Pakistan.

The most up-to-date tele-communication methods are being adopted by Indian engineers in charge of this project in establishing this link which when completed may offer 18 telegraph and five speech channels for simultaneous operation.

# PRIME MINISTER'S STATEMENT

(Continued from Page 145)

our Governor-General as the one-man boundary force which succeeded when the boundary force of 50,000 men in West Punjab did not succeed in keeping the peace. This unarmed knight of non-violence is functioning again. May the same alchemy work again in India and elsewhere.

We have sought to remove one major cause of dispute and argument between India and Pakistan and we hope that other problems will also be resolved. But let it be remembered that the people of Kashmir are suffering from a brutal and unprovoked invasion and we have pledged ourselves to help them to gain their freedom. To that pledge we shall hold and we shall do our outmost to redeem it. We seek their freedom not for any gain to us but to prevent the ravishing of a fair country and a peaceful people.

India is making an ali-out effort to become self-sufficient in her foodgrain requirements with the aid of large-scale mechanisation. Picture shows a tractor and heavy plough in operation in the Gonga Khadar tract in U.P.

# RECLAMATION OF 50,000 ACRES WASTE LAND

# **Another Tractor Unit in Action**

N pursuance of the U. P. Government's plan to reclaim waste land in the Province, a unit of heavy tractors went into action in the Nainital tarai region on Jan. 4 to reclaim by May this year 10,000 acres of waste land, which will be grown with food crops. This scheme is part of the five-year plan of the U. P. Government to reclaim 50,000 acres in the tarai region.

Tractors supplied and serviced by the Central Tractor Organisation were set in motion by Mr. N. A. Sherwani, Agriculture Minister of U. P. Government. The Central Ministry of Agriculture was represented by Mr. D. R. Sethi, Agricultural Development Commissioner, Government of India and Mr. J. Connors, Chief Engineer, Central Tractor Organisation, Mr. A. N. Jha, Agricultural Secretary and a number of officials of the U. P. Government were also present.

The fertility of this area has alluerd people, through the centuries, to settle on the land and the region has known a glorious past with flourishing populations and powerful kingdoms, as is clear from the extensive ruins found round about. Evidence of this is also available in the memoirs of the renowned Chinese traveller, Huen Tsang, who visited India in the 6th century.

For a variety of reasons, amongst which may be counted the influenza

epidemic of 1918, responsible for many deaths and a series of dacoities over a period of years on the one hand, and the unhealthiness of the tract and the depredations of wild animals on the

The heavy plough upturns virgin soil, which for centuries has grown wild grasses and wild date palm

other, there has been a steady decline in population and cultivation.

Malignant malaria, the greatest scourge of the tarat terrain, is to be checked and eventually eliminated. An ant. malaria unit has been established in charge of an ex-Army officer with experience of malar a control in Assam and Burma. There will be extensive DDT operations and subsoil drainage by the construction of artesian wells. As a result of measures already adopted, no case of malaria has been reported since September last.

### Colonisation Scheme

The Minstry of Agriculture, Government of India, is not only digging up the land by mechanical ploughs, but, at the request of the U. P. Government, who lack equipment and trained personnel, it has undertaken to cultivate 10,000 acres on the basis of no profit, no loss. This cultivation will enable the settlers on the land to have the benefit of the first crop. The crops to be sown in this area will be on the advice of the U. P. Government. It is considered likely that in June next, the land will be sown with a "smother crop" and a portion will be put under maize which will be harvested by October, 1948. The land will then be grown with rabi grains and a part of it will be under sugarcane early in 1949. It is estimated that 80,000 maunds of rabi grains will be harvested in 1949.

The present plan envisages a system of co-operative farming so that co-operative enterprise may develop into "joint farm management". No subletting or fragmentation will be allowed. The reclaimed area is to be divided into four farms of 1,500 acres each, to be colonised by exservicemen or refugees. Details regarding the settlement of refugees are under discussion with the Central Government. For each colonist settled, the Government of India have undertaken to pay a subsidy of Rs. 500 and a similar amount will be paid by Provincial Government. The U. P. Government, it is learnt, will provide every possible facility to the new settlers in the initial stages of the scheme, such as free fencing, the use of tractors, drainage, roads, hospitals, domestic water supply and short-term loans.

#### Prospects of Oil

"Once the ravages of malaria are effectively controlled", said an official of the U. P. Government, "this land, fertile with the accumulated deposit of centuries of grass and foliage, should become a veritable gold mine. This scheme will not only be the means by which the U. P. will reach soff-sufficiency in food, but we will also be able to help the refugees from Pakisten. We have plans to upgrade cattle and also start various industries in the area such as sugar, jute and starch".

Optimistically he concluded: "It should not be surprising if we strike oil, for in this region are numerous fossil palms, and wherever these are found, there is a regular oil belt".

# FIVE-YEAR PROGRAMME OF RESEARCH ON FOOD CROPS

THREE DAY session of the Indian Council of Agricultural Research Advisory Board, held under the chairmanship of Sir Datar Singh concluded in New Delhi on Jan. 7.

For protecting crops and animals and the utilisation of their products for increased food production, the Board recommended the following subjects for enacting legislation by the Central and Provincial Governments: land improvement, conservation of villege manurial resources, prevention of wastage of town refuse, compulsory castration of unfit and useless bulls, compulsory consolidation of holdings, prohibition of division and fragmentation of holdings beyond a minimum standard unit, the declaration and protection of fish breeding grounds as sanctuaries, compulsory utilisation of all suitable enclosed areas of fresh water for pisciculture, and the prevention and control of crop pests and diseases.

The Board agreed to the establishment of a Central Potato Research Institute with substations in representative regions in India underthe Indian Council of Agricultural Research. The estimated cost is likely to be Rs. 22,00,000.

The scheme of the Wheat R ist Control Committee, which is expected to cost Rs. 10,00,000 was also approved.

The Board agreed to a programme of research for the production of food crops during the next five years. The programme includes the development of hybrid strains in maize, the eradication of weeds in various crops, the production of more root crops, the production of indigenous insecticides and fungicides for the destruction of crop pests and diseases, and further research on pulses and smaller millets.

#### Soil Conservation

The Board agreed to implement, in consultation with Provincial Governments, the recommendations of the Report of Drs. Shuhart and Stewart on soil conservation in India.

In consultation with the Central Government, a high power committee is to be appointed to review the work of the Indian Agricultural Council and to make recommendations for future work, as soon as possible.

# Enlargement of Federal Court's Jurisdiction

THE Federal Court (Enlargement of Jurisdiction) Act passed by the Dominion Legislature during its autumn session in 1947, is one of the four enactments which have been assented to by the Governor-General.

This Act, which came into force on Feb. 1, 1948, provides for the enlargement of the appellate jurisdiction of the Federal Court in civil cases. Its object, briefly, is to prevent the direct passage of appeals from a High Court to the Privy Council, and thus making it compulsory that civil appeals arising from the judgment or decree of a High Court shall, in the first instance, go to the Federal Court.

# **Criminal Matters**

Regarding criminal matters, as explained by the Honble Dr. Ambedkar, Law Minister, in the Legislature, the Act does not abolish appeals to the Privy Council. Criminal matters can still be entertained by the Privy Council from judgments of High Courts.

Again, it does not abolish appeals to the Privy Council from the Federal Court as also appeals from the courts of the Judicial Commissioners of Ajmere-Merwara and Coorg. Three other enactments which have also received the assent of the Governor-General are: the Repealing and Amendment Act, 1947, the Armed Forces (Special Powers) Act, 1947, enabling certain powers to be conferred upon officers of the Armed Forces in disturbed areas, and the Armed Forces (Emergency Duties) Ameadment Act, 1947.

# FAMOUS METEOROLOGIST VISITS R. L A. F.

Dr. Sverre Pettersen, the well-known meteorologist of international repute from Norway who recently arrived in India at the invitation of the Science Congress visited No. 3 Wing R. I. A.F. at Palam on Jap. 15 and was shown round the Meteorological Section, the Navigation Briefing Section and the Radar Unit.

Dr. Sverre Petterssnen, who was accompanied by Dr. S. K. Bannerjee, Director-General of Observatories, and other officers from Air Headquarters (India) was impressed with the working of these Sections.

# PANDIT NEHRU IN CALCUTTA

The Hon'ble Pandit Jawaharlal Nehru, Prime Minister, visited Calcutta recently.

These pictures taken during his visit show (above, left) Pandit Nehru photographed with H.E. Mr. C. Rajagopalachari, Governor of West Bengal, who received him at the airport, and (above, right) the Prime Minister inspecting a Guard of Honour provided by the 5th Urban Infantry and the Bengal Armed Police at the Dum Dum airport, and (below) Pandit Nehru addressing the Annual General Meeting of the Associated Chambers of Commerce. Mr. H. D. Cumberbatch (third from left) President of the Associated Chambers of Commerce and Dr. P. C. Ghosh (third from right) ex-Premier of West Bengal, can also be seen in the picture.

Pandit Nehru, addressing the fourteenth session of the Central Advisory Board of Education in New Delhi on January 13

# THREE-YEAR DRIVE FOR LITERACY

# Central Advisory Board's Recommendations

THE Central Advisory Board of Education adopted on January 16 the interim report the Adult Education Committee appointed on the opening day of its Session which recommends the launching of a three-year programme for literacy and general education. The report says that both literacy and general education should proceed simultaneously but during the next three years greater emphasis should be laid on the latter aspect of adult education with a view to enable every Indian to take part in the New Order. Efforts should also he made, the report says, to raise the percentage of literacy to 50 at least. The report further recommends that all the resources and personnel of the country should be mobilised for the attainment of these objectives and suggests employment of whole-time workers, part-time workers and volunteers. The report says that part-time workers should be village school teachers, Post-masters and other civil servants who may be given a small honourarium for their services and voluntary workers should be recruited from amongst students and staff of schools and colleges; Government employees, district officials etc. It also recommends that all owners of mills and factories should provide for the education of their workers and their families and the Government should make it compulsory for all its employees to attain literacy within a period of three years and it should give them facilities for this purpose. Adult education should also be compulsorily prowided for all prisoners in jails.

As regards provision of funds for this purpose, the report recommends that Provincial Governments and the Central Government should both provide funds at the minimum rate of I anna per person to be educated. As the means of imparting adult education the report suggests that use should be made of modern media of mass communication as for example, Radio Films, the open air theatres, etc. Material for those media, says the report, should prepared by the Central Government in consultation and

co-operation with the Provincial Governments. The report suggests the setting up of a special department for the preparation of the necessary material expeditiously.

The report further recommends the setting up of special agencies under Departments of Education which will be responsible for the organization of Adult Education and says that the general policy and programme should be decided in consultation with the Advisory Bodies consisting mainly of non-officials. It adds that in the programme of Adult Education due emphasis should be given to further Education of literates, through clubs, discussion groups, Peoples's Colleges, summer schools and other similar agencies.

#### Medium of Instruction

There was a lengthy debate in the earlier meeting of the Board as to what should be the medium of instruction and examination in Indian Universities. The Hon'ble Maulana Abdul Kalam Azad, Minister for Education, remarked that there was a lot to be said in favour of having one common Indian language as the medium of Instruction in all the Universities. This will cement national unity as English had done in the past. He was of the opinion that provincial languages like Bengali, Maharatti and Tamil will progress at the same time. These languages were rich and bound to dayslan but the rich and bound to develop but the common Indian language was required to replace English for inter-Provincial contacts and pro-motion of cultural unity. Maulana Azad however felt that we should move with caution in this vitally important matter and the status quo may be maintained for five years and meanwhile the question may be thoroughly examined by an expert committee.

The Hon'ble Dr. Shyama Prasad Mukerjee, Minister for Industry and Supply who also took part in the debate

said the question was bristling with difficulties. Politically the ideal was one language through all stages of education. Educationally we must see what is in the interest of the students. Provincial languages, he felt, must be encouraged if mass education was to flourish. He mentioned that if the medium of instruction was suddenly changed at the University stage, it may hinder educational development. He agreed with Maulana Axad that the question must be examined by experts from all aspects and no precipitate steps should be taken.

### Refugee Students and Teachers

The Board finally recommended that the status quo may be maintained for five years and a committee be nominated by the Chairman. The Committee will be asked to report on what should be the medium of instruction and examination in higher education, the place of the official Indian and regional languages in higher education, the place of English in the curriculum and machinery required and means to implement the change over to the official Indian language or the regional language. The Board also passed a resolution urging the adoption of a uniform scientific terminology in India and the retention of international terms in use at present.

Offers of help in the rehabilitation of displaced students and teachers from Pakistan areas were made by representatives of all Provinces and Universities present. The representative of East Punjab was assured that all Universities and Provinces were anxious to assist these refugee students and teachers in every way. The Board resolved that full facilities should be given to these students whose studies have been interrupted by unforeseen happenings over the creation of which no one in this country had any control. The Board felt that neighbouring Provinces should admit those students who had completed courses of studies, condone the shortage of lectures, waive restrictions regarding domicile and migration certificates and give the students all other possible concessions.

# ROOFED ACCOMMODATION FOR ALL DISPLACED PERSONS BY APRIL

# Two-Crore Scheme For Extension of 25 Towns in East Punjab

DISPLACED persons at present under canvas in East Punjab will have roofed accommodation before April. This is expected to be achieved by constructing semi-permanent accommodation at selected sites in existing towns, by repair of damaged and burnt houses and refitting of houses vacated by Muslims in order to enable them to take in larger numbers, and by requisitioning groups of buildings.

A two-crore scheme has been sanctioned for the immediate construction of semi-permanent accommodation for 200,000 in 25 towns of East Punjab for which development schemes have already been approved. Location of these structures will also fit in with industrial plans for the province. Over 7,000 acres of land is available for suburban and supplementary town development. The new Capital, for which alternative sites have been inspected, is also expected to absorb a large number of displaced persons.

Simultaneously, a dispersal scheme aiming at the movement by the end of February of at least 250,000 displaced persons at present in camps in Ambala Division has been launched. Repair of damaged houses in villages not yet settled particularly those near the towns, is being undertaken by the Urban Rehabilitation Circle of P. W. D. District authorities have already been asked to make a survey, and block sums are being placed at their disposal for repairs.

In Delhi, the Improvement Trust has suggested certain areas for residential, industrial and business premises for displaced persons. The development of three or four sattleite towns in Delhi province is under consideration.

#### Progress of Rehabilitation

Rehabilitation plans, both for rural and urban areas, have made further progress with the setting up of the Joint Rehabilitation Board and reorganisation of the Rehabilitation Directorate of the East Punjab Government. The Board has been set up to maintain the closest liaison between the East Punjab Government and the Centre. It meets every fortnight under the Chairmanship of Mr. K. C. Neogy, Minister for Relief and Rehabilitation, and the members include Mr. Gopalaswami Ayyangar, Minister without portfolio, the Premier and Home Minister of the East Punjab Government and the Heads of Relief and Rehabilitation Departments in the Central and Provincial Governments.

Those who resettle on land are being given loans for buying seeds and bullocks and for the repair of houses and wells. So far as the provision of foods for rural resettlers and fodder for their bullocks until the harvesting of next crop is concerned, Government will give free grants, the cost of which will be shared between the Central Government

and the Government of the Province or State concerned. This scheme will include village artisans, like carpenters and blacksmiths, and it has been decided that financial assistance will be given in kind, as far as possible, and in instalments.

For urban rehabilitation, a scheme for granting loans not exceeding Rs. 500 to those who wish to settle in a particular town or place in the economy of which they are likely to be absorbed permanently has been sanctioned. The scheme covers resettlement of traders, shopkeepers, artisans, persons wishing to start their own workshops and cottage industries, doctors (including vaids, hakims and homeopaths) and lawyers. The advance may be utilised for the purchase of tools of trade, equipment, stock-in-trade, raw material, books, etc.

In East Punjab, already nearly 250,600 agricultural families have been settled on 26,20,000 acres of land vacated by Muslims. The East Punjab Government have sanctioned food grants in villages at the rate of Rs. 3-8-0 per adult and Rs. 2 per child of 12 years or less. Takkavi loans, amounting to Rs. 1,57,50,000 for the purchase of seeds, bullocks, fodder and repair of houses and wells are being distributed to refugee settlers. To help the restoration of village economy, rehabilitation loans to rural artisans and village servants are also being sanctioned. Arrangements are being made to train non-agriculturist workers in refugee camps for settlement in villages.

It has also been decided to organise 50 cotton spinning and weaving centres and five wool spinning centres in order to supplement income from land and at the same time to help in the production

of cloth and blankets.

For about 50,000 agriculturist families of West Punjab and 30,000 from Bahawalpur and Sind land will have to be found either in East Punjab States or in other provinces. In Patiala State 120,000 refugees have been settled and another 12,000 families are expected to be absorbed. In Jind, 1,169 families have so far been settled but there is still land for 13,000 families. In Nabha, 12,000 families have been settled. In Kapurthala State, 10,000 families have been settled and there is room for another 3,000.

Outside the Punjab, many provinces and States have offered to absorb agricultural refugees in their rural economy. Large areas of land have been vacated by Muslims in Bharstpur and Alwar. The States of Indore and Gwalior wish to open new tracts for cultivation. There is also opportunity of resettlement on cultivable and reclaimable land in Andamans. In the U. P. the Ganges, Khadar and Nainital Tarai scehmes, when completed, will provide large tracts of reclaimed land which will be available for refugees. These two schemes together are expected to provide land for nearly 5,000 families.

While East Punjab is expected to resettle men from West Punjab, those who have been uprocted from N.-W.F.P. Sind and Baluchistan and Bahawalpur State are expected to be resettled in Provinces and State outside. Up to the end of December 1947, 13 trains carrying 30,865 refugees had gone from Kurukahetra.

Lady Mountbatten photographed in an open air class run by the Baldev Nagar Refugee Camp, Ambala, which Her Excellency visited recently

The total number of refugees registered in Employment Exchanges up to December 15 was 53,221 of whom 8,167 have been placed in employment. The Transfer Bureau of the Ministry of Home Affairs, which registers the names of Government employees who opted for service in the Indian Union, had registered up to December 7 about 2,300 employees from N.-W. F. P. Baluchistan and Sind. Out of these about 1,300 have already been nominated to specific vacancies and the names of 700 more are being circulated to various Ministries to find out if they can be absorbed. Instructions have been issued to all Ministries to notify all vacancies, in the first instance, to the Transfer Bureau and if the latter cannot submit names the vacancies are to be notified to the Employment Exchanges. The exchanges have been asked to give preference to refugees from Pakistan, including employees of the Indian States within the geographical limits of Pakistan.

Provincial Governments have generally agreed to waive domicile restrictions in the case of experienced Hindu and Sikh refugee officials and thus it is expected many of them will be placed in suitable jobs. The Government of Assam have asked for technical men. The Government of Bombay are attempting to absorb in service refugees from Sind, including a large number of teachers. The Government of Madras have agreed to consider cases of technical men with special qualifications for posts where knowledge of a provincial language is not essential.

### Special Employment Exchange

For highly qualified persons among refugees who are unemployed a special employment exchange is proposed to be set up. Instructions have also been issued by the Ministry of Industry and Supply to give preference to refugee contractors while placing contracts. Provincial Governments and the Ministries of the Government of India have been asked to consider sympathetically the requests of displaced lawyers for employment in judicial and administrative posts and on refugee work. The Ministry of Education has circulated to all Provincial Governments particulars of displaced teachers for consideration for appointments in various government and aided institutions in their respective provinces. Statistics are being collected to see how far displaced teachers can be absorbed in the East Punjab and Centrally-Administered Areas, where it is necessary to approach other governments for reservation of certain number of posts for them so that they might be absorbed in their expansion schemes.

Training of skilled and semi-skilled persons has been given high priority in the programme of rehabilitation. In the existing training centres arrangements have been made for training 4,000 men. New technical and vocational centres have also been opened at Delhi, Ajmer-Merwara and East Punjab where nearly 2,000 to 2,500 refugees will be admitted. It is proposed to increase the capacity of the centres to 10,000. It is also hoped to provide training to nearly 5,000 apprentices in textile mills and railway

Lady Mountbatten talking to refugee women in the Ambala Camp.

workshops and other large government and private establishments. The period of training will be about 6 months and each trainee will be given an allowance of Rs. 40 per mensem in lieu of board and lodging.

The Ministry of Relief and rehabilitation has now sanctioned a cottage industries and training centre in the refugee camp at Kurukshetra with a view to providing training and remunerative employment to refugees in industries, crafts and arts such as woodwork, emithy, fitter-shop, machine-shop, foundry-shop, welding, tin and copper smithy, weaving, knitting and hosiery, soap making, tailoring, dairy, confectionary, poultry, leather, embroidery, pottery, basketery, toy making, printing, etc. The scheme will cost approximately Rs. 5 lakhs for capital equipment.

Training of 115 displaced girls and women has been arranged at the exservice women's training centre in New Delhi. This will include training in spinning and weaving, calico-printing, tailoring and dress-making, typing, stenography, commercial and clerical work. After March 31 the centre will be able to admit 300 displaced girls and women for training and a number of trades, and occupations will be added.

An Industrial Centre has also been started in New Delhi for refugee women and children. This provides employment to women in sewing and knitting, etc.

Loans to students for training abroad are being granted on the recommendation of the Government of India's diplomatic representatives to whem the students have been asked to make application. So far 45 applications for loans have been

received from U. K. and 24 from the U.S.A.

Since organized evacuation concluded and the Military Evacuation Organization was wound up, the inflow of refugees from West Punjab and N. W. F. P. has very much decreased. Efforts are now confined to clear non-Muslims from pockets all over West Punjab and N. W. F. P. The number of non-Muslims thus stranded is estimated to be 50,000 to 60,000.

Evacuees are brought from pockets to rail heads and from there they cross over to India in refugee trains.

The total number of non-Muslims cleared from peckets from Dec. 19 to Jan. 3rd was 2,587.

# Rescue of Abducted Women

In addition, the efforts of the military authorities still operating in Pakistan are directed to the rescue of abducted women and forcibly converted non-Muslims. Mixed parties of police and military assisted by women social workers are to operate in Western Pakistan. This work has not made much headway as there has been some disagreement between the Government of India and the Government of Pakistan on the actual mechanics of the operation.

The total number of non-Muslims who crossed over to India from West Punjab and N. W. F. P. by rail, by road, on foot or by air up to Jan. 3, 1948, was 40,58,307. No Military Evacuation Organization is operating in Baluchisten, Sind and Bahawalpur State. However, evacuation

has been proceeding from these areas by air, by rail and by sea. According to latest information, 394,000 non-Muslims have already left Sind and Baluchistan for India. Including Bahawalpur State, the total number of non-Muslims who the total number of non-Muslims who have come over to India is 550,000. The recent disturbances in Sind have led to increasing exodus of non-Muslims from that province. Arrangements are in hand for their reception and dispersal for relief.

The Ministry of Relief and Rehabilitation has provided, 37,948 large tents of military pattern for temporary shelter to refugees in camps in East Punjab, Delhi and Kurukshetra. In addition, 150,000 biovuac tents have been sent to East Punjab Camps. The supply of woollen covers and clothing has continued. Upto December 26, the total number of Razais made available for distribution to indigent refugees was 8,55,910 including 83,000 for Kurukshetra 8,000 for Delhi and the rest for East Punjab. The number of blankets supplied was 3,40,457, nearly 165,000 to Kuru-kshetra and 175,000 to East Punjab, 7.000 jackets and 100,000 jursies, besides 125,000 lbs. of knitting wool, have also been made available. The supply of 39,50,000 yards of various kinds of cloth and ready-made garments, numbering about 20,000,000, have also been obtained for distribution in refugee camps.

#### **PHOTOGRAPHS** 0 F UNIDENTIFIED CHILDREN

certain οf Photographs unidentified children attached and in camps in Amritsar have been received from the Red Cross Search Service Bureau in Amritsar. These will be on view at the Kingsway Camp (Outram Lines), Kalkaji Camp and in the Headquarters Office of the Displaced Persons' Enquiries and Search Service frem January 7, says a Press Note, issued by the Ministry of Relief and Rehabilitation on Jan. 7.

The Ministry of Relief and Rehabilitation have so far received over 25,000 enquiries from persons whose kith and kin have not been traced since they came from West Pakistan. The Ministry had set up an Enquiries and Searching Service in conjunction with the Indian Red Cross Society to deal with this problem. About 500 unattached persons were enabled to contact their relatives through this organisation, which helps to establish contact between missing persons and their relatives.

The Displaced Persons' Enquiries and Search Service has now arranged to place on view photographs of unattached and unidentified children, in the first instance, in different camps in Delhi. Refugees whose children are still missing should contact the following officers:...

1. Searching Officer (Outram Lines,

Kingsway Camp).
2. Searching Officer, Kalkaji Lines,

Okhla. 3. Officer-In-charge, Displaced Persons' Enquiries and Search Service, 'P' Block, Room No. 58, Raisina Road, Service, New Delhi.

# Pandit Nehru's Appeal

PANDIT Jawaharlal Nehru, Prime Minister, has issued the following appeal in connection with the -recovery of abducted wemen:

Among the many problems that we have to face, one of the most urgent is the recovery of girls and women who have been abducted. We must strain every nerve to help these unfortunate women to go back to their homes. Their friends and relatives should welcome them back and give them all comforts and solace after their harrowing experiences.

I am told that sometimes there is an unwillingness on the part of their relatives to accept the girls back in their homes. This is a most objectionable and wrong attitude for any one to take up and any social custom that supports this attitude must be condemned;

These girls require our loving and tender care and their relatives should be proud to take them back and give them every help. So far as the Government is concerned they consider themselves responsible for these girls and they do everything in their power to give them every kind of help and relief. I hope that our people and the Government will cooperate in this vital work.

The Honbl'e Dr. Syama Dr. Mukerjee's Mukerjee, M for Industry Minister and Appeal Supply, has issued the following appeal:

The major task of evacuation of Hindus and Sikhs from Western Pakistan is virtually complete, but there are still thousands of unfortunate women who have to be recovered and rehabilitated with honour in our society. The partition of the country led to the upswell of heastly passion and these women were torn from their homes and violently tossed about hither and thither. They have been victims of circumstances beyond their control and have suffered utmost physical and mental agony.

It would betray a gross lack of social consciousness on our part if we do not rise equal to the occasion and welcome them all with warmth and alacrity back to our society with the fulness of all rights, privileges and honour. shame or stigma should attach to them. If there is any shame, it is entirely ours, because we failed to afford full protection to our womenfolk.

It is the primary duty of the people and Government to help in the task of recovering abducted Hindu and Sikh women and receive them back into our society without any reservation what-soever. This is the Spirit of our true dharma and I am confident all sections of the community will worthily respond

· Mrs. Rameshwari Nehru has issued the Mrs. Ramesh following appeal: wari Nehru

The partition of India unfortunately aroused satanic tendencies amongst our people. Perhaps never in human history did men sink so low as our people did immediately after partition. to say, the gory events in India after partition make one difficult to believe that man was made in the image of God. It is difficult to explain the barbarities perpetrated by our men on innocent wo-men, Hindus, Muslims and Sikhs, alike. Thousands of women and girls who fell a prey to the savagery of abductors, remain still untraceable. Who knows where they are and what is their lot? Even the gh an all-out effort is being made in both the Dominions to rescue these helpless women, success is rathermeagre.

What adds poignancy to the situation is the foolish and callous attitude of cur people and society who are said to be reluctant to welcome back those un-lucky sisters to their original place of honour. In their upardonable ignorance some of their kinemen and relations have come to regard these victims of fate and fury of man as degraded and fight shy of accepting them back in their midst.

I condemn this inhuman outlook most strongly, whether in individuals or in our society. No Hindu Shastra warrants—that such innceint wemen who suffered because our people proved too weak to defend their life and honour housest the strongly such as the strongly weak to defend their life and honour housest the strongly such as the str should be despised. If anybody is to be condemned for the present plight of our abducted women, it is Hindu society as a whole and not these innocent women. In spite of the harrowing experiences they have undergone, they remain as pure as ever. May I request my brothers to rise above silly notions and superstitions and welcome those abducted women back with open arms. Therein lies our Dharma and salavation of our society.

Chowdhry Krishna Gopal Dutt, M. L.A.

Chowdhry Krishna Gopal fare and Board, has Dutt

Secretary, General Central Refugee Wel-fare and Vigilance issued the following state-

"No other single issue has contributed more to the rapidly deteriorating relations between the two sister Dominions of India and Pakistan than the abduction of a large number of women by ruffians in both the Dominions.

"Noble and corageous are those who are engaged in the most difficult and hazardous task of rescuing these unfortunate sisters in both the Dominions.

These brave social workers are undoubtedly tackling a most fundamental problem and they deserve the wholehearted help and co-operation of every decent man and woman in both the Dominions.

On the success of their mission depends the issue of peace and war between the two dominions. If sanity could dawn on the frenzied people on both sides and they could see the shame and brutality involving in forcibly keeping Hindu or Muslim women as hostage, the tense atmosphere that now prevails between the two Dominions will ease to a considerable extent. Such a course will have more far-reaching effects than any military operations or any verdict that the U. N. O. Security Council may give.

I, therefore, earnestly appeal to every devotee of peace in the two Dominions to strengthen the hands of these brave social workers. The co-operation of the Government and the people of Western Pakistan where conditions are still very difficult and discouraging, is particularly essential in this humantarian task".

Goswami Ganesh Dutt, President, Sanatan Dharm Pratinidhi Sabha, has issued the following statement:

I am a little surprised and distressed too to know that our Hindu and Sikh brothers are not willing to accept their abducted sisters who have been recovered from Pakistan. Instances are many where such women have been accepted by society in the past.

This is the opinion of the All India Sanatan Dharma Sabha of the Benares Hindu University. Giving their unqualified and absolute support to this view are our Hindu leaders like Mahamahopadhyay Pandit Kali Prasadji Principal "Prachya Maha Vidyalaya" of the Hindu University, Pandit Vishwa Nathji Shastri, Vedacharya, Shri Pandit Gaya Prasadji, Jyotishyacharya and others.

I should remind you that even our Jagat Guru Shri Shankaracharya gave the same opinion and advice about acceptance of recovered abducted women during the Noakhali killings.

# DOUBLE-SHIFT CLASSES FOR REFUGEE STUDENTS

The Ministry of Education, Government of India, have arranged double-shift classes for refugee students for Intermediate Arts and Science, together with the Medical Group, B. A. Pass and Honours and M. A., in the Hindu College, Delhi.

Arrangement for women students is also contemplated at the Indraprastha College for women.

# FINANCIAL AID TO REFUGEE STUDENTS

SCHEME for the grant of financial assistance to refugee non-Muslim students and trainees from Western Pakistan who have arrived in any Province or State within the Indian Union has been prepared by the Ministry of Relief and Rehabilitation.

The Government of India consider the problem of education and training of the younger generation urgent and are anxious that refugee students and trainecs wishing to pursue their studies or training should not be prevented from doing so for lack of funds.

Accordingly, the Migistry of Relief and Rehabilitation in a circular letter have asked all Provincial Governments and Chief Commissioners to take steps to introduce immediately this scheme within their jurisdictions. The States are also being similarly addressed. Provincial and State Governments have been advised to give wide publicity to the scheme amongst refugee population and invite applications, and to communicate it to the heads of all recognised colleges and institutions.

Under the scheme, financial assistance for technical and collegiate education will take the form of loans. For students in IX and X Classes of schools a free grant and certain other concessions may be given.

# Applications for Loans

Applications for grant of loans under the scheme are to be submitted by the student and/or his guardian through the Head of the Institution concerned, who is expected to verify the facts as far as possible and forward them to the sanctioning authority (normally the Director of Public Instruction of the Province) together with his recommendations. The Head of the Institution is also competent to sanction an amount not exceeding Rs. 20-y in order to avoid distress:

In the case of school students, the Government of India have decided upon the following concessions to students in the 9th and 10th classes:—

- (i) They should be given free seats and no fees should be charged from them:
- (ii) they should be exempted from the payment of examination fees; and
- (iii) a grant up to a maximum of Rs. 78 may be made to each student for books, apparatus and stationery.

The Provincial Governments will take suitable steps to ensure that these concessions are given only to those students whose parents or guardians are without sufficient funds. Applications for the above concessions will be received by the Headmaster of the school concerned.

The details of the loans scheme and its terms and conditions are given below:--

(i) Loans will be given only for studies and/or training in a recognized institution or college.

- (ii) Loans are for completion of studies which the student was already pursuing and not for any further or higher education or training. Exceptions may be made in the following casess:—
- (a) Students who are studying in the Intermediate may be taken to the end of the degree course provided they pass Intermediate in the second division or above.
- (b) Specially meritorious students and all those who graduate in the First division may be assisted for a post-graduate course.
- (c) Meritorious students who pass the Matriculation Examination in the First Division and who wish to continue studies further may be assisted.
- (d) Students who have passed the Intermediate Examination (Medical, may be assisted to continue their medical course.

The loan shall be given in such instalments, monthly or otherwise, as may be considered fit for each individual case, taking into consideration the recommendations of the Head of the Institute.

The loan instalment to any student or trainee will stop immediately on his failing to pass a recognized periodical examination, not being school or college weekly test.

The loan amount when sanctioned, will be paid through the Head of the Institution where the student is studying or is to continue his/her studies.

The student as well as the parent or guardian or the surety shall sign an undertaking to repay the loan whether in lump sum or by instalments on rehabilitation of either of them. For this purpose a half-yearly review shall be carried out of the financial position of his parent or guardian. The advance will be completely repayable within four years from the date of payment of the last instalment. No interest will be charged during a period of one year from the date of payment of the last instalment. Thereafter interest at the rate of 2 per cent. will be charged.

Government will have prior lien on the services of the students financed under this scheme.

Applications for loans should give the following particulars:--

- (a) Full name, age and address of the student.
- (b) Full name and address of the parent or guardian in Indian Dominion as well as previous address in Pakistan.
- (c) The course of studies undertaken, name of the Institute where studies were

undertaken and examinations already passed.

- (d) Minimum period required for completion of such studies.
- (e) Fees, etc., payable to the Institution and when due (Items should be given separately wherever possible) \*\*...\*, tuition fees, deposits for laboratory or library, games fees, examination fees etc.
- (f) Minimum allowances required for books, instruments, lodging, boarding and outfit etc., each item to be given separately.
- (g) Any security or surety that the student or his parent or guardian is able up to put for repayment of loan, if granted.
- (h) The manner in which the loan is desired to be repaid.
- (i) Any particulars regarding the parents or guardians of the student or traineo, that the applicant is in a position to furnish. These particulars should state properties, and assets, social standing of the parents or guardian or surety.
- (j) If the student or his guardian has registered as a refugee, under any enactment that may be in force in the area, the registration number should be quoted.

The Government of India have agreed to meet all bonafide losses on the working of the Loans Schome if so desired by the Provincial and State Governments. The Central Government will also reimburse to Provinces and States, expenditure on account of the concessions to school students if so desired.

# PROGRESS OF EVACUATION REVIEWED

The Standing Committee of the Constituent Assembly for the Ministry of Relief and Rehabilitation met in New Delhi on Jan. 12, 13 and 14 and reviewed the progress of evacuation and the measures taken for the relief and rehabilitation of displaced persons. The Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation presided.

The members of the Committee include Mrs. Sucheta Kriplani, Bakshi Sir Tek Chand, Mr. Khurshed Lal, Jaspat Rai Kapur, Mr. Shibban Lal Sexena, Ch. Ranbir Singh, Giani Gurmukh Singh Musafar and Shri Besanta Kumar Das. Mr. H. C. Mohindroo, Under Secretary in the Ministry, is the Secretary of the Committee.

Mr. S. K. Kripalani, Secretary, Mr. Dantyagi, Joint Secretary, Mr. Brij Narayan, Joint Secretary (Finance), Mr. N. C. Shrivastava, Deputy Secretary and Mr. B. G. Rao, Deputy Secretary, attended the meeting on behalf of the Ministry.

# DISPLACED PERSONS: SCHEME FOR GRANT OF LOANS

SCHEME for grant of loans to displaced persons belonging to urban areas in West Pakistan who have arrived in the Indian Union has been evolved by the Government of India, says a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 5.

This scheme which provides for grant of advances not exceeding Rs. 500 in each case will apply only to those displaced persons who intend to settle down in a particular town or place in the economy of which they are likely to be absorbed permanently.

The Ministry of Relief and Rehabilitation have already addressed letters to all Provincial Governments, the Chief Commissioners of Delhi and Ajmer-Merwara, Coorg, Panth Piploda and the Ministry of States, explaining the significance and scope of the scheme, together with instructions to implement it forth with in their respective areas. The Government of India will be prepared to meet bona fide losses incurred on the working of the scheme if the Province/State so desire.

# **Advisory Committee**

The Government of India realise the urgency of the problem of early settlement of refugees and desire that all help should be given to the refugees in their settlement. The scheme, therefore, is being put into operation immediately in the Centrally Administered Areas.

In the case of Delhi area under the Chief Commissioner, the Scheme will be administered with the help of an Advisory Committee, consisting of three nonofficial members under the Chairmanship of the Deputy Commissioner or other responsible officer, duly authorised by the Chief Commissioner. The Advisory Committee will consist of :—

- 1. Dr. Ratan Lal Sharda.
- 2. Mrs. Savitri Ram Dularelal Bhargava and
- 3. Sardar Mohan Singh.

Applications will be invited immediately for the grant of loans. The details of the scheme are as below.—

- (1) The object of the scheme is to help the resettlement of traders, shopkeepers, artisans, persons wishing to start their own workshops or cottage industries, doctors (including Vaids, Hakims and Homeopaths) and lawyers. The advance may be utilised for the purchase of tools of trade, equipment, stock in trade, rawmaterial, books, etc.
- (2) Advance will be paid by the district authorities of the district in which the person decides to settle finally.
- (3) The amount of advance will be determined according to individual requirements but will not exceed Rs. 500 in any case.

- (4) Persons, who wish to apply for the advance, should produce proof of their having been registered as refugees and sign an affidavit to the effect that they have not previously received similar advance under this scheme from any other source.
- (5) The authority sanctioning the advance will ensure that it is utilised for the purpose for which it is granted, and will also keep a watch on the person's resettlement.
- (6) Advance will be free of interest for the first year, but interest will be charged at 3 per cent. for subsequent years.
- (7) No recovery will be made in the first year. Instalments for repayment will be fixed by the sanctioning authority in each case, subject to the condition that the advance should be completely repaid within four years from the date it is given.
- (8) Payment will be subject to an undertaking to repay. Two sureties will be taken. If default is made in the repayment of any instalment, the whole advance will become recoverable as arrear of land revenue.

# REHABILITATION OF DISPLACED CONTRACTORS

Displaced contractors can now apply for enlistment as approved contractors with some of the Indian States.

The Government of India's request to enlist refugee contractors has met with a favourable response from various States.

Rajgarh Darbar and certain small States in Orissa and Chhattisgarh States Agency desire that refugee contractors should send their applications to the Regional Commissioner for States, Sambalpur, for enlistment.

Bikaner invites applications from contractors stating the nature of work and the commodities or articles which they generally tender for. The contractors should also state whether they will be in a position to supply labour, skilled as well as unskilled, for building purposes as extensive works are expected to be undertaken in the State in the next five years.

In the case of Baroda and Rewa the contractors are required to apply to the State Chief Engineer with necessary particulars.

Among other States who are prepared to invite applications for enlistment are Kapurthala, Nabha, Benares, Alipore and Datia.

# RELIEF AND REHABILITATION BOARD MEETS IN DELHI

# Mr. Neogy's Inaugural Address

NAUGURATING the first meeting of the recently constituted Relief and Rehabilitation Board for the Delhi province, Mr. K. C. Neogy, Minister for Relief and Rehabilitation, Government of India, said that all efforts should be made to provide shelter and rehabilitation to refugees who had come to Delhi. New cottage and other industries should be organised, employment opportunities created by the exodus of Muslims should be utilised and training and education programme expanded. In fact, it should be their ambition to arrange for the reception and rehabilitation of refugees that it should be an example for the rest of the ccuntry.

The Relief and Rehabilitation Minister welcoming the members of the Board and that their advice on the various rehabilitation schemes for the refugees in the province would be of great value to the local administration. He suggested that they should make a survey of the occupations that were vacated by the Muslims. Measures to fill in those occupations and trades should be adopted and other occupations which might be of value to the province of Delhi should be encouraged. There might be some occupations which would require some sort of training but there were others which could be easily adopted. For example, he said, there was a great shortage of transport in Delhi. There were very few tongas available, making it nifficult for people to go about.

#### Industrial Expansion

Apart from these occupations which had been vacated by Muslims, the Minister pointed out that they had to think in terms of industrial expansion of Delhi. Some of the trade which was concentrated at Amritsar and other towns of Punjab might shift to Delhi and they must be prepared to accommodate expansion of commerce and trade in this province. Moreover, possibilities of industrial expansion must be surveyed. It would not be advisable to expand Delhi or set up towns near Delhi if we were not in a position to find employment for the people who would live in those areas. In this context suitability of Delhi for special types of industries should be borne in mind. The Minister hoped that the Board would give its earnest attention to these problems and evolve schemes for speedy execution.

There was also, the Minister continued, considerable scope for educational facilities in the city of Delhi and in new towns that might be developed near Delhi.

The Board considered immediate steps for accommodation of refugees who were at present without shelter in Delhi. Mr. S. K. Kripalani, Secretary, Ministry of Relief and Rehabilitation, said that provision of accommodation had to be tackled on short-term and

long-term bass. There was also the immediate problem of providing shelter to those who were without a roof. For that purpose they must utilise all vacant houses and other accommodation and, if necessary, tents. In the short-term programme, the construction of semi-permanent hutments might be included. The long-term lans, lowever, depended on the complete and standard development projects and standard development schemes of the Improvement Trust.

# Appeal for Co-operation

Mr. Kr'palani hoped that the problem of finding roofed accommodation for those refugees who were without shelter would be dealt with in the next ten days and everybody will be provided for. In this work he appealed for the cooperation of the social workers and the Delhi public without whose active assistance it would not be possible to carry out the plan in hand.

Continuing, Mr. Kripalani emphasised that providing housing to refugees was

not the complete answer to rehabilitation. It was the preliminary step and they must take steps to reconstruct the economy of the Delhi province or expand its economy in order to be able to absorb the large number of people who had come in.

After some general discussion the meeting concluded.

The Board will now meet every fortnight under the Chairmanship of the Chief Commissioner of Delhi province.

The members of the Board include the Deputy Commissioner, Development Secretary to the Chief Commissioner, Chairman, Provincial Transport Authority, Director of Health Services, Director of Industries, Director, Civil Supplies, Chairman Improvement Trust, Superintending Engineer, Architect to the Government of India, Superintendent of Education, Custodian of Evacuce Property, Director of Employment Exchange and Resettlement, Mrs. Sucheta Kripalani, Mr. Deshbandu Gupta and Dr. Zakir Hussain.

The meeting on Jan. 14, was attended, among others, by Mr. S. K. Kripalani, Secretary, Mr. Dantyagi, Joint Secretary and Mr. Brij Narayan, Joint Secretary (Finance) of the Ministry of Relief and Rehabilitation.

# EMPLOYMENT IN CENTRAL SERVICES Government Decide Question of Priority

THE Covernment of India have laid down their policy in regard to the question of priority to be given to various categories of persons for employment in the Central Services, says a Press Note, issued by the Ministry of Relief and Rehabilitation, on Jan. 10.

The following decisions have been reached: —

- (1) Employees of the Central Government, who were serving in Pakistan Areas and have opted for India, and cannot be absorbed within the Department in which they were originally employed and employees of the Central Government whose appointments were abolished consequent on the constitutional changes, r.u. employees of the office of the Governor-General's Secretariat and the Political Department including the Residencies, will have the first claim on vacancies available in the Central Services. Such persons are registered by the Transfer Bureau in the Ministry of Home Affairs and nominated against vacancies reported to the Bureau by the various Ministries.
- (2) After nominating persons belonging to category (1), the Transfer Bureau will nominate employees of the Provincial Governments of the North-West Frontier Province, Baluchistan and Sind, who are also registered in the Bureau.
- (3) Vacancies which cannot be filled as in (1) and (2) mentioned above, are to be reported to the nearest Employment

Exchange. In recommending candidates for employment against such vacancies, Employment Exchanges will give preference to refugees from Pakistan, including employees of Indian States, in the geographical limits of Pakistan who are refugees in India.

Many applications for employment are being received in the Ministry of Relief and Rehabilitation. It will be noticed that according to the policy leid down above, it is not open to this Ministry to make recruitment, except through the Transfer Bureau of the Ministry of Home Affairs and Employment Exchanges.

All refugees seeking employment are, therefore, advised to register themselves at the Transfer Bureau or the Employment Exchanges as the case may be. No action will be taken on individual applications for employment received in the Ministry of Relicf and Rehabilitation.

# ESTATES OF DECEASED MILITARY OFFICERS

The disposal of the estates of deceased military officers has been held up for want of information regarding the present whereabouts of their next of kin who have migrated from Pakistan to India. said a Press Note issued by the Ministry of Defence on Jan. 28. They should communicate their present addresses to the Ministry of Defence (Estate Section), New Delhi, immediately.

# FACILITIES FOR PENSIONERS PAID FROM Refugee Holders of **DEFENCE ESTIMATES**

**▼ ING'S Commissioned Indian Officer** and Indian Commissioned Officer pensioners and civilian pensioners paid from the Defence Estimates and their widows and dependents, who have migrated from Pakistan to India. or from the Jammu and Kashmir State to other parts of the Indian Dominion, owing to the recent disturbances, will take the following action to facilitate payment of pensions, says a Press Note, issued by the Ministry of Defence on

Those pensioners, who are in possession of their Pension Certificates, will apply. in writing, to the Controller of Military Accounts (Pensions), Old Indian Military Hospital Lines, Allahabad, by registered post, giving their rank or designation, name, unit or service (in the case of family pension, rank or designation and the name of unit or service of the de-ceased), name of bank, or treasury from which they last drew their pension and from where they now desire to draw it, the date up to and for which the pension was last drawn, the rate of pension which was in issue and their present address.

# **Identification Certificate**

The applications should be supported by the Pension Certificate and a Certificate of Identification, signed by a gazetted officer, containing identification marks of the pensioner, three specimen signatures and an undertaking to agree to adjustments of the advances of pension haing made against the pension to be being made against the pension to be drawn later, after the proper transfer has been effected.

They will also forward to the Controller of Military Accounts (Pensions) Allahabad, separate applications for transfer of their pension to Banks or Treasuries in India, for effecting the transfer of their pension accounts from Pakistan or Jammu and Kashmir State.

Those who have lost the Pension Certificate should produce satisfactory evidence about the bona fide of their claim, supported by an indemnity bond from the claimant with an acceptable surety from a gazetted officer of the Government of India or a written guarantee from a recognized bank. Payment of pension exceeding Rs. 100 per mensen will be made only through recognised banks.

# **MILITARY PENSIONERS** FROM PAKISTAN

Indian military pensioners who have migrated from Pakistan can have their pensions paid to them from any of the recognised post offices or civil treasuries in India, says a Press Note, issued by the Ministry of Defence, on Jan. 2.

The procedure to be adopted by them has already been announced in the Press Note dated Nov. 7, 1947. In order to avoid frequent changes in pension paying centres, they should, as far as possible, select that station where, or near which, they intend to settle down permanently. If, however, they have to change their place of residence subsequently, as a measure of rehabilitation, they can be permitted to change their pension paying centre also, for which they should apply to the Pension Dishursing Officer concerned, giving specific reasons for seeking the transfer and full particulars about their pensions.

Those Indian military pensioners who were drawing their pensions in India but lost their Pension Certificates as a result of recent disturbances of floods, can have fresh Pension Certificates reissued to them provided they apply in writing, giving precise reasons for the loss and full particulars of their pensions, to the Pension Disbursing concerned.

In cases where the loss or damage to the Pension Certificate is due to sheer carelessness or neglect on the part of the pensioner, a sum of Re. I will be charged as renewal fee.

# **IOINT REHABILITATION BOARD**

The third meeting of the Joint Rehabilitation Board set up to meintain liaison between the West Punjab Government and the Government of India, took place in New Delhi, on Jan. 8.

The function of the Board is to review the progress of the relief and rehabilitation schemes already in operation and to discuss and approve new schemes. The Board held its first meeting in Delhi in the middle of Dec. followed by another meeting recently held at Ambala. At its last meeting the Board discussed, among other things, the progress made in the dispersal of refugees and in their rehabilitation both in urban and rural areas.

The meeting on Jan. 8 was held under the chairmanship of Mr. K. C. Neogy, Minister for Relief and Rehabilitation. Minister for Relief and Rehabilitation. Among those who attended the meeting were Dr. Gopi Chand Bhargava, the Premier and Sardar Swaran Singh, the Hone Minister of East Punjab, Mr. S. K. Kripalani, Secretary, Ministry of Relief and Rehabilitation, Mr. P. N. Relief and Rehabilitation, Mr. P. N. Thapar, Financial Commissioner, Retugees, East Punjab Government, Mr. Tarlok Singh, Director-General of Rehabilitation, East Punjab Government and Mr. C. N. Chandra, Additional Secretary of the Government of India, stationed at Jullundur, and Secretary-Member of the Board.

# Insurance Policies

ITH a view to ameliorating the difficulties of refugee holders of insurance policies, the Government of India had addressed letters to Insurers doing life insurance business and Provident Societies, requesting that such refugees should be given generous treatment, says a Press Note, issued by the Ministry of Relief and Rehabilitation, on Dec. 31.

A favourable response to this request has been received by the Government of India from the Insurers and Provident Societies.

In its letter to the Insurers, the Government of India explained how some refugees, who have been holding policies of life assurance with the Insurance Companies and Provident Societies in India and Pakistan, were unable to pay their premiums in time. It was re-quested that in view of the changed circumstances, the recent communal riots, end also in view of the large exodus of population each side resulting in dislocation of normal life of the policy-holders, the companies should accord generous treatment to the refugee policy-holders.

It was also requested that such policyholders should be given the benefit of having the surrender value adjusted in each policy towards the payment of outstanding premiums, if any, interest being calculated on overdue premiums at the lowest practicable rates.

In cases, where owing to inadequate surrender value, the policy had lapsed, the company should be prepared, on application, to revive the policy at the previous rates of premium for full sums assured without medical examination or with an appreciably easier one.

# LICENSED ARMS TO BE RESTORED

At the Inter-Dominion Conference which was held at Lahore on Sept. 14, 1947, it was agreed that persons crossing from India to Pakistan and vice versa should be allowed to take their licensed arms with them; and orders to this effect were issued. It has been brought to the notice of the Prime Ministers of India and Pakistan that these orders are not being fully implemented. Cases have been reported of licensed arms having been taken away, at the frontiers, sometimes even without receipts being

The two Governments wish to draw attention to their previous agreement on this subject, and have agreed to direct all officials concerned to ensure that their orders are in future implemented and to see, in cases where arms and ammunition have been confiscated contrary to inter-Dominion agreement, that steps are taken to restore them to their rightful owners.

# TACCAVI LOANS FOR REFUGEES Help to Ex-Service Refugee RESETTLING ON LAND MedicalOfficers

# Centre to Assist Provinces and States

THE Government of India are sending out displaced persons to various provinces and States for resettlement on land. It is realised that the displaced persons resettling on land may need assistance in various ways. They may need seed and bullocks or agricultural implements. In some cases they may need food and fodder for a period and assistance to build or repair houses.

Provincial Governments have been advised to help refugees resettling on land by advancing to them taccavi loans. Each provincial government will determine the extent of the help required.

In view of the magnitude of the task involved and to avoid delay in resettlement, the Government of India have made it clear that requests from provincial governments for loans of reasonable amounts will be sympathetically considered.

In addition to granting taccavi loans, refugees may have to be fed in the villages till the time of the next crop and for this purpose an absolute free grant may have to be made to them. The Government of India will be prepared to share this free grant with the Provincial Governments.

In a circular letter to all Provincial Governments and the Ministry of State, the Government of India have made the following suggestions:—

(a) For security of repayment, loans may be given as far as possible to groups of persons who bind themselves jointly and severally.

(b) Resettlement may be facilitated if persons coming from the same village are resettled in close proximity to one another. It is a sarranged, and the men are made jointly responsible, the risk of failure to repay will be minimised.

- (c) In order to check misuse, assistance may be given in kind to the extent possible and the assets may be hypothecated to Government.
- (d) The assistance, whether in cash or kind, may be given in instalments as required.
- (e) In considering resettlement of agriculturists the village artisans may not be overlooked. Like the agriculturists they may need assistance to set up their trades and repayable loans may be granted to willing artisans like carpenters and blackemitts.

The Government of India have also stressed that the provincial governments should give such other instructions as may ensure that the assistance is used to the best advantage and that the displaced persons are resettled as speedily as possible.

As Provincial Governments will derive substantial benefit in the shape of receipts from land revenue and in other ways, the provincial governments may reasonably be expected to bear the losses which may ultimately be incurred on the working of the scheme. If the Provincial Covernments desire, however, the Government of India would be prepared to consider sharing the losses on a reasonable basis.

# War Service Licentiates are admitted to the Lake Medical College, Calcutta, and are granted financial concessions in the shape of exemption from the payment of tuition and examination fees and cost of books and are also granted a maintenance allowance, says a Press Note. Fifty per cent. of the cost of these financial concessions is borne by the Government of India and 50 per cent. by the Provinces, States or the candidates themselves.

With a view to helping ex-service refugee medical licentiates, the Government of India have now selected eight ex-service refugee Medical Licentiates belonging to Sind, the N. W. F. P., Baluchistan and West Punjab for admission to the Lake Medical College, Calcutta, for the term commencing from December. In view of the circumstances arising out of the partition of the country, it has been decided that these candidates will be treated as Government of India candidates, who will bear the entire cost on their training.

Candidates now studying at the Lake Medical College, Calcutta, who were originally sponsored by Baluchistan and N. W. F. P. Governments and who have now expressed their desire to resettle in India, will be also given financial assistance by the Government of India.

# Registration of Refugee Claims In Provinces And States

Provincial Governments have made arrangements for refugees to register their claims for property left or lost in Pakistan, says a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 15.

It adds: In the United Provinces, the Deputy Commissioner, Refugees, has been appointed as the Provincial Registrar of Claims. The District Magistrate in each District will be the District Registrar of Claims.

### In Bombay

In Bombay, the Refugee Officer and the District Collector have been authorised to register the claims of the refugees.

In Madras, the Special Deputy Collector for Madras City and the Collectors of the Districts have been authorised to register claims. They will forward the claims to the Special Officer and

Protector of Emigrants, who will consolidate and submit the claims to the Government of India.

The Central Provinces Government have issued instructions to Deputy Commissioners to get sworn declarations in duplicate from each claimant.

In Orissa, it is proposed to authorise Collectors of Districts to register claims.

In Bihar, Sub-Divisional Officers have been appointed as Registrar of Claims.

In Assam, the Assistant Director, Resettlement and Employment Exchange has been appointed as the Registrar of claims.

In Ajmer, claims will be registered by the Deputy Director of Relief and Rehabilitation.

# STANDARDISATION OF WAGES IN TEXTILE INDUSTRY

The question of standardisation of wages, bonus and dearness allowances, was discussed by the Tripartite Industrial Committee on Cotton Textiles during its session in New Delhi, on Jan. 12.

The Committee considered various aspects of the problem such as the desirability of standardising basic wages throughout the country; whether a uniform set of basic wages should be adopted throughout the country or different sets of basic wages for different centres or areas; on what basic minima should the basic wages be worked out; the introduction of time-scales in basic wages; the necessity for standardising occupational nomenclature; whether dearness allowancer should be calculated in a simple and uniform manner, as suggested by the Central Pay Commission or whether they should be linked up with the local cost-of-living indices; how the allowances should be rationalised; whether a part of the dearness allowances should be absorbed in the basic wages; and the evolution of a formula for the payment of bonus.

After an examination of the different view points a Sub-Committee was appointed to prepare a draft resolution.

# DEVELOPMENT OF INDIA'S RESOURCES

# New Task Before Scientists

To be the tool of a foreign imperialism, and its two great tasks now are to develop Indian scientific talent to its utmost capacity so that it can make a worthy contribution to humanity's pool of scientific thought and knowledge, and to develop India's resources so that the lot of the common man in this country may be improved," said Sir Shanti Swarup Bhatnagar, F.R. S., presiding over an annual gathering of the National Institute of Sciences of India at Patna on January 1.

He continued: "No one will contend that today she has the technical personnel she needs for this task. Again, India will have to develop her science and industry for defence purposes, if she is to maintain her freedom and to pursue an independent foreign policy, or to pull her weight in defence arrangements in a Commonwealth or a system of alliances. Under foreign tutelage her scientific workers were not permitted to peep into the secrets of the War Office. But henceforward it is going to be the responsibility of Indian science to see that the Indian defence organisations do not suffer for want of scientific knowledge and scientific personnel".

#### **Need for Common Terms**

Discussing the problem of a common language of science for India as a whole, Sir S. S. Bhatnagar pointed out: "Our universities and learned bodies and education departments have to give immediate attention to the task of producing a supply of scientific text-hooks and scientific journals in Indian languages. The task I should think is one which would require the office of a central co-ordinating agency. The chief hitch at present would be the want of ready-made scientific terminology. This is a problem that requires very careful thought and much expert and erudite labour and it must not be decided in a hurry.

"The Education Ministry of the Government of India some time ago set up a committee to go into this question; and so also did the National Institute of Sciences. The Committee set up by the Institute seems to favour, when it informally met, the retention of English for the time being, as a vehicle of thought for advanced scientific knowledge, and the retention of the English technical and scientific terms in scientific writing in Indian languages. Scientific writing in India may have to be done in a number of languages, but it will be stupendous waste of labour in each of these set about coining its own scientific terms-such an enterprise might cost as much labour as did the Tower of Babel and for science in India its results might be no more propitious than those commonly associated with that monument. At the moment all I can say is that we must not lose sight of our objectives and these are:

(a) Indian scientific workers must be able to draw upon the world prol of scientific knowledge, and in repayment of this debt their own scientific work must be available as a contribution to this pool in a language which is not too difficult to learn and may have to be English.

(b) For the free exchange or scientific knowledge among the various centres in India a uniformity of scientific terminology is essential. It is hoped that the Fellows of the Institute would give the country a real lead in these matters."

#### Industrial Liaison Committee

Speaking on the need for practical utilisation of results of research conducted in various fields in India, Sir S. S. Bhatnagar referred to the manner in which organisations specially established for its promotion are functioning in countries like Britain, Canada and U. S. A. He described in particular the machinery and method of work of the Bureau of Agricultural and Industria! Chemistry in U. S. A.

Continuing he said, "All these methods and more will have to be adopted by us in India to make science really effective and understandable to masses. Realizing the importance of this aspect the Government of India set up an Industrial Research Utilisation Committee in 1941, a year after the creation of the Board of Scientific and Industrial Research. Since April last this Committee has been replaced by an Industrial Liaison Committee whose functions remain the same as those of the Utilization Committee. The success of similar utilisation methods will show even to the lay Indian public the great advantages of scientific research".

Giving an example of the success of utilisation methods he added, "To take one concrete case only, it is estimated that vegetable oil lubricants valued at Rs. 5 crores were produced by the oil companies from the processes worked out by the Council of Scientific and Industrial Research. The Council did not derive any direct monetary benefit from this process but if the oil companies made a net 10 per cent. profit on these, they paid taxes on Rs. 50 lakhs profit and if this figure is worked out it will come to quite a substantial amount.

"In addition to this some 50,000 tons of shipping space with its sea freight and handling charges was saved and if this is calculated, the savings will amount to a handsome figure. Similarly, anti-gas cloth valued at over Rs. 1 crore was manufactured from the Council's formula. Here again the Council did not derive any direct monetary benefit but the indirect benefits to the country's

Sir S. S. Bhatnagar

economy will be found to be considerable".

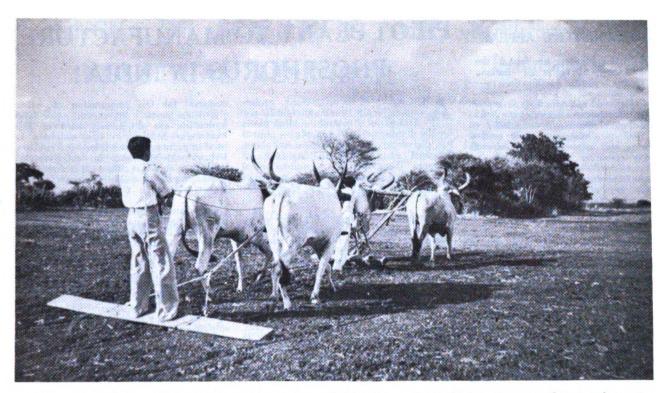

Early in the address Sir S. S. Bhatnagar referred to the great interest taken by the Prime Minister of India in scientific research. He had agreed, he said, to be the President of the Council of Scientific and Industrial Research and the Scientific Consultative Committee. Secondly, he had been elected a Fellow of the National Institute of Sciences of India.

#### Agricultural Research

Speaking on the Central Government's activities relating to research, he said: "The Central Government maintains a number of institutes for training and research in agricultural sciences, animal husbandry, veterinary sciences, dairy, forestry and fisheries. The Government have sanctioned schemes for the expansion of facilities for research and training in these institutions.

"The Scientific and Technical Manpower Committee have 'recommended that the time has come when a coordination of agricultural education and training might be accepted through the creation of an All India Agricultural Council. The proposal is now under the consideration of the Government. The Indian Agricultural Research Institute is expanding facilities for training and research in all the major branches of agricultural sciences. The greatest necessity is felt that facilities for training and research in the basic agricultural sciences are provided for our young men at the highest level so that it becomes less necessary to send young men abroad excepting for specialised training in specific subjects and gaining up-to-date experience of technique and ideas abroad. This was the main purpose for which the Indian Agricultural Research Institute. was founded. I am glad to say that it is expanding now on these lines.

"During the last year the Agricultural Department gave serious consideration to the importance of measures of control

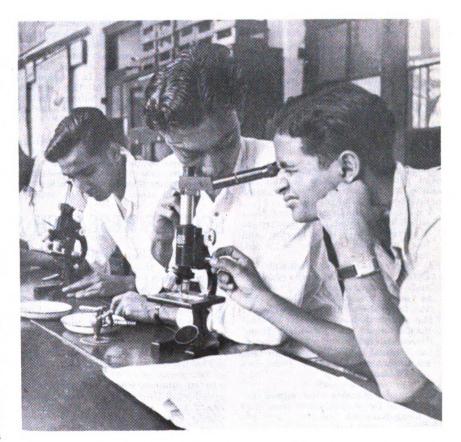

Students in an agricultural college in Deccan are given practical training on land. Picture shows a student learning sowing with the help of a seek drill which deposits the seed in the furrow at regular distances

of wheat against rust. The serious damage to the wheat crop last year which meant a loss of more than a million tons of wheat drew the attention of the Government to the subject. A scheme of research based on the note prepared by the staff of the Indian Agricultural Research Institute—this note has been published in Science and Culture—was sanctioned by the Indian Council of Agricultural Research with a view to effectively controlling rust problem. Very important work has already been done and the new scheme aims at strengthening the existing work and expanding further on all India basis the research work on the subject.

### **National Laboratories**

"Another matter which should receive the attention of all of us is the question of increased production from land. Two reports concerning soil productivity and soil conservation have been prepared and are under consideration of the Indian Council of Agricultural Research.

"For some years, the Council of Scientific and Industrial Research has been making efforts to bring into being a number of national laboratories. The National Chemical Laboratories at Poona, the National Physical Laboratory at Delhi and the National Metallurgical Laboratory at Jamshedpur have already been planned and the work of construction has already started. The Central Glass and Ceramic Research Institute at Calcutta and the Fuel Research Station at Dhanbad are also busy in completing their building operations. The technological block of the Central Glass and Ceramic Research Institute is already working. When these labora-

Students are also given theoretical training in laboratories. Here, some of them are examining soil bacteria through the microscope

#### PRIME MINISTER'S APPEAL

THE Prime Minister has issued the following appeal to all Indians having scientific quelifications:—

The Government of India have at present under consideration the report of the Scientific Manpower Committee appointed in April, 1947, to advise on the hest method of utilising and augmenting the scientific manpower resources of the country. A basic recommendation of the Committee, which the Government have accepted, is that immediate steps should be taken to prepare a roster of scientific talent that is now available. The necessity of such a roster is obvious.

The National Institute of Sciences had previously made an attempt to prepore such a roster but they were not able to make much headway. The Government of India have entrusted the work to the same agency working under the auspices of the Council of Scientific and Industrial Research.

I appeal to all persons in India, possessing degrees or diplomas in Science, to send complete information about themselves such as aye, permanent and present addresses, their scientific qualifications, research and industrial experience, their present occupation, the nature of the research work, if any, they are engaged upon, etc. This information should be sent to the Secretary to the National Institute of Sciences, India, University Buildinys, Delhi. I hope this information will be supplied soon and a complete roster prepared urgently.

tories are ready—they have been unfortunately very much delayed for reasons over which we had no control—they will constitute some of the finest laboratories in the world. Meanwhile the research work in these various fields has also been started at these centres in hired or improvised buildings.

#### **New Schemes**

"Amongst the new schemes of expansion sanctioned by the Council of Scientific and Industrial Research may be mentioned the following:—

"A nucleus of Building Research Unit which has started functioning at Roorkee with a skeleton stall and has published results of some interest.

"A Road Research Institute at
Delhi is being actively planned
and attempts are being made
to secure a plot of land for

to secure a plot of land for the Institute on the Muttra Road. "The Council has agreed to the establishment of a Central Drug Research Institute.

"The Council has also agreed to the establishment of a Food Technological Laboratory.

"The Finance Ministry has agreed to provide funds for the effective planning of the Drug Research Institute and the Food Technological Laboratory.

"The Council welcomes the establishment of the Indian Standards Institution. We are particularly happy as this is a child of the Council which sponsored its early establishment".

# PILOT PLANT TO MANUFACTURE PHOSPHORUS IN INDIA

8 a result of investigations undertaken by the Board of Scientific and Industrial Research, a pilot plant for the manfacture of 1 ton of phosphorus per day from rock phosphate has been designed at the Indian Institute of Science, Bangalore, A non-technical note on the results of this work is published in a recent issue of the Journal of Scientific and Industrial Research.

The annual consumption of red phosphorus in India was about 150 tons during the pre-war years. The present-day requirements of Indian match and non-ferrous metallurgical industries is estimated to be about 200-250 tons.

Most of the requisite equipment for the proposed pilot plant can be fabricated in India, while the raw materials are readily available. The capital expenditure of such a plant would be about Rs. 3 lakhs, while the building and working capital will cost about Rs. 2 lakhs. The cost per pound of amorphous red phosphorus produced is estimated at 10 as. 7 p. The note gives detailed data regarding the pilot plant and its construction, raw materials needed, estimates and cost sheet.

#### Celestite Find

Another article in the Journal reveals that Celestite (strontium sulphate), one of the chief minerals employed in the production of strontium salts, occurs in the cretaceous rocks of Trichinopoly district in South India. It is estimated that one million tons of this mineral occurs in this area and another half a million tons are reported to exist in Mianwali disrict in the Punjab.

Among the strontium salts employed for technical and other purposes, strontium carbonate is by far the most important. Besides its use in several industrial processes, particularly in the production of high-grade steel, it forms the starting

material for the preparation of other strontium salts. Strontium oxide and hydroxide are extensively used in the beet-sugar industry; the sulphate is used in paints and as a filler—for rubber; the chloride is used in refrigerators. Strontium salts are also used in fireworks, flares, signals, military rackets and tracer bullets.

Optimum conditions for the manufacture of strontium carbonate from Celestite have been determined in the laboratories of the Royal Institute of Science, Bombay. The economics of the process have been examined and the possibilities of utilising the abundant raw materials, as also of recovering the bye-products are discussed in detail. A point of social interest is the use of natural soda (Khar) as such for the conversion of strontium sulphate to strontium carbonate, which will bring down the cost of manufacture considerably. A conversion of 98.2 per cent is claimed by the process.

# Gluconic Acid

The problem of economic disposal of molasses has long attracted the attention of the industrial chemist. The direct conversion of uncrystallizable sugar from molasses, which averages up to 50 per cent. into valuable fermentation products is one of the methods suggested for the purpose. The production of gluconic acid by fermenting molasses after suitable pretreatment by a strain of Aspergillus niver has been discussed in another article appearing in the Journal. A yield of 80 to 84 per cent. on the basis of available glucose in molasses has been obtained by the process described.

Other articles of interest appearing in this issue of the Journal are the present position of soil survey in India and some aspects of the economics of sulphuric acid manufactre. The editorial deals with chemical engineering education in India.

# SCIENCE RESEARCH SCHOLARSHIP ABROAD

One Science Research Scholarship will be awarded this year, by the Royal Commissioners for the London Exhibition of 1851, to students from Indian Universities or institutions having post-graduate departments of Science, says a Press Note issued by the Ministry of Education on Jan. 3.

The scholarship, which is of the value of £350 per annum and tenable for a period of two years, is intended to enable the selected student, who has already completed a full University course and whose record gives evidence of capacity for original scientific investigation, to devote himself to post-graduate research in some branch of pure or applied Science at any institution abroad approved by the Commissioners.

Subjects of the Dominion of India and Indian States, below the age of 26

years on May 1, 1948 will be eligible for this scholarship. Applications from students, whether residing in India or abroad have to be recommended by the authorities of a University or an Institution and are to be made to Provincial Governments and Local Administrations through the Universities and Institutions concerned, who would forward them so as to reach the Secretary, Ministry of Education, Government of India, not later than Mar. 10, 1948.

#### MARRIAGE BUREAU

Registration of male applicants with the Marriage Bureau in the Women's Section of the Ministry of Relief and Rehabilitation has been closed, says a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 17.

# COUNCIL OF SCIENTIFIC AND Manufacture of Scientific INDUSTRIAL RESEARCH

WITH offect from January 1, 1948, the Governing Body of the Grand Company of the Grand Compan of Scientific and Industrial Research and the Board of Scientific and Industrial Research was reconstituted as under for the period ending March 31, 1950, said a Press Note, issued by the Ministry of Industry and Supply, on Dec. 31.

### (I) Governing Body of the Council of Scientific and Industrial Research.

1. The Hon'ble Pandit Jawaharlal Nehru (President); (2). The Hon'ble Dr. Syama Prasad Mookerji (Vice-President); Syama Prasad Mookerji (Vice-President);

2. Mr. S. A. Venkataraman (Ministry of Industry and Supply);

4. Mr. P. C. Bhattacharya, (Ministry of Finance);

5. Professor M. N. Saha, Calcutta;

6. Sir J. C. Ghosh, New Delhi;

7. Sir S. S. Bhatnagar, New Delhi;

8. Sir Ram, New Delhi;

9. Professor S. N. Bose, Culcutta;

10. Mr. G. L. Mehta. Bose, Calcutta: 10. Mr. G. L. Mehta, Bombay; 11. Mr. Kasturbhai Lalbhai, Ahmedabad; 12. Sir A. L. Mudaliar, Madras; 13. Dr. S. S. Joshi, Benares; 14. Mr. Frank Anthony, New Delhi; 15. Sir V. N. Chandavarkar, Bombay; 16. The Hon'ble Sri H. Sitarama Reddy, Madras: 17. Dr. K. A. Hamied, M.A.,

Ph. D.; 18. Mr. G. D. Birla, New Delhi; 19. The Hon'ble Mr. N. V. Gadgil, New Delhi; 20. Principal Niranjan Singh, Simla; 21. Sir Ardeshir Dalal, Bombay; 22. Mr. J. R. D. Tata, Bombay.

#### (II) Board of Scientific and Industrial Research

1. The Hon'ble Pandit Jawaharlal Nehru, (President); 2. The Hon'ble Dr. Syama Prasad Mookerji, (Vice-President); 3. Sir S. S. Bhatnagar, New Delhi; 4. Mr. S. A. Venkataraman, New Delhi; 5. Dr. B. C. Roy, Calcutta; 6. Mr. D. N. Sen, Calcutta; 7. Sir K. S. Krishnan, New Delhi; 8. Dr. Jivraj Mehta, New Delhi; 9. Dr. K. L. Moudgill, Trivandrum; 10. Sir Abdul Halim Ghuznavi, Calcutta; 11. Sir J. C. Ghosh, New Delhi; 12. Professor M. S. Thacker, Bangalore; 13. Professor Birbal Sahni, Lucknow; 14. Mr. Kasturbhai Lalbhai, Ahmedabad; 15. Prof. M. N. Saha, Calcutta; 16. Sir Shri Ram, New Delhi; 17. Dr. K. A. Hamied, Bombay; 18. Sir Ardeshir Dalal, Bombay; 19. Dr. H. J. Bhabha, Bombay; 20. Scientific Adviser to G. H. Q.; 21. Sir C. V. Raman, Bangalore; 22. Mr. D. N. Wadia, New Delhi; 23. Dr. J. N. Mukherjee, New Delhi.

# OLD AGE PROVISION FOR COAL MINERS

COMPULSORY Provident Fund scheme, which will ensure provision for old age to about 2,50,000 coal miners in India, is soon to be brought into force by the Government of India. The provision of Provident Fund to colliery workers was recommended in April, 1947, by the Board of Conciliation (Colliery Dispute) appointed by the Central Government.

The scheme, it is intended, should apply to all workers in collieries who are below the age of 55 and whose basic monthly salary is not over Rs. 300. Each worker will contribute roughly I anna in the rupee of his basic wage and the employer will pay an equal contribution if the worker has not been irregular.

#### Central Fund

According to the scheme, there will be a Central Fund for all collieries, with power to open Regional Offices. This will make it possible for the worker to continue participation in the scheme even when he changes employment from one colliery to another. It is proposed that the Central Fund should have a Board of Management and an Executive Committee on which the Central Government and the employers' and workers' organisations will be represented.

A worker who joins the fund will be entitled to get back the full sum at his credit when he retires after the age of 55 or when permanently invalided. If he dies, it will be paid to his nominees or to his heirs. The object of the Fund is to provide for the worker in his old age or for his heirs and dependents in case of his death.

The contributions will be collected through a system of special stamps pasted on cards. This system is expected to facilitate accounting and bring about a reduction in the cost of administration.

The payment of wages Act 1936, which ensures regular payment of all remuneration to workers and regulates deductions and fines by employers, was applied to coal mines from Jan. 15, 1948. Subsection 4 of Section 8 of the Act, relating to fines was not, however, applied, the question being under consideration by the Government, says a Press Note, issued by the Ministry of Labour on Jan. 5.

A notification to this effect was published in the Gazette of India, dated Jan. 3, 1948.

His Highness the Maharaja of Joul 1 tr has donated a sum of Rs. 10,000 to the Benevolent Fund of the Elementary Flying Training School, Royal Indian Air Force. In a letter acknowledging this handsome donation, Air Marshal Sir Thomas Elmhirst, Air Marshal Commanding the R. I. A. F., has conveyed to the Marharaja the appreciation of the R. I. A. F.

# Instruments in India

The promotion of the manufacture of scientific instruments in India is the object of a Special Committee appointed by the Central Government which started functioning in Calcutta from Jan. 12.

The Committee, of which Paranjpe is Chairman, will review the work of the Mathematical Instruments Office, Calcutta, with a view to reorganising its work and expanding its scope.

Among its terms of reference are:

- (i) the formulation of concrete plans, both short-term and long-term, for the development of the manufacture of scientific instruments and photographic, electronic and electro-acoustic equipment;
- (ii) an examination of the possibility using the Mathematical Instruments Office as a training centre for instruments makers, mechanics, etc; and
- (iii) a review of the terms and conditions of service of the employees there.

The Ministry of Industry and Supply are meanwhile appealing to the manufacturers of the mathematical instruments in India, and the trade in general to offer the Committee every kind of cooperation. They are particularly invited to communicate to the Chairman of the Committee their viess on the terms of reference stated above.

# **CONCILIATION BOARD'S** RECOMMENDATIONS

The Government of India have decided that the recommendations of the Board of Conciliation (Colliery Dispute) regarding leave, promotions, medical laciligeneral nature should also be implemented in the coal fields of the C. P. and Berar and Orissa in so far as they are applicable and to the extent the present position falls short of them, says a Press Note issued by the Ministry of Labour on Jan. 6.

Although the recommendations of the Board were applicable only to Bengal and Berar, the Government had recognised that appropriate action would be necessary elsewhere. Accordingly, a Fact Finding Committee was appointed for the coalfields in the C. P. and Berar and Orissa to deal with the more important recommendations relating to the grant of monetary benefits and concessions which require special consideration in the light of varying local conditions. The Committee's report and the Government's decision granting similar benefits to the C. P. and Orissa miners were published in October 1947.

The Government of India hope that colliery owners, who have not so far implemented any of these recommendations, will do so without further avoidable

# NATIONAL HEALTH PROGRAMME

# Dr. Jivraj Mehta Outlines Proposals for Immediate Future

for the objective of a national health programme should be to provide the individual with adequate curative and preventive medical facilities not in relation to his capacity to pay for such facilities but also in relation to the requirements of his physical and mental condition," observed Dr. Jivraj N. Mehta, Secretary, Ministry of Health and Director-General of Health Services, Government of India, in the course of his Convocation address at the College of Physicians and Surgeons, Bombay, on Jan. 5.

"In establishing an efficient health organisation", he continued, "preventive and curative measures should be properly integrated and domiciliary and institutional services provided for the people should work in the closest possible co-operation. Our health programme should lay emphasis not only on disease and on methods of dealing with it, but it should also concern itself with the promotion of positive health".

The implementation of the Bhore Committee's recommendations, Dr. Mehta said, would involve an expenditure of Rs. 1,000 crores in a period of 10 years. Though the financial resources of India at the present moment would not permit this expenditure for some time, we could not sit idle. The altered conditions demanded a reconsideration of the whole situation to enable the carrying out of necessary measures for medical relief and public health to meet conditions brought to the notice of the country in the Bhore Committee's report.

Dr. Mehta, therefore, put forward a four-fold health programme which should make provision tor:

(a) training of medical and ancillary personnel;

(b) expansion of existing health services; (c) the promotion of medical research, and

(d) education of the people to preserve their own health through the practice of personal and communal hygiene.

### Training of Personnel

Dealing with the training of medical and anculary personnel, Dr. Mehta said that there was need for laying greater emphasis on the training of non-medical workers. These could, with adequate supervision by doctors, be made to perform a wide variety of curative and preventive duties in a well-organised health programme. Preventive incculation, sterilisation of water supplies, elimination of flies, mosquitoes and other insect pests were all measures which could be undertaken by persons with relatively small periods of training. This was all the more necessary because the cost of their training was relatively less than that required for medical education.

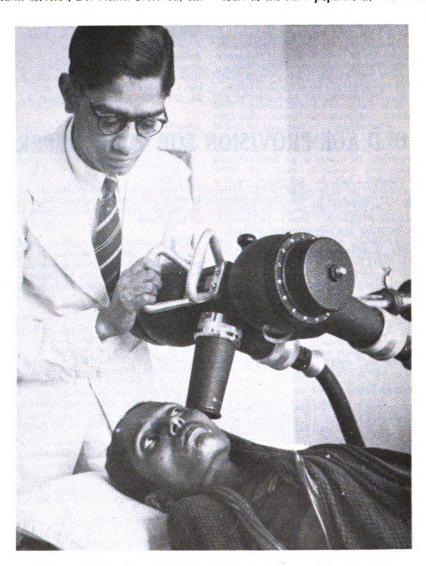

With regard to medical education, it was desirable to raise the number of

colleges, but the more urgent need was to raise the admissions to individual colleges, which could be done by providing a double shift of classes for laboratory subjects. For the clinical instruction of the additional students, Dr. Mehta suggested the idea of utilising the existing hospitals in cities, where medical colleges exist, which were not so far utilised at present. Such an arrangement would facilitate quicker outturn of doctors per year at a relatively cheaper cost than by a further increase in the number of medical colleges in the country.

In attempting to expand the existing health services, Dr. Mehta observed, one of the steps necessary was the "coalescing of the Medical and Public Health Departments in the provinces into a single organisation so that the fullest possible measure of co-operation between the two branches of health administration may be secured. Without such cooperation it is not possible to develop reasonably good services in many fields for example, maternity and child welfar work, control of infectious diseases, including tuberculosis and venered diseases and supervision of health of school children".

Dr. Mehta suggested for the consideration of the Provincial Governments that an organisation be set up to carry expert medical advice to the remoter areas in a district which would be the unit of health administration. A mobile team consisting of a well-qualified physician, a surgeon, a gynaecologist and obstetrician, and ophthalmologist, an aural surgeon and a clinical pathologist should be organised for service in two adjoining districts in the first instance, its range of jurisdiction being reduced later to a single district.

This scheme will have the merit of bringing expert medical relief near the doors of the rural population, which form

A doctor of the Tata Memorial Cancer Hospital, Bombay, centering the X-ray beam on to a patient

Anti-Malaria operations: A doctor of the Malaria Institute of India examines the spleen of a village school boy

such an overwhelming part of the inhabitants of the country. Such a mobile team could visit selected centres in the districts where temporary hospitals, say, tents provided for the purpose, could be housed, and these mobile hospitals could be shifted from centre to centre in the districts every few weeks, so us to bring specialised medical relief to remote village areas, as far as possible.

#### Hospital Structures

"In view of acute shortage of steel and cement, so essential for construction of permanent hospital structures, we should concentrate on constructing 30-bcdded Primary Health Centres or small Dispensary Hospitals, about 2,500 of which would be needed for the whole country to meet the short-term programme recommended by the Bhore Committee, in different parts of the country, and such centres, including the houses for the medical, nursing and other staff, should be constructed of sun-dried bricks rendered with mud plaster like the other village buildings in the north of the country and in the other parts of the country such structures may mainly consist of ballies, bam-boos and clastic, with tiled sor thatched roof.

It is readily understandable that we cannot obtain a hygienic finish in such buildings, but where this is required, as in the case of operation theatres and treatment rooms, burnt bricks may be utilised and stone pavement for flooring. wherever stone may be easily available. Thus, if Primary Health Centres could be constructed our of local materials available in rural areas, and if the assistance of the village-people is sought in constructing them, the cost of construction would be considerably reduced and the recommendations of the Bhore Committee for extended medical relief more speedily put into effect than is otherwise possible". Such structures would last 10 to 15 years by which time, Dr. Mehta hoped, it might be possible to put the long-term programme

of the Bhore Committee recommendations into effect.

Dr. Mehta expressed the opinion that the services of practitioners of indigenous systems of medicine could be utilised for a wide variety of functions, particularly in the preventive field, with adequate training given to them either as part of their curriculum or, at a later stage, before admission to public service.

Dealing with the problem of medical research, Dr. Mehta proposed whether a small cess on drugs and medical appliances entering the country from abroad could not be imposed statutorily in order to provide an annual source of income for the Indian Research Fund Association, the premier organisation for the promotion of medical research in the country. He also suggested that apart from the Central Government, Provinces should also contribute their share to the cause of medical research.

### **Health Education**

Health education, Dr. Mehta observed, was a subject of great importance. It could not, in his opinion, be divorced from general education, which included the training which the individual began to acquire at home from the early period of his life as well as the training he received at his school and in later life. The health education programme should be so extensive as to influence the individual through every stage of his life. Even so, infancy and childhood were the periods during which the individual's main habits were formed and the health education programme should concentrate on the teaching of the parents, particularly the mother, to impart proper training to their children as well as on the teachers who could influence materially the formation of habits in children at an impressionable age. He felt that health education could produce its most lasting effects if it were grafted on to general education both for children and adults.

# Radio-Photo Service Station

THE RADIO photo Service Station, which transmits photographs and drawings, balance-sheets and documents to the U. K. and the U. S. A. has now been shifted from Kirkee to Bombay.

The service which started in 1943, mainly for use by Government, was thrown open to the public at the end of the war. In addition to Press photographs, the service is used regularly for sending the monthly balance-sheets of some companies also.

The rates for transmission to the U. K. are different for Government, Commercial and Press matter, while there is a uniform rate for transmission to the U. S. A. They are:

# (1) Press Matter

Rs. 40-8-0 (up to 150 sq. cm.); Rs. 54 (151 to 250 sq. cm.); Rs. 67-8-0 (251 to 350 sq. cm.); Rs. 81 (351 to 450 sq. cm.) and Rs. 94-8-0 (451 to 475 sq. cm.)

### (2) Commercial Matter

Rs. 67-8-0; Rs. 87-12-0; Rs. 108; Rs. 128-4-0 and 148-8-0 respectively and

### (3) Government Matter

Rs. 33-12-0; Rs. 43-14-0; Rs. 54; Rs. 64-2-0 and Rs. 74-4-0 respectively.

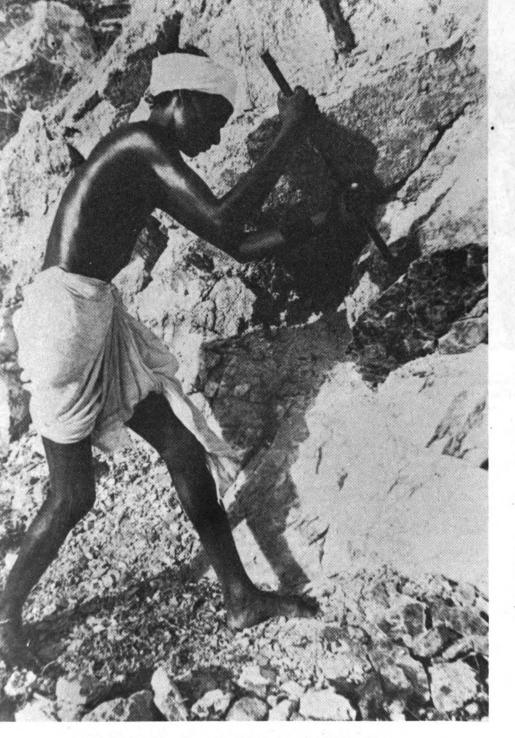

The rates to the U.S.A. are Rs. 67-8-0 up to 150 sq. cm. and Rs. 33-12-0 for every additional 100 sq. cm. or part thereof.

# Technique of Transmission

Any picture, in fact, any matter in black and white, can be translated into electric waves and sent as far as the radio waves go. During transmission, a microscopic spot of light is made to traverse the picture of document, line by line, by a spiral movement. The light reflected on the spot on the picture is concentrated on a photo-electric cell which translates light and shade into proportionate amounts of current and thus functions like a microphone in broadcasting.

The released current is handled as in a broadcasting station with the difference that the received current, instead of working a loudspeaker, is used to control the brightness of a spot of light like the one at the sending end. This spot of varying intensity traverses a sheet of photographic paper whose movement exactly synchronises with that at the sending end. The photographic paper is then handled like any ordinary negative to reproduce the pictures or documents.

Further information regarding the service can be had from the General Traffic Manager, Government of India Overseas Communications Service, Central Telegraph Office, Bombay.

of the Welfare Commissioner (Chairmen) appointed by the Central Government, the Mica Controller, Bihar, the Commissioner of Labour, Bihar, a member of the Bihar Legislature, three representatives each of mica mine-owners and mining workers in Bihar and a lady representative in case there is no woman on the Committee representing workers. The Advisory Committee for Madras will likewise consist of the Collector of Nellore (Chairman) the President of the Nellore District Board, a member of the Madras Legislature, two representatives each of mica mine-owners and mining workers in Madras and a lady representative. The headquarters of these Committees will be fixed by the respective Provincial Governments.

#### Finance Sub-Committee

The main functions of these Committees will be to advise the Central Government on schemes of welfare activities for mica miners and to consider the annual budget of the Mica Miners Welfare Fund as prepared by the Executive of the Committee. There will be a Finance Sub-Committee to assist the Advisory Committee in framing schemes of expenditure.

The Central Government are appointing Rai Bahadur B. N. Singh, Coal Mines Welfare Commissioner, Dhanbad, as the Welfare Commissioner in respect of the activities of this Fund in Bihar.

# WELFARE OF MICA MINERS

BRIGHTER prospects are now open to over 60,000 mica miners of India, whose deplorable conditions were revealed in the Rege Committee's report published two years ago. Work for their welfare will be initiated shortly with the formation of Advisory Committees in Bihar and Madras, which have now been announced by the Central Government.

These Committees are set up under the Mica Mines Labour Welfare Fund Act under which a 2½ per cent al valorem cass is being levied on exports for mica from India since April 1946. The angual yield of the cess is estimated at about Rs. 9,00,000.

The composition of the Committees and their functions are described in the Rules made under the Act which are published in the Gazettes of India dated January, 10, 1948. According to these Rules, the Bihar Committee will consist

The Industrial Committee on Cotton Textiles met in New Delti on January 12 under the chairmanship of Mr. Jagjivan Ram, Labour Minister. A view of the Committee in session

# BETTERMENT OF WORKERS' CONDITIONS

# Labour Minister's Address to Industrial Committee

THE need of increasing production and of bettering the conditions of the working classes was stressed by the Hon'ble Mr. Jagjivan Ram, Minister for Labour, in his speech at the Tripartite Industrial Committee on Textiles which concluded its session in New Dalhi on Jan. 14.

The Labour Minister announced that the Government proposed to take such action as it thought necessary on the various items considered by the Committee although no unanimous resolution could be reached.

### Standard of Living

Mr. Jagjivan Ram observed that the condition of the working classes in India was far from satisfactory, not only in the textile industry but in other industries as well. He pointed out that the standard of living in India was low in comparison with other countries and that it should be the effort of both the employers and the employees -if necessary with Government help-to try to raise it. He hoped that the joint efforts of all concerned would be directed towards this end and appealed to both employers and workers to spare no efforts in increasing production as it was only way to raise the standard of living of all the people.

The Labour Minister stated that in conformity with the practice obtaining

there had been discussions in the plenary sessions and at the Committee stages and all the viewpoints of the different sections of workers and employers had been heard. As a new innovation, however, it was attempted this time to have some resolutions. He was not sorry that they had not been able to reach a few unanimous resolutions because that was not going to handicap Government in any way. The employers, the workers and Provincial Governments all had their say and their view points noted by the Government. He did not want to enumerate the various actions that the Central Government would take but they would follow in one course either by executive action or legislation, as the case may be.

# Training Facilities for Workers

The Committee agreed in principle to the revision of training facilities for workers in the industry during its second session on Jan. 13. It is understood that a detailed scheme would be prepared soon by the Ministry of Labour in consultation with employers and workers.

Steps for increasing the production of cloth and yarn were also examined. They included the feasibility of working three shifts wherever possible and the practicability of working a 9-hour shift

and the connected problems such as housing, change-over, overtime wage rates and rationalisation. After an exhaustive discussion the Drafting Sub-Committee was asked to prepare a resolution acceptable to all the parties concerned.

The question of instituting Provident Fund was also left to the Drafting Committee after some discussion.

# COAL TRANSPORT ADVISORY COMMITTEE

The Government of India are setting up, it is understood, a Coal Transport Advisory Committee under the chairman-ship of Sir S. N. Roy.

The Committee, which will have its headquarters in Calcutta, will meet every week to review coal movement during the week preceding and prepare a tentative programme for the next week.

Clearing of transport bottleneck in the colliery area of Bihar and Bengal, which it is the object of this Committee to effect, it is expected, marks the first positive step towards solving the problem of coal shortage, which affects the entire problem of production in the country.

Besides the Chairman, there will be twelve other members of the Committee, including the Coal Commissioner to the Government of India, General Managers of the E. I. R. and the B. N. R. and representatives of shipping companies, colliery owners and labour.

#### **ECONOMIC PARLIAMENT OF ASIA**

## Scope and Functions of ECAFE

Economic Commission for Asia and the Far East at a Press conference in New Delhi on January 10, Dr. P. S. Lokanathan, Executive Secretary of the Commission, said that ECAFE was established by the Economic and Social Council in March, 1947, for the purpose of promoting reconstruction and development, for raising the level of economic activity, and for strengthening the economic relations of the countries included in its scope both between themselves and between them and the rest of the world.

It held its first meeting at Shanghai in June, 1947, and the second session was convened at Boguio, the summer capital of the Philippine Republic, on Nov. 24, and lasted two full weeks. At this session, which was opened by President Manuel Roxas of the Philippine Republic who in a stirring speech pleaded for more active assistance on the part of U. S. A. and the United Nations to Asian countries in their task of reconstruction, many important decisions were taken and resolutions passed of vital interest to Asian economy.

Endorsing the conclusions of a survey of essential short-term reconstruction needs prepared by the Secretariat that the immediate task was the reconstruction of agriculture and transport so as to relieve the critical shortages of food everywhere, the Commission advised the Food and Agricultural Orgnisation (F. A. O.) to formulate immediately a Food Programme for the countries of this region for the year 1948 and 1949, taking full note of the action in the technical and financial sphere needed to expend food supply and wherever possible to increase the export of food and raw materials.

#### Industrial Development

For this purpose the F. A. O. has been asked to set up a Working Party of experts to visit the deficit areas and make recommendations. A Food and Agricultural Committee for this region has been recommended to be set up jointly with E.C.A.F.E. and arrangements are afoot for the Secretariat of the F.A.). to work closely with that of E.C.A.F.E.

Continuing, Dr. Lakanathan said: I have been empowered as Executive Secretary to convene a conference of officials engaged in the agricultural reconstruction of the countries of this region with a view to the adoption of methods whereby their agricultural and food plans may be speedily put through.

The Commission recognised that an increase in the standard of living of the peoples of this region cannot be brought about except through rapid industrialisation and more balanced economy and hence has adopted a bold and far-reaching resolution on industrial development. It has directed the Secretariat to prepare before the next

session a report on industrial development with the assistance of a Working Party of four experts to be selected from among a panel of names to be nominated by the Government of the region. This Working Party has been advised to study the plans of countries in their relation to economic progress as a whole, to examine their technical and financial needs, to confer through the Executive Secretary with Governments and specialised agencies like the Internatinal Bank which are in a position to render assistance, to co-ordinate these plans wherever necessary and feasible and present their concrete proposals for implementation.

I am glad that the Prime Minister of India has agreed to nominate an expert for this Working Party despite some inconvenience, and for it is hoped that this body will assemble early in February to decide its place of action.

#### Inter-Asian Trade

The countries of Asia owing to their past political relations had not made full use of the opportunities for closer trade relations among themselves. It is the Commission's desire to facilitate the operation of normal economic and geographical factors, and towards that end has recommended the setting up of a working section under the Secretariate actively to promote trade relations in this region.

This Working Section will seek to encourage the establishment of trade promotion departments in countries where none exists yet, to find out that commodities, if any, in excess of domestic requirements are unable to move out for want of foreign exchange elsewhere and what commodities urgently required are difficult to secure for want of foreign exchange facilities, and to remove the bottlenecks to trade. On the basis of experience gained by its work in the next four months, a more permanent trade promotion machinery will be set up by the Commission at its next session.

Of more than ordinary interest and significance to economic development is a resolution adopted at the Boguio session for the setting up of a working section for the promotion of exchanges of trainees among the countries of the region and for assistance in the matter of securing expert personnel both from abroad and from within the region. Already several countries, including India, have agreed to the principle of regional co-operation in this field by placing available training facilities open to the nationals, of other countries in the region. It is hoped also that some countries will pool their requirements for experts and arrange to get them on a sharing basis. Considerable results are expected out of action in this field and it is probable that trainees under this scheme will start their education in July.

The Indian Delegation at Boguio was responsible for the adoption by the Commission of a resolution of immediate real value to E.C.A.F.E. countries which are importers of foodgrains. Recognising that the high prices charged for food and other agricultural imports stand in the way of reconstruction and development by eating away most of the available foreign exchange resources, the Commission had made an appeal to the food exporting countries and F.A.O. to reduce the prices to a more reasonable level. I have already communicated th's resolution to the countries concerned and it is my hope that at the meeting towards the end of January initiated by F.A.O. where food prices will be discussed action will follow.

#### Economie Parliament

The Commission has no executive powers nor are its resolutions and decisions binding upon the governments. No action can be taken in respect of any matter without the concurrence of the country concerned. Nevertheless there is no doubt that the decisions of the Commission, because they are freely arrived at by representatives of the Governments that meet at conference, have a very good chance of being implemented. Boards of Allocations may also be set upon a volunteer basis.

The commission is, I believe, of great historical significance. For the first time Asian countries, hitherto having remained apart, may now come together at Governmental level to discuss their common problems of action and thus develop the habit of regional co-operation. It is not too much to say that E.C.A.F. E. is something like an economic Parliament of Asia.

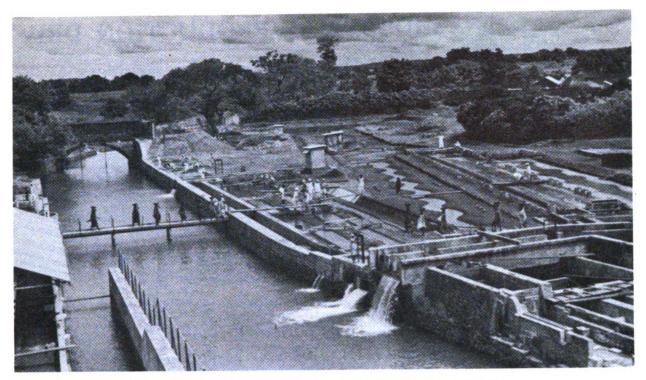

The presence of countries like the U. S. A. and U.S.S.R. is to be welcomed because of their role in the economic development of ECAFE countries and in raising standards of living. The U. S. A. Delegation have been taking an active interest in the work of the Commission and when the programmes for agricultural and industrial development are worked cut, it may be expected that the U. S. A. will express its support in a very concrete form and in a big way.

#### Meeting in India

The Secretariat is at present having its offices at Shanghai and works under the Executive Secretary. It has a budget of about 600,000 dollars for this year, which will be added to if necessary. Its permanent headquarters will be where the U. N. O. sets up its regional offices in Asia. Until then it will be temporarily located in some country in Asia, the determination of which will be made at the next meeting in May which, on the invitation of the Government of India, will be in India, most probably Ootacamand. All preparatory stages will then have been completed and the session in India will be the beginning of positive action.

The function of the Commission, besides its own direct work, is to stimulate action on the part of the governments

(Continued on Page 177)

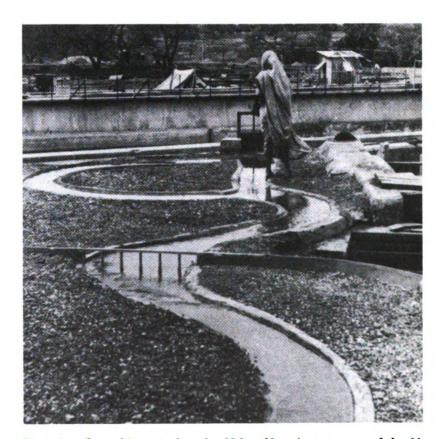

A view of the River Model Experiment Station at Khadakwasla, near Poona

## Important Investigations At Poona Waterways Station

NUMBER of important investigations carried out at the Indian Waterways Experiment Station, Poona, during 1946 with the aid of models are described in the latest Annual Report published by the Indian Waterways Experiment Station, Poona. The object of these experiments was to train tidal and non-tidal rivers at important bridges and masonry structures, preventing scour downstreams of anicuts or weirs; controlling sand entering canals etc. Advice was also given by the Station in many cases without models.

Inquiries from various quarters of India are increasing, as a result of increased confidence in the work done by this Station following the correct and successful diagnosis and effective remedies suggested by the Station and the material savings accruing therefrom. Some of the important problems dealt with by the Station during 1946 are described below.

During the floods of 1945, serious damage to the downstream sloping protection of the Central Sluices of the Mahanadi Anicut at Cuttack occurred and threatened to encroach upon the pucca pavenent and flexible apron. The local officers had proposed to repair the damaged floor with laterite blocks embedded in cement concrete. The site was inspected by the Director and

By cutting off one of its meanders, the Malaprabha river, represented by this model, shortened itself by one mile. The increased speed of the river flow caused by the cut off shown here threatened to destroy the railway bridge by erosion, but the danger was eliminated by cutting back the right bank of the river upstream as a result of experiments carried out in this medel

he considered the measures proposed to be taken by the local officers only of a palliative nature; instead he suggested a series of three bafte walls, one helow the other, to dissipate the excess energy released due to the high water level upstream of the Central Sluices and very low water level downstream. The model experiments subsequently carried out confirmed the diagnosis of the case and the solution suggested by the Director. The work has been carried out and the Central Sluices are now immune from the recurring damage.

The Luni river debouches from hills near Ajmer and collecting water on the way from various distributaries, flows westwards till it reaches Gole, a railway station on the Jodhpur-Hyderabad line, where it turns southwards and flows straight to meet the Arabian Sea. When the bridge was constructed over the Luni, a concave guide bank was provided on the left bank to guide the water through the bridge. In the 1939 high floods the guide breached and another breach also occurred in the railway bank. Again, during the flood of 1941—the maximum recorded since 1917—large breaches recurred in the guide bund and about 600 feet length of the railway embankment was severely damaged, heavy dumage was also caused to the ? end piers on the left bank, one of which collapsed alto-

The tendency of these Jodhpur rivers is to widen their beds rather than deepen, due to large quantities of sand washed down and the torrential nature of the floods.

#### **Additional Spans**

Various remedial measures were tested in the model and the most promising recommended. Additional spans and new guide banks, upstreams and downstream of the bridge, based on the latest ideas, will, it is expected, considerably improve the present unsatisfactory flow conditions at the bridge and lessen the action along both the banks.

In 1943, the Sutlej after passing through the Empress Bridge dangerously approached the Station Yard. The Director of the Station was called for advice and he suggested a long repelling groyne to keep the river away from the Yard. This groyne was constructed before the 1940 dood season and acted entirely satisfactorily until it breached because it was not sufficiently protected, as it should have been. The case was, therefore, referred to the Station, which undertook to carry out model experiments on behalf of the N. W. Railway.

The movements of the river since 1902 were closely studied and model experiments were carried out at the Station. A long spur just downstream of the breached spur has been recommended. This could either be a spur built of trees or impermeable spur built in stone. It is expected that this spur, duly protected, will prevent erosion of the left bank and will create favourable conditions further upstream for a cut-off channel to occur and short-circuit the Yard. When this happens, the Station

(Continued in Column 3)

## he considered the measures proposed to be taken by the local officers only of a INDUSTRIAL PRODUCTION DRIVE

## Dr. Mookerjee's Address

THE setting up of an All-India Industrial Advisory Council is likely to mark the second stage of an all out drive by the Central Government to increase industrial production eccording to the Hon'ble Dr. Shyamz Prasad Mooker, ee, Minister for Industry and Supply, Government of India, who met members of the various Chambers of Commerce in Calcutta on Pec. 31. The lirst step in this direction has been the holding of a tripartite conference of Industry, Labour and States in Delhi earlier last month, which has unanimously recommended three years' truce between employees and employers.

#### " Production Week"

The proposed Council, Dr. Mookerjee said, would be composed of representatives of main industries. It would meet periodically to review production position in the country and suggest ways and means to implement the recommendations of the said industrial conference. Similar advisory bodies could also be formed on Provincial basis to deal with problems

relating to industries in their areas, he added.

In order to encourage increased production, Dr. Mookerjee felt that a "Production Week" might be observed in January all over India. While industrialists should accommodate all legitimate claims of labour, it was time, the Hon'ble Minister pointed out, that the latter should also be imbibed with a new spirit in keeping with the changed conditions in the country. Now that alien rule was over and Peoples' Government was in power, any action by labour which might hamper production would be a hetrayal of national interest and would ultimately mean their own ruinction too. "Produce or Perish" should be the slogan of the day, Dr. Mooker, ee emphasised.

Later the Hon'ble Minister received a few deputations of paper manufacturers, non-ferrous metals and chemicals manufacturers' associations which placed their viewpoints regarding their respective industries before him.

#### NAUTICAL COLLEGE FOR INDIA

NDIA, like most other maritime countries, will have a Nautical College for the higher training of merchant shipping officers if the Government accepts this recommendation of the Morchant Navy Officers' Training Committee. The Committee has submitted an interim Report, which is under the Government's consideration.

At present the Indian Mercantile Marine Training Ship, "Dufferin", gives a three-year course of training to cadets before they go to sea. But after acquiring the sea experience necessary to make them eligible to take examinations, conducted by Government, for a Mate's or Master's Certificate, they have to prepare on their own for these examinations; and it has been found that as a result an unduly high percentage of candidates fail.

#### Training Facilities

In order to avoid this, the Committee stresses the importance of the establishment of a Nautical College, preferably in Bombay, to offer training facilities to candidates who wish to qualify for various certificates of competency in navigation and nautical engineering. It is felt that a three to six months course in such an institution should suffice for most of the candidates after their practical training at sea. Apart from Navigation, subjects taught in the college would include mathematics, astronomy, meteorology and law as applied to shipping.

The standard set for the Mate's and Master's examinations in India is on a par with that for similar tests conducted in Britain, and Indian certificates are of world-wide validity. In nautical engineering, the examinations held in India are of the First Class Engineer's standard. Thus a candidate need go abroad only to compete for the Extra Master's Certificate or the Extra First Class Engineer's Certificate.

The nature of the training which should be provided for ordinary seamen and the question of expanding the "Dufferin's" pre-sea training facilities will, it is understood, be dealt with by the Committee in its final report.

Pilgrim ships "Khosrou" and "Akbar" which sailed from Jedda on Jan. 2 and 4, 1948, arrived at Karachi, with 1,363 and 1,370 pilgrims respectively, on Jan. 13, 1948, says a Press Note issued by the Ministry of External Affairs and Commonwealth Relations on Jan. 15.

After disembarking pilgrims at Karachi both ships proceeded to Bombay on the same day.

(Continued from Column 1)

Yard will be permanently protected from further attack.

The annual Report also includes an interesting chapter giving an historical account of the Indian Waterways Experiment Station, Poons, from 1916 to 1946, describing the activities of the Station in various fields of research.

Armoured cars of Indian Cavalry regiment on patrol duty in Jammu

## Defence Minister's Tribute to Indian Troops Fighting in Kashmir

WISH to express the admiration of the Prime Minister, of myself and of our colleagues in the Government of India, for the work of the troops and the Air Force operating under your command in Kashmir", says the Hon'ble Sardar Baldev Singh, Defence Minister, Government of India, in the course of a special message to the Maj. Gen. Kulwant Singh, General Officer Commanding, Jammu and Kashmir Force and Air Commodore Mehr Singh, D. S. O., Air Officer Commanding, No. 1 Operational Group, R. I. A. F., respectively.

The message reads: "Moved out at short notice, and fighting against considerable odds, all units have shown great gallantry and have done magnificient work. This is all the more praiseworthy when it is remembered that many had had little or no time to reorganise after reconstitution.

"Units were moved into Kashmir at short notice with little time to be properly organised, but all difficulties have been overcome and aircraft have been kept in the air. Pilots have displayed

National Peace Brigade volunteers distributing rations to refugees on the roadside at Chauki Chura ( Jamma )

courage and the offensive spirit and long and difficult air sorties have been carried out to the great benefit of the operations as a whole.

"The country is full of admiration for the deeds of the army and for the work of the air crews and the air force ground staff that so well supported them and fully appreciates the difficulties of all kinds, not least that of climate, which beset them. At the same time none doubts their ability to bring the campaign to a successful close.

"The area of operations is being declared an operational one so that your troops and air forces, based in or flying over Kashmir, will be eligible for the pensions and other concessions connected with Field Service, and so that all may recognise and appreciate to the full the nature of their task".

## THEY KNEW THE CYPHER: Pakistan Expresses Regret

The Pakistan Government explained a few days after they first complained that the text of the Government of India's reference to the Security Council regarding Kashmir, which was telegraphed to Karachi on Dec. 21, was undecypherable, that they had been able to decypher the message.

They expressed regret for the inconvenience caused to the Government of India in calling for repetition.

The cypher employed by the Government of India was one with which both Governments were familiar as it was transmitted to Karachi by a machine, of which several were delivered to Pakistan at the time of partition.

The statement, therefore, of the Pakistan Prime Minister that the telegram could not be decyphered had mystified officials of the Government of India. The delay in Karachi in decyphering this important message was not due to any oversight or mistake in New Aelhi.

Placings by Employment Exchanges reached a new peak during November, 1947. 15,797 applicants, of whom 8,216 were ex-Servicemen, were placed in employment by the 53 Exchanges in the Indian Dominion. The number of displaced persons from West Pakistan, who were found jobs up to the end of November, was 6,667.

From the beginning of the Resettlement and Employment Organisation up to the end of November, 1947, 261,259 persons of whom 1,70,608 were exervice-men, were found employment. During November, 1587 ex-Service personnel were selected and posted to 234 Training Centres in India. This brings the total number of such persons to 40,247. Postings during the month include 1,485 ex-Servicemen to Vocational and Training Centres and 102 disabled persons to Training Centres for the Disabled. The total number of persons under training at the end of the month was 9,732.

### INDIA HOUSE RECEPTION TO MR. C. H. BHABHA

Mr. V. K. Krishna Menon, High Commissioner for India in London, gave a reception in honour of the visit of the Hon'ble Mr. C. H. Bhabha, Minister for Commerce, Government of India, during the latter's recent visit to London. These pictures show (above) Mr. C. H. Bhabha (left) talking to Sir Charles Cunningham and (below) Sir Walter Monckton (left) former Adviser to the Nizam of Hyderabad, Lady Monckton and Mr. Krishna Menon photographed at the reception.

### Air Marshal Sir Thomas Elmhirst

Air Marshal Sir Thomas Elmhirst, KBE., CB., AFC., who will continue to command the Royal Indian Air Force, has had a long and distinguished career with the Royal Air Force.

Born in 1895, he entered the Royal Navy when he was thirteen years of ege and, after flying in the Naval Air Service for four years in World War I, transferred to the Royal Air Force in 1919. During World War II, he was with the Boftiber Command and in 1940 was appointed to the Fighter Command for the Battle of Britain.

Later, he visited Turkey as Air Member of the British Mission, to conduct staff conversations with the Turkish General Staff. In 1941, he commanded the Koyal Air Force in Egypt and was made Air Defence Commander in Egypt.

In 1942, he was Chief of Administration and Endin Command of the Desert Air Porce, and took part in the Gazala Battle, withdrawal to EI Alamein, the battles of EL Alamein and the advance to Tripoli with the Eighth Army.

In 1913, he was appointed Chief of Administration of the First Allied Tactical Air Force, Algiers, and took part with the British, American and French armics in the advance to Tunis and the capture of Sicily. He was also Chief of Adminis-

tration and 2nd-in-Command of Allied Air Forces, other than American, in Europe from the beginning of the Normandy invasion until the fual route of the Germans. Subsequently, he was Assistant Chief of Air Staff at the Air Ministry in London and later on, in 1947, came out to India as Chief of Inter-Services Administration.

On Aug. 15, 1947, when India attained freedom, he was appointed Air Marshal Commanding the Royal Indian Air Force, which on the same date, under the Air Marshal, became an Independent Armed Force of the Government of India.

#### LIVESTOCK CENSUS

In connection with the World Agricultural Census, 1950 undertaken by F. A. O., the Indian Ministry of Agriculture is collecting information on the characteristics of farm population and livestock production.

At present a livestock census is carried out once in five years in a majority of the Provinces and States and as it is the only census taken on a village basis, the importance of obtaining accurate statistics has been stressed in a communication the Central Government addressed to Provinces and States.

## PARACHUTE JUMPING INSTRUCTOR'S COURSE

#### Passing out Parade at Agra

IR Marshal Sir Thomas Elmhirst,
Air Marshal Commanding the
Royal Indian Air Force visited
No. 4 Wing R. I. A. F. Agra on
Jan. 9, and took the salute at
the passing out parades of personnel
who had successfully completed the
navigator's course and the paraclute
jumping instructor's course.

Addressing the men, the Air Marshal paid a tribute to the remarkable achievement of No. 12 Squadron RIAF. in carrying supplies in the Kashmir operations. He laid emphasis on the need for discipline, loyalty and efficiency without which, he said, no armed force can be of service, to the Government.

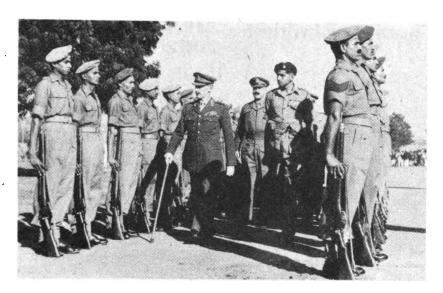

Accompanied by Air Commodore Mehr Singh, Commanding the KIAF operational Group, the Air Marshal later visited the officers' Mess.

The Governor-General has been pleased to appoint the Hon'ble Mr. Justice Pakala Venkata Rajamannar, a Judge of the Madras High Court, to act as Chief Justice of that court with effect from Jan. 15, 1948, in the vacancy of the Hon'ble Sir Frederick Gentle, says a Press Communique issued by the Ministry of Home Affairs on Jan. 14.

Parachute Jumping Instructors of the Royal Indian Air Force held a successful demonstration in Parachute jumping recently at Agra in the presence of Air Marshel Sir Thomas Elmhirst, Air Marshel Commanding the R. I. A. F. Hore Air Marshel Elmhirst is seen presenting the wing to LAC Gill

Lt. Gen. Sir Arthur Smith, former Chief of the General Staff. General Headquarters India, left for U. K. recently. Picture shows Sir Arthur Smith inspecting a Guard of Honour provided by the Raj. Rif. Regimental Centre Troops, at the New Delhi railway station, where he entrained for Bombay en route to the United Kingdom

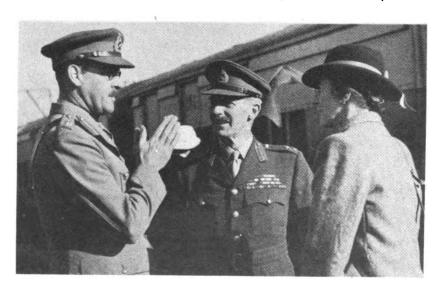

## Lt.-Gen. Sir Arthur Smith Leaves for U. K.

SEVERAL high-ranking officers of the Indian Armed Forces were present on January & at the New Delhi Railway Station to bid farewell to Lieut Gen. Sir Arthur Smith, KCB, KBE, DSO, M.C., former Chief of the General Staff, General Headquarters, India, who left by train for Bombay, en route to the United Kingdom.

On the ceremonial platform of the New Delhi railway station a guard of honour was provided by troops of the Rajputana Rifles Regimental Centre. The Rajputana Rifles Regimental band was in attendance.

Gen. Smith was educated at Eton and Sandhurst and joined the Coldstream Guards in 1910. In World War I he was awarded the D. S. O., M. C. and the Croix de Guerre and mentioned in despatches five times.

At the outbreak of World War II he was a Brigadier in Egypt and from 1941 to 1942 Chief of the General Staff in the Middle East. He was knighted in 1942 and returned to England to take up the appointment of G. O. C.-in-C., London District, where he remained until he took over command of the Persia-Iraq theatre in 1944. He was (Continued in Col. 3)

Sir Arthur Smith (centre) and Lady Smith with Lt.-Gen. F. R. R. Bucher, Commander-in-Chief, Indian Army

## GEN. SIR ROB LOCKHART'S FAREWELL MESSAGE

On relinquishing his appointment as Commander-in-Chief of the Indian Army, Gen. Sir Rob Lockhart sent a farewell message to all ranks, which has just been re-published in a special Indian Army Order.

The message reads: "With very real regret I am vacating the appointment which I have been proud to hold since Aug. 15, 1947.

"I am extremely sorry that during the time I have been your Commander-in-Chief, circumstances have prevented me from seeing as many of you as I had wanted and hoped to see. I thank all of you who have done so much in so many ways and in so many places to help our new Dominion through the difficulties which so early beset it. We have all just cause to be proud of the part that the Indian Army has played. I am confident that you will cherish and live up to the great traditions and the soldierly qualities for which the Indian Army is so justly famous, and add still further to your good name.

"I wish all ranks good-bye and all success and happiness in the future. I shall watch for news of your doings with the keenest interest".

#### MESSAGE TO R. I. A. F.

"I take with me the happiest memoies of my relations with Air Head-quarters and the RIAF", says Gen. Sir Rob Lockhart, in a message to Air Marshal Sir Thomas Elmhirst, Air Marshal Commanding the Royal Indian Air Force.

The message reads "On vacating my appointment as C-in-C of the Indian Army, I write to thank you and all your staff for all their help and co-operation during the time I was C-in-C; they were always given so readily and in so friendly a way. Good luck to you all".

#### (Continued from Col. 2)

appointed G. O. C.-in-C. Eastern Command, in September, 1945, and then became Chief of General Staff, General Headquarters, India. On Aug. 15, 1947 he became Deputy Supreme Commander (Army) and after the abolition of Supreme Commander's Headquarters assumed Command of the British Forces in India and Pakistan.

Among those present to bid farewell to Gen. Smith were Gen. F. R. R. Bucher, Commander-in-Chief, Indian Army, Air Marshal Sir Thomas Elmhirst, Air Officer Commanding R.I.A.F., Lieut-Gen. D. Russell, G. O. C.-in-C., D. E. P. Command, Maj. Gens. Rajindra Singhji. Shrinagesh, Williams, Rudra, Swinburn, Stable and Thapar and Brig. Madhuvsinhji, Delhi Sub-Area Comemander.

## Medical Supplies To Kashmir

Within the last few weeks the Government of India have sent several consignments of essential medical stores to Kashmir in response to the request of the Kashmir Government, both by air transport and by Military road convoy.

Ten consignments were sent by air with a total weight of 5,570 lbs. and three consignments by road weighing 14,282 lbs. These stores consisted of essential drugs like penicillin, sulphin drugs, vaccines, also surgical dressings, instruments, etc. Five tons of bleaching powder were also supplied for sterlizing the water supply at Jammu in view of the incidence of a number of cases of diarrhoea, dysentery and typhoid in the city.

Besides the above, Sardar Bahadur Balwant Singh Puri, Secretary-General Indian Red Cross, who visited Kashmir, took with him as a gift from the Indian Red Cross to the Government of Kashmir approximately 4,000 lbs. of Red Cross Stores consisting of medical supplies, viz., penicillin 500 vials of 200,000 units each, drugs, bandages, dressings, blankets, wollen clothing, etc.

An urgent demand for modern surgical appliances and fracture equipment required to treat qasualties at Jammu was also promptly met by the Central Government.

Further supplies of Medical stores are being made ready by the Government of India to the extent of approximately 20 tons, and will shortly be despatched to Kashmir.

#### PRINCES' MEETING IN DELHI

His Excellency the Governor-General presided over a meeting of Indian Rulers at Government House on Jan. 7.

The following Rulers attended: Their Highnesses the Nawab of Bhopal, the Maharaja of Jaipur, the Maharaja of Kotah, the Maharaja of Bikaner, the Maharaja of Rewa, the Maharaja of Alwar.

Also present were the Prime Ministers of Kashmir, Indore, Udaipur, Kohlapur, Jaipur, Kotah, Bikaner, Rewa and Alwar; the Foreign Minister of Patiala, the Judicial Minister of Jodhpur and the Representatives of Travancore and Cochin. Mr. V. P. Nenon, Secretary of the States Ministry, also attended.

There was an informal discussion about the setting up of a Rulers' Privileges Committee.

Another meeting was held on Jan. 10, when 31 Rulers' and 44 States' representatives were present and a representative of the Ministry of States also attended.

### Capt. D. N. Mukerji

Commander (E) D.N. Mukerji, R.I.N. whose promotion to the rank of acting Captain has recently been announced, is the first Indian Officer ever to be raised to this high rank in the Engineering Branch of the Royal Indian Navy. He will be in command of H.M.I.S. Shivagi, the R.I.N. Mechanical Training Establishment at Lonayls.

Senior Indian Officer of the Service, Captain Mukerji joined the Royal Indian Marine (as the Service was then called) in January, 1928. In June, 1940, he was serving in H.M.I.S. Pathan when she was lost by torpedo or mine in the monsoon. He did good work after the incident, and despite personal injuries from burns helped to save most of his shipmates before the vessel sank.

#### Several Important Appointments

Captain Mukerji, during the World War II, held several important appointments including that of Base Engineer Officer, at major Indian ports. In recent years he has been responsible for carrying out important engineering projects.

Captain Mukerji who hails from Bihar was aducated at Patna University. He specialised in marine engines and received his early training in Calcutta, later going to Scotland for further training with the firm of William Simons at Renfrew, and at the Royal Technical College, Glasgow.

## DIRECTOR-GENERAL OF EVACUATION

The Ministry of Relief and Rehabilitation of the Government of India have appointed Mr. Y. K. Puri, I.C.S., to be Director-General of Evacuation in order to deal with movement of refugees from and to the Dominion of Pakistan, and allied problems arising therefrom, said a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 17.

#### Joint Defence Council

A meeting of the Joint Defence Council was held at the Prime Minister of Pakistan's residence in Lahore on Jan 11.

Those present were: Earl Mountbatten of Burma; Mr. Liaquat Ali Khan (Prime Minister of Pakistan); Pandit Jawaharla Nehru (Prime Minister of India); Sarata Baldev Singh (Minister for Defence, India); Mr. Ghazanfar Ali Khan (Minister for Refugees, Pakistan); Lieut.-Col. Iskandor Mirza (Socretary; Ministry of Defence, Pakistan); Mr. B. B. Ghosh (Joint Secretary, Ministry of Defence, India); -Mr. A. K. Chanda (Financial Adviser, India), Gen. Sir Frank Messervy (Commander-in-Chief, Pakistan Army) and Gen. F. F. R. Bucher (Commander-in-Chief, Indian Army).

Various inter-dominion matters were discussed. One of the important decision-taken was to proclaim a general amnesty for all military personnel of the two Dominions accused of or sentenced for offences comitted whilst they were on duty in the other Dominion between Aug. 15, 1947 and Jan. 10, 1948.

The amnesty will cover proceedings, both in military and civil courts. An ordinance to this effect is being issued by the Governors-General of India and Pakistan.

#### **ECONOMIC COMMISSION**

(Continued from Page 170)

in the region, governments of other countries and the specialised agencies. By focussing attention on the economic problems of Asia, and on continuous action, the Commission will undoubtedly become a major factor in the reconstruction and development of Asian countries.

The territories within its scope are Pakistan, India, Burma, Ceylon, Siam. Indo-China, Singapore, the Malayan Union, Hong Kong, Indonesia, China and the Philippine Republic. Members of the Commission are the five countries in Asia which are members of the United Nations—India, China, Philippines, Siam and Pakistan—(since September 1947)—and also the following non-Asian countries—Australia, U. K., France, Netherlands, U. S. S. R. and U. S. A.

Non-self-governing countries are not full members, but they may be admitted as Associate Members with equal privileges except in regard to voting at meetings of the Commission. But they are eligible to be members of committees and subsidiary bodies with full rights of voting. They have to be sponsored by the Member countries responsible for their international relations. In accordance with the above, at the Baguio meeting, Burma, Ceylon, Singapore, the Malayan Union and Hong Kong were admitted on the recommendations of U. K., and Combodia and Laos on that of France.

The application of Indonesia sponsored by Netherlands and that of the Indonesian Republic directly made to the Commission and sponsored by the Indian Delegation were deferred consideration till the next meeting.

Associate Members have already proved their usefulness and shown a great sense of reality and awareness of the problem of Asian countries.

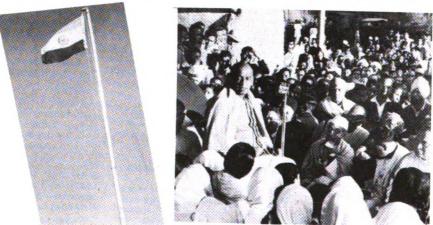

This magazine is filed with the Department of Justice, where the registration statement of the Government of India Information Services under the Foreign Agents Registration Act is available for inspection. Registration under the Act does not imply approval or disapproval of this magazine by the United States Government.

### Sardar Patel in

#### Assam

The Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister, visited Assam recently.

These pictures show (top) Sardar Patel in conference with representatives of the K'asi States Peoples' Conference, (centre) the Deputy Prime Minister addressing a public meeting in Shillong and (left) Sardar. Patel addressing the Assam Regiment at Happy Valley, Shillong.

#### WEIGHTS AND MEASURES

Weights and measures in India vary not only from district to district but also for different commodities.

The principal units in all the scales of weights are the maund, seer and tola, and the standard weights for each of these are 82.28 lbs., 2.057 lbs. and 180 grains troy respectively.

The Indian tola is the same weight as the rupee, viz., 180 grains troy; the standard or railway seer is equal to 2.057 lbs. while the standard or railway maund of 40 seers is equivalent to 82 lbs. 4 oz. 9 drams. There are numerous local variations.

#### COINAGE-RUPEE IN DOLLARS AND POUNDS

Re. 1 is approximately 1sh. 6d. or 30.05 cents.
Rs. 100 are approximately £7/9/6 or \$30.05.
Rs. 1,000 are approximately £74/14/10 or \$300.53,
Rs. 1,00,000 (a lakh) are approximately £7.473/19/2 or \$30,053.
Rs. 1,00,00,000 (a crore) are approximately £747.395/16/8 or \$3,005,259.
1,00,00,000 is one crore (1,00,00)

COINAGE

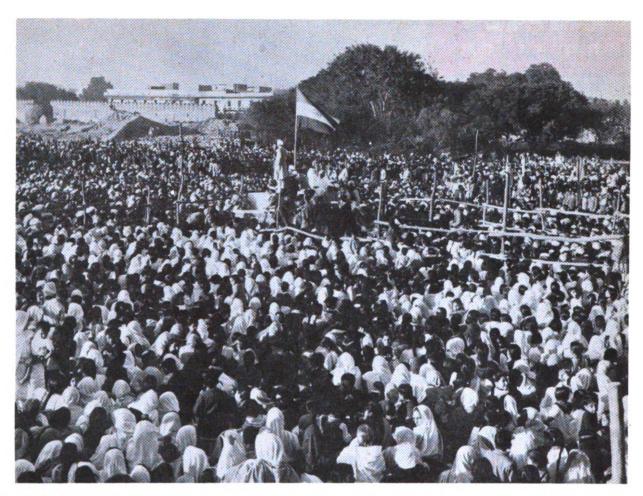

3 pies = 1 pice. 4 pice = 1 anna. 16 annas = 1 rupee.

## URGENT CHARACTER OF KASHMIR'S CASE ESTABLISHED

## Security Council Proceedings

connected summary of the proceedings of the Security Council on Jan. 22 has been received from the Indian Delegation by the External Affairs Ministry. It says:

Today's meeting of the Security Council was entirely taken up with a long discussion on procedure which at least had the merit of establishing Indian Delegation's claim that the Jammu and Kashmir question should be given priority.

Two events combined to precipitate this discussion which otherwise would have been quite unnecessary: Sir Mohammed Zafrullah Khan's letter to the Security Council's President wherein he demanded urgent consideration of the other situation, particularly Junagadh, which he said, was straining relations between India and Pakistan and secondly a change of the agenda item to read, "India Pakistan Question" instead of "Jammu Kashmir Question" as it originally stood.

#### Zafrullah's Letter

Under the heading, "India Pakistan Question", today's provisional agenda included not only the original Indian reference to the Council and Sir Mohammed Zafrullah Khan's answer contained in his letter of January 15 to the Security Council President, but also Sir Mohammed Zafrullah Khan's latest letter dated January 20.

On seeing these overnight developments, Mr. Gopalaswami Ayyangar at once sent off a letter to the President of the Security Council and also protested to him by telephone that the change of wording on the agenda was irregular.

When the adoption of the agenda came up for consideration at the start of the meeting, this afternoon, the President invited India and Pakistan to participate in the discussion although as non-members they were not entitled to in view of the delicate nature of the problem. In the course of his statement, Mr. Gopalaswami Ayyangar set forth the legal and political reasons why it was important that the provincial agenda should not be adopted in the form in which it was presented.

Emphasizing that India had no objection to other matters being discussed fully in due course, Mr. Ayyangar said that the original heading of the agenda item should be retained. "Changing the heading means changing the content of the matter on which discussion has so far proceeded", he declared, "and it is that to which India takes the strongest exception."

Urging that Sir Mohammed Zafrullah Khan's second letter should be treated as a separate item to be taken up after the Kashmir case had been disposed of, Mr. Gopalaswani Ayyangar added, "If the title is changed and the range of debate widened accordingly, we shall have to reconsider our position".

In a second intervention towards the close of debate, Mr. Gopalaswami Ayyangar insisted, "while we are not minded to exclude anything that may have a bearing on the Kashmir case, it is that subject which we have been discussing and it is to that subject that we must adhere to before passing on to others".

Conceding that it was immaterial whether the formal heading was changed or not. Mr. Gopalaswami Ayyangar demanded that the Security Council should in the first instance and as a matter of urgency concern itself with the Kashmir case. "Unless we are satisfied and an assurance is given to us that the present debate will be restricted at least for the time being to the Kashmir case, we shall be performing no useful service in continuing to participate in this debate and will have to consider our position in the light of the new circumstances", he said.

These contentions were varmly supported by both United Kingdom and U. S. S. R. The United Kingdom delegate formally proposed that the issue raised by Sir Mohammad Zafrullah Khan's second letter would be treated as a separate item as proposed by Mr. Gopalaswami Ayyangar. He subsequently withdrew his motion as it seemed unlikely to receive majority support. M. Gromyko's support of the Indian

position did not waver throughout the debate.

Various arrangements were submitted on the question of the inter-relation between the Kashmir case and the other matters raised by Pakistan. Columbia, Argentina, Syria and the United States also took part in the discussion.

In response to the Indian demand for an assurance that the Kashmir case should be dealt with first and the other matters only when the occasion arose the President said that he was unwilling to take upon himself the responsibility of giving such an assurance but would rule that such was the intention of the Security Council unless any objections should be voiced.

No objection was raised by any delegate and even Sir Mohammad Zafrullah Khan said that he only desired that "If we should reach a stage where the Council is unoccupied, then these other matters should be taken up and not considered as excluded owing to any technicalities".

#### Mr. Noel Baker

Mr. Noel Baker in the course of his last intervention in the debate said that assurances demanded by the leader of the Indian Delegation had in substances been given by practically all members who had participated in the debate.

The Indian Delegation has therefore achieved its primary procedural objective and foiled the attempt to broaden the scope of the discussion in such a way as to obscure the clear cut and urgent character of the Kashmir case.

Fighting the Invaders in Kashmir: Sepoys are seen moving with their kits through difficult and rockey country with the friendly assistance of the local people

## **CLEVER DISTORTION OF FACTS**

# Mr. Setalvad Refutes Sir Mohamed Zafrullah's Charges

THE following statement was made by Mr. M.C. Setalvad, Member of the Indian Delegation to the Security Council in reply to Sir Mohamed Zafrullah Khan's statement of January 16 and 17 before the Council:

The speech which was made on 16th and 17th by the representative of Pakistan, extending over five hours has, I am informed, established a record in the annals of the Security Council and the United Nations for the time taken. I have and can have no quarrel with length of his speech. The speech has also established a record for the calculated venom of its attack on India, the irrelevancy of much of its contents to the subject under debate, the deliberate omission of relevant matters and for its clever distortion of facts.

What I deeply regret and deplore is that a representative of a neighbouring state with whom we wish to live on terms of peace and friendship should have permitted himself to lavish numerous grave accusations against my Government, accusations many of which are not only untrue in fact but some, I feel, the representative of Pakistan himself could not have believed true.

#### The Real Issue

On behalf of my Government, I must emphatically repudiate these charges. These false accusations have been made in the hope of obscuring the real issue on which the Government of Pakistan has no effective answer.

The difficulties of the representative of Pakistan in meeting the case of my Government on the main issue can, however, furnish no excuse for the statement, full of most offensive allegations based on perverse and distorted presentation of facts. It has been stated that my Government has been a party to a well laid plan for extermination of Muslims in India and it has been suggested that the religion and culture of over thirty five millon Muslims within the Union of India are in danger.

I am sure that some at any rate, if not all, members of the Security Council are aware of the approximate number and distribution of the Muslim population in Indian Union. We have in India today over thirty five million Muslims distributed in varying proportions all over the country. Their proportion in the southern provinces of Bombay, Madras and the Central Provinces is smaller than in the provinces of West Bengal, United Provinces and the districts round about Delhi. Large masses of these thirtyfive million Muslims, even

though in small minorities, have lived and are living a normal peaceful life undisturbed and unmolested all over these provinces of the Indian Union. Is not this single fact sufficient to prove that the allegation that the Government of the Indian Union is out to exterminate Muslims is a deliberate and gross distortion of truth?

It is equally important to note that while there has been a large movement of populations between certain provinces of India and Pakistan, from the West Punjab and North West Frontier Province to East Punjab and in the opposite direction, there has been hardly any movement of Muslims from other parts of the Indian Union. These Muslims in other parts of the country, agriculturists and men in trade and business continue to live peacefully undisturbed in the Indian Union.

#### PRIME MINISTER'S APPEAL

The Prime Minister has issued the following statement:

After having heard the statements on the situation in Kashmir from representatives of the Government of India and Pakistan, the Security Council of the United Nations adopted, on the 18th January, a resolution which called upon two Governments to take immediately all measures within their power (including public appeals to the people) calculated to improve the situation and to refrain from making any statements which might aggravate it. I am aware of the restraint which the Press and pullic in India have exercised in the discussion of the Kashmir issue and would earnestly appeal to all concerned to continue to observe moderation in all references to this difficult and delicate

Eminent Muslims occupy positions of honour and importance in the judiciary and other public services in India and in her diplomatic personnel abroad. The very important Indian Embassy at Washington is manned by a Muslim. A Muslim again has been appointed Ambassador in Egypt; another has been appointed Charge-deaffaires in Belgium. Our representative nearer home in Burma is also a Muslim. The Governor of one of the Provinces in India is a Muslim. The Indian Cabinet includes two Muslim Members.

In the face of all these glaring facts, I submit that the accusation against my Government of planned extermination of Muslims or of having been

guilty of sesisting in such a plan is preposterous and does not deserve serious notice.

This accusation comes from a Government which failed woefully to discharge its responsibility to the minority in its territory. The representative of Pakistan has deliberately ignored the happenings in Pakistan which are the real cause of the most unfortunate happenings in the Indian Union. Before partition of the country into two Dominions, the territory new constituting West Punjab had a large Hindu population in the Frontier Province and Baluchistan. In effect, by reason of the atrocities perpetrated in West Punjab and other places, nearly the whole of the non-Muslim population excepting persons forcibly converted to Islam and abducted wemen, left these areas in West Pakistan. The position in Sind is that nearly one third of the non-Muslim population has already come away and a large number of non-Muslims are awaiting transport for the purpose of leaving Sind.

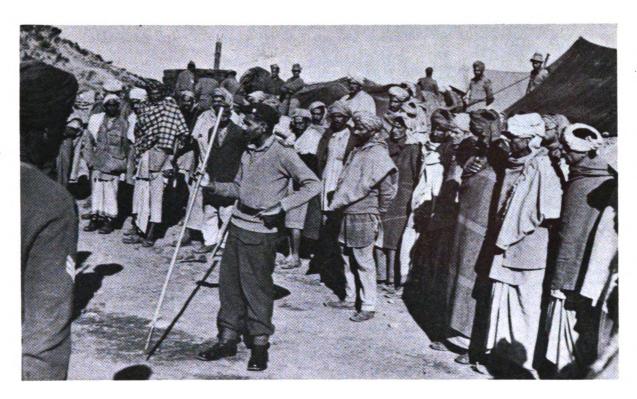

While a part of this migration of non-Muslims is even now taking place from Western Pakistan, the movement of Muslims from India into Western Pakistan has practically come to a stop. And this situation is not confined to Western Pakistan. There has recently been a continuous migration of non-Muslims from East Bengal, into West Bengal while there is no such migration of Muslims from West Bengal into East Bengal. What I wish to direct attention to is the necessary inference namely that the overwhelming body of Muslims in the Union are feeling quite secure in Indian territory and do not desire to move away.

#### Gandhiji's Efforts

Even in Punjab, while in the East Punjab about 1,50,000 to 2,00,000 Muslims will continue to stay in their homes, for example in Gurgaon District, hardly any non-Muslims are left in West Punjab, North-West Frontier Province or Baluchistan.

In view of these facts, could it be suggested that there is the slightest foundation for the accuration made against my Government that it has a desire much less a plan to exterminate Muslims? On the other hand, the definite and proclaimed policy of the Government of India, Mahatma Gandhi and the All-India Congress Cermittee is to actively discourage migration of any more Muslims from India and create conditions for giving confidence to those Muslims who migrated but wish to return to their homes.

As recently as 6th January, 1948 there was news from Karachi of the massacre of Sikhs and most extensive looting of their property. On the 12th January, there was an attack on a non-Muslim refugee train coming from Bannu in the North-west Frontier Province at Gujrat Station situated in Western Punjab. According to a despatch by Mr. Colin Reid to London "Daily Telegraph", 1,300 refugees were

To fight the raiders in Kashmir the Officer Commanding Indian Troops in Naushahra, Frig. M. Usman, is organising Home Guards from amongst the local population. Brig. Usman is seen at Beri Pattan with a large number of volunteers for the newly-formed Home Guards

massacred, 150 wounded and 400 are missing. The total number of refugees in the train was about 3,000 and according to our information the 400 missing passengers include 300 women who were kidnapped. A military escort of Indian Union troops accompanying the train was almost wholly destroyed. The tribesmen who have a concentration at Gujrat and local Muslims participated in the attack on the train.

I ask you to contrast the tranquility which now prevails in the territory of the Indian Union with the spirit of lawlessness, murder and massacre rampant even today in Western Punjab and Sind, evidenced by the two occurrences which I have mentioned. If I were minded to follow the example of the representative of Pakistan, I would rely on these occurrences as evidence of a plan by the Pakistan Government to exterminate non-Muslims. I do nothing of the kind. I do not wish to emulate him in making fantastic unsupportable accusations.

#### **Doctrine of Hatred**

The root cause of these massacres, killings and other brutal unmentionable crimes is to be found in the continual preaching of hatred of the communtiy by Muslim leaders for a number of years. This reprehensible propaganda was essential to and inseparable from the ideology on which the Muslim League founded itself. Muslim masses have been continually fed and nurtured on this doctrine of hatred and their fanaticism has been excited by cries of Muslim religion and culture being endangered.

It was inevitable in these circumstances that mass disorder broke out. It began with an orgy of killing and detestable crimes in Calcutta by Muslims and resulted in equally violent retaliation by Sikhs and non-Muslims in Calcutta. This was in August 1946. Since then the story has repeated itself in various parts of Bengal, Bihar, Punjab and elsewhere but it would be only right to say that, in broad outline, fury and disorder was, to begin with, let loose by Muslims. It is also correct to say in some cases, murder, looting, arson and other crimes committed by Muslims were acquiesced in if not encouraged by some Muslims in high authority.

These crimes led to an influx of large masses of population from Muslim majority areas into non-Muslim areas. These refugees brought with them tales of horror and woe that they suffered. The result was excitement among the non-Muslim population where the refugees had arrived. This excitement gave rise to a desire to exact retribution and retaliate on the Muslim population in their midst. Thus arose from time to time, retribution and retaliation leading to crimes equally heinous and obnoxious against Muslims by non-Muslims in varrious parts of the territories mentioned.

These crimes in their turn led the Muslim population in the affected areas to migrate to non-Muslim majority areas so that there was a stream of these Muslim refugees fleeing from East Punjab, Delhi and some other places towards Western Punjab and Sind. It has not been possible to esti-

mate the very large number killed in these various happenings, so great and varied have been the outrages in some parts of the country. Some estimates of the population migrated from either side of border to other side, have been about five million. That is a true picture of the killings, refugees and the transfer of population.

#### Mass Frenzy

These events have been the result of mass incitement and mass frenzy. It is obvious that with feelings of this nature pervading large masses of population, it was inevitable that forces of law and order should also be affected. These feelings naturally travelled into the minds of the police and the military of either community and it was found that these forces of law and order failed to do their duty to preserve it. However notwithstanding this attitude and the conduct of the forces of law and order, in our submission, it is fantastic to attribute these events to a preconceived plan of destruction or of driving away parts of their populations by either Government. Yes, there was connivance and encouragement by some Governments, of these happenings. Such connivance and encouragement can be demonstrated to exist in events in Calcutta where the Muslim League Government was in power and also in Lahore in West Punjab.

There has been a great deal said about genocide in the document submitted on behalf of Pakistan and my friend on the other side has said something about it. I have already pointed out the fantastic nature and indeed the absurdity of a suggestion of this kind.

Only a few days ago, Mahatma Gandhi started a fast in order that harmony might be restored between Hindus and Sikhs on the one hand and Muslims on the other, principally in Delhi and the area surrounding it. Aged and frail as he is, he risked his life for the purpose of bringing home to Hindus and Sikhs in the area mentioned the necessity of living in peace and brotherhood with Muslims. Happily he succeded and was able to obtain assent to seven points which he wished them to agree. Can it be seriously suggested that the Government of India which acknowledges the leadership of Mahatma Gandhi could ever plan or adopt a policy of exter-mination of Muslims? I repeat that this theory of genocide so fantastically put forward is not worthy of serious consideration.

#### **Totally Irrelevant**

True responsibility, as has already been stated, for these most unfortunate occurrences which led to the loss of so many lives and such detestable crimes, lies on the heads of those who in order to further their policies deliberately preached all over the country the doctrine of communal hatred and of some men who now occupy responsible positions in the Government of Pakistan.

In our view the story of these happenings all over India, of the events in Eastern Punjab and Eastern Punjab States and the detailed accounts of them which the representative of Pakistan has referred to are totally irrelevant to the issue now existing between India and Pakistan as regards Jammu and Kashmir. It has been alleged that these events form a background to the situation and that this situation could only be understood in the light of the background which the representative of Pakistan has tried to depict. That is again a suggestion which we cannot accept.

We submit that events and the causes which led to them are altogether beside the point. We say that they have been introduced in the answer filed on behalf of the Government of Pakistan and into the speech delivered by its representative merely to confuse what we regard as a very clear issue. That issue broadly speaking is whether with reference to the invasion of the State of Jammu and Kashmir by the tribesmen and others, Pakistan has failed to discharge her obligations as a friendly neighboring State to India in the manner we have alleged. We submit that no light can be thrown on that issue by examining the various matters constituting a background which have been adverted to by the other side. Indeed, we feel we shall be confusing the issue and making the position more difficult if we swent into those matters. However, as these matters have been gone into, it will be my duty to deal with them in detail. I assure the Council that my Government has nothing to conceal in these matters and hope to satisfy the Security Council-in this respect in due course.

It is surprising that the representative of Pakistan in his anxiety to find support for his allegations should have been driven to rely on untrue and un-authenticated reports. The Council will remember how he referred to the murder by Dogra troops of Brigadier Khoda Bux, the only Muslim Briga-dier in Kashmir Army,—"An Associ-ated Press report dated 31st October revealed that Brigadier Khoda Bux, Garrison Commander of Jammu who was the only Muslim Brigadier in the Kashmir Army had been murdered by Dogra troops in Jammu". I am sure that Security Council will be greatly surprised to learn that not only has the gallant Brigadier not been murdered but also that he is at the moment occupying the position of the Chief of Staff of the Kashmir State Forces. I shall give another example of how the representative of Pakistan has not hesitated to distort facts. He stated the other day that India sent a duplicate copy of its appeal to the Security Council to the Pakistan Government by cable in a cipher to which they knew that Pakistan Government did not possess the key.

#### First Complaint

On 31st December 1947 the Government of India despatched its com-plaint to Security Council, the text of which was sent to the Government of Pakistan on the same day. On the same day again we repeated to Pakistan the text of our complaint. On 1st January 1948 we received a tele-gram from Pakistan reporting that our message was undecipherable. Thereupon we despatched to Pakistan a message repeating the text of our complaint to Security Council. On 2nd January 1948 we again received message from Pakistan that they could not work our messages in automatic decoding machine called "Public". Thereupon we sent on 3rd January very detailed information in regard to the working of "Public" messages. On 4th January we received from the Pakistan Government a message dated 3rd January from Karachi to the following effect : "Please cancel our telegram No. 19 of date. We have deciphered telegram. Regret inconvenience". These facts should have been known to the representative of Pakistan. His inference that my Government sent cable to Pakistan Government knowing that the Pakistan Government could not decipher such a cable was most unjustified.

This in itself is a matter of small moment, but I mentioned it. It is tpyical of many such inaccurate statements made on behalf of the Government of Pakistan. It has been put before you, in our submission, as a wholly distorted picture which has been subtly supported by tacts inaccurately stated.

The one issue and the prime issue before you is the issue relating to the invasion of Kashmir. Our conten-

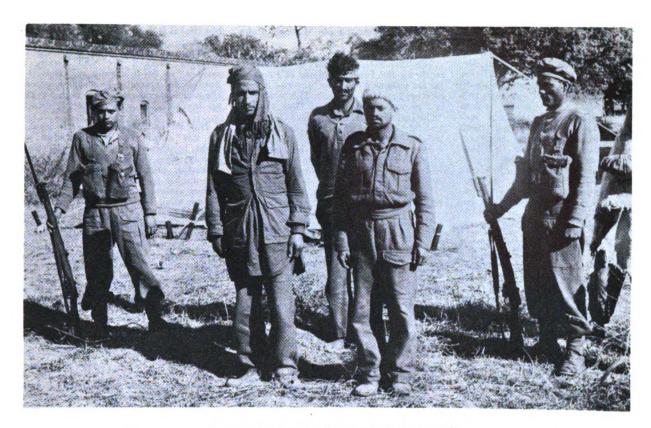

tion is, putting it again very broadly, that Pakistan as a neighbouring peaceful State failed to discharge its duties inasmuch as it has permitted transit to the invaders through its territory, or to use an expression which has been used here it has permitted warlike passage to these invaders through its territory. And we say further that Pakistan has rendered to these invaders direct and indirect assistance. Putting it very briefly, that is the main issue before the Security Council.

#### Reinforcement of Raiders

Before I pass on to the various other matters which have been adverted to, I wish to make a further comment on the main issue. I submit that there is a clear presentation of facts which lead us thoroughly to the inference that Pakistan has no answer to the charge which we have made against it—the charge in regard to the invasion of the province of Jammu and Kashmir. In the first place the existence of a large body of tribesmen in Kashmir is not and cannot be denied. We have reports as recent as 11th January 1948 which put the figure at as many as 60,000 tribesmen.

I wish to draw the attention of the I wish to draw the attention of the Security Council to a despatch by Mr. Douglas Brown published in "London Daily Telegraph" which contains the following passage: "The tribal leaders claimed that there were 60,000 Pathans always fighting in Kashmir each man fighting for about a month at a time. They said they used all routes but owing to Pakistan's lack of co-operation found it best to cross the State of Swat. The casualties so far have been about 400 dead and 250 wounded." That is the material part of the passage. I read it in order to make the following sulmission that as many as 60,000 tribermen sion that as many as 60,000 tripesmen are in Kashmir territory. What more, not only are they there, but they are being constantly reinforced so that tribesmen who go there are there for about a month and are then replaced. by others who also get into Kashmir. I wish to draw attention to what I may term an inescapable fact resulting from the geographical position of Kashmir vis-a-vis Pekistan. Is it possible for those 60,000 tribesmen to be there and be maintained as a fighting force as they are without the willing co-operation of Pakistan for the passage of those people to and fro through Pakistan? One has only to look at the map to see that it is inconceivable that these large hordes of tribesmen should be able to pass through Pakistan territory without-I will.... put it in the mildest way-cooperation of Pakistan Government. If one looks at the map one finds that they have had to travel at least 100 miles through Pakistan territory to get into Kashmir.

I put the following question to members as men representing responsible Governments and as men of affairs who understand these matters: Is it conceivable that these large bands or hordes of tribesmen could go through Pakistan territory in this manner into

Some prisoners captured during Kashmir operations

Kashmir without the co-operation of the State of Pakistan? That is really a simple issue and the conclusion which one can draw about it is inescapable by reason of the geographical considerations to which I have already referred.

However, the matter does not merely rest there. We have recently received news of tribesmen who were actually on their way to Kashmir or had the purpose of going to Kashmir being found in Lahore which is the capital of the Province of Western Punjab in Pakistan. I have a telegram from London which reproduces the information which the Lahore correspondent of London "Times" submitted under the heading "Armed Tribesmen in Lahore; Dances on Hotel Lawn". This is the telegram which we have received and it is dated 22nd January, 1948. It reads as follows:

"An armed band has reached Lahore nearly 300 miles from the entrance to the Khyber Pass. It' is quartered within 100 yards of the West Punjab Assembly in an old hotel originally requisitioned by the Provincial Government for Refugee Relief Headquarters. The men are of the Sulaiman Khel and Shinwari tribes and are behaving with their usual abandon and disregard for conventions. Tribal dances are now being held on the lawn of the hotel and drum beats throb down the Mall.

"In spite of the recnt local ordinance prohibiting the bearing of arms every man is carrying a rifle, the firing of which appears to express his appreciation of the dances. So far these 'joy shots' have not reminded the police of their duty.

"Later today they danced through the streets in a big farewell to some of their comrades who were leaving for Jammu. Before Queen Victoria's statue in Charing Cross they paused still dancing. They appeared to be in a happy mood, but as the procession proceeded down the Mall the tempo of drums quickened and a fusillade of rifle shots stampeded some horses and a small camel caravan".

#### Through Pakistan

That is the situation in Lahore. The inference is obvious that it is not only in the distant border land between the North-West Frontier Province and the tribal areas that tribesmen are trickling through, "scampering down the hills like goats", as my learned friend described them in a very graphic manner. But they come in well organized bands right through the capital of the West Punjab. There they are very hospitably received; police regulations are suspended, they are allowed to do what they like and it is while living there that they bid farewell to fight in Jammu.

That is what the telegram says. But the matter does not rest there. Some United States newspapers actually carried photographs of tribesmen being organized in Pakistan territory. I shall not weary the members with a great number of photographs, but I do wish to mention the one which appeared in "Life" magazine of the 5th

January, 1948, on page 16 of that issue. Muslim tribesmen are pictured shouldering rifles and cartridge belts boarding unofficial truck convoys for the Kashmir front. Therefore, photographic evidence is actually at hand of tribesmen being openly convoyed in what are called "Unofficial" trucks through Pakistan territory. I submit that this is a very strong evidence in support of the submission which we have made in our complaint to the Security Council.

What has been Pakistan's answer? Frankly, we have found it somewhat difficult to understand Pakistan's answer because in our view it has been said: "We have done everything short of war to prevent tribesmen from coming through our territory". That is one answer. Additional answers have been given by my friend on the other side of the table: "We have a long boundary and it is difficult to control the tribesmen. They come down in wintertime to do marketing and occupy themselves". It has also been said "tribesmen have been coming in that manner through the border all these years".

I wish to make an important observation. Until the 15th of August, the British were in charge of the frontier and tribesmen did not come down every year except some few of them for certain purposes. Was there ever such an influx of tribesmen as we have witnessed on this occasion when the British were guarding the frontier? Were these armed men allowed to come down

not only into the West Punjab but also into the neighbouring state of Jammu and Kashmir as happened on this occasion? I understand that the practice was always that outposts were maintained and when these tribesmen came they were allowed to go into this territory, their arms being taken away for the time being, which was for the purpose of preventing them from doing mischief in the territory. We understand that such military outposts as were located in the frontier territory or near it in Northern Pakistan have been withdrawn. We do not know for what reasons they have been withdrawn, but an explanation advanced is that tribesmen are friendly. However we do not know the reason.

Is it too much to suggest under the circumstances that have transpired that this deliberate withdrawal of military outposts, which existed through all these years, has been resorted to for the purpose of conniving at the entry of these tribesmen into Pakistan territory, so that they will be accorded free and comfortable passage into Kashmir? As I have already stated, we do not know, but we do suggest this as a motive behind the withdrawal of the outposts. Pakistan's answer is that it has done everything short of war to prevent this warlike passage through its territory, but has the Security Council been furnished any substantial or tangible evidence of any attempts by Pakistan to prevent the passage of these tribesmen? I submit most respectfully that no such evidence has been produced here. On the contrary, there is evidence to show that far from discouraging or even trying to prevent the transit of tribesmen, incitement and encouragement is being afforded to them.

#### On Jammu Border

Stories have recently appeared in newspapers of the visits of the Prime Minister of Pakistan to these tribal areas and it has been suggested that these visits were made with a view to prevailing upon the tribeemen to abstain from entering Pakistan territory and passing into Jammu and Kashmir territory. What are the true facts in that connection? Here again I draw attention to the comment made by the special representative of the "Statesman", a British-owned newspaper which is published at Delhi and Caleutta.

The comment reads: "The strength of the complaint by the tribesmen of arrests in Pakistan of those persisting in their journey to Kashmir raises the suspicion of propaganda. It is difficult to align these complaints with the presence of many hundred armed Pathans which I saw myself on the Pakistan border of District Jammu and the undoubted presence of at least several thousand tribesmen on the Azad front in Kashmir". In other words, what has been resorted to is not really for the purpose of preventing or even persuading the tribesmen to desist from what they are doing. There is, if the correspondent's view is correct, on the one hand a show of persuasion; there is, on the other hand, co-operation or committee, at any rate, in the

passage of these people through Pakistan territory.

We have also the report of statements made by the Prime Minister of Pakistan on his visit to Peshawar in the speech delivered on 15th January. This is what he is reported to have said in that speech: "The Indian Government were determined to bring Kashmir into tkeirfold by sheer weight of arms, which Muslims would never tolerate. Their action contrasted most unfavourably with Pakistan's restraint in not sendning troops to Junagadh". He went further to say that "the tribesmen would be treated in all respects as citizens of Pakistan."

Proceeding on the assumption that this report is a correct one, here is the Prime Minister of Pakistan stating that these tribesmen are to be treated in all respects as citizens of Pakistan.

#### Bases in Pakistan

Comment on a statement of that kind is needless. It would result in the necessary inference that these tribesmen are treated as Pakistan nationals and are allowed to go in thousands into the State of Jammu and Kashmir, with a view to what they are doing there. After what I have submitted to the Security Council, particularly in regard to this, I submit that the inference is irresistible that Pakistan is deliberately cooperating with these masses of tribesmen which have gone into Jammu and Kashmir.

It has been mentioned by my delegation that there are bases actually in Pakistan territory for the use of these tribesmen. I call attention to an extract from a Memorandum dated 12th December 1947 from Lt. Col. Douglas Leefer O.B.E. to the Chief Secretary of the North West Frontier Government.

The extract from the Memorandum reads: "There is, however, another factor we are bound to take into consideration and it is that recently we had in Parachinar, that is a part of the North-West Frontier Province, almost permanently leshkars of well armed men mostly khans on their way to Kashmir. The numbers sometimes fall to less than one thousand; on one day we reached the maximum of five thousand."

That statement in a letter by a responsible officer of the Government of North-West Frontier Province indicates and establishes the existence of a base which has in it tribesmen varying in number from one thousand to five thousand at a place called Parachinar. Could there be any clearer documentary evidence of existence of these bases which we allege exist in the State of Pakistan for the use of these tribesmen?

Speaking very broadly, again if what I have placed before the Security Council is, and I say it is, sufficient certainly to lead to the inference that Pakistan is cooperating with the tribesmen, I submit that it clearly has committed a breach of international obligations.

May I put the position in this way. Pakistan protests that it is anxicus to discharge its international obligations,

but that it is unable to keep these tribesmen from going into Jammu and Kashmir. That is, as I am sure the members of the Security Council are well aware, no answer. A State cannot say that it is unable to restrain a warlike passage through its territory to others and permit an invasion of a neighbouring State.

But let us suppose for a moment, I do not admit it, that Pakistan was right in the view it has put forth. Surely, then the remedy is very simple. Pakistan should openly state: "We are unable to keep the tribesmen away, either assist us in keeping them away or we shall have to adopt some other method to do this". If their contention is a true one, that I submit is a straight and direct answer which they should give. As we have already stated more than once, if that is the true situation we are quite willing to cooperate with Pakistan to get rid of these tribes. It would be no difficulty at all so far as our Government is concerned. But it will not do, I submit, for a friendly neighbouring Government to state, as they seem to, that they are unable to deal with the tribesmen and at the same time permit nothing to be done to deal

That is in short the position in regard to the broad issue. I submit that those who know the affairs of state can really and clearly appreciate this position. Could any of the States tolerate a situation of this kind in its territory? Let us suppose any one of the States represented on the Security Council was invaded by these large forces in this organized manner. Would it be an answer—I ask the Security Council to consider, and I am not speaking from a legal point of view, I am speaking from a broad political point of view for a neighbouring State to say: "We are not able to prevent it and we shall not let anyone else do it." That is the position which with respect I ask the Security Council to consider deeply.

#### Unjustified Attitude

I turn next to the statement, made more than once on behalf of the Government of Pakistan, namely, that this army which entered the State of Jammu and Kashmir is what they call an army of liberation. Let us assume that it is an army of liberation, which in fact it is not. However, let us assume that. Would that be any answer on behalf of the Pakistan Government to the issue raised? With respect I sumbit it is no answer.

Suppose that in a State there is a revolution or an insurjence. Does that justify—and again I call upon the Security Council to consider this point—a neighbouring State in co-operating with the invaders from beyond its borders, who are going into the State in which the revolt or insurrection is taking place?

Assuming that there is something to be liberated in Jammu and Kashmir, which of course we say is not true, I submit that even so the attitude taken by the Government of Pakistan is not justified.

The Security Council must undoubtedly consider the question whether the raiders in fact constitute an army of liberation. I admit that it is an army, not a mere band of raiders. But it is not an army of liberation, but of death, destruction, loot, arson and murder and in what they have done, they have made no dike between a Muslim and a Hindu or Sikh.

Mr. Setalvad proceeded to read quotations showing the raiders' destructive and barbarous methods, particularly at Baramula, from the London Duily Express of November 10, the New York Times of November 10, the Calcutta Statesman of November 11, the Chicago Tribune of November 3, the Times of India of November 13, the Peoples' Age Bombay of November 13, and also the United Press of India report of December 12, citing the Poonch Muslim National Guards Commander, Mr. Akram Khan's ramarks dissociating himself from the Muslim Conference and similar organisations.

He continued: All this evidence demonstrates that what came down from Pakistan into Kashmir was now an army of liberation but an army bent on destruction. Therefore the whole fabric, reared by the Pakistan representative on the thesis that here you have an invasion and we have to relieve Muslim brothers in distress, is entirely without foundation.

#### League Ideology

If not liberation what then is the object for which these forces have been allowed to onter Kushmir? Pakistan's object is clear—to coerce Kashmir into accession to Pakistan. Mr. Firoz Khan Noon said, "Pakistan without Kashmir was inconceivable". That is the key to the whole conduct and attitude of Pakistan regarding Kashmir.

The variety of matters brought in by the Pakistan delegate as background are not really relevant to the issue. But since they have been made the basis of various allegations against the Government of my country, it is my duty to deal with them.

The root cause of the situation, which has arisen not only in one dominion but in both, consists of two ideologies which have been prevailing in India recent years. One is the ideology of the Indian National Congress which is a secular political State wherein the individual, whatever his faith, would be a citizen. Contrasted with this was the Muslim League ideology based on religion-not a secular state but one to be dominated by those professing the Muslim faith. It is the idelology which impresses itself upon those in charge of Pakistan affairs and makes them aim at the forcible accession of Kashmir to Pakistan. The two ideologies led to a conflict in the pre-partition India. Muslims were told their religion was in danger and they must organise for its protection. There was propaganda of hatred against the other communities. What is more, violence was openly preached.

Mr. Setalvad quoted from Mr. Firoz Khan Noon and Mr. Suharwardy's

His Highness the Maharaja of Patiala talking to women and children refugees evacuated by the R. I. A. F. from Poonch

speeches of the 9th April 1946, and referred to the inaugrration of the Muslim League Direct Action Programme in July 1946 and the Calcutta Direct Action Day in August 1946 leading to the first large mass disorder which overtook India. Facts disclosed by the Spens Enquiry Committee show complicity of the Muslim League Bengal Ministry in the Calcutta Killings. Calcutta was followed by Noakhali where forced mass conversions occurred; then the brief terrible retaliation in Bihar by Hindus in October and November 1946. He referred to Pandit Nehru's part in quelling the Bihar disturbances.

#### West Punjab Disorders

Mr. Setalvad continued: Soon after the British policy announcement of January 1947 there arose a scramble for power in the Punjab which led to the peaceful province being torn into factions and handed over to forces of loot and disorder. The Muslim League attempt to dominate the Punjab, where Sikhs form a large number, led to tension and in February and March 1947 large numbers of Sikhs and Hindus were massacred at Rawalpindi, Peshawar and other places. So great was the terror that large numbers of Sikhs and Hinuds fled from the Province. Be it noted that there was at this time no persecution or harassment of Muslims in East Punjab. The flow of refugees was entirely from west to east. In West Punjab the Sikhs, largely responsible for the prosperity of these districts, were threatened with having to leave the homeland they had built with great labour and effort. Hence the deep apprehension among the Sikhs and the incident when Master Tara Singh brandished his sword and said what he did; I am not here to give the impression that he was justified in using those words. But the Sikh community was labouring under a great provocation at the time.

The theory of premeditated conspiracy or plan by the Sikhs is utterly unbelievable, fantastic and cannot command acceptance. To suggest that

the Sikhs, who own large farms in West Punjab, would be parties to a plan to migrate to the over-crowded East Punjab and exterminate the Muslims there in order to acquire little bits of land, cannot reasonably be given credence by any one acquainted with the situation. Stories of dreadful happenings in Peshawar, Rawalpindi and other places, carried back by the refugees from West Punjab, were the cause of happenings in East Punjab in August and September 1947. Sir Zafrullah Khan's picture is distorted because he has only presented what I may call the second chapter of the story. It is the first chapter which I have related wherein lies the real cause of what happened in East Punjab in August and September, 1947. It is no organised policy or premeditated plan but the necessary consequence of mass feelings generated by happenings in West Punjab which came to the knowledge of those in East Punjab: and the refugees brought details of horror. What ensued expected.

#### The True Picture

That is the true picture of the one or more outbursts of mass frenzy on either side which no State and no forces of law and order could control, for the simple reason that it was based on religion and community. These mass frenzies resulted in denuding the whole western territory of the Punjab and the North-Western Frontier Province of the whole of its Hindu and Sikh population, barring those forcibly converted or abducted women. It resulted equally in the movement of Muslims from East to West Punjab, though not to the same extent or degree. Disorders in some instances were encouraged or connived at or participated in by. forces of law and order but I refute the inference that the Government was a party to these disorders. Some of the tragedies in West Punjab took place at the hands of forces of law and order, in Sheikhupura in August 1947. I do not lay any charge against the Government

of Pakistan or the Government of West Punjab but emphasise that, while the police and troops were sometimes parties to disorders, this cannot support the inference which the Pakistan representative wishes us to draw that the Government was a party to the disorders.

Things became so difficult for Hindus and Sikhs in West Punjab that some of them, in September, 1947, were driven to mass suicide, rather than submit to the Muslims' heirous ill-treatment. One such occurrence took place at Jhang in West Punjab. Mr. Setalvad quoted a letter dated October 12 from the Governor of East Punjab to the Prime Minister of India and also from Bombay People's Age, October 5. He continued: Prominent Muslim League leaders and landlords participated in killing and looting in West Punjab. What really happened was that the beast in man got the upper hand owing to preaching of hatred and religious fanaticism. Forces of law and order did not function in East Punjab. To a greater degree they not only failed to function but participated in crimes and looting in Western Punjab. It is futile to attribute these happenings to any Governbute these happenings to any Governmental plan or Governmental participation. The tragic happening in West Punjab has resulted in practically wiping out the non-Muslim population in that province and the North-West Frontier Province. When I say wiping out I do not mean that all of them have been murdered; a large number has been and the rest have migrated.

#### A Difficult Problem

Another factor which should be mentioned is that the difficulties of East Punjab Government were far greater than those of West Punjab in August and September because, owing to the partition, a new administration had to be formed and organised. It was during this process of organising its administration that East Punjab was faced with the problem of dealing with mass disorder.

The Government of India is in no way concerned with and has no responsibility for the events in East Punjab States in June and July when the British Government was still in authority.

On the question of censorship it was suggested that India having planned the extermination of Muslims, did not desire newspapers to publish the true facts. I reject that charge and submit that no material has been laid before the Security Council to substantiate it. On the contrary a number of cases will be found where the Pakistan Government deliberately prevented journals from stating the true facts concerning the West Punjab happenings. He quoted an extract from an editorial in the Civil and Military Gazette, Lahore, dated August 13.

Regarding the destruction of property and Sir Zafrullah Khan's complaint about his own house, he said: The house is intact. This matter has been repeatedly investigated and General Nazimuddin, a relative of the Pakistan delegate, was taken by General Thimayya to the house and the house was shown intact to him. If the meaning of the complaint is that the house has been

looted, that also is incorrect. We are informed on proper inquiry that the furniture and belongings of house except a few things were taken under proper escort to Lahore. That is the true picture of what happened. Not that I or my Government feels distressed in the least by any damage that may have been caused to my friend's property. When there is mass disorder and mass destruction loss must inevitably fall on one side or the other, on persons who have the misfortune to own property in the disturbed areas. My friend is not the only one to have suffered some loss. There are members of the Indian delegation who have also suffered losses, but it is unwarranted to build up a case against a Government or its policy on the basis of these facts.

#### Delhi Peace Efforts

While the loss of Quadian is again a matter of deep regret, it is literally nothing compared to the huge losses suffered by the Hindu and Sikh population in West Punjab. He quoted figures collected regarding such loss in the small town of Saghora and said: Places which have suffered similar fate regarding the property of Hindus and Sikhs are principally Lahore, Rawalpindi, Sheikhupura, Sialkot, Multan and Peshawar.

As for the Delhi happenings, nothing has been placed before the Security Council to show Government participation. Indeed the British press published many reports of attempts by persons in authority, including the Prime Minister, Pandit Nehru himself, to quell the disturbances often at personal risk.

Although Sir Zafrullah Khan complained about some youths shouting slogans against Mr. Jinnah, he had no compunction in reading out a quotation from the "Truth" imputing advocacy of war to Mahatma Gandhi. A suggestion of this character against the person who recently undertook a fast to prevent communal discord is entirely unjustified. What Mahatma Gandhi said was that utmost efforts should be made to bring about peace and harmony because if that were not done the two countries would drift into war.

The Delhi happenings are comparable to recent events in Karachi. The forces of law and order attempted to control disorders and some of the Ministers took part and did their best to try to quell the disturbances. That is precisely what happened in Delhi also. Mr. Setalvad quoted the latest telegram from Mr. Sri Prakasa on this point; and also the London Daily Telegraph despatch of January 15, about the Gujrat Railway Station massacre.

Such is the true position and the Government which has happenings of the sort I have described in its territory has the temerity to accuse India of geoccide. I submit that no accusation could have been based on slanderer foundations than the one submitted by the Pakistan representative.

The Pakistan representative referred to Ajmer as one of the places where the Muslim population was in danger, but the fact is that all steps have been taken to safeguard this place and whatever difficulties have arisen are due to differences between local Muslims.

Following the luncheon recess Mr. Setalvad continued: A fact which must be remembered is that the partition was a shock to many and feelings of people had been exacerbated. Therefore, it is not surprising in the light of the background I have outlined that there was a great upheaval. That the upheaval was not unnatural will be understood and appreciated in view of the fact that the country which had been under a unitary Government for a century had to be partitioned.

Having regard to the problems involved in the transfer of large masses from either side of the country, what has happened is not really a considerable disturbance, and the transfer has been carried out on the whole very satisfactorily. I am speaking not only with reference to our own, but also to Pakistan Government. In support of his point, Mr. Setalvad quoted Lord Mountbatten's statement made in London that 97 per cent of the people in India were living in peace.

Turning to Kashmir, the system of absolute monerchy and antiquated laws regarding cow killing etc. are not peculiar to Kashmir. Similar laws exist in other Indian States.

#### Sheikh Abdullah

As far back as 1931 or 1932, popular agitation started for freedom of the press and popular legislative and other reforms. This agitation was led by Sheikh Abdullah, lerder of the people's movement and of the National Conference. He founded in 1938 a movement which included not only large masses of Muslims but also Hindus and Sikhs. He advocated not only political uplift, but also social and educational imprevement in the State. Naturally, he came into conflict with the State. He has been sentenced to gaol seven times and has spent about four and one half years in gaol in Kashmir. His followers, Muslims, Hindus and Sikhs also disobeyed certain unjust laws and followed him into gaol. As a result of the "Quit Kashmir" demand, Shiekh Abdullah was charged with sedition and sentenced to nine years in May 1946.

Another body in the State, called the Muslim Conference, represents the ideology of the Muslim League and membership is restricted to Muslims. The January 1947 elections were boycotted by the National Conference and contested by the Muslim Conference, but out of an electorate of 6,00,000 only 2,00,000 went to the polls to vote.

While disturbances in East and West Punjab were going on, complete peace prevailed in Kashmir itself. The State was crowded with refugees moving from one direction to the other and they were cared for mostly through the activity of the National Conference.

In August 1947, attempts were made to inflame feelings in Kashmir. Certain familiar methods were adopted and propaganda agents were sent into the State by bodies believing in a State founded on religion. In September, Muslims from West Punjab raided Jammu Province on a number of occasions. The third phase was the engineering of a revolt in Poench area.

INDIAN INFORMATION, FEBRUARY 15, 1948

All these activities were designed to arouse disturbances in Kashmir, then still peaceful.

A further aspect, perhaps indicative of the source from which these activities flowed, was Pakistan Government's attitude towards Kashmir. By means of economic dislocation, creating difficulties in the matter of supplies, an attempt was made to coerce Kashmir into acceding to Pakistan. Still, right up to the end of September 1947, except for Hindus and Sikhs killed by Muslim raiders, there was no disturbance at all and no reason to suggest that any Muslims were being molested in the State.

On September 29, Sheikh Abdullah was released and he re-stated his attitude which had always been that wishes of the people should be ascertained on the question of accession without pressure from outside.

Pakistan, however, was not content to accept this attitude. The scheme was to augment the coercion it wished to apply by inviting tribesmen and affording them passage through its territory.

It is most important to remember that until the invasion began on October 22, there had not been any killing by Dogras. We have no facts to show that any Muslims were killed in Kashmir by Sikhs, Hindus or the Maharaja's Dogra troops before October 22. That central and important fact cuts at the root of what the Pakistan representative has tried to put before the Security Council.

#### In Dire Peril

It was in circumstances of dire peril to Kashmir, when people were faced with forcible conquest, that the decision to accede to India was taken—not only by the Maharaja but by Sheikh Abdullah and the National Conference. This step saved the State capital from being overrun, looted, pillaged like Baramula

No evidence has been placed before the Security Council to suggest that there was anything fraudulent about the accession in circumstances in which it was made. It is hardly short of an insult to the intelligence of the Council to be asked to infer fraudulent accession. Even if what I have been saying is brushed aside, no evidence can be found in Sir Zafrullah Khan's own statement that any fraud was involved. Even if his statements are taken as correct, there cannot be any question of fraud, much less violence. There was violence, in a sense, but violence encouraged and connived at by Pakistan which procured accession.

The conduct of my Government has been entirely above board in this matter. Even though the request came from both the Ruler and the people, my Government was careful to stipulate that it was accepting accession only on the condition that popular will should be ascertained in the proper manner when poace was restored. Could one then for a moment entertain the suggestion that there was any underhand dealing, fraud or anything improper in Kashmir's accession to India?

It was a feeling of revenge fostered by the presence of the Muslim invaders from the North that resulted in the first killing in Kashmir by Hindus and Sikhs on November 4. That is the only killing

Maj.-Gen. Kulwant Singh G. O. C., Jammu and Kashmir Division with Brig. Sen at a diversion where raiders have destroyed the bridge

of any moment which occurred at all in Kashmir. Is it not preposterous to suggest that this killing which took place after the raid was the cause of the raid on Kashmir?

Mr. Setalvad referred to the circumstances wherein the Muslim convoy was attacked and to the Indian Prime Minister's telegram to the Pakistan Prime Minister dated December 26 and proceeded: There has been no excess of any kind against Muslims since Indian troops entered Kashmir and nothing can be charged against the Indian Union or its troops. In fact it is their presence which has been instrumental in agreat measure in preventing occurrences of this kind against the Muslims in the Kashmir territory. On the contrary, large masses of the Hindu and Sikh population in Kashmir have been attacked and annihilated, partly with the assistance of raiders from West Punjab.

Even in these difficult circumstances Sheikh Abdullah was working for peace and harmony in Kashmir.

The theory that the Maharaja wished to exterminate Muslims in Kashmir where they are eighty per cent of the population does violence to the ordinary canons of inference. Had that been the intention, would lie have put Sheikh Abdullah in charge of the administration? Is the Maharaja to carry out the policy of extermination with the assistance of this popular leader, himself a Muslim? That is an exaggerated, extraordinarily fanciful position upon which the Security Council is asked to base its consideration and from which it is asked to proceed.

#### "Pearl Harbour Technique"

As to Kashmir's alleged failure to negotiate with Pakistan, I am not concerred here to defend the conduct of the State, but wish to point out that the invitation to go to Karachi dated October 20 was received by the Kashmir Prime Minister on October 22. Those dates are very eloquent. The suggestion that Kashmir should go to negotiate with Pakistan regarding economic difficulties when Kashmir had already been invaded cannot for a moment be

accepted. This reminds one of the historical instances like Benes or Schuschnigg being invited by the Nazis to negotiate with them when attacks on their territorics had been already planned or were in progress. It is a technique which can be summarised as the Pearl Harbour technique.

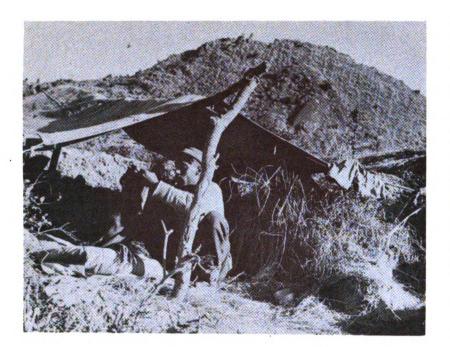

There is no question that the accession of Kashmir to India was pre-planned. As regards the complaint that Pakistan was not informed of the intended despatch of Indian troops, my answer is that there was no need, no obligation en our part to inform the Pakistan. The accession made Kashmir part of the Indian Union. We would have failed in our duty and imperilled Srinagar if we had waited to consult Pakistan.

It is an unfounded statement that the Indian Union refused at any time to negotiate a settlement. Far from there being any refusal to negotiate on our side, it has been Pakistan's attitude which effectively prevented any effort e.g., infiltration by raiders and eventual invasion.

#### India's Allegations

The numerous allegations we have made regarding Pakistan's aid to the raiders remain undenied. No denial has been forthcoming of our statement that the Prime Minister of the North-Western Frontier Province was the chief organiser of the raiding force. We have referred to admissions made by regular officers of the Pakistan Army as to the real position. These have not been denied.

Mr. Sitalvad went on to quote from a report by the correspondent of the London Times of January 13, 1948, regarding the "certain" complicity of Pakistan in the invasion and remarked: That is the situation which I ask the Security Council to remedy at an early date. We have placed before the Council such preponderating factual and circumstantial evidence as to justify the request that the Council should give Pakistan directives for which we ask. I stress the urgency and immediacy of the situation and give an assurance once again that my Government desires a peaceful solution of the Kashmir situation.

In the thickly wooded country of Jammu and Kashmir. Indian Troops are engaged in expelling the randers who have brought death and destruction to thousands of homes. Picture shows an Indian soldier's improvised home in forward area

# RAIDERS' ATTEMPTS TO CROSS SUPPLY LINE FOILED Survey of Campaign in Jammu

NDIAN casualties in all the operations in Kashmir and Jannu since October 27 were 84? including 339 killed, according to a survey of operations by Indian forces in Kashmir and Jammu till the third week of January, 1948. A conservative estimate of the raders' casualties put them at over tentimes this number.

Winter had already begun when the Indian Army after driving the raiders off the Srinagar Valley began its operations in Jammu province with Jammu City as the headquarters of the force. The absence of any good road which the Indian forces could use as their line of communication was a severe handicap. The one road, narrow and unmetalled, which led deep into the province, ran from Jammu through Akhnur and Beri Pattan to Naushahra and beyond it to a small village called Jhangar near which the road forked into two, one fork leading towards Mirpur and thence to the Pakistan border, and the other fork going north to Kotli, Poonch and Uri.

This road, nearly 200 miles long, has been built in many stretches on the sides of hills and followed the contours. It is so narrow in parts that only one vehicle can go over it at a time. It is also broken at many points by culverts and wooden bridges, not strong enough to take heavy equipment such as tanks. Lastly, this road runs almost parallel to the Pakistan border, across which

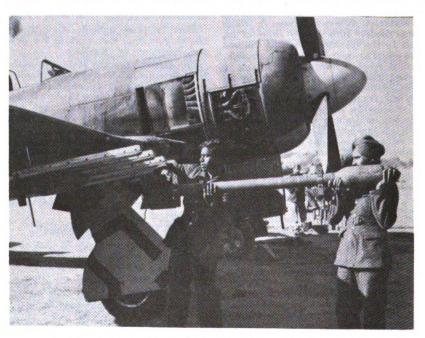

come some good first-class roads from Rawalpindi, Abbottabad, Gujrat and Sialkot, cities in Pakistan only within a few hours' drive from the Jammu frontier. Thus the Indian Army's advance had to be made at right angles to the real front which was the Jammu-Pakistan border.

When the Indian forces began to move from Jammu city to Akhnur and Beri Pattan, the position was as follows: Bhimbar had fallen after a battle in which well-trained raiders had attacked the small State Force garrison and vanquished it. Rajaori, north of Naushahra, along the old Moghal route through Bhimbar and Naushahra, had also fallen to the raiders. Rawalkot, Bagh and other such towns, in which the State Force garrisons had earlier made a stand against numerically superior formations of raiders, were in the hands of the raiders. In short, the entire district of Muzaffarabad, the district of Mirpur (with the exception of Mirpur town then held by a small State Force garrison) and the district of Poonch (excluding Poonch City, had been overrun.

The places in which the State Force garrisons were holding out against determined and continuous opposition from raiders—an opposition which had lasted for weeks—were Mirpur, Kotli, Poonch, Jhangar and Naushabra.

#### Indian Army's Advance

It was a race between the raiders using their shorter lines of communications and the Indian Army using its long, precarious and uncertain road. Indian Army advanced to Naushahra, relieved the garrison and went beyond to the cross-roads at Jhangar. The plan at that time was to close the gap between Jhangar in the south and Uri in the north through Kotly and Poonch, in order to have one long link between Jammu city and the Baramula-Kohala road. This plan could not be accomplished because of several factors; one was that a bridge between Poonch and Uri was found destroyed, another was that there were thousands of refugees for the Army to look after, a third was the weather and the fourth the

Armourers fitting rockets to a Tempest aircraft at Jammu airfield

Army's vulnerable line of communication with troops insufficient at the time to guard it.

Two columns, however, set out, one from Jhangar up north to Kotli, and another from Uri south towards Poonch. Both the columns again gained their objectives. The Jhangar column reached Kotli and brought out some 15,000 refugees who had gathered in the town to come under the protection of the State Force garrison. The column from Uri, crossing the stream at Kahuta on foot, arrived in Poonch and was ordered to consolidate and hold the town. Thus there was a break in the line between Jhangar in the south and Poonch in the north.

The raiders who had been moving daylight in lorries were forced to confine their movements to night-time as a result of the effective action taken by a reraft of the Royal Indian Air Force. Even so forward Indian pickete at Poonch, Uri and elsewhere could see headlamps of lorries coming in convoys up the many roads leading from Pakistan. Raders every day thus increased their strength and made their dispositions and concentrations. Action taken by Indian aircraft, ground patrols and long-range columns helped a great deal in disrupting the raiders' communications, in addition to inflicting large numbers of casualties on them. However since lives seemed to be of no importance to them, they came in ever increasing numbers.

#### Rain and Snow

Uri was accessible only from Srinagar and thus supplies or reinforcements to Uri had to go either by air to Srinagar and thence by road through Baramula or by road from Jammu city through Banihal Pass to Srinagar. As the winter advanced, Poonch also became isolated by land from the nearest base. The Haji-pir Pass (8,000 feet above sea-level) which lies between Uri and Poonch was blocked by heavy snowfalls. The Jhangar garrison had to turn its attention to Mirpur where the position was critical. The column actually made eight miles down the road to Mirpur when it was realised that raiders were getting control of the town. There were casualties among the State Ferce garrison in Mirpur as they prepared to abandon the town and fall back on Jhangar. However, many thousands of refugees and some men of the garrison managed to get away, although the remainder of the refugees perished at the hands of the raiders.

With the advent of rain and snow, the road between Jhangar and Jammu city became often unserviceable. Also raiders, using Japanese tactics, began to cut the road at many places. These interruptions, however, were at no time serious. Road clearing columns were sent and they reopened it after brief engagements with the raiders. There were, however, some losses in vehicles.

In the third week of December much movement was observed around Jhangar. Making use of adverse weather conditions, over 5,000 raiders surrounded the Indian detachment at Jhangar, and after cutting the road between Jhangar and Naushahra, stormed Jhangar. There were less than 200 Indian troops in Jhangar at the time and, although they fought valiantly for

An Indian Mortar team in action in Kashmir

several hours, they were forced to yield ground and fight their way out of the ring of raiders. The detachment suffered casualties in this action.

Emboldened by the local success they had achieved, the raiders made directly for Naushahra and surrounded it. Another spell of rainy weather was the signal for an offensive on Naushahra which began on January 6. The raiders were so confident of the outcome of the engagement that they departed from their usual custom of attacking at night and began their assault at 9.40 a.m. Naushahara was a strong base and Indian troops beat off the attack after it had lasted for some eight hours. Indian officers and men saw that the raiders did not worry about losses but came wave after wave and made charges against machine-gun and cannon fire. But by the afternoon they had had enough and, unlike on previous occasions when they had gone to the extent of suffering casualties in order to remove their dead and wounded, the survivers abandoned their wounded and dead around Naushahra and bolted into the night. The part played by the R.I.A.F. in this engagement was noteworthy. Indian pilots on returning reported that they had seen heaps of dead and wounded lying on the battlefield and lorries piled with the dead returning in the direction of Mirpur.

Indian forces in Naushahra followed up their success in this engagement and began an assault. In a fan-like movement they went from hill to hill and cleared each of raiders, until they had

widened the area of operation and their perimeter. They reopened the road behind Naushahra which had been out just before the raiders' assault,

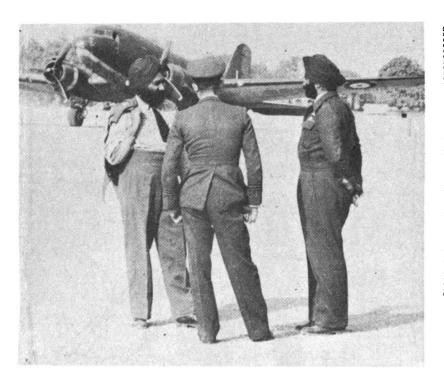

Simultaneously armoured columns operating in the direction of Bhimbar, penetrated deep into raider-held areas and destroyed many raiders,

The present position is that the Indian garrison has widened its perimeter around Poonch city. Uri is held in strength and columns and patrols are daily going out from other bases.

Jammu city is roughly ten miles from Pakistan territory due west and 16 miles south-west along the main road to Sialkot. Raiders have been active south of Akhnur around the tongue of Pakistan territory which abuts into Jammu province and is known as the Akhnur Buldge. But their efforts have been confined to nightly raids across the border, arson, kidnap and loot and return to Pakistan before morning. Indian troops have intensified patrolling in this area.

South-west of Akhnur, between Manawar and Bhimbar, again there is vigorous patrolling and there have been frequent brushes with the raiders.

The road which is the main supply line for Indian troops in Jammu and Kashmir, nancly the Pathankot-Jammu road, is protected by stationary pickets as well as moving patrols. Raiders have made so far four attempts to cross this road but each time Indian troops have intercepted them and put them to

R. I. A. F. in Jammu: Air Commodore Mehr Singh, Air Officer Commanding No. 1. R. I. A. F. operational group, discussing air oprations with Wing Commander M. M. Engineer, O. C. R. I. A. F. Jammu and Wing Commander S. D. Singh

flight across the Pakistan border which is only 3½ miles at its nearest point.

Indian casualties in all the operations in Kashmir and Jammu from October 27 are 842 including 339 killed, A conservative estimate of the raiders' casualties puts them at over ten times this number. These figures are based on reports from patrols and columns, from aerial reconnaissance and from local intelligence. In many cases Indian patrols have actually counted the number of dead in a particular engagement.

Pathans form a large part of the raiding force. These men and others who are nationals of West Punjab, including ex-soldiers, are being trained in various bases near the Jammu border. They have been using rifles, light machineguns, medium machine-guns, sten-guns, mortars, mountain artillery, (3-7 inch howitzers) anti-tank rifles, anti-aircraft guns, Mark V mines, grenades, Verey lights, 2" mortar flares and a large number of army pattern vehicles. It has been claimed that these weapons have been captured from the Indian Army. Some rifles and some light-machine-guns may have been captured from State Force troops but no artillery, mines or other weapons. Few of the vehicles that the Indian forces have lost could have been used by the raiders, as these vehicles had been temporarily abandoned roads from which the raiders could not have driven them off into their own roads.

All those who have been taken prisoner whether they are Pathans or nationals of Pakistan, claim that they have been forced against their will to fight or have been incited by political leaders on the cry of a holy war. Nationals of West Punjab, who have been captured, have spoken in most scathing terms about the behaviour of the Pathans whom they dread and despise.

## We are Indians First and Last

HEAVY responsibilities lie on your shoulders as officers of the Indian Army in a free India. The men we command are second to none in the world and are well-known for their devotion to duty, loyalty and spirit of sacrifice—they are magnificent men," said Lt.-Gen. K. M. Cariappa, the new G. O. C.-in-C. Delhi, East Punjab Command, addressing officers of the Indian forces in Jammu and Kashmir in Jammu city on Jan. 26.

Gen. Carieppa said: "Some have expressed a doubt as to the officiency of the future Indian Army. On account of the reconstitution of the Army there has been a certain amount of dislocation but we can certainly overcome these and build a really first-rate army. We should be proud of being the pioneers in building up the army of new India.

"You must look after the men you command. The service of our country comes first. We are the servants of the people and our duty is to help our government carry out their policy at this critical period in India's history".

Continuing Gen. Cariappa advised the officers to set an example to others. "We are all Indians first and last," he said.

## ANTI-YELLOW FEVER MEASURES

To prevent the importation of yellow fever into India by airborne passengers who have been exposed to yellow fever infection, the Government of India have laid down certain conditions which must be observed by passengers travelling by air before they are allowed to enter this country, says, a Press Note issued by the Ministry of Health on Jan. 22.

According to the Indian Aircraft (Public Health) Rules, 1946 any person arriving in India by air is detained in isolation on arrival in India for a period up to nine days after arrival if he has been exposed to the risk of yellow fever infection and is not protected against the disease through a previous attack of yellow fever or by satisfactory immunisation.

The Government of India regard large tracts of the continent of Africa, including the whole of Central Africa, and the countries of Brazil, Bolivia, Peru, Ecuador, Colombia, Venezula, British Guiana, French Guiana and Dutch Guiana on the continent of South America to be infected with yellow fever.

Satisfactory inoculation against yellow fever is one which has been performed (1) not less than ten days before arrival in a yellow fever infected area (or embarkation in a yellow fever infected aircraft which is regarded as a moving yellow fever infected area) or not less than 15 days before arrival in India; and

(2) not more than four years before departure from the yellow fever infected area.

The Government of India accept only those certificates of inoculation which are issued on the International form by competent National Health authorities concerned and which show that the inoculation has been performed with any one of the yellow fever vaccines approved by the World Health Organisation.

## SAFDARJUNG HOSPITAL EXPANDED

To relieve the Delhi city hospitals of the heavy pressure under which they have been working since the influx of refugees, the Delhi Provincial Administration has re-equipped the general hospital on Safdarjung Road and reinforced the staff so that it can now accommodate 150 indoor patients and treat outdoor patients between 9—11 a.m. every

Taken over from the U.S. authorities in the beginning of 1947, the hospital is fitted with an X-ray plant and a pathological laboratory and it is regularly visited by the physicians and surgeons of the Irwin Hospital.

ENDIAN INFORMATION, FEBRUARY 15, 1948

A bird's eye view of the current developments in Indian States was given by the Hon'ble Sardar Vallabhbbai Patel, Minister for States, at a Press Conference in New Delhi on January 29. Mr. V. P. Menon. Secretary, States Ministry is on Sardar Patel's right and Shri N. C. Mehta, Secretary, Ministry of Information and Broadcasting, on the left

## CONSOLIDATION AND DEMOCRATIZATION OF STATES

## Sardar Patel's Statement

HAVE no doubt that the process of consolidation and democratization will be completed very shortly and certainly well before the new Constitution, which is being framed by the Indian Constituent Assembly, comes into effect and thus there will be no discrimination between the people of the Provinces and the people of States in the matter of degree of freedom enjoyed by them", said the Hon'ble Sardar Vallabhbhai Patel, Minister for States, in the course of a statement on the consolidation of States at a Press conference in Delhi on Jan. 29.

Following is the text of the statement:

As you are all aware, on the lapse of paramountcy, every Indian State became a separate independent entity and our first task of consolidating about 550 Indian States was on the basis of accession to the Indian Dominion on three subjects. Barring Hyderabad and Junagadh, all the States which are contiguous to India acceeded to the Indian Dominion. Subsequently, Kashmir also came in.

With the birth of independence in India, the urge for enjoyment of similar freedom naturally inspired the people of the States, where the process of democratisation of administration had not made anything like the same progress as was made in the adjoining Provinces. The result was agitation on the part of the people and occasional clashes between the Rulers and the ruled. Some Rulers,

who were quick to read the writing on the wall, gave responsible government to their people, Cochin being the most illustrious example. In Travancore, there was a short struggle, but there too the Ruler soon recognised the aspirations of his people and agreed to introduce a Constitution in which all power would be transferred to the people and he would function as a constitutional Ruler. Similarly, in Mysore, there was a struggle for a short time in which the popular will triumphed eventually, and we know that there has been a complete transfer of power from the Ruler to the people.

#### Orissa Rulers' Sacrifice

While these big States were temporarily able to deal with popular movements, the smaller States were notable even to maintain law and order with their limited resources and with the people in opposition to the administra-tion. This was particularly evident in the Eastern States, in one of which States, namely, Nilgiri, the situation had so deteriorated as to result in the Ruler leaving the State. In another State in the same area the Ruler could not return to the capital and had to approach the Ministry of States to advise the local Praja Mandal to keep quiet as the Ministry was about to take up the question of consolidation of States. States had formed a superficial Union which could not last as it was not based on linguistic, cultural and economic affinities. The law and order situation

in some of the States was so bad as to cause apprehension to the adjoining administrations of Orissa and the Central Provinces.

You know the sequence of events thereafter. I went there in the middle of December, met the Orissa Ruleis at Cuttack and the Chhattisgarh Rulers at Nagpur, and it was decided that the best interests of the people as also of the Rulers lay in administrative integration of the States with the adjoining Provinces. As early as 1930 the Simon Commission States with the adjoining Provinces but recommended the integration of these nothing came out of the proposal. The act of sacrifice on the part of these Rulers which this decision involved has been universally acclaimed throughout the country. The transfer of adminis-tration from the Rulers to the Provinces was smooth and peaceful and has been warmly welcomed by the people of the States except in one or two places where ugly incidents occurred. But I shall not refer to them as they were not of any consequence and do not affect the main theme, namely, that the merger of the States was carried out willingly and has caused satisfaction all around.

#### In the Deccan

The merger of Eastern States electrified the whole atmosphere. The people of the States found that here was a remedy for their difficulties arising out of their limited resources and narrow outlook. The 8 Deccan States which formed the United Deccan State by merging their sovereignties in the new State, a step which was then considered to be re-

volutionary, felt that even in the new State their life would be cramped and that they would not have the same amenities and benefits as the people of Bombay the adjoining Province of would have with all the resources of Bombay. The people who had assembled to frame a democratic constitution for their new State changed their minds and asked for the merger of their States in Bombay. The Rulers who have always been known for their their progressive outlook, appreciated weight and soundness of this view and agreed to abide by the decision of the people. The Constituent Assembly of the new State met only three days ago, i.c., on the 26th of January, and has passed a resolution by on overwhelming majority in favour of merger with a Province. The merger will thus be given effect to within a few days.

There are some other States in Deccan which had not joined the Union, but in these States also the movement for merger had become so strong that the Rulers could not maintain law and order and have had to approach the Central Government to take over charge of law and order pending the merger of the States in the Province of Bombay. These States are Akalkot and Jath. The Ruler of Jamkhandi was one of the earliest to read the signs of the times and had approached this Ministry more than two months ago for unqualified There merger of the State in Bombay. was thus no trouble in his State and the prople have welcomed the decision and the action of the Ruler. Thus all States in the Deccan except Kohlapur will shortly take their place in the Province of Bombay to the mutual advantage of both, and to the particular advantage of the people of these States.

#### Kathiawar

Next came the problem of Kathiawar. Kathiawar is a veritable jigsaw puzzle of different jurisdictions. The States in Kathiawar comprise 13 Salute States, 107 limited jurisdictional States and 329 non-jurisdictional estates and talukas making up 449 units altogether. The area involved is more than 22,000 sq. miles with a population of between 2½ to 4 millions. The administration of the States is complicated by the fact that many of them have scattered islands of territory all over the place. The Salute States of Nawanagar, Gondal and Junagadh, for instance, have respectively 9, 18 and 34 separate areas of territory. Added together, these 449 units divide the map of Kathiawar into about 869 different areas.

Because the jurisdiction changes every few miles, communications are in a primitive condition. Internal trade is rendered difficult by the export and import duties and the octrois which the various units levy, and this encourages extensive smiggling and black market operations. The administration of justice and the maintenance of law and order under these circumstances are greatly handicapped. The economic development of the region which has great potentialities is hampered by its political fragmentation.

This state of affairs is good neither to the State nor to its people. The late Political Department tried in its own way to solve the problem, but their measures were necessarily half-hearted and did not serve the purpose of unification. Their solution was that some of these smaller units should be attached to the higher States. This scheme was tried out, but at best it was never a good working arrangement. In any case the lapse of paramountcy brought this to an end.

Since I took charge of the States Department, the un fication of Kathiawar has been one of the major tasks to which I have devoted myself. In the altered circumstances the Rulers of the Kathiawar States have fully recognised the difficulties in continuing the present system, and I am glad to announce that it has now been possible to work out a scheme and get the agreement of the States to it by which the whole of the Kathiawar region will be integrated into a new State of Kathiawar as a single blood of territory. There will be no separate State or than boundary, and the whole area will be served by one Government. I have called you here to explain this, but in the first place I must pay my tribute to the Rulers for their patriotic co-operation which made this task so easy of achievement.

A copy of the Cevenant has already been given to all of you.

#### The New Set-up

I shall now describe briefly the main features of the new set-up.

The new State of Kathiawar is known as the UNITED STATE OF KATHIAWAR. There is a Presidium of Rulers consisting of five members, each of whom shall be the Ruler of a Covenanting State. The Rulers of Nawanagar and Bhavnagar, the two most important States in the region, are members of the Presidium in their own right. One member is elected from amongst themselves by the Rulers of the Covenanting non-Salute States. The other two members are elected by the members of the Council of Rulers consisting of the Rulers of the Saluto States other than Nawanagar and Bhavnagar

The Council of Rulers elect one member of the Presidium to be the President or the Raj Pramukh and another to be the Vice-President of the Presidium. The first election has already taken place, and H. H. the Jam Sahib of Nawanegar, who played a notable part in bringing these negotiations to a successful conclusion, has been elected as the RAJ PRAMUKH with H. H. the Maharaja of Bhavnagar as the Vice-President. The term of office of the Raj Pramukh and the Vice-President is five years. There will be a Council of Ministers to aid and advise the Raj Pramukh.

We have provided for the formation of an Interim Ministry, as follows. There is already an electoral college for Kathiawar which elects representatives to the Constituent Assembly of India. Our plan is that the same electoral college should meet not later than the 20th February and choose the leader of the Interim Ministry. It will be his task to constitute this Ministry.

The Covenant also makes provision for the summoning of a Constituent Assembly to draft a Constitution for the State of Kathiawar.

We have in the Covenant only provided for the basic principles regarding the Kathiawar Constituent Assembly. The details will be worked out by the new Government of the United State of Kathiawar. It is our intention that when this Constituent Assembly has been set up the Ministry should be reconstituted so as to reflect the majority opinion in the Constituent Assembly. Thereafter it will be for the Constituent Assembly to frame a permanent Constitution for the new State within the frame work of this Covenant and of the Constitution of India.

The Privy Purse of the Rulers has been fixed, and the amount shown against each is contained in Schedule 1 to the Covenant.

#### Bundelkhand

This Covenant, as you will have noticed, applies only to the Salute States and Non-Salute States. There are in addition a number of Talukas and Thanas which are administered by the Government of India through its Regional Commissioner in Kathiawar. We have prepared a separate instrument for their signature which we hope to complete by the end of January.

The movement for merger by which I mean either merger with the Provinces to suit geographical situations or amongst themselves, is progressing rapidly. Such a move has now the support of both the Rulers and the ruled. It is no longer a demand of the people only. You must have observed that recently the Rulers of Bundelkhand met at Nowgang and adopted a resolution for the creation of a United State of Bundelkhand in which all the Bundelkhand States and Kewa are likely to participate. It would be a State fairly large in area, but very substantial in mineral, forest and natural resources. Mr. Menon is hoping to go there on or about Febryary 8, 1948, to have further discussions with the Rulers and the people and to help there in bringing about a State based on complete transfer of power and somewhat on the model of the State of Kathiawar.

#### Central India

Another region where too the Rulers and the people are thinking on similar lines is Central India or Malwa. I have just received information that the Rulers of this region are forming a unitary State on the Lines of the State of Kathiawar based again on full responsible government, that is, executive being fully responsible to the Legislature and Legislature being fully representative of the people of the area. There is a similar move for Rajputana where all the smaller States and some of the bigger ones are hoping to join to form a State of Rajasthan which will help to preserve traditions, culture and peculiarities of life of the Rejputs. I welcome all these moves as they solve the problems of consolidation as well as responsible

INDIAN INFORMATION, FEBRUARY 15, 1946

Digitized by

government at one stroke and it is particularly gratifying to note that these moves are not impositions from above but joint and wiking proposals of the Rulers and the ruled. Both the people and the Rulers have realised that grant of full responsible government is inevitable and that responsible government in a small State is just a farce. It is not possible to have a decent and modern administration except in a unit of fan size and this is what is now being attempted with, I am sure, considerable success in the country.

There will still be a number of large States unaffected by the movement for merger or Union. In these States there is a definite inovement for full responsible government. As I observed before Cochin led the way and Travancore soon followed suit and the Interim Government introduced in Mysore has become a model for many States to follow such as Kashmir and Gwalior. I have reason to believe that the leading Rulers of Rajputana are thinking of the same lines and will not lag behind the other Princes in trusting their people and giving them full responsible government thus enabling them to shoulder responsibilities for their own Government. I expect similar constitutional changes to be introduced very shortly in Bikaner and Jaipur. It is obvious that if any State lags behind it will only do so to its own disadvantage and to the disadvantage of its people. I have no doubt that this process of consolidation and democratization will be completed very shortly and certainly well before the new Constitution which is being framed by the Indian Constituent Assembly comes into effect and thus there will be no discrimination between the people of the Provinces and the people of States in the matter of degree of freedom enjoyed by them. All the units will thus march side by side and with equal freedom and not some as free men and some as seris.

#### Rulers' Co-operation

Nobody could have visualised this transformation in the country six months ago. Mr. Menon will tell you that a very senior officer of the Political Department told him just before the transfer of power that he was wasting his time over accession and standstill agreement and that not one State will accept the accession as proposed by the newly formed Ministry of States. These officers are still alive and must be wondering how the changes that have occurred since they left have really been brought about. While I give plenty of cradit to the people for this bloodless revolution in nearly \$ of the country, I have nothing but praise for the manner in which the Rulers have co-operated with us and with the people in bringing about this development. None is more conscious than myself that all this could not have been achieved but for their willing cooperation and their intense patriotism which was latent but which has just blossomed forth in all its fullness with the acquisition of independence by the country.

One State remains which is still causing us some anxiety. It is the State of Hyderabad. Its geographical situa-

(Continued on Page 229)

## THE UNITED STATE OF KATHIAWAR

## Covenant Entered Into By Rulers

OLLOWING is the Covenant entered to be part of this Covenant. into by the Rulers of Kathiawar States for the formation of the United State of Kathiawar:

We, the Rulers of certain States in Kathiawar,

BEING CONVINCED that the welfare of the people of this region can best be secured by the establishment of a state comprising the territories of the numerous States, Estates and Talukas in Kathiawar with a common Executive, Legislature and Judiciary,

AND HAVING resolved to entrust to a Constituent Assembly consisting of elected representatives of the people the drawing up of a democratic Constitution for that State within the framework of the Constitution of India to which we have already acceded, and of this Covenant,

DO HEREBY, with the concurrence and guarantee of the Government of India, enter into the following COVE-NANT-

#### In this Covenant,-Article I

- (a) "Covenanting State" means any of the States mentioned in Schedule I the Ruler of which has, whether by himself or by a duly authorised representative, signed this Covenant;
- (b) "Covenanting Salute State"means any Covenanting State which is mentioned in Part A of Schedule I;
- (c) "Covenanting Non-Salute State" -means any Covenanting State which is mentioned in Part B of Schedule I; and
- (d) unless there is anything repugnant in the subject or context, references to the Ruler of a State, or the Talukdar of a Taluka, include any person or persons for the time being exercising the powers of the Ruler or Talukdar whether by reason of his minority or for any other

#### (1) The Covenanting Article II States agree-

- (a) to unite and integrate their territories in one State, with a common executive, legislature and judiciary, by the name of "THE UNITED STATE OF KATHIAWAR"; and
- (b) to include in the United State so established, any other State, Taluka or Estate the Ruler or Talukdar of which agrees, with the approval of the Government of Indie, to the merger of that State, Taluka or Estate in the United State of Kathiawar.
- (2) The terms of all the agreements of merger referred to in clause (b) of paragraph (1) of this Article shall be binding on the United State and shall be deemed

- (1) There shall be a Council of the Kulers of the Covenan-Article III ting Salute States.
- (2) There shall be a Presidium consisting of five members, each of whom shall be the Ruler of Covenanting State and shall be not less than 21 years of age.
- (3) Subject to the condition mentioned in paragraph (2) of this Article. the Rulers of Nawanayar and Bhavnagar shall be permanent members of the Presidium, one member shall be elected from among themselves by the Rulers of the Covenanting Non-Salute States, and the other members shall be elected from among themselves by the members of the Council of Rulers other than Nawanagar and Bhavnogar.
- (4) The Council of Rulers shall elect one member of the Presidium to be the President, and another to be the Vice-President of the Presidium, and the President so elected shall be the RAJ PRAMUKH of the United State.
- (5) A Ruler elected as a member of the Presidium in pursuance of paragraph (3), or as the President or the Vice-President of the Presidiun in pursuance of paragraph (4), of this Article shall be entitled to hold office as such member, President or Vice-President, as the case may be, for a term of five years from the date on which he enters upon the duties of that office.
- (6) Notwithstanding anything to the contrary contained in the preceding paragraphs of this Article—
- (a) the present Rulers of Nawanagar and Bhavnagar, having been elected President and Vice-President, respectively, of the Presidium by the Rulers concerned on the 17th January, 1948, shall be the first President and Vice-President, respectively, of the Presidium;
- (b) the present Rulers of Dharangadhra, Palitana and Kotda-Sangani, having been elected members of the Presidium by the Rulers concerned on the 17th and 21st January, 1948, shall be the first elected members of the Presidium; and
- (c) the said President, Vice-President and members of the Presidium shall, for the purposes of paragraph (5) of this Article, be deemed to have entered upon the duties of their respective offices on the 1st February, 1948.
- (1) The Raj Pramukh shall be entitled to the same salary, allowances, and other Article IV amenities enabling himto discharge conveniently and with dignity the duties of his office, as the Governor of Bombay is entitled to on the 20th January, 1948.

- (2) If the Raj Pramukh is by reason of absence or illness, or for any other reason, unable to perform the duties of his office, those duties shall, until he has resumed them, be performed by the Vice-President of the Presidium. During such period the Vice-President shall be entitled in the same salary, allowances and other amenities as the Raj Pramukh.
- (1) There shall be a Council of Ministers to aid and advise the Raj Pramukh in the exercise of his functions except those under paragraph (2) of Article VII.
- (2) The Ministry shall be chosen by, and shall hold office during the pleasure of, the Raj Pramukh.
- (3) For the purpose of choosing the first Council of Ministers the Raj Pramukh shall convene, not later than the 20th February, 1948, meeting of the members of the Electoral College of Kathiawar (formed for electing representatives to the Constituent Assembly of India) but excluding the members from the States of Cutch, Idar and Radhanpur.
- (1) The Ruler of each Covenanting
  State shall, as soon as
  may be practicable, and
  in any event not later
  than the 15th April,
  1948, make over the administration of
  his State to the Raj Pramukh; and
  thereupon—
- (a) all rights, authority and jurisdiction belonging to the Ruler which appertain, or are incidental, to the government of the Covenanting State shall vest in the United State of Kathiawar, and shall thereafter be exercisable only as provided by this Convenant or by the Constitution to be framed thereunder;
- (b) all duties and obligations of the Ruler pertaining or incidental to the government of the Covenanting State shall devolve on the United State of Kathiawar and shall be discharged by it; and
- (c) all the assets and liabilities of the Covenanting State shall be the assets and liabilities of the United State of Kathiawar.
- (2) When in pursuance of any such agreement of merger as is referred to in clause (b) of paragraph (l) of Article II the administration of any other State, Taluka or Estate is handed over to the Raj Pramukh, the provisions of clauses (a) and (b) of paragraph (l) of this Article, and in the case of a State, the provisions also of clause (c) thereof, shall apply in relation to such State, Taluka or Estate as they apply in relation to a Covenanting State, with the modification that in relation to a Taluka or Estate, the references in the said clauses to the Ruler shall be construed as references to the Talukdar.
- (1) The military forces, if any, of each Covenanting State

  Article VII shall as from the date on which the administration of each State is made over to the kaj Pramukh, becomes the military

forces of the United State of Kathiawar.

(2) Subject to any directions or instructions that may from time to time be given by the Government of India in this behalf, the authority to raise, maintain and administer the military forces of the United State shall vest exclusively in the Raj Pramukl:

Provided that nothing in this Article shall be deemed to prevent the Kaj Pramukh from consulting the Presidium or the Council of Ministers in regard to any of the said matters.

Subject to the provisions of this Covenant and of the Article VIII Constitution to framed thereunder, the executive authority of the United State shall be exercised by the Raj Pramukh either directly or through officers subordinate to him; but nothing in this Article shall prevent any competent legislature of the United State from conferring functions upon subordinate authorities, or be deemed to transfer to the Raj Pramukh any functions conferred by any existing law on any court, judge, officer or local authority in a Covenanting State.

- (1) There shall be formed, as soon as may be practicable, a Kathiawar Constituent Assembly in the manner indicated in Schedule II.
- (2) It shall be the duty of the said Assembly to frame a Constitution for the United State (whether of a unitary or federal type) within the framework of this Covenant and the Constitution of India, and providing for a government responsible to the legislature.
- (5) Until a Constitution so framed comes into operation after receiving the assent of the Raj Pramukh, the legislative authority of the United State shall vest in the Raj Pramukh, who may make and promulgate Ordinances for the peace and good government of the State or any part thereof, and any Ordinance so made shall have the like force of law as an Act passed by the legislature of the
- (1) The Ruler of each Covenanting
  State shall be entitled
  to receive annually from
  the revenues of the
  United State for his privy purse, the
  amount specified against that Covenanting State.
- (2) The said amount is intended to cover all the expenses of the Ruler and his family including expenses on account of his personal stail, maintenance of his residences, marriages and other ceremonies, etc., and shall neither be increased nor reduced for any reason whatsoever.
- (3) The Raj Pramukh shall cause the said amount to be paid to the Ruler in four equal instalments at the beginning of each quarter in advance.
- (4) The said amount shall be free of all taxes, whether imposed by the Government of the United State of Kathiawar or by the Government of India.

- (1) The Ruler of each Covenanting
  State shall be entitled
  to the full ownership,
  use and enjoyment of
  all private properties (as distinct from
  State properties) belonging to him on
  the date of his making over the administration of that State to the Raj Pramukb.
- (2) He shall furnish to the Raj Pramukh within one month of the said date an inventory of all the immoveable properties, securities and cash balances held by him as such private property.
- (3) If any dispute arises as to whether any item of property is the private property of the Ruler or State property, it shall be referred to such person as the Government of India may nominate, and the decision of that person shall be final and binding on all parties concerned.

The Ruler of each Covenanting State, as also the members of family shall be entitled to all the personal privileges, dignities and titles enjoyed by them, whether within or outside the territories of the State, immediately before the 15th day of August, 1947.

- Article XIII and custom, to the gaddi of each Covenanting State, and to the personal rights, privileges, dignitics and titles of the Kuler thereof, is hereby guaranteed.
- (2) Every question of disputed succession in regard to a Covenanting Salute State shall be decided by the Council of Rulers after referring it to the High Court of Kathiawar and in accordance with the opinion given by that High Court

No enquiry shall be made by or under the authority of the State of Kathiawar, and no proceedings shall lie in any court in that State against the Ruler of any Covenanting State, whether in a personal capacity or otherwise, in respect of anything done or omitted to be done by him or under his authority during the period of his administration of that State.

Article XV in consultation with the Government of India and the Government of Bombay, take all steps necessary to set up a Joint Advisory Council, consisting of Ministers of Kathiawar and Ministers of Bombay, for investigating and discussing subjects of common concern and making recommendations thereon, and in particular recommendations for the better co-ordination of policy and action with respect to any such subject.

(1) The United State of Kathiawar hereby guarantees either the continuance in service of the permanent members of the public services of each of the Covenanting States on conditions which will be not less advantageous than on which they were serving before the date on which the administration of that

State is made over to the Raj Pramukh or the payment of reasonable compensation.

- (2) The United State of Kathiawar further guarantees the continuance of pensions and leave salaries sanctioned by competent authorities in any of the Covenanting States to members of the public services of that State who have retired, or proceeded on leave preparatory to retirement, before the date referred to in paragraph (1) of this article.
- (3) The provisions of paragraph (1) and (2) of this Article shall apply also in relation to the public services of any other State in Kathiawar merging in the United State of Kathiawar; and the provisions of paragraph (1) shall apply also in relation to any staff of the Regional Commissioner, Western India and Gujarat States, which may be transferred to the service of the United State of Kathiawar.

Except with the previous sanction of the Raj Pramukh, no proceedings, civil or criminal, shall be instituted against any person in respect of sny act done or purporting to be done in the execution of his duty as a servant of any Covenanting State before the date on which the administration thereof is made over to the Raj Pramukh.

Overnment of Kathiawar from negotiating a Union of Kathiawar with

other Gujarati-Speaking areas on such terms and conditions as may be agreed to by the Council of Rulers, as well as the Council of Ministers, of Kathiawar.

## PROVISIONS RELATING TO CONSTITUENT ASSEMBLY

The Provisions relating to the Kathiawar Constituent Assembly are:

1. The Assembly shall consist of not more than forty-five elected representatives of the people of the United State of Kathiawar on the basis of one representative for approximately one lakk: of the population:

Provided that the people of each Covenanting Salute State shall, irrespective of their number, be entitled to elect at least one representative.

- 2. The United State of Kathiawar shall be divided into territorial constituencies and the total number of seats shall be distributed among them by assigning to each constituency one or two seats as may be convenient. As far as possible the constituencies shall be so delimited as not to cut across the boundaries of any compact part of a Covenanting State.
- 3. The qualifications for membership of the Assembly and for being included in the electoral rolls shall be similar to those prescribed in relation to the Provincial Legislative Assembly of Bombay, subject to necessary modifications.

Provided that no person shall be

disqualified either from being chosen as, or from being, a member of the Assembly or from being included in the electoral roll of a constituency, merely because he is the Ruler of a Covenanting or other State, or the Talukdar of a Taluka or Estate.

- 4. An order shall in due course be made and proclaimed by the Raj Pramukh providing, consistently with the foregoing provisions of this Schedule, for—
  - (a) the delimitation of constituencies:(b) the preparation of electoral rolls;
- (c) the qualifications for membership of the Assembly;
- (d) the qualifications entitling persons to vote in the elections;
- (e) conduct of the elections, including bye-elections for the filling of casual vacancies;
- (f) corrupt practices at or in connection with such elections; and
- (g) the decision of doubts and disputes arising out of or in connection with such elections.

In confirmation of the above Covenantwe append our signatures, on behalf of ourselves, our heirs and successors.

## GOVERNMENT OF INDIA'S CONCURRENCE

The Government of India hereby concur in the above Covenant and Guarantee all its provisions. In confirmation thereof Mr. Vapal Pangunni Menon, Secretary to the Government of India in the Ministry of States, appends his signature on behalf and with the authority of the Government of India.

Secretary to the Government of India, Ministry of States.

## PRESS LAWS ENQUIRY COMMITTEE MEETS

The Press Laws Enquiry Committee met in New Delhi, on Jan. 21, under the chairmanship of Shri Ganga Nath to hear oral evidence of official and non-official witnesses.

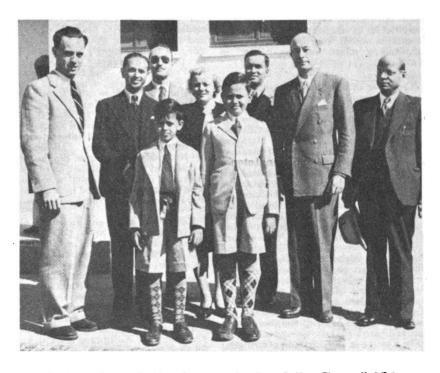

The Committee examined Mr. K. Shrinivasan, Secretary, All India Newspaper Editors' Conference and the Hon'ble Pandit Lingaraj Misra, Minister for Education and Health, Orissa. Resuming its sitting on Jan. 22, the Committee took the evidence of Mr. A.D. Mani, Editor, Hitvada, Nagpur, Mr. M. Chelarathi Reo, Editor, National Herald, Lucknow and Shri Radhanath Rath, Editor, Samaj, Cuttack.

The Committee will now meet in New Delhi on March 2—4, 1948, to record further evidence.

## ALCOHOLIC DRINKS PROHIBITED AT OFFICIAL PARTIES

The Government of India have asked all employees of the Central Government to refrain from serving alcoholic drinks at official or semi-official parties given by them in view of the general policy of prohibition.

The use of alcoholic drinks would be permissible only at social functions of a private nature, though it is hoped that on these occasions also, such drinks would be avoided or at least reduced to the minimum.

Sir N. Raghavan Pillai, who has been appointed as Indian Charge d' Affaires at Paris, left with his wife and children (centre group) on January 27. Appearing at right of the picture are Mr. P. A. Menon, Joint Secretary, External Affairs Ministry, M. Roux, Charge d' Affaires French Embassy in India and Mr. R. R. Salzena, Joint Secretary, External Affairs Ministry

#### CREATION OF UNITED KATHIAWAR

#### Shri Balwantrai Mehta's Broadcast

HE story of how the dream of united Kathiawar has materialised within 14 months of the Kathiawar Political Conference demanding the creation of such a State was told in a talk broadcast on Jan. 27. from New Delhi by Shri Balwantrai G. Mehta, Prime Minister of Bhavnagar.

The following is the full text of the broadcast:

A great and revolutionary change has come over the States of Kathiawar, in Western India. It was only 14 months ago that the Kathiawar Political Conference, at its session at Dhrangadhra, passed a resolution asking for the creation of a Unitary Kathiawar State with one Legislature, one Executive, one Judiciary, one Treasury and one Police Force. There was a hot debate at the session and the younger elements in the Conference pressed for the elimination of the Institution of kingship. Wiser counsels prevailed however, and the Conference by an overwhelming majority accepted the Resolution as it was originally drafted. The demand thus formulated at Dhrangadhra grew stronger every day and gripped the hearts of the people of Kathiawar. It was reiterated from hundreds of platforms—both inside and outside Kathiawar.

#### Junagadh

The surrender of Junagadh to the Government of India, after a vehement struggle by the Popular Forces against its unnatural inclusion into Pakistan, was a great and historic event which fires the imagination of the people, and set forces in motion which were bound to have a far-reaching effect on the polity of Kathiawar.

The State of Bhavnagar, presided over by a young and popular Prince, Shri Krishnakumar Sinhji, startled the Princes and people of Kathiawar by declaring the establishment of a full responsible Government. His Highness the Maharaja invited the elected members of his Legislature to form an Interim Goernment forthwith, and declared his intention to abide by the advice of the new Ministry in the affairs of the administration. He also invited these same elected members to elect a Constitution Committee which would draft the Constitution of the State on the basis of full Responsible Government. This declara-tion of His Highness the Maharaja of Bhavnagar on the 15th instant in the presence of Sardar Vallabhbhai Patel, our Deputy Prime Minister, stirred the stagnant waters of Kathiawar Politics. His Highness the Maharaja himself, in his speech while making the declaration had indicated that it was advisable to make a move in the direction of bringing about the Political Unity of Kathiawar.

The Leader of the Opposition in the State Legislature, who has now formed the Interim Government, in his speech

welcoming the historic announcement of the Maharaja Saheb emphasised the vital necessity of bringing the whole peninsula of Kathiawar under a single Unitary Government for the moral and material well-being of its people. This plea found a welcome response in the speech of Sardar Patel who advised the Princes and the people of Kathiawar to take steps in this direction. It was a unique occasion when the Maharaja of a State and the Leader of the Opposition were arguing out the same case. Both wanted a Democratic new State which would even be willing to merge its individuality in a future province of Maha-Gujerat.

#### Rajkot Conference

Two days after this historic event took place at Bhavanagar, Mr. V. P. Menon of the Ministry of States, convened a Conference, at Rajkot of the Ruling Princes of the Salute States of Kathiawar. It was at this meeting that the leading Princes of Kathiawar took a wise and bold decision which would affect the destinies of the people of Kathiawar for years to come. They decided to merge their identities and create a single Unitary State which would be presided over by a Raj l'ramukh and be governed by a Popular Ministry responsible to the Legislature elected on the basis of a wide franchise. The Rulers have elected H. H. the Jam Sahib of Nawanagar as the first Raj Pramukh. This is a fitting selection and the people of Kathiawar have every confidence that with his wide experience and patriotism he will be able to launch the new State properly and guide it in its formative stages. The dream of the Popular Workers of Kathiawar which had found expression only 14 months back at Dhrangadhra came to be realised in this remarkable manner. The Ruling Princes of the III and IV Class States in Kathiawar met the States Secretary at Rajkot on the 20th and agreed to accept the decision for a merger of all the States of Kathiawar into one Single State. A covenant for the elimination of boundaries and creation of such a State had been prepared and signed by the Kathia-war Princes. The New Era has set in.

Kathiawar has an area of about 23,000 sq. miles with a population of about 40 lakhs. The total revenue of all the 250 States will approximate about six crores. The land being cut up into all these innumerable jurisdictions had failed to satisfy the needs of its people and every year there was an exodus of thousands of Kathiawaries to Ahmedabad, Bombay and other industrial cities in India and to various overseas countries. The people of Kathiawar are well known for their enterprise and business acumen. They have fared very well in all walks of life wherever they have gone. They have made their mark in many fields of activities, wherever they have gone. It was the misfortune of these sturdy

people to have been divided into innumerable estates and States. All opportunities for self-development and self-expression were severely restricted. A common Kathiawar outlook could not be developed.

The creation of the Kathiawar State, popularly known as the State of Saurashtra, opens vast possibilities of develop-ment. There is the famous Girner hill in the heart of Kathiawar. It is the opinion of experts that this site if properly harnessed could provide hydroelectric power to about a third of Kathiawar. This scheme has every chance of materialising under the new conditions. There are said to be mineral resources in the bowels of the earth in Kathiawar. They have neither been properly surveyed nor has there been any serious attempt for their exploitation. The New Popular Government when it comes into existence on or before the 20th of February will be able to develop these resources and bring prosperity to the toiling masses. When there are the Gir Forest, the rivers Shadar and Shetrunji, the various hills and hillocks and the beautiful coastline of the peninsula extending over about 300 miles. All this and a fine specimen of manhood and womanhood could well combine to make Kathiawar a land of Peace, Plenty and Prosperity.

It would be possible under the new dispensation to create a mercantile marine, a school for marine engineering, to develop fisheries, exploit the minerals and forests, encourage seafaring, develop trade and commerce through the various ports which have great possibilities of expansion, to harness the waters of the rivers for the purpose of irrigating barren land, generating power and preventing soil erosion. Years back, an economist of repute wrote about a port of Kathiawar that its growing strength would make it an equal to the flourishing ports of Bombay and Karachi. Kathiawar can develop excellent ports which could also be utilised as strategic naval bases. Cottage industries could be developed with the aid of electric power and the peasantry and artisans could ply their trade in peace.

#### Land Revenue Systems

There is a confusing multiplicity of land revenue systems and taxation structures in Kathiawar. It will be possible now to substitute this by a uniform land tenure, land revenue system and equitable taxation structure based on the model of the Bombay Presidency. The ruthless exploitation of the peasantry in petty States and estates will cease to exist, law and order will no longer be defied with impunity as it used to be the case under separate jurisdictions and boundaries. There will be bo rival claims to riparian rights to impede the progress of irrigation and agriculture. A common policy for the abolition of illiteracy, prevention of the spread of disease and eradication of the abject poverty shall have every likelihood of being formulated and carried out by the new Popular Government. This is really a call to the creative genius and constructive talents of the people of Kathiawar wherever they reside.

Digitized by Google

INFORMATION, FEBRUARY 15, 1948

The New Saurashtra State will come into existence on the 1st of February and will gather to itself estates and States by gradual stages till the whole of the peninsula with few exceptions is included into its boundaries by the 15th April. The Gackwar's territory in Kathiawar. i.e., Amrali division of the Baroda States and the Jaffrabad portion of the Janjira State shall have to be merged into the new State in order to make it compact, homogeneous and natural. Some portion of the Bombay Province, now interspersed with some of the Kathiawar States could also with advantage be transferred to this new State. The island of Diuthe Portuguese settlement-shall also have one day to form a part of this new State. It will be then that the dream of the workers of Kathiawar will materialise to its fullest extent.

#### **After 12 Centuries**

For the past several centuries, the people of Kathiawar, though destined by nature to be one and homogeneous, have been deprived of Political Unity and, consequently, have been denied of the opportunities of self-expression and selfdevelopment. It may have possessed some sort of unity under the Mauryas and the Guptas, but, after the fall of Vallabhi dynasty for the last 1,200 years or so, the land has been divided and subdivided and every adventurer has had his full sway over the area he could command. Thus the land that produced Shri Krishna, Sudama, Gandhi Dayanand became a picture of misery and unhappiness and became the hunting ground for a band of exploiters and freebooters. The times have changed, the fetters are gone. The patriotic and far-sighted move of the Princes of Kathiawar has set forces in motion which are sure to restore Power and Plenty to this ancient land of Saurashtra.

## INTERNATIONAL SHIPPING ORGANISATION SCHEME

A Conference to consider the formation of an International Maritime Consultatative Organisation which would be, in relation to the United Nations, the specialised agency in the field of shipping will open on February 19, 1948, in Geneva.

The Indian Delegation will comprise:

Leader: Sir N. Raghvan Pillai, who has been appointed Indian Charge d'Affaires in Paris.

Members: Sir A. Ramaswami Mudaliar, Mr. M. A. Master and Mr. L. K. Jha of the Ministry of Commerce.

Besides the member states of the United Nations, the following countries have been invited: Albania, Australia, Eire, Finland, Hungary, Italy, Portgual, Switzerland, Rumania, Transjordan and Yemen.

The Conference will have before it the draft Convention adopted by the second session of the United Maritime Consultative Council in Washington in Oct. 1946.

# Work and Future Development of Survey of India

India a map reproduction organisation and plant, which with the addition of a few specialist personnel and special equipment, is likely to serve the needs of India for many years to come". This is the view expressed by the Surveyor General of India in his report "Survey and Mapping Policy", which is now under the consideration of the Central Government.

The Report continues "It is fortunate for the surveyor who will work in the India of the future, that the geodetic and other foundations on which his work must be built, were laid when India could be treated as a whole before partition. In the future, both countries and the geographical and scientific world, will gain much if the Survey of India and Pakistan can eliminate by mutual co-operation some of the restrictions imposed on their work by political divisions.

#### First Authoritative Map

According to the Report, the First autoritative map of India was published by a Frenchman in 1752. It had been compiled from route surveys by travellers in the interior and rough charts of the coast. Fifteen years later Lord Clive appointed the first Surveyor General of Bengal. His maps were originally military reconnaissances and chained surveys based on astronomically fixed points. They did not however attain the accuracy of modern maps of India based on the system introduced at Madras in 1802, and since extended over the whole of India and beyond. From these beginnings the Survey of India developed and it has since published. maps embodying geodetic and topographical surveys and undertaken the compilation of geographical maps covering the greater part of South East Asia.

For the Survey of India, the second world war was both an interruption and a digression. Normal civil activities practically ceased and the whole effort of the Department was directed towards war work. A large part of its staff was mobilised and formed the backbone of the military surveys in Persia, Iraq and the South East Asia Command.

During the war, practically no new topographical surveys were made in India and hardly any revision of standard maps was carried out. Production of revised editions of maps also fell heavily into arrears.

Among the new trends and demands for surveys noticeable since the end of the war, is the planning of numerous development projects in India. The irrigation, hydro-electric and other projects require precise surveys, not only of reservoir and dam sites, but also of the often very extensive areas proposed for irrigation.

Industrialisation has led to numerous demands for large-scale surveys of important cities, and the reclamation of wasteland to grow more food has also to be based on accurate surveys.

The Survey of India will now have to meet very heavy demands for surveys and publication, first to make up the arrears of work arising from the curtailment of normal activities before and during the war, and secondly, to provide large-scale surveys and maps for the development of India's resources in minerals, power, agriculture and industry, and also to meet the increased requirements of India's army and aviation.

The first is probably a temporary demand, which with extra facilities, the department should be able to meet during the next few years.

As regards the second, the following factors among others will have to be taken into consideration:—

- (a) The completion of the modern survey of India involving 180,000 sq. miles of new surveys must be effected as soon as possible.
- (b) Provision must be made for the periodical revision of standard top cguaphical maps.
- (c) Special air navigation charts must be kept up-to-date to meet the growing demands of civil and military aviation.
- (d) Demands for accurate large-scale survey of cities and other industrially important areas cannot be refused indefinitely, and
- (e) Special surveys in connection with irrigation, hydro-electric, land reclamation and similar projects will require high priority to assist in the development of India.

#### Development in Air Survey

During the last few years, very great advances have been made in air survey mainly in the direction of an improvement in the design of air cameras and lenses. Larger photographs can now be taken, which reduce work and improve accuracy. The design of machines for direct plotting of maps from air photographs had also improved, which enable accurate maps to be plotted with the minimum of ground control. Air survey is therefore likely to play a much more important part in the future.

The total area of the Union of India including the States is about 12,00,000 sq. miles and of this 180,000 sq. miles have yet to be surveyed in modern style. A programme of air photography of about 30,000 sq. miles yearly for the completion and revision of topographical maps would occupy about 40 years. A plan for topographical and project surveys is now under the consideration of the Government of India.

## RELAXATION IN IMPORT CONTROL

## Consumer Goods To Be Permitted On More Liberal Scale

HILE the main consideration governing India's import control continues to be the availability of foreign exchange, it is understood that a more liberal policy will be followed during the first half of this year in regard to the import from non-dollar sources of certain commodities, including motor cars and lorries, bicycles, typewriters, wireless receiving sets, tinned milk, newsprint, industrial tools, coaltar dyes, drugs and medicines, paints and varnishes, chemicals, scientific instruments, aeroplane parts, etg.

The goods will not be freely licensed, but it has been decided to raise the monetary "ceilings" governing their import. Two factors have combined to make possible these higher "ceilings". First, the licensing arrangements, which operated from July to December 1947, have served to provide a fairly accurate picture of the country's import requirements. Secondly the system of revalidating licences ceased with the end of 1947, relieving the pressure on foreign exchange resources.

An exception, however, has been made in the case of Capital Goods licences. These are being revalidated up to the approximate date of arrival of the goods, the only test being whether firm orders have been placed with exporters.

#### **New Validity Periods**

Another feature of the present import control arrangements, announced on Dec. 12, 1947, is that licensing will no longer correspond to the half-yearly shipping periods. Instead, most of the licences granted will be valid for six months from their date of issue. Others, covering goods which normally take a considerable time for delivery, will be valid for one year from the date of issue. This change, it is hoped, will even up for licence holders the time factor in the obtaining of their goods. It is understood that this innovation is the result of the improved shipping position.

Another aspect of the present system of the control is the classification of imports into different groups:

- (a) those licensed freely from dollar areas.
- (b) freely licensed goods from non-dollar areas, and
- (c) articles not to be licensed at all from any source.

The distinction drawn between dollar area and non-dollar area imports arises from the necessity to conserve dollars. It is recognised that for articles

which must be imported from dollar areas, licences will be granted. But generally it should be easier to obtain licences for goods from non-dollar countries.

Under the revised arrangements Open General Licence No.9'has been cancelled from the beginning of this year, but commitments already made in respect of articles affected by the cancellation will be allowed entry up to March 31, 1948, without the formality of a licence. The O.G.L. covered a wide range of articles, some of which were parts of machinery, machine-made cloth, agricultural implements, woollen and cotton fabrics, copra, coconut oil, mineral oil, raw silk, cotton yarn, raw wool, wood pulp, raw hides and skins. These goods are now being freely licensed from nondollar areas. On the basis of these licences, Government expects to have accurate and timely information of supplies received and commitments made.

Three O. G. Ls. of minor importance are still in existence. O. G. L. No. 2 covers certain imports from Middle East countries, mostly mineral oil products, O. G. L. No. 4 pertains to import of samples and of goods brought as personal luggage by diplomatic personnel. O. G. L. No. 6 covers country craft traffic from the Persian Gulf, Aden, Palestine, etc.

## GRACE PERIOD OF IMPORT LICENCES EXTENDED

The Government of India have been informed that owing to snow-storms in the United States of America, shipment of goods, which otherwise could have been made before the end of last year, was unexpectedly delayed. As a result, consignments which left the manufacturing factories well in time for shipment before Dec. 31 could not be shipped except after that date.

In order to cover the import of these consignments it has been decided, as a special case, that in the case of licences for imports from the United States of America which were to expire on Dec. 31, 1947, a period of 31 days' grace should be allowed, instead of the 15 days' grace at present allowed. Goods shipped against these licences on or before Jan. 31, 1948, will be allowed clearance, says a Press Note, issued by the Ministry of Commerce, on Jan. 23.

#### RESERVE BANK ASKED TO PAY 50 CRORES TO PAKISTAN

The Government of India instructed the Reserve Bank on Jan. 17, to credit the Pakistan Government with Rs. 50 crores in implementation of the agreement about the division of the cash balance, said a Press Communique issued by the Ministry of Finance on Jan. 17.

The balance of Rs. 5 crores was to be adjusted against the expenditure incurred by India since August 15, 1947, on account of Pakistan.

## EXPORT OF COTTON CLOTH AND YARN

A Press Note issued by the Ministry of Commerce on Jan. 30 said: In pursuance of the policy of progressive decontrol, the Government of India have reviewed the position with regard to price control over cotton cloth and yarn intended for export and have decided to lift the control, with immediate effect, in respect of all destinations except the following:

Australia, British East Africa (Kenya, Uganda and Tanganyika) and the Sudan.

The relevant notification under the Cloth and Yarn (Export Control) Order, 1945, appears in Section I of Part I of the, Gazette of India published on January 31, 1948.

#### **EXPORTS BY PARCEL POST**

Exports by parcel post of all articles, other than jewellery and precious stones, are no longer required to obtain valuation certificates from port Customs authorities regarding the contents of packages, says a Press Note issued by the Ministry of Finance on Jan. 21.

The Government of India has taken this decision with a view to removing difficulties at present experienced by exporters in inland trading centres, where facilities for valuation do not exist.

The relevant foreign exchange forms in respect of parcels containing articles other than jewellery and precious stones will continue to be countersigned by the Reserve Bank of India, or an authorised dealer in foreign exchange, on the strength of invoices, bills etc., but a Customs valuation certificate will not be necessary.

#### PROGRESS IN EMPLOYMENT

Of 24,631 refugees registered during the month of December, 1947, at the Employment Exchanges and District Employment Offices of the Ministry of Labour in the Indian Union, 3,899, involving 15,697 dependants were placed in employment. The placement figures for this month are the highest recorded so far.

The total number of refugees registered with the Exchanges upto the end of December, 1947, was 64,224, of whom 10,566, involving 47,342 dependants have been placed in employment.

The All India Educational Conference opened in New Delhi on January 16- Maulana Abul Kalam Azad (extreme left) is seen addressing the Conference

## **EDUCATION FOR ALL: CONSCRIPTION OF TEACHERS**

## Maulana Azad's Address at Educational Conference

would urge upon every educated man and woman to regard it as a sacred national service to come forward and serve as a teacher for at least two years. They should regard it as a sacrifice to the national cause and accept, for their services whatever allowance the state may afford", said the Hon'ble Maulana Abul Kalam Azad, Minister for Education, Government of India, opening the All-India Educational Conference on January 16 in New Delhi.

The Education Minister added: "If every matriculate is required to put in one year's and every graduate two years' service in education before he or she attains his or her certificate we would get a large supply of teachers for our purpose".

Below is the text of the address:

It is exactly a year ago that I assumed charge of this Ministry on the 15th of January, 1947. It was then my intention to summon immediately an educational conference of representatives of Provincial Governments, the States and Universities in order to chalk out our future programme of action. In fact, dates had been announced for such a conference twice but circumstances over which we had no control, intervened on both occasions. I need not go into the reasons for these postponements as they are well known to you and will only say that I have spared no efforts to summon the conference as early as possible. In any case, we have met today and I have every hope that the combined wisdom of all who are present today, will enable us to formulate schemes that will meet adequately the educational requirements of this ancient land. I extend to you my cordial welcome and thank you all for your response to my invitation.

The agenda is already before you. You will find that it contains only the most pressing problems that confront us today. The first issue refers to the provision of basic education for every citizen of the State. It is on all hands that without such education a modern democratic state cannot flourish or perform those functions which are expected of it. The scheme of Post-war Educational Development prepared by the Central Advisory Board of Educa-tion has been accepted by the Central and the Provincial Governments. Steps have already been taken to set on foot the programme of action according to a first five year plan, but I must point out that all these have been done according to old methods and on the old scales. After the realisation of our independence, we cannot however, be content with programmes which were considered adequate for the old regime. Thus, no one will for a moment tolerate today that 40 years must elapse before the full scheme of basic education for all the inhabitants of this land can be implemented. In fact, even half that period will seem to many to savour of delay and procrastination. We must, therefore, devise measures by which the educational progress of this country can be so accelerated that we reach our objective within a much shorter time.

I know the many difficulties and obstacles which face us. I know that on account of the happenings in the recent past, the attention of the Government and the people has often been diverted from constructive work. After full consideration of all these factors, I would still assert that education cannot wait. Even if other nation building activities of the Government have to be slowed down or deferred on account of such difficulties, education, at any rate, must be pushed forward as rapidly as possible. We must not, for a moment, forget that it is the birth-right of every

individual to receive at least the basic education without which he cannot fully discharge his duties as a citizen.

In talking of basic education, we have to deal separately with the problem of providing education to school-going children and to sdults. The population of India today, after partition, is roughly 24 crores, if we leave out of account the people of the States. The school-going population will, therefore, be about 2,93,72,000, if we consider the age-group of 6 to 11 years. If we calculate on the basis of even 3 teachers for every hundred pupils, this would require about 9 lakhs of teachers for teaching close upon 3 crores of boys and girls. I will not raise here the question whether we should discourage single-teacher schools, though the best educational opinion favours at least two teachers for a school. In any case, the provision of 3 lakhs of trained teachers immediately seems an altogetier impossible task and nothing that the Government can do can remedy this defect overnight. In fact, this seems to be one of the main reasons why 40 years was regarded as the minimum period which must elapse before educational facilities can be provided for all citizens of the land.

#### An Appeal

We have, however, already seen that we cannot wait for such a long time and, therefore, my appeal will be to all educated men and women of this country to come forward to meet this deficiency. I would urge upon every educated man and woman to regard it as a sacred national service to come forward and serve as a teacher for at least two years. They should regard it as a sacrifice to the national cause and accept for their services whatever allowance the State may afford. We may also consider some kind of conscription for the purpose. If every matriculate is required to put in one year's and every graduate two years' service in education before he or she obtains his or her certificate, we would get a large supply of teachers for our purpose. If 2 lakhs of educated men and women come forward every year, we can in five years realise the

minimum number of teachers necessary for fulfilling our plans. This will, however, be an emergency measure and cannot continue indefinitely. We must, therefore, devote these five years for the greatest possible expansion in the provision of facilities for training teachers, so that by the end of that period, we may gradually replace volunteer teachers by teachers who have taken up teaching as their vocation.

Another great obstacle towards immediate provision of educational facilities for all is the financial implication of constructing the necessary school houses and other buildings. This, however, need not and should not deter us. I would go so far as to say that we need not just now make any provision for building expenses at all. India is a country where for nine months in the year pupil can work in the open without any difficulty or injury to their health. In villages, if necessary, educational work can be carried on under trees and even where structures have to be put up, whether in town or village, these can be built with bamboo and mud at a much lower cost than a pucca building would cost. In addition, we must never forget that in India there have already been voluntary contributions towards the establishment of schools and I have no doubt that if we can tap fully the resources or private munificence, the problem of meeting the cost of educational structures will be at least partially met.

#### Problem of Finance

Another chief obstacle to the immediate fulfilment of the Basic Education Plan is the problem of finance. For basic education alone we require at least 9 lakhs of teachers. The Pay Commission recommended a scale of Rs. 30—Rs. 50 for such teachers on the pre-war scale. I realise that this is hardly enough to attract the best type of candidates, but as I have stated earlier, my appeal is to educated men and women to regard this educational service for two years as a sacrifice in the cause of the nation. They must therefore agree to work on this meagre pay and look at it more in the nature of an allowance than wages for their labour. I have suggested that we should have at least two lac volunteers every year which will give 4 lacs of such volunteers at a time from the second year of the enforcement of the scheme. Even on the basis of pay suggested in the Pay Commission's Report, this would mean a wages bill of Rs. 2 crores per month or Rs. 24 crores per year for the next five years. The amount actually spent on Primary Education by the Provinces and the Centre as shown in the budget for the year 1945-46 is as follows:-

[See Cols. 2 and 3]

The figures have been taken from the Provincial General Educational Table. Since then there have been considerable increases in the provision for Education in the Central and Provincial Budgets, but figures are not at present available for the years 1946-47 and 1947-48 except in the case of the Centre. In the Centre, the Budget provides for a little over Rs. 11 lakhs for 1947-48. We may, however, ignore these

variations as well as the variation that has been caused by the partition of the Provinces of Bengal and Punjab.

We would, therefore, have to find additional funds to the extent of about sixteen crores for the next five years. In Bengal, an attempt has been made to find money for educational purposes by the imoposition of an educational cess. It is for you to consider whether some such method may not be applied to other Provinces in order to meet part of this gap. You have also to suggest what further steps the Central Government can take in addition to what it has already done.

#### Adult Education

I now come to the problem of providing for the education of adults who are illiterate. Its importance need hardly be emphasized, especially to a body of educational experts like you. It is obvious that with the extension of democracy, the problem of adult education has become even more important than it was in the past. As you know, some work

for adult education has been started in the Provinces since 1938 but this was on a very small scale and must be increased and expedited manifold, if we are to obtain the desired results. Adult education has two aspects viz. (a) arrangements for making the adults literate, and (b) the provision of measures to enlarge their minds and enable them to take an intelligent interest in the affairs of the country.

I will take up the question of education in the second sense first, as obviously this is more important in the case of adults than mere provision of literacy. Such expansion of mind of the adults can be largely effected today through the use of scientific methods and machinery which has made our task in this respect much lighter than it was before. There is experience of countries like Russia and the U. S. A. where open-air drama, the film and the radio have been used to very great effect. Russia has, in fact, succeeded in carrying out her successive five-year plans largely through the use of such scientific methods and machinery. We should benefit by the

experience of these countries and draw upon the vast stores of educational films which have been built up in Russia and U.S.A. At the same time, it has to be remembered that our conditions differ in many respects and their experience will have to be modified to meet our requirements. I am glad to inform you that the Education Ministry has recently established a department of Social Education which will take this problem up. Expansion of the Department is, however, necessary in order to make it possible to provide such dramas, films and radio programmes in all Indian languages. I hope that very soon the Ministry will be able to publish complete plans and schemes for this purpose.

The problem of imparting literacy to adults must be taken up along with that of providing basic education to schoolgoing children. For this purpose, we must not only depend upon the teachers who are engaged in such schools, but also call upon all Government employees of all categories to render such voluntary service as may be possible. This would be necessary, especially in the rural areas where it would not be possible to provide any alternative machinery for adult education. Government emadult education. Government employees can render great help both in their spare time by working in Night School and Sunday Schools, and also by their axample in their example in their example in their example in the spanning in the state of the schools. their example in introducing a drive, for literacy among their own subordinates who are illiterate. A time must soon come when literacy will be made one of the conditions for any employment under the Government, and in the meantime, Government are considering methods by which illiterate Government servants may be encourged to become literate.

#### **Medium of Instruction**

I now come to the second broad problem which we have to discuss in the Conference today. This concerns the medium of instruction in the schools and colleges. You are already aware of my views on this question. I hold that there is no place for English as a medium of instruction in future India, but at the same time there should be no precipitate action that may damage the cause of education. I hold that the replacement of English as a medium of instruction should be gradual and stage by stage so that there is the least possible interruption or interference with the process of education in the country.

I think it is not necessary to raise the question of the medium of instruction in the primary and secondary stages. Opinion is unanimous that instruction in these stages can be imparted only through the mother tongue. Differences hrise only when we come to the stage of education in the universities. sharply divided schools of thought hold the field. There are on the one hand those who want one common language as the medium of instruction for all the universities in India. There is another school who hold that education in the universities should be imparted through the regional language. I realise that there are weighty arguments in favour of both the alternatives. The Central Advisory Board, which has just completed its session, has discussed this question and decided to appoint a Committee of experts to go into it and submit recommendations. I have been asked to nominate the members of the Committee and will announce the names as soon as this Educational Conference is over.

I placed my own views before the Central Advisory Board and said that we should not change the medium of instruction in the University suddenly but allow a period of five years during which we can prepare for the gradual replacement of English by an Indian language. This would mean that by the sixth year, English would no longer be necessary as the medium of instruction in the universities and an Indian language could take its place. I am glad to inform you that the Board is in full agreement with this view.

#### Scientific Terms

One important problem in this connection is in respect of scientific terms but the Central Advisory Board has tried to solve it by declaring that scientific terms are international, and it would be a serious mistake to try to translate them. I agree with the view of the Board and believe that this is the only rational solution of the difficulty.

I may here refer to the experience of other eastern countries which have already made the experiments of coining new words for scientific and technical terms or importing them from an ancient classics. In Egypt the question of scientific terminology became important in the 19th century when Egypt took to modern European education on a large scale. Egypt, as you are aware, has a rich classical language from which it can derive most scientific terms. In fact, Arabic possessed many terms in Astronomy, Chemistry, Physiology and other Sciences which have since been incorporated into European languages. It was therefore easy for modern Egypt to coin new Arabic terms in the old moulds and one group in Egypt sought to adopt these Arabic terms for current use in Egyptian education. Many words were thus derived from the Arabic Classics and many new words coined, but experiment soon proved that this was not the happiest solution of the problem. With experience, the Egyptians, were convinced that the scientific terms in current usage in modern Europe should be adopted, as they have become international and do not now belong to any particular nation or country. Turkey and Iraq have also come to the conclusion that in matters of science and knowledge there should be no narrow nationalism but a truly international approach. Similar has been the experience of China and Japan. It must however, be admitted that for certain technical terms, especially in Philosophy, Logic and Mathematics, many terms are already available in Indian Classical languages and we should certainly use them, especially as in their case there is not the same universal agreement as in the case of scientific terms.

The next problem I want you to consider is the question of reforms in University Education. As I have already stated, there can be no question of narrow

nationalism in the field of knowledge, but at the same time we must see that there is no wrong perspective of a nation's past history and culture nor a failure to encourage the highest ideals in national character and civilization. Unfortunately, this has happened in India and I will draw your attention by way of example to the two particular instances of Philosophy and History.

To take up Philosophy first. Greek Philosophy was revived in Europe through the agency of the Arabs who were its commentators and critics during the middle ages. It was only during the Renaissance that direct translations were mude from Greek and Latin. The result is that in Europe, even the general history of Philosophy starts with the Greeks and ends with modern European Philosophy, touching merely the fring of Indian and Chinese thought. This is the history of Philosophy which the universities teach in India. But you will all admit that this does not represent the true fact of the development of philosophical thought in the world. No one can today deny the supreme achievements of the Indian mind in the realms of metaphysics and philosophy. It is true that recently Indian Philosophy has been introduced as one of the subjects of study in Indian universities, but it has not yet gained the position which it deserves in the general history of the Philosophy of the world.

#### Pythagoras School

One of the earliest schools of Greek Philosophy is that of Pythagoras. The tradition of his visit to India may or may not be true, but his Philosophy shows unmistakable marks of the influence of Indian thought. There is little doubt that the Indian mind had already advanced beyond the stage reached by Pythagoras. In fact, almost every school of Greek Philosophy has its counterpart in India. In addition, there are flashes of insight which we do not find in Greek Philosophy. 1 think that with the exception of two specific branches of learning the Indian mind has shown itself superior in every respect to the achievements of the Greeks. only two exceptions are in Logic and Astronomy. Aristotle's "Logic" is superior in structure and scope to Indian "Nyaya", while in Astronomy Ptolemy's "Nyaya", while in Astronomy Ptolemy's "Majestic" is superior "Majestic" is superior to Brahma Gupta's "Siddhanta" and the work of Aryabhatt. We therefore need a new History of Philosophy in which Indian Philosophy may find its rightful place.

Similarly in the field of History. Up to the time of Vincent Smith, there has been no reasonably true or correct History of India in English. Even Smith's History is defective and in many respects out of date. All histories used in our universities today reflect these defects. They suffer from both lacunae and distortions. Nothing is more important today than the reorientation of historical studies from the primary to the highest stages. This is a task which the universities must immediately undertake. The most practical method would be to prepare books in English which can then be translated into all the Indian languages. This would not

only mean economy in labour but also give a uniformity in tone and treatment of the subject. I would, therefore, appeal to all Indian universities to help in this noble task, and I can assure them that the Central Ministry will extend to them every possible help.

Another important question that I would like the Conference to consider is that of the study of the oriental languages and culture. We must admit that this has been most inadequate till now. I am sure there will be no difference of opinion that in the future we must make ample provision for remedying this defect. For this, two things are immediately necessary. We must, on the one hand, have a reform and simplification in the methods of, teaching and, on the other, we must afford both encouragement and facility for such studies.

Even where oriental subjects have been taught in the universities, they have been treated in a most cavalier fashion. If we look at the plight of Sanskrit or any other of the classical languages in the universities, we cannot deny that this has been done in a most half-hearted fashion in spite of the fact that such studies are essential for a true appreciation of Indian History and Culture. What applies to Sanskrit applies also to the study of Arabic and Persian.

#### Travellers' Accounts

I would like to draw your attention to the provision of facilities for the study of other oriental languages as well and especially of Tibetan and Chinese. It is well known that many of the Buddhist scriptures and literature are preserved in Tibetan, though the original in Sanskrit has been lost. For instance the "Tarka Bhashya" of Mokshankar Gupta could not for long be obtained in Sanskrit but a Tibetan translation was available and till recently that constituted the only source of our access to his thought. It is only lately that the original has been found and published in the Gaekwar Oriental Series.

The accounts of Chinese travellers are similar sources of illumination in respect of ancient India. Other treasures lie hidden in Chinese language and literature for the interpretation of our ancient history, if only they were accessible to us. For these reasons it is essential that our universities must provide adequate facilities for the study of these oriental languages. We must not forget that in the past, India was a Centre where the currents of Asiatic thought met and from which flowed out atreams which spread to the farthest corner of the Asiatic Continent. To truly appreciate Ancient India, it is therefore essential that there must be knowledge and understanding of other Asiatic languages and culture as well.

There are other issues which also require consideration and I have no doubt that you will take them up as the Conterence proceeds with its work. In conclusion, I would once again thank all of you for the trouble you have taken in coming to attend this Conference, and end by expressing the hope that our deliberations may yield results which will prove of lasting value to the cause of education in free India.

## EDUCATIONAL CONFERENCE DECISIONS

The Educational Conference, which concluded its three-day session on Jan. 18, made far-reaching decisions on different aspects of education.

The most important item considered by the conference was the modifications necessary in the plan of educational development set out in the Central Advisory Board of Education's report popularly known as the Sargent Report, in the light of experience gained since the report was published in 1944. Pro-vincial Ministers of Education, Vice-Chancellors of Universities, Directors of Public Instruction and other eminent educationists present in the con-ference were all agreed that the period required to complete the work of mass education must be substantially reduced from the periodof 40 years envisaged in the Sargent Report. As suggested in the report, the conference agreed that eight years should be the period of Compulsory Basic Education but in view of the practical difficulties in the way of introducing it immediately, this period might be reduced during the first stage though in no case should it be reduced to less than five

The conference resolved that simultaneously, to supplement further education, a comprehensive scheme of Adult Education (through libraries, open air threatres, radio, films, etc.) should be put into operation immediately; that for the first five years conditions of training for teachers in basic schools would be relaxed; the work of full-time workers might be supplemented by parttime workers and skilled artisans; and the double shift system should be introduced to economise on buildings.

#### Committee on Grants and Loans

The conference also endorsed the recommendation of the Central Adviscry Board of Education for appointing a small committee of educationalists and others concerned with education administration to consider the question of finance required to implement the basic educational plan including the question of Central grants, educational cess and cducational loans.

The conference placed on record its appreciation of the work of the Central Advisory Board of Education, the Inter-Universities Board, the All India Council for Technical Education, the Central Advisory Board of Archaeology, the University Grants Committee and similar bodies. It recommended that the Central Advisory Board of Education should be fully representative of the Provinces, States and Universities and for efficient work, Provincial, Regional and State Committees should be constituted on the same basis to work on similar lines; that the Bureau of Education should extend its activities on library and film units: that the Inter-University Board should be strengthened financially and otherwise to enable it to discharge its duties effectively and maintain suitable standards of university qualifications. The conference welcomed the extension of the scope of the University Grants

Committee to cover the work of all universities and research institutions and expressed the hope that it will work on lines similar to those in the United Kingdom.

The conference recommended that establishment of a Central Institute of Adult Education for training personnel for administration, supervision and field work and suggested that such a body should give a lead to provincial and State Governments, local authorities and voluntary agencies. It also recommended the establishment of a Central Co-operative Library. The recommendations of the Central Advisory Board urging the appointment of a committee to consider the means of financing education at all stages and the appointment of a Commission for Secondary Education were endorsed by the conference.

There was a prolonged debate in the conference about the medium of instruction and finally the conference recommended to the Ministry of Education the appointment of a committee to consider what should be the medium of instruction and examination at the university stage; the place of the national language in secondary and higher education and its script; the palce of English as a language in the university education; the stages by which English should be replaced by the national language or regional languages as medium of instruction and the steps to be taken for the preparation of text books, scientific terminology and requisites for implementing the recommendations made.

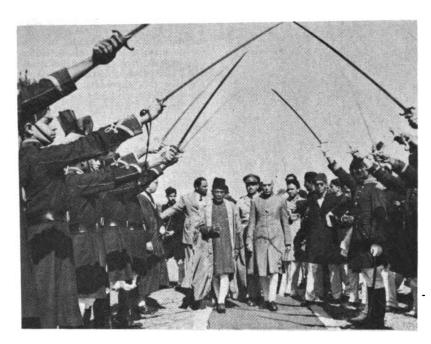

The Central Advisory Board scheme for the setting up of a National Cultural Trust was endorsed by the conference with slight modifications.

The conference urged the paramount need for research in all branches of learning and recommended that the Government of India should do all in its power to encourage the universities and research institutions to undertake research.

The Interim Report of the Scientific Man-power Committee was also considered by the conference which recommended that early action to implement the report should be taken.

It is announced in the Gazette of India dated January 17, 1948, that the offices of the Archaeological Survey of India and the Anthropological Survey of India shall, in future, be called the 'Department of Archaeology and Department of Anthropology" respectively.

The pilgrim ship "Rizwani," 'which sailed from Jedda on Jan. 11 1948; arrived at Karachi on Jan. 19, 1948. After disembarking about 143 pilgrims at Karachi she proceeded to Bombay on the same day, says a Press Note, issued by the Ministry of External Affairs and Commonwealth Relations, on Jan. 21.

Pandit Jawaharlal Nehru addressed the Annual Convocation of the Muslim University at Aligarh on January 24. The Aligarh U. T. C. presented a Guard of Honour to Pandit Nehru on his arrival

## PLAY YOUR ROLE IN BUILDING UP THIS GREAT COUNTRY

### Pandit Nehru's Advice to Aligarh Students

INVITE you as free citizens of free India to play your role in the building up of this great country and to be sharers, in common with others, in the triumphs and setbacks alike that may come our way", said the Hon'ble Pandit Jawaharlal Nehru, Prime Minister, addressing the annual convocation of the Muslim University at Aligarh on January 24.

Following is a gist in English of the speech delivered by Fandit Nehru:

I have come back to Aligarh and to this University after a long interval. We have been separated not only by this distance of time but also by a distance of spirit and outlook. I do not quite know where you, or for the matter of that most of us, stand today, for we have gone through convulsions and heart-breaks which have no doubt created in many of us doubts and disillusionment. While the present is full of uncertainty, the future is even more shrouded and difficult to pierce. Nevertheless, we have to face this present and try to mould the future. We have to see, each one of us, where we stand and what we stand for. Without a stout anchor of faith in the future we will drift in the present and life itself would have no objective worth striving for.

I have accepted the invitation of your Vice-Chancellor with pleasure, for I wanted to meet all of you and to probe somewhat into your minds and to let

you have a glimpse of my own mind. We have to understand each other, and if we cannot agree about everything, we must at least agree to differ, and know where we agree and where we differ.

For every sensitive human being in India the last six months have brought pain and sorrow, and what is worst of all, a humiliation of the spirit. It has been had enough for those who are old in years and experienced, but I often wonder how the young feel who, at the threshold of their lives, have seen and experienced catastrophe and disaster. They will, no doubt, survive it, for youth is resilient; but it may well be that they will carry the mark of it for the rest of their days. Perhaphs if we are wise and strong enough to think and act rightly even now, we might succeed in erasing that mark.

For my part I wish to say that, in spite of everything, I have a firm faith in India's future. Indeed if I did not have it, it would not be possible for me to function effectively. Although many of my old dreams have been shattered by recent events, yet the basic objective still holds and I have seen no reason to change it. That objective is to build up a free India of high ideals and noble endeavour where there is equality of opportunity for all and where many variegated streams of though' and

culture meet together to form a mighty river of progress and advancement for her people.

I am proud of Innia not only because of her ancient magnificent heritage but also because of her remarkable capacity to add to it by keeping the doors and windows of her mind and spirit open to fresh and invigorating winds from distant lands. India's strength has been two-fold; her own innate culture which flowered through the ages, and her capacity to draw from other scurces and add this to her own. She was far too strong to be submerged by outside streams, and she was too wise to isolate herself from them, and so there is a continuing synthesis in India's real history and the many political changes which have taken place have had little effect on the growth of this variegated and yet essentially unified culture.

I have said that I am proud of cur inheritance and our ancestors who gave an intellectual and cultural pre-eminence to India. How do you feel about this past? Do you feel that you are also sharers in it and inheritors of it and therefore proud of something that belongs to you as much as to me? Or do you feel alien to it and pass it by without understanding it or feeling that strange thrill which coroses from the realization that we are the trustees and inheritors of this vast treasure? I ask you these questions because in recent years many forces have been at play diverting people's minds into wrong channels and trying to pervert the course of history. You are Muslims and I am a Hindu. We may adhere to different religious faiths or to none; but that does not take away from that cultural inheritance that is yours as well as a mine. The past holds us together, why should the present or the future divide us in spirit?

#### Change of Spirit

Political changes produce certain results. But the essential changes are in the spirit and outlook of a nation. What has troubled me very greatly during these past months and years is not the political changes but rather the creeping sense of a change of spirit which created enormous barriers between us. The attempt to change the spirit of India was reversal of the historic process through which we had been passing for long ages past and it is because we tried to reverse the current of history that disastor overwhelmed us. We cannot easily play about with geography or with the powerful trends which make history. And it is infinitely worse if we make hatred and violence the springs of action.

Pakistan has come into being, rather unnaturally, I think, but nevertheless representing the urges of large numbers of persons. I believe that this development has been a throw-back, but we accepted it in good faith. I want you to understand clearly what our present view is. We have been charged with desiring to strangle and crush Pakistan and to force it into a reunion with India. That charge, as many others, is based on fear and a complete misunderstanding of our attitude. I believe that, for a variety of reasons,

it is inevitable that India and Pakistan should draw closer to one another, or they will come into conflict. There is no middle way, for we have known each other too long to be indifferent neighbours. I believe indeed that in the present context of the world India must develop a closer union with many other neighbouring countries. But all this does not mean any desire to strangle or compel Pakistan. Compulsion there can never he, and an attempt to disrupt Pakistan would recall to India's disadvantages. If we had wanted to break Pakistan why did we agree to the partition? It was easier to prevent it then instead of trying to do so now after all that has happened. There is no going back in history. As a matter of fact it is to India's advantage that Pakistan should be a secure and prosperous State with which we can develop close and friendly relations. If today by any chance I was offered a reunion of India and Pakistan, I would decline it for obvious reasons. I do not want to carry the burden of Pakistan's great problems. I have enough of my own. Any closer association must come out of a normal process and in a friendly way which does not end Pakistan as a State but makes it an equal part of a larger union in which soveral countries might be associated.

## **National State**

I have spoken of Pakistan because that subject must be in your minds and you would like to know what our attitude towards it is. Your minds are probably in a fluid state at present, not knowing which way to look and what to do. All of us have to be clear about our basic allegiance to certain ideas. Do we believe in a national State which includes people of all religious and shades of opinion and is essentially secular as a State, or do we believe in the religious theocratic conception of a State which considers people of other faiths as some-thing beyond the pale? That is an odd question to ask, for the idea of a religious or the theocratic State was given up by the world some centuries ago and has no place in the mind of modern man. And yet the question has to be put in India today, for many of us have tried to jump back to a past age. I have no doubt that whatever our individual answers might be, it is not possible for us to go back to a conception that the world has outlived and that is completely out of tune with modern conceptions. So far as India is concerned, I can speak with some certainty that we shall proceed on secular and national lines in keeping with the powerful trends towards internationalism. Whatever confusion the present may contain, in the future India will be a land, as in the past, of many faiths equally honoured and respected, but of one national outlook, not I hope a narrow nationalism living in its own shell but rather the tolerant creative nationalism which, believing in itself and the genius of its people, takes full part in the establishment of an internanational order. The only ultimate aim we can have is that of one World. That seems a far cry today with warring groups and preparations for and shouting of World War Number Three. Yet despite

s'andit Nehru addressing the Convocation

all this shouting, that is the only aim that we can keep in view, for the alternative to world co-operation is world disaster.

We must cultivate that broad outlook and not to be led away by others' narrowness into becoming narrow in spirit and outlook ourselves. We have had enough of what has been called communism in this country and we have tasted of its bitter and poisonous fruit. It is time that we put an end to it. For my part I do not like the intrusion of this communal spirit anywhere, and least of all in educational institutions. Education is meant to free the spirit of man and not to imprison it in set frames. I do not like this university being called the Muslim University just as I do not like the Benares University to be called the Hindu University. That does not mean that a university should not specialise in particular cultural subjects and studies. I think it is right that this University should lay special stress on certain aspects of Islamic thought and culture.

I want you to think about these problems and come to your own conclusions. These conclusions cannot be forced upon you except to some extent of course by the compulsion of events which none of us can ignore. Do not think that you are outsiders here, for you are as much flesh and blood of India as anyone else, and yet you have every right to share in what India has to offer. But those who seek rights must share in the obligations also. Indeed if the duties and obligations are accepted, then rights flow of themselves. I invite you as free citizens of free India to play your role in the building up of this great country and to be sharers, in common with others, in the triumphs and set-backs alike that may come our way. The present with all its unhappiness and misery will pass. It is the future that counts, more specially to the young, and it is that future that beckons to you. How will you answer that call?

## Electric Power Map of India

The Survey of India under the general direction of the Office of the Electrical Commissioner, Government of India, has published an Electric Power Map of India, available to the public from the Manager of Publications, Delhi, and the Government Publication Depot, Calcutta.

The map which is drawn to a scale of 70 miles to an inch shows all existing power stations of 1000 kw. and over including steam, diesel as well as hydro-electric power stations and all major transmission lines of 22,000 volts and over.

Reproduced in five colours, it enables the different types of power stations and transmission lines at different voltages to be distinguished clearly.

It also shows projected power stations, steam as well as hydro, on which work has already started, or which are in an active stage of planning by the Provincial and State Governments or other authorities. Since it has been made from information available at the end of 1946, it necessarily shows the electric power picture of India before the country was partitioned.

The transmission lines shown in the map indicate approximately the areas which will be fed by the respective power systems, and if studied in conjunction

with the Government of India's annual publication "Public Electricity Supply—All India Statistics" a comprehensive view of the industry can be secured. The map has been produced in response to repeated requests from many sources.

The map contains a few insets in which details of certain areas have been shown on a larger scale for the purpose of clarity, The more important of insets are: (1) The greater Calcutta Electricity Systems; (2) the Bihar and Bengal Coal-field areas; (3) the Greater Bombay Hydro area, and (4) the United Provinces Gangee Canal Hydel System.

## RICE FOR COCHIN

In view of the special efforts made by Cochin State to procure a very high ratio of its crop nearly 40 per cent. it is learnt that out of the first shiploud of 5,000 tons of Pakistan rice, the Indian Ministry has allotted Cochin 3,350 tons.

The Food Ministry is reported to be more favourably inclined towards these deficit areas, which have taken steps to intensify internal producement.

## TRUE FREEDOM LIES IN SERVICE

## Health Minister's Address

tan only be judged by how far it will help in the establishment of a form of society in which human beings can live together most happily and find their true fulfilment both as individuals and as members of a community", declared the Hon'ble Rajkumari Amrit Kaur, India's Health Minister, in her Convocation address delivered at the Government College, Ajmer on January 25. Following is the text of the address:—

First of all may I express my appreciation of the honour which the authorities of this college have done me in inviting me to deliver the Convocation address today. And may I thank you, Mr. Principal, for the very kind words with which you have been good enough to introduce me. They are far too generous and I alone can know how little I deserve your praise.

Graduates of the Government College of this ancient and historic city, I am happy to be with you today and to have the opportunity of sharing my thoughts with you. An ancient writer said, "Great reverence is owed to Youth" and it is in that spirit that I am addressing you today, not as an elder come to give you what you may feel is yet another overdose of admonition.

#### What is Freedom?

It is good to learn from the lips of your Principal of the high standard of results attained in the academic sphere by this Institution as also of its all round development. I can well understand and sympathise with his impatience at the slow pace of expansion of educational facilities but that is in keeping with the lot of all Institutions whether in the Provinces or Centrally administered. The resources of the country just cannot today keep pace with the demand. Nevertheless no financial or other handicaps may deter us from pressing on towards our goal.

This is your first "Annual celebra-on" in a free India. Throughout the ages men and women have died in the cause of freedom and India is no exception to the rule. But what is freedom? We have shaken off the foreign yoke. That is indeed a tromendous achievement for we are free now to shape our own distiny. But ever since political freedom became ours we have been faced with an upheaval the like of which no country in the world has ever had to battle with. To deal with the transference of a population numbering several millions was and is a gigantic task in itself, enough to strain the financial and administrative resources of any government. But to those, like myself, who have been privileged to serve this vast mass of humanity what has most appalled and stirred one to the depths is the mad extent to which communal frenzy can lead those who come under its sway. Men, women and

children uprooted from their homes, robbed of their possessions, their dear ones often killed before their eyes, rich vesterday, penniless today, victims of men's lowest passions, sad and broken in spirit, filled with despair. Is this the freedom for which the great leaders of the freedom movement in India and we who followed them had suffered and which we had dreamt of? Surely not. And so we come back to ask ourselves "what is freedom"? The present is a tremendous testing time for us; we are being tried in the crucible of suffering and whether we come through the ordeal purified depends on ourselves and our ability to understand and appreciate the essential values. For unless we do so we shall not be able to make anything of our freedom. Is it going to be another word for anarchy or untruth or the self-interest of those who are powerful to be achieved by violence and deceit and rather than through reason and merit? The practical value of freedom can only be judged by how far it will help in the establishment of a form of society in which human beings can live together most happily and find their true fulfilment both as individuals and as members of a community. In such a society there can be no room for violence, hate, fear, mistrust or suspicion nor for lying and deceit. No right claimed by any individual or community may be denied to another for that is no freedom which claims liberty of action without regard to the existence and wellbeing of others. It follows, therefore, that true freedom really signifies a willing subjection of himself by the individual or by a community to the chains of duty. In other words that perfect freedom lies in service. It is to that aspect of freedom, as I understand it, that I would like to draw your thoughts today.

## Power of Love

In the present crisis through which we are passing it is impossible to think of the major issues which control the destiny of mankind without relating them to current events. Whether we do or do not believe in violence as a method of settling personal or national differences, we cannot ignore the fact that only last week the greatest man of the age was willing to sacrifice his life because he believes in the Power of Love as the only weapon which can bring about peace and enable men to settle their differences. That a whole nation responded to his call on this occasion, as it has done more than once before, shows that the heart and mind of India are still sound. But the iron of hatred has undoubtedly entered deep into the minds and hearts of our suffering humanity and has bred the desire for revenge. We stood in danger of losing our beloved leader, we may yet lose him if we do not adhere to the straight and narrow way which he and the saints who have gone before him have trod and pointed out as the way of salvation. But greater than the danger of losing him is the

danger to us of losing our souls if we follow the wrong path.

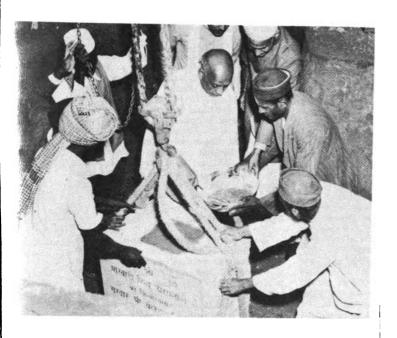

It is in the hands of the young men and women of this unhappy land to rescue it from all dangers and rebuild the fabric of our national life so that we may live truly and in perfect freedom. Youth has got to be developed to its highest potential. Education is power. If it is soundly conceived and efficiently administered it can and will mould the outlook of those who come under its sway. I believe we have been given in Basic Education a something that will train our boys and girls to become passionate lovers of that ideal of freedom which I have tried to place before you.

## **Spirit of Service**

You, young friends, stand on the threshold of your careers. I sincerely hope many of you will want to become teachers and doctors, two of the noblest professions that any man or woman can take up—the one to train and mould the heart and mind and character of our young and the other not only to relieve suffering but also to teach everyone the right way to live so as to avoid disease. For I believe that doctors can render a greater service to people by teaching them how to remain well than by curing them when they fall ill. Man falls ill because he disobeys the law of life and this illness applies equally to the mind as well as to the body. But no matter what profession you adopt you must remember that you are first of all a citizen of India and by virtue of the knowledge acquired a teacher in whatsoever walk of life fate calls you. A true citizen must have a sense of values, he must set and demand standards of integrity in both private and public life, he must have a veneration for discipline which is a corner stone of the national edifice and, above all, he must be filled with a spirit of service.

It is the privilege of youth to dream dreams. One of those for you has come true today and I warmly congratulate you on having proved yourselves worthy of being granted degrees. You are leaving the portals of your Alma Mater to sail on the wider sea of life. A larger freedom of choice and action has come to you which I hope you will use worthily in the opportunities of service which will open out to you. The whole of our land is a vast field of service. And I must emphasise that real India lies in the 700,000 villages of our land. It beckons to us to put our whole souls into the fight to end poverty, ignorance and disease, to endeavour to let every citizen feal the glow of freedom to build our national structure in such a way as to ensure justice and fulness of life to all, irrespective of caste, sex or creed. You who have been nurtured in this ancient and historic city should, if its history and beautiful monuments have been correctly appreciated by you, be able to make a special contribution to communal harmony. Ajmer represents the best in both Hindu and Muslim culture and art. These are our common heritage which none can take from us. Communal strife is the sport of little minds. Peaceful living alone will ensure growth, whether mental, material, moral or spiritual.

# DEPUTY PRIME MINISTER IN BOMBAY AND AHMEDABAD

During his recent visit to Bombay and Ahmedabad, the Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister, performed the foundation-stone laying ceremony of hospitals in both the cities.

(Above) Sardar Patel laying the foundation-stone of the Marwari Hindu Hospital at Marine Lines, Bombay on January 19. (Below) The Deputy Prime Minister laying the foundation-stone of the Seth Lallubhai Gordhandas Hospital at Ahmedabad on January 22.

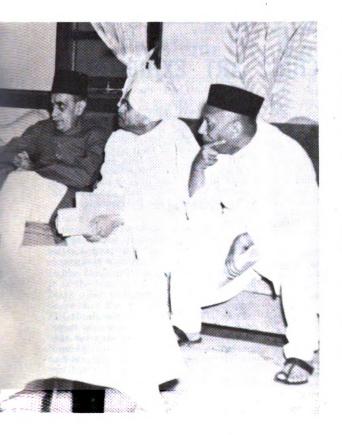

Sardar Patel and the Maharaja of Bhavanagar at the ceremony January 15, in connection with laying the foundation of the Gards in commemoration of grant of full responsible government to the Bhavanagar State.

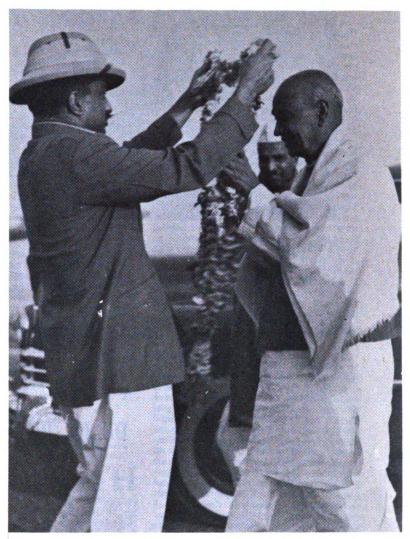

The States Minister is having discussions with the Deccan State

# STATES MINISTER IN RAJKOT AND BHAVANAGAR

The Hon'ble Sardar Vallabhbhai Patel, Minister for States, paid a visit to Rajkot and Bhavanagar in the third week of January.

s on January 19, during his visit to Bombay.

## (Continued from Page 205)

And here I would like to ask you to think seriously on what lines this growth shall be. "Read not to contradict and confute: nor to believe and take for granted: nor to find talk and discourse: but to weigh and consider", said a great philosopher. There has been and still is a danger of our copying everything from the West regardless of whether it is suited to our genius and tradition or not and equally the other of calling everything Western bad. There is good and bad in all of us. As we start to build we must be wise enough to free ourselves of all the shackles in the shape of evil customs or outmoded thought that bind us and eschew all that has led again and again to war between the nations of the West. Such wisdom can only come from deep study and careful thinking. I have drawn your attention to the real India. I am convinced that if we can remodel our villages so as to make them homes of culture and art and havens of peace, happiness and prosperity, we shall be making a tremendous contribution towards national growth along right lines.

#### Advice to Girls

I am happy to note that this is a college which gives equal opportunities to girls and I feel I must say a few words specially to them. Freedom will connote nothing if they are not alive to their responsibilities. For long years I have felt and often said that an educated girl should not enter into married life until she has given at least three years to social service in some phere. An illustrious son of your college has set an excellent example by devoting his whole life to the sphere of social reform and I am indeed glad that he is in our midst today. Custom and usage have dealt harshly with women and the fact that they are today sunk in a well of ignorance and superstition adds to their own and the country's misery. If educated women will not help their sisters the country will never rise to its full stature. To you who are listening to me today and through you to all young women I appeal to come forward in your thousands to serve your own cause which is the country's cause. In the recent tragic happenings women have been the worst sufferers. Buildings can be destroyed but rebuilt, wealth can be lost but can be remade, homes can be uprooted but new ones can spring up. But honour lost cannot be regained and it is hard to heal the wounds of the spirit. Let womankind in India be true to the high calling of their sex and let the lives of the loved heroines of our ancient past still inspire and guide us. All the rights which we to-day claim will come to us if we are determined to fulfil our part nobly for a right can only spring from a duty well ful-

Young friends. I pray that the end of your University career is for each one of you but the prelude to a life of progressive prosperity and happiness and that you will look upon this day not as the end of your education but as one marking the successful completion of only the first stage in a lifelong process. May God bless you and may He enable you to be true to your ideals, true to the best in you, true to the country which gave you birth and, above all, true to thun in thought, word and deed.

# REFUND ON TELEGRAMS DELAYED OR UNDELIVERED

In case of delay or non-delivery of ordinary and express telegrams, refunds will now be given by the Posts and Telegraphs Department subject to certain conditions, says a Press Note, issued by the Directorate-General, Posts and Telegraphs on Jan. 21.

A full refund is admissible when the fault of the telegraph service is established. In case of errors in a telegram, a refund will be given when the telegram has been rendered useless by mutiliation. No refund will, however, be granted when the error is due to illegible or doubtful writing on the original.

In case of delays a refund may .ordinarily be granted when the delay exceeds the postal mail time in respect of ordinary telegrams and half the postal time in case of express telegrams. When the delay to an express telegram does not actually exceed half the postal time, but is still unduly serious, a refund of the difference between the 'express' and the 'ordinary' rates may be given at the discretion of the Post-Master General.

When a fully paid late fee telegram cannot be transmitted to the telegraph

office of destination during its closed hours, a refund of the difference between the 'express' and 'ordinary' rates, in addition to the refundable late fee, may be granted at the discretion of the Post-Master General. No refund is admissible, however, when the public had been previously warned that telegrams were liable to heavy delays owing to certain causes.

In cases of non-delivery, a refund may be granted at the discretion of the Post-Master General provided he is satisfied that the telegram has actually failed to reach the addressee through the fault of the service. If the telegram sent in reply to a reply-paid telegram remains undelivered through the fault of the spread through the fault of the spread in the Post-Master General may, at his discretion, grant a refund of the full cost of the telegram and the amount deposited for reply. No refund is, however, admissible when non-delivery is due to insufficient, incorrect or illegible address given by the sender.

Refund orders will be current for not more than three months from the date of their issue.

## DELHI POLYTECHNIC ART EXHIBITION

ER Excellency Lady Mountbatten speaking at the opening of the Delhi Polytechnic Annual Art Exhibiton on Jan. 22 said: I am most grateful to Mr. Fairbairn and Mr. Chakravorty for the very charming welcome they have given me on behalf of you all and I would like to say how very much I appreciate the invitation extended to me to open this annual Exhibition of work done by the students and staff of the Art Department of the Delhi Polytechnic.

It is most encouraging to know the headway this Department has made since it was started in 1942 and I earnestly hope it will be possible for your authorities' ambition that it should be developed into a Central School of Arts and Crafts to be fulfilled before long.

#### Delhi as Art Centre

The present day-to-day problems and needs of the people are such that it is all too easy to forget their cultural welfare. As the capital city of the new Independent India, housing diplomatic and foreign visitors from all parts of the world, it is only right and proper however that Delhi should be able to hold its head high as a centre of artistic life.

When I was in London I had the opportunity of visiting the magnificent Indian Art Exhibition at the Royal Academy, and you can indeed be proud that examples of the work of your students and staff here were on view, enabling people in England to realise that artistic effort and achievement is not only a thing of antiquity but is being vigorously maintained today.

Since my arrival in India last year I have seen a good deal of the work of those connected with the Delhi Polytechnic and have been highly impressed by the standard of their work and skill. I have in my possession some of the products of their craftsmanship which I hold in very high regard including a beautiful vase which was presented to me by students of the Polytechnic.

If the pioneer work you are doing here is to bear fruit, it must enjoy public sympathy and patronage. Arts has always required its patrons and never more so than now.

#### Scope for Development

From all that I have seen in India during the past year it is clear that there is ample scope in this country for the development of fine art, industrial and commercial art, sculpture and crafts. With sufficient public support it will be possible to invite experts in these different branches to come forward and to encourage the students to study arts and crafts which, quite apart from their intrinsic artistic value, would be of practical value to the nation.

May I congratulate your Art Department on the wide range of work it is exhibiting? It is a great tribute to the enterprise of Mr. Chakravarty and his staff, as well as to the keenness and talent of the students.

In opening this Exhibition I wish it every success and commend it most warmly to the patronage of all who value art in Delhi.

INDIAN INFORMATION, FEBRUARY 15, 1948

Digitized by

A two-day session of the Governing Body of the Indian Council of Agricultural Research opened in New Delhi on January 29.

Mr. Jairamdas Deulatram, Agriculture and Food Minister is seen addressing the Session. Picture shows (from L. to R.)

Capt. Ranjit Singh, Development Minister, East Punjab; Mr. S. M. Srivastava, Secretary, I. C. A. R.; Sardar Datar Singh, Vice-Chairman, I. C. A. R.; Mr. Jairamdas Daulatram; Mr. B. R. Sen, Secretary, Ministry of Agriculture; the Hou'ble Mr. R. K. Patil, Minister, C. P. and Berar and the Hou'ble Mr. Siddaiya, Minister, Mysore

## INDIA MUST BE SELF-SUFFICIENT IN FOOD

# Mr. Jairamdas Daulatram On Problems Of Agriculture

our country than that of food. It ought to be given the priority which is its due to-day. We must make India self-sufficient in regard to food and that also soon", stated Mr. Jairam-das Daulatram, Agriculture and Food Minister, Government of India, opening a two-day session of the Governing Body of the Indian Council of Agricultural Research in New Delhi on Jan. 29.

The full text of the speech is as follows:—

It gives me great pleasure to welcome you all here for this the seventeenth meeting of the Governing Body of the Indian Council of Agricultural Research. It is the first meeting of the Governing Body after the attainment of Independence and the partition of the country. The changes necessitated in the constitution of the Council on this account have been approved at a Special General Meeting of the Council held recently and they have been brought into force with immediate effect. I take this opportunity of welcoming the representatives of the two newly created provinces of West Bengal and East Punjab and also the representative of Jaipur State which has joined the Council only recently.

## Napoleon's Dictum

I would first of all like to refer to the most important need of the country at the present moment, I mean the necessity of doing all we can to improve its food situation. We hardly realise the truth that probably no problem is more important for our country than that of food. It ought to be given the priority

which is its due. Napoleon's dictum that "the army marches on its belly" is as true to-day as it was a century and a half ago. We must make India self-sufficient in regard to food, and that also soon. I wish the Centre and the Provinces combined materially to increase the sowings of May and September 1948. The task before us is of a very emergent character and we require the active co-operation of every individual in the country in tackling this great problem.

#### Fruits and Vegetables

As you are all aware for several years now India has failed to produce the food it requires and the partition of the country has made the position worse. It is incumbent on the Council in common with other national organisations to do its utmost to bridge the gap by under-taking useful research for both short and long term plans and by transferring the practical results of such research to the farmer's field. I am gratified to find that this problem has already received the attention of the Advisory Board who have stressed the necessity of chalking out a programme of urgent research to help the campaign of Food self-sufficiency. I am glad also that the necessity for having suitable legislation on certain important aspects of the problem has also been carefully considered by that body, and I hope the matter will be taken up in right earnest by all concerned.

One particular point I would like to mention in this connection is that with the exclusion of certain tracts from the Indian Union the situation regarding protective foods such as fruits and vegetables and fish has considerably deteriorated. I understand that the I.C.A.R. is calling a Conference of Horticulturists some time in March next. I have no doubt that the Conference will review the present position and suggest practical methods for meeting the shortage of fruits and vegetables in the Union. An urgent review of the position in respect of other articles of foodstuffs e.g., fish, milk, potatoes etc. will also be required. Several other nations do not consume per capita as much cereals as we do and yet have better physique and health. India's present shortage in regard to cereals could also be easily remedied if the nation altered its dietetic habits and consumed other foodstuffs. I hope that the Council will conduct a proper research into all these matters so as to make India self-sufficient in Food.

#### **Eradication of Pests**

While research must be concentrated on the task of evolving better and higher yielding varieties of crops, in discovering better cultural practices and in placing more efficient tools in the hands of the cultivators, while due attention must be paid to the improvement of the animal husbandry resources of the country and while, as I have already said, the highest priority should be given to the increase of the food supply of the country, attention must also be given to the eradication of pests and diseases of crops and cattle in order that the country may be saved from enormous losses of foodstuffs for which these are responsible. I am glad therefore to find that a serious attempt is going to be made to control the wheat rust and other pests which effect crops and animals. As regards wheat rust, the Central Government have set up a Committee to co-ordinate the work of control and Government will finance the carrying out of this important work.

Survey and improvement of soile,

production and use of manures and fertilisers and manurial and varietal trials as recommended in the extremely valuable report submitted by Dr. stewart have also to be undertaken. I am sure that if the experiments recommended in the report are conducted not only on individual cultivators' fields but also on an all-India basis they will yield valuable data regarding the optimum yields of crops.

As you are aware, there is a serious dearth of technical personnel in the country at the moment and Government has taken upon itself the responsibility for sending men abroad for purposes of training. I hope that in the near future we shall have ample technical staff needed for our plans of progress. But even then the main problem will remain viz., to link our existing manpower with the vast material resources of the country and to develop them according to a plan, for in planned scientific development only lies the salvation of the country. I am glad, therefore, to know that the Council has taken up the quarties of the country. taken up the question of undertaking research on the basis of a planned programme from the Centre and on a regional basis. In framing our plans for agricultural progress we should work for a reasonable degree of regional self-sufficiency in regard to food. I have every hope that the provinces will give in this matter their fullest co-operation.

I think the Council was wise in amending its Charter to include developmental research and activities, for, in my opinion development cannot be divorced from research but must proceed hand in hand together. I shall be very much interested to know the results of the Delhi Development Scheme which the Council intends to work out. I understand that the intention is to apply all known improved practices in agriculture and animal husbandry in certain selected villages near about Delhi in order to prove to the cultivators what can be achieved by tackling their problems scientifically.

#### Cost of Production

The economic aspect of the Council's researches should also be kept in view. As one of my predecessors has once said. a poor country like India can ill-afford "Ivory Tower" research divorced from the realities of life and the needs of its cultivators. I welcome, therefore, the experiment that you propose to carry out regarding putting the "cow on the plough". Science must be utilised to serve the needs of the country but at the same time the economic aspect must not be overlooked. Agriculture being the most important industry in the country the cost of production must play an important part in all the activities of the Council. I was interested to know that the Council had been carrying out crop-cutting experiments for years now and that these experiments had been found to be very useful in estimating the crop yields in the provinces. Crop estimation is by far the most important aspect in the country's economy and I hope that the Union as a whole will adopt the technique in due course.

I regret to say, however, that one aspect of the Council's activities has not yet received the attention it deserves, that is its publicity and propaganda side. The Council must function effectively as the clearing house of information relating to agricultural and animal husbandry research and I would, therefore, suggest that its information activities must be put on a satisfactory basis as early as possible.

The partition of the country has prejudicially affected the financial resources of the Council and the income expected from the levy of a cess on agricultural produce is bound to fall in future. If the Council is to function satisfactorily it will be necessary for it to be provided with more funds than it can expect to get out of the cess. I hope that this body will make a strong representation to Government so that it may agree to make a suitable recurring grant to the Council for at least some years to come. I understand that the Advisory Board have recommended that the Government of India should be asked for necessary grants in connection with certain important activities e.g., (a) carrying out of the agronomic and varietal trials recommended in Dr. Stewart's report, (b) utilisation of bone meals, (c) carrying out of research on tubers etc. I think this is a step in the right direction and hope that Government will come forward with liberal grants required for these and other purposes. It is impossible for this organisation to serve the people of India unless its financial resources are very ample.

There are two other matters a reference to which is, I feel, called for in view of the circumstances existing in the country. Heavy loss to food crops in India is being caused by insect pests and plant diseases, amounting roughly to about 500 crores of rupees. This damage is caused not only to crops when growing in the fields but also to grains after harvest and during storage, in fact till they are processed and consumed.

Several important authorities such as the Indian Famine Commission (1943), the Food and Agriculture Organisation of the United Nations, have suggested very high priority to plant protection work in food production programme and in fact the Council of the F. A. O. have expressed the opinion that this single factor if properly attended to, can considerably reduce the food deficit of the world.

A good deal of the loss caused by pests and diseases can be avoided if control operations are taken in time and in a properly organised manner. It is therefore imperative that provinces should establish adequate Plant Protection Organisations for carrying out field scale control operations against more serious pests and diseases. The most essential pre-requisite for establishing such organisations is the appointment of well qualified Entomologists and Mycologists at the provincial headquarters. At present only the three provinces of U. P. Bombay, and Madras have such experts and these provinces are taking steps to establish Plant Protection Services for field work. The rest of the provinces, many of them are deficit, should emulate the examples of these provinces.

Control operations against some serious pests can be undertaken by simple methods, while others require power-operated sprayers and dusting machines which are unfortunately not

## Research Schemes On Food Production

MPORTANT research schemes on food crops production were approved by the Governing Body of Indian Council of Agricultural Research at its meeting held in New Delhi on Jan. 29 under the chairmanship of Mr. Jairamdas Daultaram, Agriculture Minister. To help India to become self-sufficient in food-grains as urgently as possible, research is to be carried out inter alia on the evolution of hybrid strains of maize, on improved varieties of pulses and millets, weed control, root crops and soils and manures.

#### Delhi Scheme

The scheme for the development and improvement of a group of 20 villages in the Delhi Province was adopted. The object of the scheme is to see what improvements can be achieved under existing village conditions as distinct from conditions prevailing in Government farms, and how the present methods should be modified to suit the average cultivator to enable him to apply the results of research in his day-to-day work. The five-year scheme has been prepared to improve both agriculture and animal husbandry in two compact blocks, one

of the irrigated and another of the unirrigated area of Delhi Province.

The Council of Agricultural Research has undertaken to establish a Central Potato Research Institute, for which the Government of India will provide the necessary funds.

The meeting adopted the following resolution on co-operative farming"

"The Indian Council of Agricultural Research should place at the services of Provinces and States who require it, all the experience and technical sovice which is available for the furtherance of co-operative farming".

The budget estimates for 1947-48 and 1948-49 were approved and members elected to the Standing Finance Committe of the Council.

The meeting was attended among others by the Ministers of Agriculture from C. P. and Berar, Mysore, Orissa and East Punjab, Mr. B. R. Sen, Agriculture Secretary, Government of India and Sir Datar Singh, Vice-Chairman Indian Council of Agricultural Research.

so far available in India. Arrangements are being made for the import of a small number of such machines which after trial for a season or two will be selected as model for the manufacture, if possible, of such machinery on a large scale in India. As regards pests and diseases which can be controlled by other methods -the number of such enemies of food is also large—the Plant Protection Adviser to the Government of India is going round the provinces and suggesting in consultation with local experts what pests and diseases can be tackled immediately with the facilities available. It is hoped that during 1948 all provinces will endeavour to control these saboteurs of our food resources which, are today inadequate for the needs of the country. The Plant Protection, Quarantine and Storage Organisation of the Ministry of Agriculture will always be available for any assistance at the spot which the pro-vinces may require. It need hardly be emphasised that the urgency of establishing provincial organisations is great.

## **Marketing Problems**

The question of marketing of agricultural produce also needs attention. Though all provinces recognise the importance of improvements in Agricultural Marketing, of late there has been a tendency to side-track the subject and in some provinces the organisation which had been set up to deal with the problem has been disbanded. In the East Punjab there has been a complete breakdown while in the United Provinces orders were recently issued to disband the office of the Chief Marketing Officer. Assam disbanded the Marketing Staff in April 1947.

In the majority of provinces the Marketing Staff was utilised for Civil Supplies work since after the break of war and consequently there was a dislocation in marketing work. I would request all provincial Governments to take stock of the existing agricultural marketing problems and immediately formulate and execute new shemes of marketing with special reference to co-operative marketing, regulation of weights and measures, organisation of regulated markets and introduction of quality standards.

I do not wish to add to the length of my remarks at to-day's meeting by referring to other equally important matters. I would now invite you to take up the fairly long agenda which has been placed before the meeting.

## CATTLE SHOW COMMITTEE

The eighth meeting of the All-India Cattle Show Committee was held in New Delhi on Jan. 30 under the chairmanship of Mr. Jairamdas Daulatram, Minister for Food and Agriculture.

The members agreed to approach the Central Government for a recurring grant of Rs. 1,75,000 for meeting the increased activities of the Committee. It was also agreed to abolish the Hissar breed of cattle for exhibition purposes.

Sir Datar Singh was elected Vice-President of the All-India Cattle Show Committee, Rai Bahadur P. N. Nanda as Chairman of the Executive Committee and Shri Desraj, Revenue Minister, Bharat-pur and Mr. B. N. Nanda as members.

# FOOD SELF-SUFFICIENCY DRIVE IN PROVINCES

PRACTICAL steps to increase India's foodgrain production in 1948 were discussed by Mr. Jairamdas Daulatram, Agriculture Minister, with the Ministers from C. P. and Berar, Mysore, Orissa, and East Punjab, and with the officials of other areas, who attended the meeting of the Governing Body of Indian Council of Agricultural Research on Jan. 29.

In his opening remarks, Mr. Jairamdas Daulatram stated that while the general question of increasing 'India's food production had been discussed often before, at this informal conference they should concentrate on measures for increasing the sowings of crops in 1948 so as to secure the maximum food outturn at the end of the year. It was necessary therefore to discuss only such schemes which could be implemented in the current year and which would be readily acceptable to the cultivators.

#### **Needs of Provinces**

The representative from Madras inter alia stated that the demands of his province were (1) high priority for the movement of manures (2) larger supplies of pumping sets for the areas affected by the failure of the monsoon, and more iron and steel for agricultural implements (3) priority for the movement of diesel oil and an additional allotment for the next few months (4) prohibition of inter-provincial movement of ground-

nut cake and (5) the supply of more tractors and larger supplies of nitrogenous manures.

On behalf of the Central Government, the action already taken in regard to the various points raised, was explained. There were world shortages of diesel oil and nitrogenous manures, and India's production of iron and steel had fallen by a third since pre-war. Even so, specific quantities were being earmarked to provinces for agriculture, from the steel quotas allotted to them.

## **Tractors for Mysore**

The Agriculture Minister from Orissa desired more oilcakes and pumps to increase production in his province. He would also welcome technical advice to increase fish supplies, particularly in the Chilka lake.

The Mysore Minister required pumps for agricultural needs, assistance in securing tractors for the reclamation and cultivation of waste land, and larger supplies of trucks and petrol for transport.

On behalf of the Central Government, it was explained that owing to earlier commitments to other areas, no tractors were available for Mysore for the next Kharif crop, but it might be

## Comrades in a Common Cause

An earnest plea for a complete identification of Government officials with the masses of the people and vigorous and energetic action in building a strong and prosperous India was made by Mr. Jairamdas Daulatram, Agriculture Minister, on Jan. 23 addressing the Ministry of Agriculture.

After the 15th of August, stated the Agriculture Minister, India had become politically free, but real freedom would only come when the fruits of 'swaraj' were made available even to the humblest individual. "For that a mental revolution was necessary in two directions, first the cultivation of brotherly feelings towards all, a spirit of common endeavour, and second a realisation of the fact that there is no distinction between government officials and the people. We are all comrades in a common cause, the uplift of our nation.".

Elaborating the theme, Mr. Jairamdas Daulatram stated that it was not sufficient if efficient work was done in the offices, but it must be realised that we were all members of one common family, and suffering in one part of the country must affect us all in equal measure. Unless we cultivated this spirit of commonness, we could not aspire to be a great

Referring to a news item in papers regarding the refusal of labourers of the Tanjore District of Madras to harvest the crop, Mr. Jairamdas Daulatram stated that there was probably some grievance behind this incident, but it was not realised that this action might affect the food supply of our own countrymen. There must be a more active, positive and vigorous attitude of co-operation amongst us all. "We are on our trial, and the world is watching to see what we make of our freedom. If we acquit ourselves nobly, we shall earn a name for ourselves in history."

Agriculture, stated the Minister, was a positive and productive activity, and it would be his endeavour to enlarge the scope and activities of the Agriculture Ministry. Their responsibilities had increased with the adoption of the policy of decontrol in foodgrains, and all their efforts had now to be mobilised to meet the new conditions.

Mr. B. R. Sen, Agriculture Secretary, assured the Minister, of the loyalty of his colleagues and staff.

Earlier in the day, Mr. Jairamdas Daulatram addressed the Ministry of Food on similar lines. possible to supply a unit of 15 tracttors in time for the rabi sowings.

The Minister from the C.P. required assistance from the Centre in the following directions (1) engineering staff on a temporary basis for minor irrigation schemes (2) technical advice for siting wells (3) larger supplies of iron and steel (4) supplies of oil engines and pumps (5) liberal supplies of arms and ammunition to protect crops against the ravages of wild pigs. The Government of India was supplying 30 tractors for reclaiming 20,000 acres of waste land in the Saugor district.

Bihar needed assistance in securing more building materials and iron and steel. Punjab's requirements consisted of jower seeds, fodder for cattle, supplies of iron and steel and tractors. It is expected that about 200 tractors will have been delivered to East Punjab by June.

Mr. Jairamdas Daultram in his concluding remarks suggested the establishment of emergency machinery both at the Centre and the Provinces for increasing the food output during the next two seasons.

## REGIONAL STATISTICAL CONFERENCE

A Regional Conference on Statistics will be held at Singapore from January 27 to January 30 under the auspices of the Special Commissioner, South-East Asia, said a Press Note issued by the Ministry of Agriculture on Jan. 23. The Conference will discuss statistical methods with particular reference to food production and consumption, as they are now followed in the different countries of South-East Asia, to enable statistics to be compiled on a comparable basis.

The Government of India delegation to the Conference will consist of Dr. P. V. Sukhatme, Statistical Adviser, Indian Council of Agricultural Research as Leader and Mr. G. M. Sankpal, Director, Bureau of Economics and Statistics, Government of Bombay, as member.

## GOVERNMENT SERVANTS' SCALES OF PAY

Government servants, who were given the option to elect the rates of pay prescribed in the Schedule to the Central Civil Services, (Revision of Pay) Rules, 1947, issued with the Finance Department Notification No. F. 11 (1)—Establishment (Special)-47, dated July 29, 1947, were required to do so within six months of the date of issue of the rules.

In view of the fact that the scales of pay in respect of certain services and posts still remain to be prescribed, and due to certain other reasons, it has not been possible for the persons concerned to exercise the option within stipulated period, which expires on January 29, 1948.

The Government of India have, therefore, decided to extend the period of election up to April 29, 1948, says a Press Communique, issued by the Ministry of Finance on Jan. 21.

# DR. KUMARAPPA'S SUGGESTIONS TO INCREASE FOOD PRODUCTION

Ofar the researches carried out on problems of agriculture have been mainly for the henefit of the rich. We must now reverse the process, and undertake research schemes which will benefit the poor cultivators. Swaraj will have no meaning unless we realise that the masses are our masters and their needs should be paramount", stated Dr. J. C. Kumarappa of the All India Village Industries Association, at an informal conference of the officials of the Ministry of Agriculture which had been arranged by the Minister for Food and Agriculture on January 28 to discuss various problems relating to the programme of making India self-sufficient in food.

India was an agricultural country, he said, and any shortage in food should not last for more than 6 months or for more than a year at the most. The Agriculture Department can be an insurance against food shortages.

Dr. Kumarappa continued: "We have to tackle this question of food shortage on various fronts, such as the production, distribution, preservation and consumption of foodgrains. We have also examined the possibilities of instituting reforms and changing conditions by which we can reduce the grain requirements of the people. The Agriculture Department is one of those departments which must benefit mainly the producers.

One method of solving the problem was to give high priority to the production of food crops such as cereals, oilseeds, fruits and vegetables in preference to commercial crops. For this it would be necessary to plan on the basis of small self-contained village unit. A group of 30 or 40 villages for instance with a population of about 50,000 could be grouped for such a purpose, and it would be easier to work out a balanced diet for the people in such an area. It would probably be necessary to introduce crop planning by legislation. We must have a regular plan of production not in regard to money crops but for food crops.

On the question of distribution, Dr. Kumarappa stated that the primary aim should be to feed the local village population. That would also solve to some extent, the problem of long distance transport, because long distance transport was necessary only to meet the requirements of deficit areas. If groups of villages were made self-sufficient in food, it would also be possible to eliminate to a large extent, middlemen.

The Government should also develop multi-purpose co-operative which could help avoid the which now results on account of untimely sowings. Co-operative societies could also supply the needs of the villagers such as seeds, implements and manure.

## ECONOMY COMMITTEE SET UP

A resolution of the Central Government was published on Jan. 28 constitututing an Economy Committee in response to the widespread desire expressed in the Constituent Assembly (Legislative) on a cut motion by Shri B. Das regarding economy in expenditure. A Press Note issued by the Ministry of Finance on Jan. 28 says: During the War, enormous expansion of Departments took place, and no systematic review has been made since its termination to effect legitimate reduction. Government have, therefore, been considering for some time the need for a scientific enquiry into the growth of expenditure of the various Departments, their attached and subordinate offices since 1938-39 and the promotion of economy and elimination of waste in the context of altered conditions, having due regard to the requirements of normal Governmental activities and the development plans which they propose to carry out as a National Government of a free and independent India.

The composition of the Committee is as follows:

Shri Kasturbhai Lalbhai—Chairman; Shri B. Das, Member, Constituent Assembly; Shri S. K. Patil, Member, Constituent Assembly; Shri T. A. Ramalingam Chettiar, Member, Constituent Assembly; Shri Ishwar Dayal, Accountant-General, Members and Shri G. S. Rau, Deputy Secretary in the Finance Ministry will act as Secretary.

It is the endeavour of the Government to carry out a scientific investigation of the needs of the various Ministries etc. and the composition of the Committee as set out above, representing as it does the experience of business, the legislature and the Government Departments, is a guarantee to that end. Government have impressed on the Chairman and the Members of the Committee the expeditious nature of the work. They have accordingly directed the Committee to make interim reports in respect of the various Ministries so that action can be taken as quickly as possible on the recommendations of the Committee.

## INCREASED FACILITIES FOR TRUNK CALLS

In order to provide increased facilities for the booking of trunk calls by the public and to avoid congestion on the lines due to priority calls by officials, the Government of India have restricted the duration of priority calls of the category 'Immediate' to 9 minutes, says a Press Note, issued by the Directorate-General, Posts and Telegraphs, on Jan. 21.

This, it is hoped, will lead to early maturity of calls booked by the public.

Digitized by Google

The aim should be to help farmers to overcome their various difficulties.

India was a food producing country and there was no need for imports from abroad. He felt that there had been a diversion of land from food to commercial crops. In Malabar for instance about 20 per cent of the land under food has been diverted to money crops. Referring to polished rice; Kumarappa said that the rice mills enabled the storage qualities of rice to be better, but all the nutritive value was lost. If rice mills in the country were abolished the nutritive value of the rice would go up by 10 per cent. As far as the rich people were concerned they could supplement their diet with other things, but in the case of the poor they were at present getting rice devoid of all nutritive

Turning to the growth of the sugar industry in the country, Dr. Kumarappa instanced the case of Bihar which had become deficit in rice by turning to sugarcane. The use of gur which had more nutritive value would mean less area under sugarcane and thus more under rice. Sugar was a devitalising food for it drew upon certain minerals from the body for its digestion. Therefore, it should have no preference over rice. We had to think in terms of the masses and not the city dwellers. From this point of view, the increase in tobacco cultivation in Andhra was another step towards national suicide.

#### Manure

To meet the villager's need for manure, co-operative societies could be organised to arrange suitable subsidies for the manufacture and distribution of compost from night soil. This could become an industry as individual farmers could not be expected to manufacture their own manure. Artificial manures might be utilised where farm-yard manure was not available, but it should not replace natural manure. By the use of compost, the increase in production would probably be more than by using chemical fertilizers. While details had not been worked out, there was a suggestion to utilise cowdung in villages for the manufacture of methane gas which would serve as fuel, and the residue after the manufacture of the gas could be used as manure.

Although valuable researches had been carried out, it was necessary to fit these into the farmer's economy. At present the Agriculture Department did not have sufficient field workers to carry the knowledge from the laboratories to the farmers. It was, therefore necessary to expand its contacts with the cultivators.

The speaker referred to his recent visit to England where he had found the younger generation in better health than before the war. One explanation for this was the greater intake of fruits and vegetables and milk products than before since England had less cereals than before the war. He did not see any reason why, as in England, people here too should not take more to vege-

tables. This intake of cereals need not be as much as it is now.

Mr. B. R. Sen, Agriculture Secretary, speaking on behalf of the Department explained what the Department had been able to achieve in regard to the different suggestions made by Dr. Kumarappa. In the course of his remarks he stated that the broest Department was already working on schemes of planting quick growing trees which would help solve the villager's problem of fuel shortage, and night soil was being converted into compost. Out of 700 large municipalities 250 were already producing compost and the Government of India were subsidising its distribution to the villagers. The present difficulties were in securing sites for settling tanks and in securing the technical staff.

In regard to the question of commercial crops many factors had to be taken into consideration. Without commercial crops they could not, for instance, earn the necessary foreign exchange which was essential for India's industrial development.

### Minister's Observations

Mr. Jairamdas Daulatran, Agriculture Minister thanked Dr. Kumarappa for his views on Agriculture, which in broad outline were the views of Gandhiji. In commending these to the officers of the Agriculture Ministry, for examination, he said, "A man of science is not a true scientist if he is not open-minded and always prepared to receive new ideas. We must welcome such ideas and test them in the light of our experience disinterestedly and dispassionately and if we find that they contain some element of truth then we should try to implement them. Unless we adopt such an attitude, we cannot progress, we cannot move forward".

## HALF-YEARLY JUTE EXPORT QUOTA

The Government of India have reviewed the supply position in regard to raw jute vis-a-vis the requirements of mills etc. and have decided that the quota for the current half-year ending June. 25, 1948, should be restricted to 5,00,000 bales, says a Press Communique issued by the Ministry of Commerce on Jan 29. Should the supply position, however, indicate later an overall improvement, the question of the release of a further quota will be taken up for consideration.

Exports will be allowed on the same basis as announced in the Press Communique of January 8, 1948; that is on the production of bona fide evidence that firm contracts have been concluded with importers abroad.

Applications will be invited by the Deputy Chief Controller of Exports, Calcutta, for the entire six-monthly quantity. Intending exporters should approach him for further details, including destinational quotas and the last date for submitting applications.

## INCREASE IN TALCHER COAL PRICES

The Government of India have announced in a Gazette of India (Extraordinary) an increase of He. 1-6-0 per ton in the price of coal produced in Talcher State; the revised prices will be Rs. 14-6-0 per ton of run-of-mine, dust coal and slack and Rs. 15-6-0 per ton of steam coal, rubble and smithy nuts. The increase is the result of a rise in the cost of production following the grant of certain wage increases to labour in accordance with the policy adopted since last year of securing an improvement in the wages and working conditions of colliery labour.

The revised prices took effect from January 30, 1948.

# **EXPORT OF RAW COTTON:** FURTHER RESTRICTION

The Government of India annunced in a Press Communique dated November 30, 1947, that the export of long staple raw cotton (13X16" and above) would be prohibited.

A Press Communique issued by the Chief Controller of Export Office, on Jan. 19, says that in view of the practical difficulties involved in administering this restriction and of the imperative need for the conservation of suitable types of raw cotton for use in the mills, it has been decided to prohibit, with immediate effect, the export outside the Indian Union to all territories, including Pakistan, of all raw cotton except the following specified varieties, namely,

Bengal Deshi, Oomra Deshi (excluding CP I and II), Math, Assams and Commillas.

To avoid hardship, however, to such exporters as may have effected confirmed sales of varieties of short and medium staple cottons, other than those specified above, prior to the announcement of this prohibition, the Government has decided that consignments covered by sales effected prior to this date will be allowed to be exported, provided documentary evidence is produced to the Export Trade Central authorities at the port of export within three days of this announcement.

Therefore, exporters concerned are advised to contact the Export Trade Central authorities at the port concerned with such evidence immediately. Claims received after three days of this announcement will not be considered.

## BETTER CONDITIONS FOR FACTORY WORKERS

## Labour Minister's Speech In Parliament "Even with these changes, the new definition will not cover all workers. I

OVING for reference to a Select Committee the Bill to consolidate and amend the law regulating labour in factories the Hon'ble Mr. Jagjivan Ram, Minister of Labour, said in the Dominon Parliament on Jan. 30: "When this Bill is passed into law, we would have placed on the Statute Book a Factory Law, which if properly enforced, will secure a marked and distinct improvement in working conditions."

Mr. Jagjivan Ram pointed out that if the House agreed to the Bill the number of industrial establishments subject to control would be trebled and protection would be extended to 35,00,000 of factory workers.

Speaking on the main changes that had been introduced in the Bill, the Labour Minister stated: "We have tried to implement as many of the provisions of the International Labour Organisation Code of Industrial Hygiene as are practicable under Indian conditions. The provisions relating to periodical medical examination of young persons and the submission of plans of factory building are also from I.L.O. Conventions. We have also freely drawn upon the British Factories Act, one of the most comprehensive pieces of legislation on this subject."

#### Administration of Law

Mr. Jagjivan Ram confessed that the administration of the law required considerable tightening up. Ever since he took charge he added, he had kept this question prominently in view. In every one of the half-yearly conferences with Provincial Labour Ministers, this question was discussed in some form or other. The difficulty of the Provincial Governments was stated to be mainly of finance. Although the centre had no executive responsibility in this matter, it had set up an Advisory Organisation to study the various aspects of factory administration in this country and elsewhere and advise the Provincial Inspectors. This organization was also running training and refresher courses for the Provincial Officers. He hoped, therefore, that before long we would have a corps of trained officers, adequate in number, to secure strict enforcement of the

Mr. Jagjivan Ram said: "This Bill was introduced at the last session. It has been circulated by executive order for eliciting opinion. We hope to receive the opinions before the end of April. The Select Committee can meet sometime in May or June, as may be convenient, and submit its report to the House in the next Session.

"The object of the bill is not only to consolidate the law relating to work-

ing conditions in factories, but also to introduce certain important new features."

Explaining the important changes that have been proposed in the Bill, the Labour Minister continued : "The existing law applies only to industrial establishments where manufacturing process is carried on with the aid of power and where 20 or more persons are working. There is an enabling provision authorising Provincial Governments to extend the provisions of the Act to establishments using power and employing 10 or more workers. But this enabling provision has been made use of only to a very limited extent, with the result that Factories Act may be said to apply only to industrial establishments using power and employing 20 or more persons. A few Provinces have enacted legislation to regulate factories where power is not used. But even such legisla-tion is applicable only to establishments where 50 or more workers are employed.

#### Protection for Workers

"It is now proposed that the law relating to factories should be made applicable to all industrial establishments employing 10 or more workers where power is used and 20 or more workers in all other cases. As a result of this change the number of establishments subject to control is likely to be trebled. The number of workers to whom the protection of the Factories Act will extend will increase immediate-ly from 25 to 35 Lakhs. The country is now setting upon an era of industrial expansion. We are all agreed that, as far as possible, this industrial expansion should not take the form of a limited number of big factories, but rather of a large number of small industrial establishments dotted all over the country. It, therefore, becomes necessary that our law relating to factories should be made applicable to the smaller establishments also. It is with this view that the definition has been widened.

The present Act makes a distinction between seasonal and perennial factories. Becuase the seasonal factories work for only a part of the year, there is a tendency to be somewhat lenient in the enforcement of standards relating to safety and health. This is not a satisfactory state of affairs. Whether a factory works for a part of the year or for the whole year, provisions relating to safety, health and welfare should be equally applicable. We have, therefore, done away with the distinction between perennial and seasonal factories.

feel, and I am sure the Hon'ble Members will agree with me, that regulations relating to cleanlines, ventilation, lighting, supply of drinking water, the provision of sanitary conveniences, fencing of machinery, hours of work, weekly day of rest, prohibition of the employment of children, reduced hours of work for adolescents should be applied to all work places, irrespective of the number of people employed. The difficulty in extending these essential provisions is mainly an administrative one. As I have said, the new definition of factories will treble the number of establishments subject to control. The Inspectorate will need considerable strengthening. Provincial Governments should be given sometime to organise a bigger Inspection service. As soon as satisfactory arrangements are made to secure a proper enforcement of the Act to establishments covered by it. Provincial Governments will be in a position to extend the essential provisions relating to health, safety, welfare, hours of work and age of entry into employment to other work places. To enable them to do so, a provision (Section 86) has been added giving power to Provincial Governments to apply these provisions to any premises where a manufacturing process is carried on, with or without the aid of power, except where the work is done by the worker solely with the aid of his family.

#### Safety Provisions

"The elaboration of the provisions relating to health, safety and welfare deserve attention. The existing Act leaves far too many things to be covered by rules or to be done at the discretion of the Inspector. The rules are not always uniform, and the discretion cannot be exercised in a uniform way, with the result that there are considerable variations in the standards applied to different factories and in different parts of the country. Another serious defect in the existing legislation is that it leaves many matters to be attended to only at the instance of the Inspector. There is no obligation on the factory owner installing new machines, not specifically covered by the rules or notified by the Inspector as dangerous, to take any measures for the safety of their workers. With the rapid technological advancements that are taking place, installation of new types of machinery and the introduction of new processes will be of frequent occurrence. The adoption of safety measures cannot be postponed till provision is made for them in the rules. The only satisfactory method is to lay on the factory owner a clear and definite responsibility for taking all measures necessary to secure the safety of workers in his factory. If we are to lay this responsibility on the owner, the precautions to be taken and the standard to be observed in regard to health and safety measures should be clearly prescribed in the Act itself. This is precisely what has been attempted in the Bill.

"An additional and no less impor-tant advantage of this procedure will be the enforcement of a definite and uniform standard in all industrial establishments and throughout the country. Sections relating to the casing of new machinery, hoists and lifts, cranes and other lifting machinery, pressure plant, precautions to be taken against dangerous fumes, ex-plosive or inflammable gases, are all new. The obligation relating to the casing of new machinery, has been imposed not only on the factory owner, but on the manufacturer of the machinery or his selling agents as well. In the Chapter dealing with the disposal of wastes and effluents, the specific provisions relating to ventilation and temperature are new. Similarly, the sections relating to the provision of cool drinking water during hot weather, the employment of cleaners to keep the water closets clean, the obligation to provide suni-tary water closets in all establishments are new provisions.

"In the chapter relating to welfare, we have made provision that in every factory where are workers obliged to work in a standing position, suitable arrangements for seating should be provided, so that they may rest whenever they get an opportunity. Where a worker can work efficiently in a sitting position, then seating arrangement should be provided for him. The sections relating to facilities for storing and drying clothing is also new one.

## Scrutiny of Plans

"If the arrangements for the welfare of workers are to be successfully managed, it is essential that workers must realise their responsibilities in the matter and should be actively associated in their management. Section 50 of the Bill provides for such association. An enabling provision has also been made under which the owner of any factory, employing 500 or more workers may be required to appoint a suitable Welfare Officer, whose specific duty it will be to look after the welfare of the workers. To ensure that the right type of people are appointed and to give them a measure of security and independence, Provincial Governments have been given power to prescribe the duties, qualifications and conditions of service of these officers. Honourable members will appreciate that this is an important provision.

"Another important provision, to which I would like to invite attention of the House, Sir, is the one embodied in Section 7 providing for the scrutiny of the plans and specifications of factory buildings and their layout by the Factories Inspectorate. In quite a number of buildings, walls and roofs have not been so constructed as to keep the temperature, which in our country shoots upto 110 or 120 degrees

in summer, as low as possible. Again, even such an elementary thing as pro-per flooring is not done according to the requirements of the processes car-ried. Then again, rest sheds, wash-ing and bathing places, water closets have all to be located at convenient places. The layout should be such as will promote, to the maximum extent, the safety and health of the workers in the factory. Where the manufac-turing process is such as will throw out considerable quantities of wastes and effluents, it is of great importance that proper arrangements should be made for their disposal, so that they may not affect the public health of the neighbourhood. Very often buildings are put up without proper consideration being given to these aspects. Later on, it becomes difficult to rectify the defects. We have, therefore, introduced a section so that before the buildings are erected, the plans and specifications are examined with a view to seeing whether the provisions of the law relating to matters of health, welfare and safety been complied with and proper arrangements will be made to dispose of the wastes and effluents.

## Age of Entry Raised

"In regard to employment of workers, we are raising the age of entry from 12 to 13. Young persons who have not attained the age of 18 years, instead of the present limit of 17, will be considered as adolescents. If they have not reached sufficient physical maturity to be classed as adults, their hours of work will be only 4½ hours instead of the present limit of 5. The provisions relating to medical examination of young persons are also being strengthened. Hereafter they will be examined not merely before initial employment, but every year.

"The Chapter dealing with holidays with pay has been revised to provide for the grant of holidays to workers who, have done six months' service. This is a new provision. The definition of authorised leave has also been revised to provide for unauthorised absence upto a limit of twenty days in a year. In regard to casual absence due to illness or other reasonable cause it would be sufficient if the worker gives the reasons for his absence within three days from the commencement of such absence. These provisions will remove a source of dispute between employers and workers whether a particular absence is authorised leave or not, and if it is not an authorised leave, whether the worker is at all entitled to leave in respect of any preceding period.

"Information in this country regarding occupational diseases is somewhat scanty. The factory owner and the medical practitioner attending upon factory employees are the persons who can give useful information. Provision has been made requiring these people to give information regarding accidents in factories causing death or serious injury or of diseases treated. Power has also been given to take

samples of substances used in the manufacturing process, if its use is either contrary to the provisions of the Act or likely to lead to injury or cause disease to workers, and for their examination. Certifying surgeons have been authorised to exercise medical supervision in any factory where the occurrence of occupational diseases have come to notice or is suspected. These provisions which are new, are designed not only to obtain a knowledge of occupational diseases, but also to arrange for such remedial measures as can be taken to prevent their occurrence or reduce their incidence.

"Changes have been made in the Penalties Chapter also. The existing law only provides for a fine for contravention of the provisions of the Act. To an employer, a fine is no deterrent. We have, therefore, provided for imprisonment as well, upto three months for the first offence and upto six months for the second and subsequent offences".

## GOVERNMENT'S GENUINE SYMPATHY

Replying to the debate on the motion the Labour Minister emphasised that it was only from a genuine feeling of sympathy towards labour that the Government were bringing forward measures of labour legislation. He added that it was not because of sentiment or of coercion due to agitators but because labour had so long been denied the minimum human rights.

Mr. Jagjivan Ram claimed that the Bill was not a revolutionary measure but a modest beginning towards a great objective. He denied that the Government were blindly copying the west and stressed that they were only taking advantage of the experience of the western countries. He pointed out that a country which began industrialisation at a later stage had the advantage of learning from those countries which had started earlier.

Dealing with the argument that the provisions of the Bill might strangle industry, the Labour Minister said that it was a platitude often indulged in by the industrialists of this country. He felt certain that the provisions, instead of preventing the growth of industy would help its development on sound and scientific lines.

#### Costs of Production

Referring to the criticism that the cost of production might increase, he admitted that if we were fair to the working classes the cost of production might slightly go up. That was no reason, he added, why we should not give the workers their due. No doubt, he continued, reduction of working hours and payment of their wages to workers would add to the cost of production. But, he pointed out, they had to put the whole thing on a rational basis. There were, he thought, other items by which the cost of production might be reduced and he

suggested that some thought might be given to the question of how much profit the industrialists in this country were making. Was it not necessary in the interest of the consumer and the country as a whole to have a check on profits as well, he asked.

Concluding, the Labour Minister referred to the provision in the Bill giving power to Provincial Governments to exempt certain categories of factories from the operation of the Act and said that this had been done with a view to allowing some time to the Provincial Governments to set up a proper machinery for inspection. There was another difficulty also apart from finance, namely the availability of the necessary technical personnel for the inspectorates. These limitations, he said, were the reason for the latitude given to Provincial Governments.

Messrs. R.K. Sidhwa, B. Das, Tajamul Husain, Harihara Nath Shastri, Z.H. Lari and V.C. Kesava Rao took part in the debate that preceded the Labour Minister's reply.

After Mr. Jagjivan Ram had replied, the House adopted the motion to refer the Bill to a Select Committee consisting of the following: (1) Mr. Khandubhai K. Desai; (2) Mr. B. Shiva Rao; (3) Mr. N.G. Ranga; (4) Shrimati Renuka Ray; (5) Mr. Gokulbhai D. Bhatt; (6) Mr. Sunder Lal; (7) Mr. Nand Kishore Das; (8) Mr. T.A. Ramalingam Chettiyar; (9) Mr. Harihar Nath Shastri; (10) Mr. Naziruddin Ahmad; (11) Mr. H.V. Kamath; (12) Mr. K. Santhanam; (13) Mr. Arun Chandra Guha; (14) Mr. Balkrishna Sharma and (15) Sir J.P. Srivastava, besides the Mover (the Hon'ble Mr. Jagjivan Ram).

The Select Committee is to report on the opening day of the next Session of the Legislature.

## PROTECTION OF DOCK WORKERS

The Indian Dock Labourers Act 1934, the operation of which was kept suspended owing to various reasons, came into force from Feb. 10, 1948, according to a notification in the Gazette of India dated January 17, 1948.

By another notification in the same issue of the Gazette, regulations were prescribed for the protection of dock workers and for the safe working of machinery in ports and quays.

The ratification by the Government of India of the I. L. O. Convention regarding protection against accidents of workers employed in loading and unloading ships was registered on Feb. 10, 1947, and twelve months must elapse before legislation on the subject could be enforced.

## 48-Hour Week For Coal-miners

## Compulsory Provident Fund

48-hour week for India's 250,000 coalminers was agreed upon by the Tripartite Industrial Committee on Coal-mining at its meeting in Dhanbad on Jan. 23. Mr. V. K. R. Menon, Secretary to the Labour Ministry was in the Chair.

Other proposals to amend the Indian Mines Act which received the approval of the Committee aim at insuring comprehensive provisions for safety, health and decent working conditions for miners. Amendments seek to provide for improved water supply, sanitary conveniences, ambulances, and medical requirements, both below and above the ground, and for their inspection by a Welfare Commissioner. In addition, it is proposed to make medical examination of young persons obligatory.

Maintenance of proper registers, which facilitate implementation of conciliation awards, Provident Fund and other benefits, is to be made compulsory. A proposal to embody in the Act the rate of payment of overtime at one and a half times the normal daily rate was also agreed to.

Representatives of the Central Government, of the Provinces of West Bergal, Bihar and the Central Provinces, and of the States of Bikaner and Rewa were on the Government group. Delegates and advisers from mineowners' and workers' organisations also took part in the meeting.

The institution of a compulsory provident fund for coal-miners and the setting up of a school for training in the use of machinery were agreed to by the Committee at its resumed sitting on Jan. 24.

## Payment of Bonus

The Committee also decided to make payment of bonus querterly and approved a proposal to standardise employment, attendance, output and payroll registers with a view to improving statistics of labour and production in coal-mines.

The aim of the provident fund scheme is to provide for the miner in his old age. According to the scheme adopted by the Committee, there will be a central fund for all collicries. The cost of administration will be met through a levy which is likely to be less than one pice per ton of the coal raised. Workers who are entitled to get bonus for 1947 or who might hereafter qualify for bonus in any quarter will automatically become members. In addition, underground workers who put in thirty per cent of the number of working days in a quarter and surface workers who put in forty per cent attendance will also be eligible. A worker will contribute roughly about one anna per rupce on his basic wage and the employer an

equal amount. The scheme discourages the withdrawal of accumulated funds by a worker except at the age of 55 years. Payment in case of invalidity or death is provided for.

The scheme for the establishment of a training school is intended to improve the skill and efficiency of the worker in handling machinery, the use of which is expected to increase with the development of the Damodar Valley. At the first stage men will be trained as electrical and mechanical fitters and later in operating underground machinery. The capital cost of the school is estimated at about Rs. 10 lakhs and the annual recurring cost at about Rs. one lakh. While the capital cost will be borne by Government, the recurring cost will be met by the collieries which send the trainees. Trainees will be given allowances during the period of training.

The Committee agreed that the attendance and production bonus awarded by the Board of Conciliation (Collicity Disputes), equavalent to four months' basic wages in the year, should be paid every three months instead of annually. An underground miner will be entitled to quarterly bonus if he puts in an attendance of 70 per cent. of the working days. The Committee recognised the need for improving statistics of labour and production in coalmines. After considering proposals for standardisation of registers, a sub-committee was appointed to finalise the forms of registers and returns. It will consist of Chief Inspector of Mines, Director, Labour Bureau and two representatives each of employers and workers.

## U. P. REMOVAL OF SOCIAL DISABILITIES ACT

The Government of India bave extended the provisions of the United Provinces Removal of Social Disabilities Act 1947, to the province of Ajmer-Merwara, says a Press Note issued by the Ministry of Home Affairs on Jan. 23.

This Act provides that a member of a Scheduled Caste will be eligible for an office under any authority and will have access inter alia to any river, well, water-tap, bathing place, cremation ground, hospital, dispension, educational institution or place of public amusement or public entertainment.

A member of a Scheduled Caste will be entitled to enter any Hindu temple and offer worship therein in the same manner and to the same extent as Hindus in general, and no court shall, in adjudicating any matter or executing any order, recognise any custem or usage imposing any civil disability on any person on the ground that he belongs to a Scheduled Caste.

INDIAN INFORMATION, FEBRUARY 15, 1948

# PRIME MINISTER PLEADS FOR MAXIMUM PRODUCTION

E want a stream of wealth pouring out from our fields, factories and workshops and reaching our country's millions, so that ultimately we might be able to see India fulfil our dreams," said the Hon'ble Pandit Jawaharlal Nehru, Prime Minister of India, on January 18, broadcasting from New Delhi in the series "Produce or Perish".

The Prime Minister said, "Friends and comrades, I am supposed to speak to you about the production crisis. But my mind is full of other matters and other crises. We talk of production of many things but perhaps the most important thing is for a nation to produce men and women, good and true. One such person is in India who through his goodness, truth and power of the spirit brightens this ancient land and casts his radiance on us, a weak and erring mortals, and advises us when we go astray. We have strayed enough from the right path and wasted our inheritance, and our good repute and had enough of this now. We must go ahead on the path of creation and construction and co-operation and goodwill to our brother man.

"Production means wealth. If we do not produce we don't have enough wealth. Distribution is equally important so that wealth cannot accumulate in the hands of a few but, nevertheless, before we think of distribution, there must be production.

#### **Economic Problems**

You know we have many problems to face today -economic problems-apart from others. There are questions of control and inflation and so many other things. There is, again, the scarcity of goods. The changeover from wartime to peace-time economy has been very slow. And indeed instead of progress there has often been going back. Now this is the most urgent and serious matter for us to consider, because as this kind of thing goes on there is a kind of creeping paralysis on our economy and the whole of India and the whole of the nation suffers. Today in addition, we have to face tremendous problems of vast mig-ration and colossal numbers of refugees. The refugees are not producing. East Punjab is not producing much and all these people become unfortunately a burden on the country. Not that they want to be a burden, not that they are not capable of producing but circumstances have forced them into this unhappy position. So we have to think of production as an urgent problem even more than what we have otherwise done.

"We want a stream of wealth pouring out from our fields, factories and workshops and reaching our country's millions, so that ultimately we might be able to see India fulfil our dreams. "We talk of freedom, but today that political freedom does not take us far unless there is economic freedom. But there is no such thing as freedom for a man who is starving or for a country which is poor, the poor whether they are nations or individuals, have little place in this world. Therefore we have to produce in order to have wealth, sufficient, and distributed by proper economic planning so that it may go to the millions, more specially to the common man. Then not only the millions prosper but the whole country becomes rich and prosperous and strong. Many people have faith in all manner of dangers and people talk loosely of conflict with other countries. I hope there will be no such conflict.

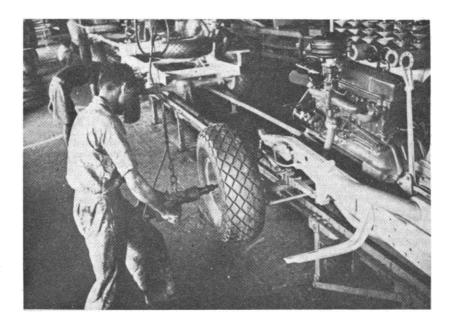

Nevertheless, a new country-a new State which has recently achieved its independence—must take full care of guarding that independence and that freedom. It has been said rightly that eternal vigilance is the price of liberty. How are we to effect this? How are we to put into effect the schemes of reforms, or constructive schemes or development schemes unless we have the wealth to put into them? We cannot live on borrowed money for long and even if we borrow money we must have the credit for it. We must be strong enough to invest it in proper channels. All these require production-production in the immediate present to fulfil our immediste needs, so that we may have something to lay by for these productive

schemes of development. Therefore, we come back to this basic need of production at the present. Now, production means hard work, unremitting labour; production means no stoppages of work or strikes or lockouts.

#### Strikes and Lock-outs

"Now I am the last man to say that labour should be denied the right to strike, for the weapon of strike has been a much valued weapon through which gradually labour has gained a position of strength and eminence in most countries. Nevertheless, there are times when strikes are dangerous, when strikes not only injure the cause of the nation but also ultimately the cause of the worker himself. This is one of those times, and it was for this reason that a short while ago at a Conference held in Delhi the representatives of the Government, of Labour and Industry decided almost unanimously that we should have a three-year truce, during which there should be no strikes or lock-outs. Obviously, if we decided any such thing, we must have a machinery to see that such a thing is done. Otherwise some will take advantage of this decision. Therefore in that conference it was further decided to have this machinery so that the worker, labourer or peasant would have his due, would have a fair deal and would even take some part in the management more specially in regard to his own needs. If we have a fair and impartial machinery of this kind then strikes and lockouts would have no meaning.

"Of course, strikes and lockouts should have no meaning in a properly constituted State, where everyone has his due. Strikes and lockouts are the symbols of

Assembling automobiles in India: Truck wheels being mounted to chassis on moving conveyer

Digitized by Google

something being wrong in the economic system. Well, a great deal is wrong in our economic system today not only in India, but in other parts of the world as well. We have to change it but in changing it we have to take care that we do not smash what we have already got. There is that danger that in doing something rashly, we may go further away from the objectives that we aim at. Therefore at present with all these crises facing us it is most important for us to have a period of industrial calm and peace so that we may all together co-operate in increasing production in the country and in building up the country by having put through the vast schemes of development.

"You know that we have had these schemes for a long time. Unfortunately, many of them still remain paper schemes. It is time that we gave effect to them. There are among them great river valley schemes which would not only irrigate the land, prevent floods, produce hydroelectric power and prevent malaria and other diseases but generally produce conditions for rapid development of industries and for modernising our agriculture. Do you realise that India is heavily populated but still has vast tracts of land where no man is putting up because these tracts do not have water or the soil requires some treatment?

"Our present population can easily be fully employed without any unemployment and add to the wealth of the country, No country can be over-populated if there is work for everyone, and we propose to have this work, but if we succeed in our endeavour then we shall have to give up the idea of unceasing conflict in the economic and labour fields and that again as I said, can only be solved if the worker gets his due, and if he is not exploited by others.

"We must devise something early for this purpose. To some extent this has been done but a great deal has yet to be done. Meanwhile we must decide to give full effect to this three-year truce which we have decided upon.

#### Need for Peace

"So let us get on with work, hard work. Let us produce but what we are producing is not for some individual pocket but for the nation, to raise the standard of the people and the common man and then if we do that we shall see India progressing rapidly and many of the problems that face us today ending in a solution. It is not an easy task for us to rebuild India. It is a very big problem though we are many people and there is no lack of resources in India, there is no lack of human beings capable, intelligent and hard working human beings. We have to use these resources of man power in India.

"It also depends on peace, international peace, national peace, economic peace and peace in the labour world and in the industrial world. Let us have this peace. At the present moment, I am particularly talking to you for industrial peace and let all of us join together in this campaign to produce and remember that this production is not for just enriching individuals but it is to enrich the nation. For if India lives we also live."—Jai Hind.

# Indian Wattle Bark: Plan For Big-scale Cultivation

THE Indian substitute for South African wattle bark, so indispensable to Indian industry, has been found and the Government of Madras are intending to cultivate it on a large scale. An article published in a recent issue of the Journal of Scientific and Industrial Reseach discusses the relative merits of the indigenous tanning material and the possibility of cultivation of wattle trees in India.

Indian tanning industry largely depended for its requirements of vegetable tanning materials on South African wattle bark. The imports of wattle bark from South Africa, during 10 years ending 1945-46, amounted to 28,000 tons valued at Rs. 396 lakhs.

The Indian babool bark and avaram bark are not rich sources of tanning, yielding only 14 per cent. tannin, as compared to 64—65 per cent of the imported bark. The approximate cost per unit of tax is Rs. 36-10-0 as compared to Rs. 6-12-0 of the South African bark.

#### Research Carried out

During the last two decades appreciable research has been carried out by the Madras Forest Department on the possibilities of economic production of wattle bark. It has been established that Niligiris tan bark black wattle, Accacia mollissime wild Syn., Accia decurrens wild var meths Lin., are indentical with Natal black wattle. The bark of the trees grown in the Palani Hills and the Nilgiris has a tannin content varying from 20 to 57 per cent. The species in the Madras Province requires an elevation of 5,000—7,000 ft. and a well distributed rainfall of 60 inches or more for best development. Attempts to grow them at an elevation of 3,000-5,000 ft. have failed.

The Madras Government intends to plant 24,000 acres in Palani Hills 5,000 acres in South Coimbatore division and another 5,000 acres in Kollegal and North Coimbatore Hills. A research station is also to be started at Kadaikanal to deal with plantation, production and marketing problem.

The article gives relevant statistics regarding planting costs, estimated offtake of bark in different provinces, acreage to be planted to meet the demand and other relevant details.

Two factors, affecting the life of an internal combustion engine, are efficient air cleaning and crank-case ventilation systems. It has been estimated that a three to five fold increase in engine life is possible by the use of air cleaners, which prevent dust accumulation in the engines and consequent wear. Proper ventilation of the crank-case is necessary to remove harmful vapours and gascs in the engine, thus reducing engine deposits and wear.

A new and improved system combining the function of air cleaning and ventilation development in the Physical laboratories of the Council of Scientific and Industrial Research, Delhi, is described in another article appearing in the Journal. Simplicity of design, ease of its construction, and superior performance are some of the outstanding features of the new system. The composite system can be used in producer—gas vehicles and—many types of stationary engines could be fitted with this system. Results of critical tests on this system and other devices are given.

## Fabric Type Filters

The system employs the fabric filters, the fabric being an Indian mill product, which could be readily produced in large quantities. A pair of bags made out of this cloth can give considerable length of service. In one case, a distance of 4,500 miles was covered on the original pair of bags. The bags can be washed and used over and over again.

A patent application to cover the device described in the article has been filed in the Indian Patent Office (Prov. No. 35646, dated September 11, 1946.)

Other articles of interest appearing in this issue are Lac or Synthetic Resins, Refractories and Indian Graphite,—its beneficiation and probable uses. The editorial discusses the progress of science and university education.

In pursuance of the decision to allow resumption of private trading with Japan, it has been decided that applications for licences for the import and export of goods should be made to the Chief Controller of Imports and the Chief Controller of Exports respectively, or their Deputies at various ports, in the same manner as that obtaining in respect of countries with whom private trade is now permisible, says a Press Note issued by the Ministry of Commerce on Feb. 2.

No Mail Order business will, however, be permitted, and the existing procedure whereby private traders enter into contracts direct with SCAP (Supreme Commander, Allied Powers) for purchases or sales will continue for the time being.

A fresh batch of photographs of unclaimed and unidentified children, who came from Pakistan, has been received by the Displaced Persons' Enquiry and Search Service, says a Press Note issued by the Ministry of Relief and Rehabilitation on Feb. 10. These photographs have been placed on view at the Kingsway and Kalkaji Refugee Camps, Bela Road Barracks, Purana Qila and at the Search Service Headquarters in Room No. 58, 'P' Block, Raisina Road, New Delhi.

# DAMODAR VALLEY PROJECT—A MULTI-PURPOSE SCHEME

THE Bill for setting up the Damodar Valley Corporation is to come up for consideration before the Indian Parliament during the Budget session.

The Damodar Valley Project is a multipurpose scheme. It is designed to control floods, irrigate about 763,800 acres of land and supply power to the extent of 350,000 Kw.

It is proposed to set up the Damodar Valley Corporation on the lines of the Tennessee Valley. It shall be the duty of the Corporation to promote the Agricultural, Industrial, economic and public health development of the area within its operation. And in order to carry out the functions the Corporation may establish, maintain and operate laboratories, experimental and research stations and farms for conducting experiments and research. This will give an idea of the comprehensive nature of the work entrusted to this Corporation in the Valley and the adjoining area which will be declared from time to time as its area of operation.

#### **Damodar River**

The Damodar river is notorious for the frequent flood damages it has caused. The river flows through the province of Bihar and Bengal and drains an area called, on account of its industrial potential, the Ruhr of India. The industries that will be located along the lower reaches of the valley must be protected from the ravages of flood. The main lines of communication connecting the important port of Calcutta with the rest of India must not be damaged. The rich irrigable rice fields of Burdwan District must not be subjected to dangers of a flood. Last but not the least, the city of Calcutta should never be threatened by a flood. Flood control is therefore a very important

development. This of this aspect will be obtained by constructing a number of dams across the Damodar river and its tributaries, to provide large storage reservoirs which will hold back the floods. These reservoirs will be kept partially empty during the flood season to hold the rushing storm waters which will be released later at a safe rate. The many dams together have a flood control storage of 3,569,000 Acre feet. This capacity to absorb floods is sufficient to reduce a flood much larger than any under record and a peak flow of 1,000,000 cubic feet per second to a harmless 200,000 cubic feet per second.

#### Power Resources of Project

The flood waters and the annual flow will be converted into a perennial flow and will also be harnessed to develop electric power. Electric power generating stations have been planned at all dams. The total installed capacity of all the hydro-electric stations put to-gether will be about 200,000 Kw. As the amount of this power available varies with the season, a large thermal (steam) generating station with an installed capacity of 150,000 K. W. will also be built. This hydro-steam combination will not only meet most of the load requirement in South Bihar and South West Bengal but also form the backbone of the future inter-provincial electric power grid connecting the different provinces. The annual energy available from the hydro-electric stations alone will amount to 800,000,000 K. W. hrs. Preliminary estimates indicate that the energy will be available for sale at very attractive rates which will rapidly advance industrialisation of the valley.

At present the Damodar River partially irrigates about 186,000 acres in the Burdwan district. During dry

## Employment Service: Record Placings

In December

During the month of December 1947, the Employment Service in the Indian Dominion again set up a new record of placings, says a Press Note issued by the Directorate-General, Resett ement and Employment on Jan. 23. 16,103 applicants, of whom 6,609 were ex-Servicemen, were placed in employment by the 53 Exchanges in the Indian Dominion. Up to the end of December, 10,566 displaced persons from West Pakistan were placed in employment.

The total number of persons placed in employment, since the inception of the Resettlement and Employment Organisation, up to the end of December,

1947, was 2,77,362, of whom 1,77,217 were ex-Servicemen.

During the month of December, 1947, 2,461 ex-Service personnel were selected and posted to 249 training centres in the Dominion of India, bringing the total number of selected and posted up to the end of that month to 42,708. Postings during the above month include 2,384 ex-Servicemen posted to vocational and technical training centres and 77 disabled persons posted to training centres for war disabled. The total number of persons under training at the end of the month was 9,884, including 368 displaced persons.

years when the monsoon fails, this area is not assured of sufficient water even in October. No water is available for any summer crop. After the completion of the project sufficient water will be stored for release to meet the irrigation requirement of about 763,800 acres in the districts of Burdwan, Bankura, Hoogly and Howarh. Two crops will be assured where one grows now, irrigation will also be available to a fairly large acerage in Bihar. To achieve this in addition to the dams there will be a barrage on the lower reaches of the Damodar from where the water will be diverted into a net work of canals on both the banks of the

The main irrigation canal will be made navigable for large, low draft river craft. This canal will be provided with suitable berthing facilities and lock arrangements to enable through traffic at very economical rates between Calcutta and the neighbourhood of the Regional coal fields. This additional means of transport will be of great value to the industrial development of the valley.

In addition, general development like water supply to towns and industries nearby scientific management of soil, better methods of cultivation for different crops on model farms, reafforestation of large areas, cheap electric power supply for rural areas, establishment of cottage industries, co-operative movement, fish culture, recreational facilities for industrial labour on the lakes formed by the reservoirs, malaria control and amenities to attract tourists will all be undertaken.

#### Problem of Rehabilitation

All this must be achieved and that, too, within a short time. Previously construction of a single dam has taken as much as 10 years or even more. We must move faster. We want immediately more food, more power and more industries. It is therefore proposed to go in for the most modern methods of construction which will enable us to complete the scheme within a period of ten years if not earlier. This project when completed will cost the nation over Rs. 55 crores.

Formation of reservoirs will submerge large number of villages and large areas of land. This is unfortunate though inevitable in schemes of this nature. But the Central Government have assured all that rehabilitation of the displaced will be the first charge of the Corporation. Every attempt will be made to settle the displaced population under conditions superior to those under which they now live. Land with irrigation facilities will be found wherever possible. A great number will find employment in the construction of the project. Many will enter new industries. None will be left without a liberal compensation. Everyone in and near the valley will be benefitted. Already detail mineralogical survey has begun. Exploratory investigations to establish useful industries have been set on foot. It is hoped that with full cooperation of all concerned the Damodar Valley Corporation will introduce a new era of prosperity for the people of this most important part of the country in Bihar and West Bengal.

## EMPLOYMENT SERVICE ORGANISATION

## Director-General's Plea For Continuance

PLEA for the continuance of the Employment Service Organisation was made by Dr. N. Das, Director-General of Resettlement and Employment, when he addressed the Central Employment Advisory Committee on Jan. 16, in New Delhi.

In a message to the Committee, the Hon'ble Mr. Jagjivan Ram, Minister for Labour, stated: "The Employment Exchange Organisation is an infant institution in this country, having been set up only two and a half years ago. We are anxious that it should develop on sound lines and be able to render effective service to employers and employment seekers alike. I hope that the celebrations of this Committee, in which I am deeply interested, will contribute towards making this Organisation more efficient and useful".

The Director-General in his speech said: "Employment Exchanges and Training Schemes play a vital part in the economy of every civilised country and it will be a tragedy if, in India, after

the initial experimental period of five years, these institutions are not allowed to assist in her economic development. The last Asian Regional Labour Conference, held in New Delhi, discussed the scope of the Employment Service and Training Centres in the planned development of Asian countries and came to the unanimous conclusion that these institutions were not merely desirable but essential for orderly progress.".

## Nearly Three Lakhs Employed

Referring to the work of the Organisation up to the end of December, 1947, the Director-General pointed out that 2,77,300 men and women had been placed in employment and 3,894 persons trained while 9,159 persons were under training at present. The organisation, Dr. Das observed, had also helped in the problem of rehabilitating displaced persons from Western Pakistan. This was made possible, he said, as there was in the country an organisation which could be adapted to meet all emergencies.

## River Projects To Be Speeded Up

DECISIONS of far-reaching importance were taken and several recommendations made to hasten the development of irrigation and hydroelectric projects in India at the 18th annual meeting of the Central Board of Irrigation, held recently in Delhi, under the chairmanship of Shri A. N. Khosla, I. S. E., President of the Board. Chief Engineers for Irrigation and Electricity from all parts of the country attended the meeting and discussed many technical and administrative problems connected with the river projects to be extended shortly.

The Board has unanimously recommended that persons whose land will be submerged under the storage reservoirs or will be otherwise acquired for works in that connection should be compensated as far as possible, by giving them land for land. Where Government land in sufficent quantities does not exist, a proportion of private land benefited by the project should be acquired for the resettlement of dispossessed people. Early, legislation is recommended to permit acquisition of land for settling dispossessed land holders as acquisition for a public purpose.

#### **Potential Water Resources**

In another resolution the Board reiterates the necessity of undertaking early surveys of the potential water resources of all catchments and has commended the action recently taken in this respect by the Government of Bombay. The Board has put forward suggestions for co-ordinating such activities of all provincial and state administrations in India.

The Board has decided to establish a close liaison with the activities of the newly formed Indian Standards Institution and has decided to co-operate with this body in preparing and publishing standards of interest to the engineering profession.

Th Board has also recommended the undertaking of electrical research in main hydraulic research laboratories in India and has decided to establish close liaison with various institutions already engaged in this work.

The Board has called for the appointment of a Committee to review existing legislation and propose measures necessary to overcome the present difficulties created by demands for realignment of power transmission lines after erection.

Various other technical matters of great importance to the new irrigation and hydro-electric projects were also discussed. The Board has reviewd its existing constituation and recommended changes to bring it in line with the changed political structure of the country.

Mr. A. N. Khosla, Chairman, Central Waterways, Irrigation and Navigation Commission, has been re-elected President of the Board for the third year in succession. Rao Bahadur A. R. Vankatacharya, Chief Engineer, Madras, has been elected as Vice-President of the Board, the other members of the Executive Committee being Rai S. K. Guha Bahadur, I. S. E., Chief Engineer for rrigation, Bengal, and Shri S. A. Gadkery, Chief Engineer for Electricity, East Punjab.

This also vindicated, added Dr. Das, the policy the Government, followed in encouraging expansion of the scope of the organisation in consultation with the Provincial Governments so as to cover all categories of employment seekers, irrespective of whether they were ex-Servicemen or not. The reason for pursuing this policy, he explained, was because the Government felt that, in the ultimate analysis, employers wanted the best type of men.

Concluding Dr. Das stressed that the organisation had made honest and sincere efforts to build up an employment service which would benefit employers and employment seekers alike, although it had to contend against prejudices from various quarters and deal with a difficult commodity, namely, Labour.

#### RESOLUTIONS ADOPTED

The Central Employment Advisory Committee adopted a resolution recommending that the employment service should be made permanent and expanded to include all categories of employment seekers. The resolution added that an Employment Service Office should be opened in each district and that further expansion of the service should be according to the needs of each individual district.

A second resolution adopted by the Committee recommended that civilians should be brought within the scope of the technical and vocational training scheme of the Ministry of Labour and that the Central Government should take immediate steps to improve the quality of craftsmen trained.

By another resolution the Committee requested the various Central and Provincial Government Departments to take steps to implement the Central Home Ministry's order regarding recruitment of staff through the Employment Exchanges.

After appointing three Sub-Committees on Employment Exchanges, Training and Employment of Women, the Committee reviewed the work done by the Employment Organisation last year.

Among those who attended the meeting were officials of the Directorate-General of Resettlement and Employment and representatives of Provincial and State Governments, employers, workers and women's organisations.

## RELEASE OF CARGOES DETAINED BY JAPANESE

Cargoes originally owned by Allied or neutral nationals but which were detained in Japan under the Japanese Freezing of Shipping Act of July 1941 are now being released, according to an announcement by the Civil Property Custodian in Japan, General Headquarters, Supreme Commander for Allied Powers, says a Press Note issued by the Ministry of Commerce on Jan. 27. The release order covers merchandise paid for before the outbreak of war, or which was in transit to other countries at the time of the Japanese Freezing Act.

For the full text of the announcement containing conditions of release, reference should be made to the Indian Trade Journal of December 18, 1947.

# RECOVERY OF ABDUCTED WOMEN AND CHILDREN

# Joint Appeal by Women of India and Pakistan

A JOINT appeal by women representatives of India and Pakistan was issued on Jan. 28 for the recovery of abducted women.

The appeal is signed among others by Viscountess Mountbatten of Burma, Mrs. Sarojini Naidu, Rajkumari Amrit Kaur, Miss Jinnah and Begum Liaqat Ali Khan.

It states: "We are sure that women of India and Pakistan will not rest until all women have been recovered and effective action taken to restore women to their inherent status and prestige".

"Raising the status of woman and encouraging her to take her legitimate share in national reconstruction has been an important item in the national programme of the main political parties. Independence has been achieved in both the Dominions. We the women of the States of India and Pakistan had hoped that on gaining independence we would get a chance of implementing the programme concerning the progress of women. Before we could do anything in this direction we found the East and the West Punjab in the grip of terrible orgy of violence and brutality. Human life seemed to have no value at all. Unfortunately women and children becarre the special targets of this fury. The experience which the masses of women and children had to go through blackened the fair name of India and Pakistan. As if this was not enough, abduction of women and children as a planned objective of retaliatory measures took place. This is a problem that not only raises issues on humanitarian grounds but is endangering the whole question of the status of woman, and her right to live as an individual member of the States, and to get protection from it.

## Appeal to Women

It is satisfying that the Governments of both the Dominions had long ago realised this danger and taken clear decisions that forced conversions and marriages would not be recognised. They also attached particular importance to the recovery of women and called a special Inter-Dominion Conference on the 6th December, 1947 to devise a machinery for the purpose.

The success of this work depends mainly on enlightened public opinion and general realisation of the fact that women are human beings and abducting them and keeping them are a direct infringement on their fundamental human rights to live as citizens of a free country. If the present tendency is allowed to pass without challenge from woman, it is feared that it will check the course of women's progress. We, therefore, call upon all women and women's organisations in both the Dominions to mobilize themselves to fulfil the following programme:—

- i. To organize a vigorous campaign in favour of "Hands off Women and Children and Return the Women".
- 2. To collect information regarding the location of abducted women and children kept in their area and communicate it to the proper agency entrusted with the recovery work in that area.
- 3. To organize propaganda through personal approach and public meetings.
- 4. To make the "Restore Women and Children Week" from Monday the 1st February, 1948 to Sunday the 7th February, 1948, a success, by educating public opinion and actually helping in the effort to recover women.
- 5. To put pressure on Provincial and State Governments to establish official organisations for the recovery of abducted women brought into their provinces or

We hope that the women of both the Dominions will realise the gravity and importance of this programme and make an all-out effort. Let us not forget that what has happened in the Punjob is not only a challenge to all our ideals and hopes, but it creates a precedent, which if tolerated, will endanger our society. If, for any reason, this practice is abducting women is not vigorously opposed, than for all practical purposes owomen will be deprived of their right to citizenship and protection by the State.

We are sure that women of India and Pakistan will not rest until all women have been recovered and effective action taken to restore women to their inherent status and prestige".

The signatories to the appeal are:-

#### INDIA

Viscountess Mountbatten of Burna, Shrimati Sarojini Naidu, Rajkumari Amrit Kaur, Shrimati Rameshwari Nehtu, Mrs. Nathulakhshmi Reddi, Lady Trivedi, Kamladovi Chattopadhya, Begum Masuma Hussoin Ali Khan, Mrs. Anusuya Bai Kale, Tarabai Prem Chaud, Shrimati Sucheta Kripalani, Mrs. John Matthai, Lady Ram Rao, Mrs. Hansa Mehta, Miss Leilamani Naidu, Mrs. Renuka kay, Mrs. Hannah Sen, Shrimati Raksha Saran, Mrs. Kitty Shiva Rau, Shrimati Shanno Devi, Miss Premvati Thapar, Miss Mridula Sarabhai, Sita Devi and Dr. Parkash Kaur.

#### PAKISTAN

Miss Jinnah, Begum Liaqat Ali Khan, Begum Shah Nawaz, Begum Bashir Ahmed, Begum Fatima, Lady Haroon, Begum Mir Ahmad, Begam Hidayat Ullah, Begum Jamalud Vin Khan of Baluchistan, Begum Abdul Qayum, Begum Tasadduq Hussain, and Begum Ismat Iftikharud Din.

## Army's Role In Recovery Work

A conference was held at Lahore on Jan. 8, 1948, to review the progress of the recovery of abducted women, said to Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 19.

It added: The conference revealed a basic difference in the outlook of the Governments of Pakisten and India regarding the role which the Army should play in the recovery of abducted women. The representatives of the Government of India pressed that the Army should be actively associated in the recovery on both sides of the border, that is, troops be allowed to accompany the police parties to the villages for recovery of abducted persons, as originally agreed in the conference of Dec. 6, 1947. The Government of Pakistan did not agree to this proposal and desired that the activities of the troops should be restricted to guarding transit camps and providing escort for transport of recovered persons to their own Dominion. The representatives of the Government of India also protested against the proposal of Pakistan authorities to stop the entry of Indian troops even for this limited purpose in some of the districts of  $W_{\mbox{\footnotesize est}}$  Punjab.

Although on the main issue, agreement was not possible between the two Governments, yet on other matters related to proper functioning of the present machinery the representatives of both the Dominions agreed that an all-out effort should be made.

## DOUBLE-SHIFT CLASSES FOR WOMEN STUDENTS

The Ministry of Education, Government of India, have arranged double-shift classes for refugee women students in the Indraprastha College for women, Delhi. Instruction will be provided only in the Faculty of Arts both in the Intermediate and B. A., Pass and Honours.

Students desirous of attending these classes should contact immediately the Principal, Indraprastha College for Women, Delhi.

Similar arrangements have already been made for men students in the Hindu College, Delhi.

H. E. Lady Mountbatten, Lady Trivedi (in striped overcoat) and Rajkumari Amrit Kaur, surrounded by refugees of the Juliundur Refugee Camp, which they visited recently.

## Registration of Claims For Refugee Property

Registration of claims regarding property left behind in Pakistan by refugees was started by the Ministry of Relief and Rehabilitation in New Delhi on October 1, 1947, says a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 30. Provincial Governments have now started registring similar claims in their territorics.

The registration was considered desirable with a view to:—

- (1) obtaining some approximate idea of the extent of property left behind by non-Muslims in Pakistan.
- (2) obtaining record of all documentary evidence of title that individuals may have brought out.

There was and is no intention on the part of the Central Government to assume responsibility for paying these claims over the counter. Negotiations for a property settlement are, however, in progress with the Pakistan Dominion. At present it is not possible to say whether mutually satisfactory agreement will be reached, and if so when. In any case considerable time would elapse before individual claims could be adjusted within the framework of some inter-dominion settlement.

Owing to disturbances in Palestine, no insured correspondence or parcels for that country will be accepted at post offices until further orders, says a Press Note issued by D.G., P. and T. on Feb. 7.

Security of mails is not guaranteed by the Palestine Postal Administration and mails in transit through Palestine are likely to suffer delays.

## LOANS TO DISPLACED DOCTORS AND LAWYERS

The Government of India have decided to raise the maximum limit up to which loans may be granted from Rs. 500 to Rs. 3,000 in the case of doctors, including dentists, radiologists, vaids, hokims and homeopaths, and legal practitioners, said a Press Note issued by the Ministry of Relief and Rehabilitation or Jan. 23.

It added: The grant of loans will be subject to the terms and conditions already specified under the scheme for grant of loans to displaced persons belonging to urban areas in West Pakistan who have arrived in the Indian Union. Furthermore, the grant of loans will be confined to persons who decide to settle in a town or place in the economy of which they are likely to be absorbed permanently.

## MORE STATES TO ENLIST REFUGEE CONTRACTORS

In response to the Government of India's request, a number of Indian States, besides those already announced, have agreed to enlist refugee contractors.

Narsingarh invites applications to enlist six contractors experienced in road and building. Jhalaker wants two refugee P. W. D. contractors and applicants should contact the State Engineer. Kotah offers good prospect to refugee contractors who may be enrolled as P. W. D. Contractors for roads, buildings, irrigation works. Licensed electrical contractors and plumbers can also be enlisted.

Rajkot, Dharangahara, Bundi, Indore, Benswara, Ratlam and Suket are also prepared to consider applications for enlistment.

Other States which have agreed to enlist refugee contractors and about whom an announcement was earlier made, are Baroda, Bikaner, Rewa, Kapurthala, Nabha, Benares, Alipore, Datia, Rajgarh Darbar and cortain small States in Orissa and Chhattisgarh States Agency.

## INFORMATION FOR REFUGEES

A fortnightly journal, entitled Relief and Rehabilitation, intended to represent the cause of rofugees as well as to give information as to the steps taken by Government to help them, has been issued by the Ministry of Relief and Rehabilitation, Government of India.

The Journal which is being published in English, Hindi and Punjabi, is for free distribution among refugees all over India, particularly those in Camps in East Punjab, and Kurukshetra. The object of the Journal is explained in an announcement in the first issue, dated January 15, 1948, which says:

"The fortnightly journal issued by the Ministry of Relief and Rehabilitation intends to provide a forum for displaced persons and the authorities responsible for their well-being. Our readers are invited to write to the Director, Information Bureau, asking for information on the varied problems facing them. We will do our best to obtain relevent information from authoritative sources and the replies will be sent to individual enquiries and where information is of general interest it will also be published in these columns.

"Apart from this, the Journal will serve as a current news-sheet, to convey to displaced persons information regarding relief and rehabilitation".

In a message to Relief and Rehabilitation, the Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation. says:

The problem of refugees is one of the most stupendous problems any country in the world has ever had to face. It is one of those problems which are not amenable to easy and quick solution.

Though it is the direct liability of the Government it deserves the care, attention and service of every Indian in every sphere of life. Despite the manful efforts of the Press, the public at large have grasped the situation only in its bare outline. Few, who have not come in direct contact with the problem and studied it in detail, can have a real idea of its serious proportions, its far reaching consequences and the difficulties pertaining to its solution, particularly in the matter of rehabilitation. Let me however, give this assurance that difficult as the task is the Government is determined to carry out its obligation to the fullest extent.

The present publication is intended to represent the cause of refugees as well as to give information as to the steps taken by the Government to help them. It will serve as a link between the Government and the displaced community and as a vehicle for the exchange of information between the two. In this the refugees will have a scope for making known their special requirements and the Government for indicating what is being done for meeting them. The publication is thus expected to render a much needed service.

I should like to convey thanks of Government to the authorities of *The Hindustan Times*, and specially to Mr. Devdas Gandhi, for generously agreeing to print the journal free of charge.

# FOUR TOWNSHIPS TO BE BUILT NEAR DELHI

Sites for four satellite townships in the Delhi Province have been announced. These townships will, to a large extent, meet the demand for houses for the overflowing refugee population in Delhi, says a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 26.

It adds: The new townships will be at Mehrauli, Kalkaji, Tehar and Sheikh Sarai. The Delhi Improvement Trust has framed expansion schemes for the development of these areas and has issued notices under section 36 (I) of the U. P. Town Improvement Act 1919 (8 of 1919) as extended to the Province of Delhi, inviting objections by February 17, 1948.

The Mehrauli Scheme will cover 518 acres and will comprise the villages of Mehrauli and Sultanpur. Kalkaji scheme will cover 825 acres and consists of Tughlakabad, Tekhand and Bhapur villages. Tehar has the largest acreages of 1450 acres consisting of Tehar. Nangal Ria, Posangipur, Asalatpur, and Khawad villages. Sheikh Sarai will cover 632 acres consisting of Khirki, Hausrani, Begumpur, Tutsarai, Sheikh Sarai and Sarai Shahji villages.

Full particulars of the scheme, maps of the areas comprised in the scheme and a statement of the land which it is proposed to acquire may be seen at the office of the Delhi Improvement Trust, Regal Buildings, New Delhi, on any working day between the hours of 10 a.m. and 5 p.m.

## RECOVERY OF MUSLIM WOMEN AND CHILDREN

Up to January 15, 1948 the East Punjab Government had been able to recover 8,005 Muslim women and children and converted persons, said a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 23. The details of rescued persons are: abducted women 3,391, abducted children 2,750, converted persons 1,864.

An intensified campaign to recover abducted women and children and abducted persons was launched in East Punjab in accordance with the decisions of the Inter-Dominion Conference at Lahore on December 6, 1947.

Reliable figures of women and children and converted persons rescued in West Punjab are not available. From reports it is clear, however, that the progress in rescue operations in West Punjab has not been satisfactory and in certain districts of West Punjab the provincial government has imposed restrictions on the movement of Indian military and police personnel engaged in those operations.

## HIS HALF MONTH'S WAGES

A Delhi workman went to the Prime Minister's office on Jan. 28 and handed Pandit Nehru twenty two rupees and two annas in small changes.

"That represents my half month's wages, Panditji, and I donate it for the National Relief Fund which you have opened," he said.

## CONCESSIONS FOR DISPLACED STUDENTS

To enable displaced students who were studying in the ninth or tenth class in high-schools in Pakistan to continue their studies, it has been decided to give them further concessions, says a Press Note issued by the Ministry of Education on Jan. 28. Such students may now apply for exemption from tuition fees and grants for purchase of books to the heads of their respective institutions.

Besides Government schools, private recognised institutions also are expected to give this financial relief to displaced students. Such institutions may ask for an increase in Government grant if necessary, in case they have a large number of displaced students on their rolls.

## REGISTRATION OF REFUGEES

On account of the developments in Sind, Government of India have decided to restart registration of refugees in Delhi at Room No. 168, 'P' Block, Raisina Road, with effect from Wednesday, 28th January, 1948, said a Press Note issued by the Ministry of Relief and Rehabilitation on Jan. 28.

## VALIDITY OF ARMS LICENCES

Licences issued to persons in the Indian Dominion under the Indian Arms Act and Rules before August 15, 1947, are now valid only within areas which comprise the Provinces of the Dominion and are not valid in the territory now in Pakistan unless the law of that Dominion permits it, says a Press Note issued by the Ministry of Home Affairs, on Jan. 22.

In the case of arms licences which extend within former Provinces and districts of India which have now been partitioned, the extent of the validity of the licences should, so far as the Indian law goes, be deemed to be limited to the areas which now fall within the Indian Dominion. Their validity in the areas now falling in Pakistan is governed by the laws of that Dominion.

A licence, which was duly made before Aug. 15, 1947, by a District Magistrate now in Pakistan but which extends to an area now in the Indian Dominion, continues to be valid within that area. Its validity in the area which now falls within the territory of Pakistan is dependent on the law of that Dominion.

When a licence is due for renewal, the renewing authority can only validate it for a juristiction within which he has authority, i.e., for the Union of India or for the present Province which he serves or for his own district.

If a licencee wishes to validate his licence outside the area within the Provinces of the Indian Dominion, he must seek a fresh licence from the competent authority in that area.

It is, however, pointed out that the relevant provisions of the Pakistan (Adaptation of Existing Pakistan Laws) Order 1947, are similar to those in the corresponding Indian Order and hence unless the Pakistan Government has in the meantime amended its Arms Act of 1878, the position of the licences issued before Aug. 15, 1947, in Pakistan will be the same as in India.

Another view of the Jullundur Refugee Camp

# PRIME MINISTER'S APPEAL TO REFUGEES New Development and Rehabilitation Board

THE Hon'ble Pandit Jawah arlal Nehru, Prime Minister, issued the following statement on Jan. 13:

About 10 days ago I stated that the Government was making every effort to provide some kind of whelter for the refugees in Delhi who lacked accommodation. We have taken this up as an urgent problem of the highest priority because we did not want any single refugee from Pakistan to be without a shelter at least. The problem has been a big one, made all the more difficult by more and more people arriving.

The Ministry of Relief and Rehabilitation and the local Delhi Administration have worked hard during the past 10 days to make arrangements for providing this accommodation and shelter. Inevitably it is not possible to provide all the amenities that we should like to give but I am glad to say that some kind of accommodation and shelter is available now for these who lack it. No refugee at present in Delhi need be without this shelter which varies in quality.

It is important to remember, however, that Delhi cannot possibly absorb or accommodate fresh batches of refugees. If fresh batches come they will have to be sent on to Kurukshetra or other places.

We have provided additional accommodation during the past few days for about 10,000. Our first priority is to make this accommodation available to those refugees who have been residing in the mosques in Delhi, secondly those in the Railway Station, thirdly those at the Wavell Canteen. Any person who may have been absolutely shelterless will, of course, be given a high priority.

There are many camps in Delhi for these refugees. Among them the Kingsway Camp is the largest, and is meant for destitutes and others who are given free rations. In other places like Anandparvat and Purana Qila free rations are not supplied but foodstuffs are made available through shops, etc.

## **Temporary Arrangements**

Various other arrangements have been made to provide refugees with accommodation. These need not be detailed here. Any person desiring some kind of accommodation should register his or her name at the Town Hall.

I would earnestly request that no further refugees from Pakistan should come to Delhi as this will not help them in any way. They will merely add to their difficulties as well as ours. It is easier for us to help them in other places and we intend to do so.

These are temporary arrangements. The next step which we hope to take very soon is to begin to rehabilitate them in a more permanent way. A large number

of plots of land in the Shadipur area of Delhi will be reserved for refugees. Similar areas in other places are also under consideration. Within afew days I hope that the announcement of the new Capital for East Punjab will be made and no doubt many p-ople would like to settle down there.

The Cabinet has decided to entrust the whole problems of rehabilitation to a special Board called the Development and Rehabilitation Board which will he constituted soon. This Board will have wide powers so that it may be able to achieve results with speed and without the delays normally accompanying governmental procedure. It is proposed to combine as far as possible the process of rehabilitation with development and many of the existing schemes of development will be utilised for this purpose. The Board will plan for the whole of India and will have large executive powers.

This is a tremendous task and the Government seek the co-operation of all people including the refugees themselves in order to deal with it adequately and with speed.

## RECEPTION OF SIND REFUGEES

The Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation, paid a visit in the last week of January to Ajmer, Deoli Camp, Marwar juneticn and Marwar Pali to find out for himself the arrangement in connection with the reception of Sind refuges. He found that there were about 20,000 refugees at Ajmer out of whom 2,000 were living in dharmsalas. In Deoli Camp there were 1150 refugees. This Camp was capable of taking another 5,000 and arrangements were being made to transfer refugees from Marwar junction to this place.

At Marwar junction, a transit camp, there were about 5,000 refugees. They were being accommodated in dharmalus, tents and temporary hutments of sirkin. At Marwar Pali there were about 4,000 refugees who have accommodated in military barracks.

Arrangements had been made for the distribution of free food to all refugees in the transit camp at Marwar junction and to indigent refugees in other relief camps. Quilts and blankets had also been despatched to Marwar junction.

At all these places, Mr. Neogy discussed their problems with the representatives of refugees. His visit had a reassuring effect

# PRIME MINISTER'S NATIONAL RELIEF FUND

THE Hon'ble Pandit Jawaharlal Nehru, Prime Minister has issued the following appeal on Jan. 24.

At no time has the necessity of giving relief to vast numbers of our suffering countrymen been so great and urgent as it is today. This is not merely a humanitarian task but one affecting the future of India. We cannot permit the real wealth of India, as represented by the millions of men and women, who have been dispossessed and driven away from their homes, to waste away with no opportunity of settling down again and taking full part in the creative and constructive activities of the nation. We connot permit the growing generation to be deprived of home and education and opportunities of becoming efficient and productive citizens of India. We have passed through disaster and suffering on a colossal scale. The effect to overcome it and to rise superior to it must be on an equally extensive scale.

The Government of India are diverting their energy and resources to this end. But that is not enough; the co-operation of all our people, including those who have suffered, is essential in this vast enterprise. That co-operation has, to some extent, been forthcoming. Even more is necessary.

There have been many relief funds and generous donations have been given

to alleviate suffering. Many donors have sent me spontaneously their contributions for relief work. I feel that it will be desirable to have a central relief fund which can be used for any type of emergency relief of distress but which must now be especially used for the relief and rehabilitation of refugees from Pakistan who have come to India.

I am, therefore, starting a fund called "The Prime Minister's National Relief Fund" and I invite donations to this Fund. To begin with, this Fund will be managed by a committee consisting of the Pr.me Minister, the President of the Indian National Congress, the Deputy Prime Minister, the Finance Minister, a representative of the Tata Trustees and a representative of Industry and Commerce to be chosen by the Federation of Indian Chambers of Commerce.

Further particulars about the administration of the Fund will be announced later.

Donations, which will be announced in the Press, may be sent to the Central Bank of India, New Delhi, or any of the branches or sub-branches of the Bank. They may be earmarked for specific purposes such as medical relief, education and care of orphans.

# SIGNIFICANCE OF JAN. 26 FOR INDIA AND AUSTRALIA

ROADCASTING from All-India Radio, Delhi on Independence Day (Jan. 26), Dr. Rajendra Presad, Congress President, said:

In the modern history of India January 26 is a day of great importance.

When the Lahore session of the Congross adopted full Swaraj as its goal and decided to launch a campaign, meetings were organised all over the country at which the Congress's pledge was repeated.

The people pledged themselves to secure freedom and we renewed our determination to do so every year till January 1947. Sometimes when our campaign gathered momentum and we were in the midst of a Satyagraha movement then on this day quite often we had to meet the force of Might and many of our brothers and sisters have laid down their lives and suffered other great difficulties. The movement which we began in 1930 continued till we had a glimpse of Swarai.

With the help of God and under the leadership of Gandhiji we have won the battle of freedom and gained our objective. It is, therefore, necessary to repeat that pledge now. If any pledge is necessary it is that we should be able

to safeguard the freedom which we have won and through that freedom we shall have peace and prosperity so that our nation may be able to face the world. It is unfortunate that today due to communal disturbances we have so forgotten ourselves that countless Hindus. Sikhs, and Muslims have lost their lives. If our freedom is to have any meaning then our aim should be that all inhabitants of this great nation whether they are Hindus, Muslims, Sikhs, Parsis, Jews or of any other religion should be able to live and prosper in peace and self-respect. We should never allow ourselves to think that this country belongs to the followers of any one of religion and that the others have no rights here, for this is their way to destruction. It should be our endeavour to create confidence in the minds of Muslims especially and other minorities that they shall have the same rights as

If we undertook this pledge today then the 28th January will be for us as great a day as in the past. On this occasion let us pay our respects to the countless men and women through whose sacrifice we have secured this freedom. It is our duty to the memory of those who have brought us this freedom that we make our nation great and prosperous. Jai Hind.

Independence Day was calebrated in Delhi on January 26, when Pandit Nehru, Prime Minister, gave a reception at his residence. His Excellency M. Nevikev, Russian Ambassador to India (centre) at the reception

# Sir Iven Mackay's Broadcast

Following is the text of a broadcast by Lt. General Sir Iven Mackay, High Commissioner for Australia in India, from A. I. R., Delhi on Jan 26.

It is a happy coincidence that on the very day on which India commemorates her Independence movement, we in Australia also celebrate one of our most important national occasions. For us, January 26th is known as Australia Day. It is a historical anniversary; for on this day, one hundred and sixty years ago, the first small group of settlers reached the end of their twelve thousand mile voyage from England, and came ashore in what is now famous as Sydney Harbour.

This landing was in no sense an invasion. Only 290 persons came ashore as settlers. They were accompanying a party of prisoners. For in those days so little was known of Australia, so little could be foreseen of her future, that the new country was thought of merely as a suitable place for a prison settlement. The aboriginal inhabitants of Australia were wandering, stone-age tribes who kept no cattle, grew no crops, and had no dwellings to live in. At most they numbered half a million, and they were scattered through a continent half as large again as India.

It was from this handful of European settlers that there has grown up today a young nation of some seven and a half million Australians. It is still a small nation, it is true; but we feel we are striving to make our mark in the modern world, and in the process we seek to make good friends amongst our fellow nations.

#### Historic Phase in India

To me it is a great privilege, therefore, as India's guest and representative of a sister Dominion, to speak to Indians and perhaps also to listeners overseas on this occasion of mutual celebration. It is irresistible, in the circumstances, to think of our two countries in terms of comparison and contrast. Australia is still very young in her history and her culture. She is young, too, as a nation. Yet in that one respect she is actually older than present-day India. While your Independence Day has been celebrated for a number of years, you have yet to celebrate the first anniversay of the actual realisation of that deal. I trust that on next August 15th you will do so with due rejoicing, and that you will continue to celebrate it in peace and harmony and grow in prosperity for many years to come.

Having attained that ideal of self-determination, India, it seems to me, now enters a new historic phase of nation-building. In Australia, our self-determination and our nation-building were perhaps more interwoven. From the very day when the pioneers landed in 1788—the occasion we are honouring

today-our nation-building really started. It was a hard and dreary battle against nature's resistance—against mountains and deserts, droughts and floods. But no sooner had the crops taken root, the herds begun to multiply, the hidden mineral riches of the country been unearthed, than the children of those prisoners began to feel that they must control their own destinies. It was their happy lot that self-determination came about, without strife, but by the peaceful assumption of responsibilities. When our six separate colonies federated in 1901 as the Commonwealth of Australia, we made our bow to the world as a brand-new nation-just 46 years ahead of the Dominion of India.

If, as scientists tell us, the continent of Australia, many millions of years ago, was cut adrift from Asia by some geological happening, times have so changed that today India and Australia are closer than ever. It is another happy coincidence that on this very day young Indians and Australians have met in friendly rivalry on the cricket field in Adelaide. This may not be on the highest plane of international relations, but it is something which you understand and we understand, a common heritage from Britain, which will certainly cement our friendship over the coming years.

## Australia's Greetings

To Indian listeners may I say that I offer Independence Day greetings on behalf of Australians; and that I pray Providence that your independence will be enveloped in that peace and goodwill already so wondrously set in being by Mahatma Gandhi. To Australians who may be listening, I send a fellow-countryman's greetings, and my wishes that, wherever you may be, you will celebrate many another joyous and prosperous Australia Day.

## PEACE PLEDGE SIGNED BY POLICE OFFICERS

The Chief Commissioner addressed today a meeting of all Magistrates and Senior Police Officers and reminded them of the pledge signed by him and the Deputy Commissioner along with the leaders of various communities in Delhi for presentation to Mahatma Gandhi on January 18, which led him to break his fast. The Chief Commissioner emphasised the important role which officers of Government, particularly Magistrates and Police Officers, have to play in maintaining peace and communal harmony. Each officer signed the following pledge:

"I solemnly affirm that I will sincerely endeavour to promote the cause of communal amity and in order to achieve that object I will honestly and truly do all I can in my official capacity to assist and enable the local administration to implement the pledge signed, amongst others, by the Chief Commissioner and the Deputy Commissioner of Delhi, for presentation to Gandhiji before he broke his fast on the 18th January 1948".

# Schemes Approved By Standing Finance Committee

Schemes for the setting up of a Bureau of Mines, construction of a major airport at Gauhati and aid to the Tata Institute of Social Sciences were among those approved by the Standing Finance Committee, which met in New Delhi on January 26 and 29 under the chairmanship of the Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance.

To serve as a "Brains Trust" for coordinated development of mineral resources in the Indian Union, the Bureau of Mines will be under an expert mining engineer or geologist and will have three technical branches, namely, Mining Engineering, Mines Inspection and Mineral Treatment, besides an Administrative branch. The desire for central co-ordination of mineral development and for creating machinery to aid it was expressed at a National Mineral Policy Conference held nearly a year ago by the Government of India.

The Bureau will in its early stages function primarily in an advisory capacity, without an executive or statutory powers nor will it undertake any actual mining or marketing of minerals. It will give advice on mining marketing and other problems to other Ministries and will collect information and statistics, organise training and research, formulate policy and coordinate measures for conservation and utilisasion of mineral wealth in the best interests of the country.

The scheme will cost about Rs. 3 lakks in the first year.

#### Civil Aviation

Civil Aviation featured on the Agenda. Sanction was obtained for the development of a major airport at Gauhati, in Assam, establishment of a Central Research Laboratory in Delhi and provision of adequate ground organisations at various airports in India. Expenditure on the proposals is estimated at about Rs. 3.7 crores in 1948.49.

Other schemes under this head include the construction of hangars and runways, residential and administrative buildings, workshops, and wireless stations, which are needed for expanding internal requirement and to meet India's obligations in accordance with international civil aviation conventions.

An expenditure of nearly Rs. 3 crores was agreed in to in respect of capital outlay on Posts and Telegraphs. There schemes include the establishment of a new tele-communications link between communications link between Assam and the rest of the Indian Dominion, expansion of the telephone system in Delhi, Bombay, Calcutta, Madras and Ahmedabad, the opening of new exchanges in various places, installation of new equipment and renewals, and construction and expansion of building required by the Department. A major part of the scheme is in accordance with the 15-year development plan.

The Standing Fnance Committee also accepted the proposal of the Ministry of Education to give the Tata Institute of Social Sciences, established in 1936 by the Trustees of the Sir Dorabji Tata Trust, a non-recurring grant of Rs. 7,00,000 (to meet part of the expenditure on land and a new building for the Institute) and a recurring grant, to be determined after scrutiny of the Institute's accounts. The recurring grant is subject to the following conditions: first, the Institute should train about 50 candidates a year in Industrial Relations and Labour Welfare subjects; secondly, it should train a reasonable number of medical social workers; thirdly, the Government of India will have the right to nominate if necessary, upto 15 students every year.

In order to meet the increasing demand for professionally trained social workers in the field of Industry as well as Social Services, the Institute proposes to strengthen and expand its training facilities. It is proposed to house the Institute in a new building at Worli. This will include residential accommodation for trainces and will also enable the institute to provide for 100 trainces, as against 40 at present. It is estimated to cost about Rs. 20 lakhs.

# Restitution of Property Taken Under Duress by Germans

The Office of the Military Government for Germany (U. S.) has promulgated Military Government Law No. 59, an internal restitution law, providing for the restitution of identifiable property wrongfully taken from its rightful owners by the Nazis during the period January 30, 1933 to May 8, 1945 through transactions under duress arising from discrimination because of race, religion, nationality, ideology and political opposition to National Socialism, says a Press Communique issued by the Ministry of Commerce on Jan. 27.

This law provides for the return of all identifiable property located in the American Zone and occupation including Land Bremen, but excluding the American Sector of Berlin.

Any persons now resident in India who suffered under the Nazi regime during that period may take steps to reclaim their property. All claims for restitution under the law must be filed on or before December 31, 1948, with the Central Filling Agency (Zentralanmeldeumt) establishment at Bad Nauhim, in the American Zone in Germany.

For further enquiries in the matter, the intending claimants may communicate with the Custodian of Enemy Property, Caltex House, Ballard Road, Bombay.

# NEED FOR RESTRICTION IN TRAVEL

## Railway Chief Commissioner's Appeal to Public

ROADCASTING from All India Radio, Delhi, on Jan. 19, Mr. K.C. Bakhle, Chief Commissioner of Railways, said, "We should revert to the war-time restriction of travelling only when we must, remembering that we have to accept austerity conditions for some time and that the facilities available in the country must be shared by everybody fairly.

He added: "We railwaymen promise to continue to do our best to improve service in every way, but we do seek a little of your consideration and a great deal of your active co-operation."

Here is the text of the broadcast:

On the last occasion when I broadcast from All India Radio in September, 1947, the subject was "The Task Before Railwaymen". Tonight, the title of my talk is "A Railwayman Speaks". I have been prompted to be the subject by the other side. place before the public the other side of the picture, because in the face of the constant and severe criticism expressed in the newspapers, on public platforms and even on the floor of the Assembly against Railways and Railwaymen, I consider that you should be informed that we are conscious of your difficulties, that we are making all efforts to improve what is unsatisfactory, and also because I wish to ask for your active help in consolidating every little improvement which Railwaymen in their hundreds all over India are endeavouring to make. While I hold no brief for the incivil, corrupt or indifferent worker, who merits and should receive due punishment, I should like the public to acknowledge the sincere, honest and good work which the vast majority of railwaymen are giving in their service.

## Effects of War

I suppose that one cannot really escape history, and that of the Railways has been particularly unhappy. Sir Ralph Wedgwood, the Chairman of the 1936-37 Indian Railway Enquiry Committee stated that the Railways were perhaps the most unpopular institutions in the country. Indian opinion regarded them as unfriendly, as indifferent to national interests, being largely European in direction and as possessing the attitude of the monoplist. Much of this was true ten years ago.

Then came the war, and with it heavy restrictions were imposed upon passenger and goods traffic, all the resources of Railways being almost entirely directed to the war effort. The commercial side of railway working was relegated to the background, and all the earlier intentions of developing amenities and better public relations had to be set aside for the duration.

The end of the war was followed by a period of intense political uneasiness before India became an independent self-governing country. That interval might be regarded as a semi-colon, if not a full-stop, in the change over of railway activities from war time to peace time footing, because during that period many factors, such as scarcity of essential stores and a general sitting-on-the-fence attitude, prevented real rehabilitation of much over-used and under-maintained assets, alike locomotives and rolling stock. With the 15th of August, 1947, came a sudden, different and a strange realisation that after all was said and done we were free. Indian railwaymen, with no less enthusiasm than other nationals celebrated the dawn of freedom.

### **Greatest National Undertaking**

But-and this is a great "but"the inertia which had been developing in the period immediately after the war, constituted a major problem to be solved before Railways could make real progress in the altered state of the country. In the years preceding the war, while resources at the disposal of the Railways were plentiful, the charge was that the Indian passenger especially third class, did not receive the amenities, service, or treatment which were his due. Even so, with progressive Indianisation in the executive grades, a spirit of understanding had already begun to develop: I know that there were cases where Indian officers did whatever lay within their limited sphere towards mitigating the shortcomings in respect of the third class passenger, and where commercial interests were properly and satisfactorily served.

It should be remembered that, in 1939, five major Railways were still under Company-management; it was only during the war years that Government acquired complete management of all major Railways, and, with the constitutional changes, the number of Indians in the higher administrative positions increased appreciably. day. Railways form our greatest national undertaking, in charge of an Indian Minister of Cabinet of a National Government not influenced by any considerations other than the good of India. I should like to quote to you some illuminating statistics. In the gazetted cadres, Indians today hold 63 per cent of posts in the administrative, and 87 per cent in the executive grades. In the Class II Services the percentage of Indians is 93, while the Class III and IV Services are almost 100 per cent

But, here is the irony of fate: when real progress was possible with plentiful resources, the direction of policy was not in our hands. When the reins of power did come to us, who had been waiting for the opportunity to serve and who are inspired with the will to improve, the resources had been depleted materially and, I regret to say, to some extent also morally. An all-out drive on the psychological front has been instituted: the staff are digging themselves out of the old grooves into which many had got set; they are being educated into making themselves self-respecting citizen-servants of the State. The weaning away of men who grew up n the earlier environments will take a little time; but already there are indications that many who understand have begun to act in the new spirit. There is, they realise, free scope for action and the old inhibitions are being shed rapidly.

A widespread and complicated public utility organisation like Railways cannot function in isolation, and the numerous factors that have added to the difficulties of civil administration and executives throughout India have also affected Railways to at least an equal extent. One of the main reasons for complaints now is the restiveness of the public at the inadequate service which Railways are in a position to offer. Often the complaints are genuine, but often too the public tries to the straining point the forbearance of the staff and seldom is the railwayman credited with the honest handling of a situation rendered difficult by the passengers' lack of understanding of the Railsway's case. We have to admit also that there is, in many places, an unfurtunate spirit of challenge to authority. This does not make matters easy. Discipline in public life is as escential for the welfare of the State as it is in service

## Railway Labour

From patronage by the Railway of the passenger, the situation has changed, and correctly so, to patronage by the passenger of the Railway. As a railwayman, I value that patronage and regard it as vital to our well-being, but, with it, I respectfully seek the consideration which a patron must give to his protege.

On the labour side, as the Minister for Railways remarked during the Budget speech to the Assembly in November 1947, the ugly chapter of ill-will and misunderstanding has ended. The relations between the Railway Board and the All-India Railwaymen's Federation are now happily cordial and the representatives of the Federation and the Members of the Board now talk the same language. We speak without reservation at our meetings and we understand each others' points of view, the practical difficulties and limitations. We are agreed that discipline, increased output and efficiency for national needs are paramount considerations and that, while Government is prepared to do what is expected of it as a model employer, it cannot go so far as to upset the national economy of the country.

In certain circles the wage bill of the Railways is regarded as being exorbitant, and there are suggestions that this should be reduced. Ninety-four per cent of the total wage bill for all Railways represents the wages paid to Class III and Class IV employees. Their standards are as set by the Central Pay Commission scales to a very large extent

and Government cannot reduce these pays, nor has it any desire to do so. Real economy will come only when the output standard is improved, that is to say, when for every rupee paid in wages, the Railways and the country receive a full 16 annas worth of return. This is where the Labour Unions and railwaymen can really help. The number of Class III and Class IV employees on all Railways is about 8 lakhs. There is enough work for these persons for a long time to come because we have yet to catch up the arrears of work and the deferred maintenance, besides tackling the expansion, which we cannot at present consider because of our limited resources.

During the recent discussions in the Assembly, the point regarding overcrowding in passenger trains was emphasised by various members. I have had many persons ask me the straight question as to why we cannot put on more trains although the war has been over for some years now. The whole pro-blem hinges upon the availability of rolling stock, viz., locomotives and coaches. Orders have been placed for the manufacture of additional coaches with indi-genous industry and in Railway Workshops; we are bulding them as fast as material becomes available and our workmen work. But when we realise that passenger traffic has increased since 1939 by 96 per cent, and the additional coaching stock put on line during the same period has only been 10 per cent, it will be clear that overcrowding will disappear only when the difference between the shortage of stock and increase in number of passengers is reduced to zero.

These are times of decontrolling and far be it from me to suggest that passenger travel should be controlled. But decontrol involves a considerable amount of self-control. I would ask that we revert to the war-time restriction of travelling only when we must, remembering that we have to accept austerity conditions for some time and that the facilities available in the country must be shared by everybody fairly. Restricting travel, not under law, but by self-restraint, is perhaps the quickest solution.

#### Ticketless Travel

I should next like to refer to the question of ticketless travel. The loss to Government on this account is estimased to be of the order of Rs. 8 to 10 crores per year, and this is a very large slice of railway revenue. It is normally human nature to pay not something that one can get for nothing, but on the other hand, as good citizens of this country, we have got to realise that we cannot get anything out of the till unless there is something in it, and paying for one's journey honestly is helping to put something into the till. We cannot carry on with deficit budgets, and postpone provision of essential amenity works for the travelling public and for railwaymen. One thing leads to another and we should now move forward clockwise and not anti-clockwise as has been the direction for some

It has always surprised me that persons who regard themselves as honest and who would not stoop to picking up a cake of soap from a grocer's shop without paying for it, should consider it as no great a sin to defraud the Railway. There is only one other Department of Government, which, I think, is regarded in the same light. It is the Income Tax Department. With that happily I have no concern. The amount of ticketless travel which goes on now would be reduced considerably if there were less aiding and abetting of this civic offence by the public generally, and conditions would improve if good citizens would expose, instead of shelter, those who commit this civic offence against the State. When therefore next time you are challenged for your ticket, please do not misunderstand the Ticket Checker. He is performing his duty by the State and is not really wanting to make a nuisance of himself so far as you are concerned. Your personal cooperation while you travel as our passenger is requested.

The next point to which I would refer is the utilisation of wagons. The earnings from goods traffic are more than the earnings from passenger traffic; the goods earnings can be increased without imposing any additional burden on the consumer or the trader if wagondays for movement of general goods and merchandise can be reduced. We there-

fore ask the commercial and trading community of India to do what they can to unload and release wagons quickly. Increasing the speeds of goods trains or putting more wagons on the line is useless, if at terminals these are going to be used as warehouses, perhaps because some one interested is speculating for a higher price before he puts the commodity which has come to him by rail on to the market. After all, wagons are provided with wheels so that they may keep moving. The more wagons there are available for loading, the less is there scope for blackmarketing in wagon supplies.

## An Appeal

And that brings me to a very important point, namely, corruption. While on the Railways we are endeavouring to teach our staff that being corruptible is an anti-national act may I on behalf of railwaymen plead that the public should realise that giving graft for selfish purposes is an antisocial act? It is difficult to prove corruption and though I am informed by all kinds of persons that the railway service is corrupt, no one who has paid a bribe is prepared to come forward and admit it, because he has committed an offence as much as the bribe-taker. As an old Indian proverb says: "You cannot clap with one hand". We are

## **WORKS PROGRAMME FOR 1948-49**

The Standing Finance Committee for Railways met at New Delhi on Jan. 22 under the chairmanship of the Hon'ble Dr. John Matthai, Minister for Railways. The 1948-49 Works Programme for Railways was approved, says a Press Note issued by the Ministry of Railways on Jan. 22. Following are the main details:—

The expenditure approved was: Capital Rs. 24.82 crores; Betterment Fund Rs. 5.22 crores; Depreciation Fund Rs. 22.93 crores, totalling Rs. 53 crores. The main heads of expenditure are: Rs. 20 crores for open line works, Rs. 22 crores for rolling stock; Rs. 4½ crores for machinery in Workshop; Rs. 4 crores for new construction, restoration and purchase of branch lines; Rs. 1 crores for investment in road services, and the balance of Rs. 1½ crores for miscellaneous items.

The expenditure on open line works includes Rs. 6½ crores on new works, about 8 crores on works in progress and the balance on track renewals.

In the new construction programme, an expenditure of Rs. 2½ crores was approved for 1948-49 on the construction of the direct rail link to Assem.

For the establishment of the headquarters of the Assam Railway, which would include office and residential accommodation, an item amounting to Rs. 2.9 crores was approved, to be spent over a period of three years.

The provision of a combined hospital for the use of the G.I. P. and B. B. & C.

I. Railways at Bombay and the doubling of the main line over the Barkhera Ghat (between Itarsi and Bhopal, G. 1. P. Bailway) were two of the major item, aproved.

Expenditure to the exent of Rs. 22 crores under the Betterment Fund was also approved for the provision of amenities for the travelling public.

The programme included the provision of a large number of residential quarters for Class IV and Class III staff on various Railways. These will be constructed to the new standards in accordance with, the Mitra Committee's recommendations.

## WAGON TURN-ROUND TO BE SPEEDED UP

Measures to speed up the turn-round of wagons are being enforced with immediate effect, says a Press Note isued by the Ministry of Railways on Jan. 22.

These include reduction in the free time allowed to the public for loading and unloading wagons from nine hours to six hours, and placement of wagons for unloading within a maximum of three hours on arrival at terminal stations, Loading and unloading on Sunday is being introduced at all Goods Depots and large stations where this practice is not observed at present. Railways have been asked to make special efforts to reduce the average period of detention of wagons in marshalling yards and to see that the overall period does not exceed 24 hours.

Digitized by Google

INDIAN INFORMATION, FEBRUARY 15, 1948

trying to do what we can but we must get the public to learn to stand in the queue and take what is available in their own turn.

I wonder how many know that the number of railway staff who come into contact with the public forms only 10 per cent of the total staff employed by Railways. I am not prepared to accept that all this staff, whom I may call public relations staff, are corrupt, incivil, indolent or inefficient, because I know that a large number of them are honestly giving service. For them and the hundreds of others, whom the public does not meet, it is very hard to be given a bad name, because a small handful are had

Before I end, I would like to tell a story about Confucius, the great Chinese philosopher. Of the factors of Government he said: "The people must have sufficient to eat, there must be a sufficient army and there must be faith in the nation". Asked if he were forced to give up one of the three factors, what he would go without, Confucius answered that he would go without the army first. Asked again if he were forced to go without one of the two remaining factors, which he would give up, Confucius replied that he would go without sufficient food. "There have always been deaths", he said, "in every generation, but a nation without faith cannot stand".

We railwaymen have faith in our national institution, and we are determined to see that you shall not lose faith in the Indian Railways. We refuse to be defeated by difficulties, and we promise to continue to do our best to improve service in every way, but we do seek a little of your consideration and a great deal of your active cooperation, so that we may truly subscribe ourselves: your most obedient servants.

#### SARDAR PATEL'S SPEECH

(Continued from Page 193)

tion, the composition of its people and its cultural and traditional tics with India are such that it cannot but be an integral part of India tied to it by the same bonds which characterise the relationship today between India and the acceding States. Accession in the case of Hyderabad is inevitable and will I hope come before long. Similarly democratication which will characterise the whole country cannot be delayed or withheld in Hyderabad. The people there must get their due and I would only appeal to His Exalted Highness the Nizam to appreciate this situation and to do the right thing in time.

The time at my disposal is short and the problem is vast but I have tried to give you a bird's eye view of the current tendencies as well as of the picture which the country is likely to take when this process of consolidation and democratization is completed as it should be in the next few months.

# FIXATION OF RAILWAY STAFF'S PAY

## Agreement With Railwaymen's Federation

number of anomalics in the application of the Central Pay Commission's recommendations to Railway employees will be removed as a result of the two-day discussions between the Railway Board and the All-India Railwaymen's Federation which concluded on January 23, says a Press Communique issued by the Railway Board on Jan. 24.

Mr. Jayaprakash Narayan, President, Mr. Guruswami, General Secretary, and 4 other members represented the All-India Railwaymen's Federation. The Chief Commissioner, Railways, and Members of the Railway Board represented the Ministry of Railways. The Minister for Railways attented the meeting for part of the time.

Agreement was reached on the two main issues—the fixation of pay of staff on pre-1931 scale electing for the Pay Commission's scales; and the removal of anomalies resulting from the application of Pay Commission's uniform scales to staff on varying scales of pay in different zones.

The number of adjustments which become necessary in fixing, on Pay Commission's scales, staff on various existing scales and grades of pay on different railways, brought out the need for some machinery to be set up by means of which the Federation could refer points which in their opinion require immediate investigation and consideration. The Railway Board on their side agreed that a small committee of the Federation so appointed could keep in constant touch with the Board for the purpose and it is hoped thereby that many of the questions will be more expeditiously investigated and settled.

## Pre-1931 Staff

The Federation represented that many of the more senior staff on pre-1931 scales would, if opting for Pay Commission's scales, find their pays fixed at a figure lower than their existing pay. Although Government had given such etaff the protection that the difference would be treated as personal pay to be absorbed in future increments, the Federation contended that this protection was inadequate and denied to such staff any benefit either now or in the immediate future. Government of India having considered this, the Minister for Railways announced on the second day of the meeting that, in such cases, the pay of pre-1931 staff would be fixed at the next stage in the Pay Commission's scale above their present pay plus interim relief and that future increments would be drawn in the normal way.

On the representation of the Federation, the Government have also agreed that the present pay of employees in the

different zones would be treated as the basic pay for the purpose of fixation in the Pay Commission's scales.

Other subjects discussed were:

- (a) Educational assistance for children of railway employees.
  - (b) Confirmation of temporary staff.
- (c) Enforcement of the Adjudicator's Award.
- (d) Extension of railway service privileges to employees engaged by Railway Station Committees, Institutes, Credit Societies and Staff Benefit Funds.
- (e) Reinstatement of those convicted for political offences and of those discharged for desertion of posts during the air-raids at Calcutta.
- (f) Staff problems arising out of partition.
- (g) Working of grainshops and grant of dearness allowance for 'B' and 'C' greas.
- (h) Uniform conditions of rervice on all railways within the Indian Dominion.

#### **Educational Aid**

The Federation requested that the Pay Commission's recommendations in the matter of grant of educational assistance to railway employees' children be implemented and that the present discrimination between Class IV and Class III employees in this regard be eliminated. The Railway Board pointed out that these recommendations were subjects of general policy to be decided by the Government of India before any action could be taken in respect of railway staff.

On the subject of confirmation of temporary staff, the Federation alleged that a large number of staff known as 'substitutes' or 'casual labour' kept in continuous emplo employment over a number of years but were not treated as permanent and given the benefits of permanent employment. It was also alleged that they were periodically discharged and immediately reemployed. The Railway Board pointed out that it would be impossible to avoid temporary posts which had to be created to deal with seasonal and traffic fluctustions and for special works. Instruc-tions had, however, been issued to Railways to convert temporary posts into permanent posts wherever justification exists. The Federation represented that casual labour, although not paid at market rates, were deprived of the dearness allowance. The Railway Board stated that casual labour were engaged at market rates and therefore were excluded from the grant of dearness allowance, but agreed to examine the matter further.

The Federation enquired about the progress in implementing the Award of the Adjudicator in the dispute between the nine Indian Railways and their respective Labour Unions. The Railway Board stated that the Adjudicator appointed has been Ďу Labour Ministry to whom his report had been submitted and to whom enquiries on the subject should be addressed as they were the only competent authorities who could enlighten the Federation. It was added, however, that the most important part of the Adjudicator's recommendations referred to leave concessions which would affect the strength of leave reserve into the various categories of staff. The Report of the Central Pay Commission also deels with leave rules. As Government have not yet arrived at an overall decision on the subject of leave rules, as recommended by the Central Pay Commission, action on the Adjudicator's Award relating to Indian Railways could not be taken. The Federation, however, pressed for an early decision, although the President of the Federation agreed that the issue was complicated and that the implementing of the recommendations on this account might be delayed.

On the subject of extension of railway service privileges to employees engaged in Railway institutes, Credit Societies etc. the Federation wanted all such employees to be treated as regular railway employees on the ground that the activities of such Institutions were incidental to railway working. The Railway Board stated that such Institutions and Societies were run by the staff for their own benefit and it was for such Institutions to improve the conditions of service of their employees.

#### Reinstatement of Employees

The question of reinstatement of railway employees dismissed for political offences was next considered. References were made particularly to cases of men involved in the disturbances in 1942. The Railway Board stated that they had issued general instructions for the removal of the ban on re-employment of all persons discharged for political offences. The Chief Commissioner promised to have investigations made into specific cases sent up to him by the Federation.

On the Federation's proposal that a joint meeting be held between representatives of the Federation and the Railway Board to discuss their suggestions for improving the Working of grainshops, the Chief Commissioner stated that the reports of various Railways on these suggestions had been received and a joint meeting would be arranged in the near future.

Claims against nationals of enemy or ex-enemy countries in respect of property in those countries, or compensation for loss of or damage to such property should in future be registered with the Custodian of Enemy Property, Caltex House, Ballard Road, Bombay, and not with the Director of Commercial Intelligence, Calcutta, says a Press Note issued by the Ministry of Commerce on Jan. 20.

# POWER AND PROJECT ORGANISATIONS RECONSTITUTED

THE Government of India have decided that henceforth only three organisations will deal with their waterways and electricity development schenes. They will be the newly constituted Central Waterpower Irrigation and Navigation Commission, the Central Electricity Commission and the Damodar Valley Corporation, the last being an autonomous body which is being set up by an act of the Legislature.

The first two of the above-mentioned organisations are the results in each case of the amalgamation of two distinct bodies. Thus the Central Waterways, Irrigation and Navigation Commission and the Office of the Consulting Engineer on Irrigation have been combined in one case and the Central Technical Power Board and the Electrical Commissioner's Office in the other.

## **Apportionment of Duties**

This reconstitution of two bodies out of four carries with it also a clearer apportionment of functions and duties between them. Thus CWINC., as at present constituted, will be in sole charge

#### INTER-RAILWAY SPORTS

Mr. K. C. Bakhle, Chief Conmissioner of Railways, performed the opening ceremony of the 14th Annual Meet of the Indian Railways Athletic Association on Jan. 17, at the Irwin Stadium, New Delhi. A large and distinguished gathering of Railway officials and others was present.

Proceeding- began with a march past by the athletes taking part in the tournament. On Jan. 18, the second and concluding day of the Meet, there were sports, and the finals of the Inter-Railway Tennis Teams.

#### Prize-winners

Following were winners in th torunament:—

The Senior Railways Athletic Challenge Cup was won by the Bengal Nagpur Railway and that of the Junior Railways, by the Nizam's State Railway, Mesrs. K. L. Perret (Bengal Nagpur Railway) and C. G. Cleur (South Indian Railway) received Cups for Best Athletes.

Inter Railways Tennis Tournament: Sir Edward Benthall Challenge Cup was won by the East Indian Railway, defeating the Bombay, Baroda and Central India Railway.

Inter-Railways Tug-of-War Tournament: Eastern Punjab Railway defeated the East Indian Railway.

Mrs. Bakhle, wife of the Chief Commissioner of Railways, distributed the prizes to the winners.

of all multi-purpose river valley schemes except the Damodar Valley Project, and the Central Electricity Committee will be in charge of purely electricity projects.

This would mean in effect that while CWINC will be in charge of the hydraulic, hydro-electric and civil portions of the river valley schemes, the other Commission will undertake planning, lay-out, etc. for the transmission, distribution and switching system together with the utilisation problems such as load surveys, estimates of revenue from power sales and formulation of preliminary power structures. In this the Central Electricity Commission will assist all the Provincial and State Governments in the Indian Union as well as CWINC and the Damodar Valley Corporation. Besides, this Commission will advise the Central, Provincial and State Governments on the administration of electricity legislation and control of electric utilities. Its advice will also be available on all matters relating to electric power development and public electric utilities both private and State-owned.

#### **CWINC'S Functions**

CW INC retains all its old functions in respect of water-power generation, irrigation, navigation and flood control, and it may also be required, as before, to undertake the construction of any these schemes on behalf of the Government of India. At present CWINC is directly responsible for the construction of the Hirakud Dam Project, while in other river projects such as the Bhakra Scheme in East Punjab, Rihand Project in U. P., the Ramapadasagar Scheme in Madras, etc. it gives expert technical aid to the Provincial Governments concerned.

Another important function accrnes to CWINC, according to the terms of its reorganisation, by which it will be called upon to advise the Government of India, whenever necessary, in respect of water and water-power rights and disputes as between Provinces or Provinces and States. The Commission will report on the effect which any scheme for the conscivation and utilisation of water may have on the interests of the Provinces or States concerned and give an authoritative interpretation of any agreement existing between them in regard to such manners.

## MODERNISATION OF AIRFIELDS

Plans are being formulated for the rapid modernisation of Royal Indian Air Force airfields in India.

With a view to studying the planning, lay-out and construction of airfields in the United Kingdom, two Indian officers have already left for that country. They are Lt. Col. Partap Narain, Chief Engineer, Air Force Works, and Flight Lieutenant J. K. Koy of Air Headquarters (India).

INDIAN INFORMATION, FEBRUARY 15, 1948
Digitized by

# STEEL PRICES RAISED BY Rs. 80 PER TON

THE Government of India have decided, it is learnt, to raise the price of steel purchased from Registered Stockists by Rs. 80 per ton, the increase coming into effect from Jan. 27, 1948.

The increase, though substantial being nearly 30 per cent over the existing price level, is on a par, it is felt, with recent increases in the prices of other commodities and not higher. Further, even with this increase, steel prices in India will continue to be the lowest in the world. Particularly as indigenous apply is to be supplemented by imports the step-up is inescapable.

It will be recalled that, consequent on the acceptance by the Tata Iron and Steel Company Ltd., and the Steel Corporation of Bengal Ltd. of a reduction of Rs. 12-8-0 per ton in the price of steel on account of the removal of the Excess Profits Tax, it was possible for Government to effect a substantial reduction in the selling price of steel to consumers from April 1, 1946. Since then the liabilities of the Companies have increased because of the enactment of the Business Profits Tax Act and an increase in the Corporation Tax, the works cost has also risen on account of increases in the cost of labour and raw materials.

After considering the matter very carefully, the Government of India are convinced that if production is not to be adversely affected, some immediate relief to the Companies is called for. They have accordingly decided that, pending examination by the Tariff Board of the question of the fixation of steel prices on a long-term basis, the

cut of Rs. 12-8-0 referred to above should, as an interim measure, be restored to the Companies. Due to the recent increase in railway frieght charges, both on raw materials and finished goods, there will be an addition of Rs. 11-0-0 payable to the Main Pooducers; in other wards the Main Producers will get Rs. 23-8-0 per ton in all.

## **Imported Steel Costs More**

Government expect to import from the U. K. and the U. S. A. substantial quantities of certain categories of steel in 1948 but the price of this steel will be higher than Indian price. It is impossible to sell imported steel at a higher price than the indigenous price. Any attempt to do so would not only involve invidious discrimination among consumers, but would also in effect raise the price of all steel to the higher level. It has, therefore, been decided that the increased prices of imported steel should be spread over all categories of steel except billets, which are only used by re-rollers.

To equalise the high prices of imported steel with those of indigenous steel and to meet the additional payment of Rs. 23-8-0 to the Main Producers, the prices at which the consumers will purchase from the Registered Producers have been increased by Rs. 75 per ton.

The prices at which the Controlled and Registered Stockholders will sell have been increased by Rs. 80 per ton, the extra Rs. 5 to cover the Bihar Sales Tax.

#### KOREA STATE COAL PRICES

In the Gazette of India Extraordinary of January 31, 1948, the Government of India notified revised prices of coal produced in Korea State. In accordance with the Government of India's policy of improving the wages and working conditions of colliery labour, the Korea Durbar, in November, 1947, sanctioned centain wage increases and other concessions and also refixed the price of coal to enable collieries to meet the increased cost of production. The prices fixed by the State were Rs. 16-6-0 per ton of runof-mine, dust coal and the slack and Rs. 17-6-0 per ton of steam coal, rubble and smithy nuts.

These prices have since been reviewed by the Government of India, who have decided that a substantial reduction in the prices notified by the Kores Government should be made. The prices now fixed are Rs. 14-3-0 per ton of run-of-mine, dust coal and slack and Rs. 15-3-0 per ton of steam coal, rubble and smithy nuts; they took effect from January 31, 1948.

Difficulty is being experienced in the early settlement of outstanding pension gratuity or disability pension claims of ex-RIAF airmen or heirs of deceased airmen, owing to the lack of information regarding the present addresses of the individuals concerned, says a Press Note issued by the Ministry of Defence on Jan. 27.

Those affected are therefore, advised to apply with full particulars to the Officer-in-Charge, RIAF Record Office, New Delhi.

Heirs of deceased airmen should also specify full particulars of their present addresses and their relationship to the deceased.

The Textiles Conference was recently held in Bombay. Picture shows Mr. C. H. Bhabha, Dr. Shyama Prasad Mookerji and Sardar Vallabhbhai Patel at the Conference

# RECRUITING MELA AT AMBALA

Thousands of villagers assembled at the Recruiting Mela held on Jan. 15, at Kurali, in Ambala Division, where India's Defence Minister, Sardar Baldev Singh, and East Punjab leaders were also present. The Mela was organised by the Recruiting Organisation to attract the right type of men for the Indian Armed Forces, to fill vacancies caused as a result of the partition of the forces, demobilization and other causes. Enthusiastic villagers had trekked more than forty miles to participate in the Mela.

Opening the Mela, Sardar Baldev Singh referred to Mahatma Gandhi's fast and asked everyone present at the Mela to pray for his long life. At this critical moment, he said, no effort should be spared to ensure perfect communal harmony in order that Mahatma Gandhi should live.

Sardar Baldev Singh assured the refugees that the Government were trying their utmost to rehabilitate them and make them happy. He appealed to all the young men of the country to come forward and assist in the building up of a strong national Army for India. Referring to Indian troops now fighting in Jammu and Kashmir, the Defence Minister praised their bravery and courage and added that so long as there was a single raider on Kashmir soil, the Indian Forces would not rest content.

Several leaders of different political groups in East Punjab also spoke at the Mela, which was a great success as was evidenced by the fact that a large number of young men volunteered for service in the Indian Armed Forces.

Earlier the National Flag was unfulred to the accompaniment of the firing of guns, while RIAF aircraft flew overhead in formatian and dipped in salute.

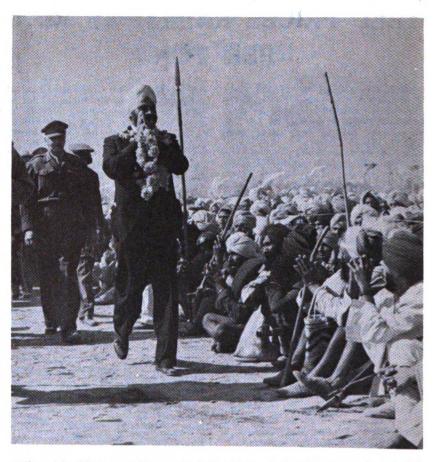

## APPEAL FOR AMENITIES TO TROOPS IN KASHMIR

An appeal for woollen garments and gifts of newspapers, periodicals, and light fiction, for the men of the Armed Forces of the Indian Dominion fighting in Kashmir, has been made by the General Officer Commanding-in-Chief, Delhi-East Punjab, Command.

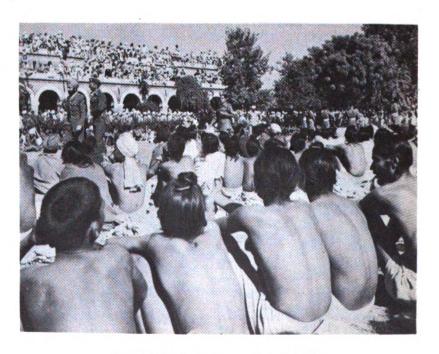

The G. O. C.-in-C., DEP Command, appeals to the ladies who so generously helped our troops with gift parcels in the last war to resume sending similar gift parcels of woollen garments such as pullovers, mufflers etc.

Newspapers, periodicals and light literature, in English and all provincial languages of India would also be welcome.

These parcels of woollen garments and periodicals, etc., are to be marked "gift parcel for troops in DEP Command" and sent to Brigadier-in-Charge, administration, H. Q., Delhi-East-Punjab Command, "F" Block, New Delhi.

A Recruiting Mela was held recently at Kurali, in Ambala! Division, where India's Defence Minister, Sardar Baldev Singh and East Punjab leaders were also present. Picture shows Sardar Baldav Singh arriving at the Mela

A crowd of volunteers present at the Mela

The Prime Minister paid a surprise visit recently to the Combined Military Hospital, Delhi Cantonment. Here Pandit Nehru is seen talking to a patient undergoing treatment in the hospital

H. E. Lady Mountbatten also paid a visit to the Hospital on January 21. Picture shows Her Excellency talking to a patient wounded in Kashmir

#### R. I. A. F. CATERING SCHOOL

In order to ensure better food and messing arrangements for the men of the Royal Indian Air Force, a school of catering has been established by the RIAF.

Selected officers and men of the RIAF will receive training in cooking and catering administration at this school. The men will be taught to make intelligent use of the food ration and obviate waste by improved methods of preservation and cooking.

The Chief Catering Officer of the R.I.A.-F. Sq.-Ld. N. H. Gosden, who has had wide experience of catering in different theatres of war, will run the course.

#### R. I. A. F. FAMILIES WELFARE

Families of RIAF airmen will receive free medical aid, and ante-natal care under a scheme announced by Air Headquarters (India).

The scheme provides for the immediate setting up of 12 more maternity and Child Welfare Centres at RIAF Stations throughout the Indian Dominion and lady doctors and nurses will be made available at these centres for the treatment of families of airmen.

A sum of Rs. 25,000 has been made available for this purpose from the welfare funds of the RIAF.

## MILITARY HOSPITAL IN DELHI

## VISITS BY PRIME MINISTER AND LADY MOUNTBATTEN

Officers and men of the Indian Armed Forces under treatement in the Combined Military Hospital, Delhi Cantt. had a delightful surprise on January 20 when the Prime Minister visited the hospital and spent over two hours speaking to them.

Accompanied by Mrs. Bucher, wife of Gen. F. R. R. Bucher, Commander-in-Chief, Indian Army, and others, Pandit Nehru visited various wards and talked to the men. Among those for whose welfare the Prime Minister expressed solicitude were men wounded in the fighting in Jammu Province. He had a word of cheer for all of them.

Pandit Nehru on arrival was received by Brig. Mahdo Singhji, Delhi Sub-Area Commander, and Lt. Col. B. S. Sandhu, Commanding the Hospital.

Her Excellency the Countess Mount-batten of Burma visited the Combined Military Hospital, Delhi Cantonment, on Jan. 21. Lady Mountbatten was accompanied round the Hospital by Brig. Madhuvsinhji, Delhi, Sub-Arta Commander, Col. Tandon, Director-General Medical Services, Col. B. S. Sandhu, Officer Commanding and Acting Matron Miss John, and met all the members of the staff.

During Lady Mountbatten's tour of the hospital departments, which included the Families' Wards, she spoke to all the patients, most of the men having been wounded in Kashmir.

Afterwards Her Excellency took refreshments with the Medical and Nursing Staff and congratulated them on the fine work which they are doing.

## KING'S COMMISSIONED INDIAN OFFICERS

The Government of India have issued an Ordinance—Indian Army Act (Application) Ordinance—making King's Commissioned Indian Officers subject to the Indian Army Act in the same way as Indian Commissioned Officers, says a Press Note issued by the Ministry of Defence on Jan. 27.

This has become necessary because before August 15, 1947, KCIOs were subject to the Army Act but due to the promulgation of the Indian Independence Act they ceased to be governed by that Act from that date. The Ordinance is effective from August 15, 1947.

The pilgrim ship Alavi which sailed from Jedda on the 26th January 1948 arrived at Karachi on the 5th February 1948, says a Press Note issued by the Ministry of External Affairs and Commonwealth Relations on Feb. 9, 1948. After disembarking about 349 pilgrims at Karachi she proceeded to Bombay on the same day.

The Defence Minister presided over the fifth meeting of the Indian Sailors', Soldiers' and Airmon's Board, which met in New Delhi on January 24. A view of the meeting in progress

## Rehabilitation Of Ex-Servicemen

THE question of rehabilitating exservicemen, who had migrated from Pakistan to India, was actively considered at the fifth meeting of the Indian Sailors', Soldiers' and Airmen's Board held at New Delhi, on Jan. 24. The Hon'ble Sardar Baldev Singh, Defence Minister, presided.

To those unfortunate displaced exservicemen and their families from Pakistan the Defence Minister expressed his sympathy. He mentioned that over a million of such men were displaced, leaving behind crores of rupees of property. In East Punjab and the western districts of the United Provinces there are a large number of ex-servicemen who have migrated from Sind, Baluchistan, the N.-W.F.P. and West Punjab.

To contact ex-servicemen and their families in villages and to look after their welfare and offer general assistance it was agreed that better local liaison should be maintained with ex-servicemen.

## Soldiers' Welfare

The Indian Sailors', Soldiers' and Airmen's Board was constituted in 1919, to advise on questions affecting the interests of serving, discharged and deceased Indian soldiers and non-combatants and their dependants. In course of time, it has been entrusted with certain executive functions in the matter of welfare of soldiers' families.

Those present at the meeting were: Mr. P.V.R. Rao, Joint Secretary, Ministry of Defence: Maj-Gen. S.M. Srinagesh, Adjutant General, Indian Army; Mr. A. K. Chanda, Financial Adviser, Detence and Supply; Capt. H. G. Hopper, R. N. Naval Headquarters, India; Wing-Commander Sondhi, Air Headquarters, India; Mrs. Hannah Sen; Mr. M. K. Kripalani, Ministry of States;

and the provincial representatives, Maj. D. P. Banerji (West Bongal); Sardar Lal Singh (East Punjab); Sri D. K. Mardaraj (Orissa); Capt. R. C. Mahanta (Assam); Capt. C. S. Bhatnagar (United Provinces); Capt. Samadar Singh (Rajputana); Mr. A. N. Misal (Representative Kolhapur State) and Mr. L. G. Mirchandani, Secretary of the Board.

## PASSAGE FOR NON-VOLUNTEER BRITISH PERSONNEL

All non-volunteer British Personnel i.e., officers and their families and ORs and their families whose services terminated on Dec. 31, 1947, (this includes all British personnel who applied for extended service with the Dominions of India and Pakistan, but who were not accepted by either Dominion), who are still awaiting passages to U. K. and other countries will report at HBID Deolali between Feb. 1 and 11, says a Press Note, issued by the Ministry of Defence, on Jan. 21.

Personnel, who do not report at HBTD Deolali between Feb. 1 and 11 will have to make their own arrangements for passage through civil Shipping Agents at their own expense, and their release leave will commence from Feb. 1, 1948.

The Government of India have arranged to divert the following steamers for evacuating non-Muslim refugees from Sind: Shivala, Karapara, Akhar, Khosran, and Jaladurga, says a Press Note issued by the Ministry of Relief and Rehabilitation on I to 8.

The possibility of diverting more shipping to Karachi is being investigated.

## Pakistan Military Personnel Amnesty Ordinance

THE grant of general archesty to certain military personnel accused or convicted of offences in connecton with internal defence duties is announced in an Ordinance issued by the Government of India, says a Press Communique issued by the Ministry of Defence on Jan. 18.

This is consequent upon an agreement between the two Dominions that a general amnesty should be granted to certain military forces of the two Dominions who were convicted of diverse offences in the course of discharge of their duties connected with internal defence or protection or evacuation of refugees.

The Ordinance further says:

- (1) No legal proceeding shall be instituted in any civil court, criminal court or court-martial in India against any member of the military forces of Pakistan who was engaged in duties connected with internal defence of the protection or evacuation of refugees in any part of India, in respect of any act done or purporting to be done between the 15th day of August, 1947 and the 10th day of January, 1948;
- (2) If immediately before the commencement of this Ordinance any legal proceeding is pending against any such person in respect of any such act as aforesaid, the proceeding is hereby withdrawn;
- (3) If any such person as aforesaid has before the commencement of this Ordinance been convicted by a criminal court or court-martial of an offence in respect of any such act as aforesaid, the sentence or punishment ordered by such court is hereby remitted, and the person shall, if under confinement, be released forthwith and any forfeiture or penalty imposed shall be set aside and fine realised from him shall be retunded;
- (4) Any person who immediately before the 15th day of August, 1947, was a member of His Majesty's military forces in India shall be deemed to be a member of the military forces of Pakistan if in accordance with or by virtue of any orders issued before the said 15th day of August, he has opted for service in the military forces of Pakistan or has been assigned for such service.

## RIAF LIAISON OFFICERS IN U.K.

Squadron Leader K.N. Gocal and Squadron Leader M. Malhotra have been appointed R.J.A.F. Liaison Officers in the United Kingdom.

The appointments follow the Government's decision to establish the R.I.A.F's liaison with important countries. A start has been made with the United Kingdom.

The two officers wife are now ontheir way to the U.K. will function under the High Commissioner for India in London.

ENDIAN ENFORMATION, FEBRUARY 15, 1948

# Banks In Disturbed Areas: Arrangements BANKS PROHIBITED FROM RECEIVING FRESH DEPOSITS

S a result of discussions, says a Press Communique issued by the Ministry of Finance on Jan. 22, between representatives of the Governments of Pakistan, India, West and East Punjab and the Reserve Bank and other banks the following arrangements have been made for facilitating resumption of business by banks which have closed their offices owing to disturbances, or which find themselves unable to carry on their normal functions owing to paucity of staff:

Reopening of Branches in Labore: The West Punjab Government have agreed to make all the necessary arrangements for the protection and housing of non-Muslim staff of banks in Lahore and also to provide guards at bank premises in Lahore at the expense of the banks. Arrangements have also been made for the training of Muslim candidates in Lahore for recruitment to banks service Banks should therefore arrange to get back as much of their staff to Lahore as possible and supplement it where possible with locally recruited staff.

The West Punjeb Government have nominated Mr. Habib-ur-Rahman, Under Becretary, Finance, Lahore (Telephone No. 4572) to assist banks in arrangements for the protection and accommodation of staff in Lahore reopened. Representatives of banks in India with branches in West Punjab should approach him for this purpose. They may also contact Mr. K. L. Panjabi, (Officer on Special Duty) Deputy High Commissioner for India in Pakistan at Lahore, in case they need any assistance or advice locally.

Consolidation of Branches: -- If on account of staff or other difficulties, banks are unable to carry on business except at one branch at Lahore or a limited number of branches at a few centres, they will be allowed, if they so desire, to close the remaining branches and to remove their business to such of their offices as are functioning, after giving due notice of such removal to their local constituents through newspapers or otherwise. On being satisfied that such notice has been given, the Custodian of Evacuee Property (Mr. Justice Rahman) will give them the necessary permission to remove all their valuables, cash, securities, accounts, records, etc., to the branches at which the business is to be consolidated. On obtaining such permission they should approach Mr. Habib-ur-Rahman, Under Secretary Finance, West Punjab Government, who will make the necessary arrangements with the Deputy Commissioner of the Districts to assist them in the removal.

Transfer of Accounts:—There are many complaints by evacuees in both Dominions about cheques and matured fixed deposit receipts being returned by banks with trivolous objections and about applications for transfer of accounts being refused on similar flimsy grounds, such

as non-return of unused cheques. In order to avoid inconvenience and distress to the evacuee depositors, and in their own interests, banks are requested to desist from such practices and to co-operate by giving all possible facilities to their constituents. To the extent that the difficulties in regard to transfer of accounts from one Dominion to the other are due to the non-functioning of banks and difficulties of communication, these will largely disappear when the business of banks is consolidated and some of their branches start functioning properly and when communications improve.

To facilitate transfers it is suggested that each bank should designate one office in India and one in Pakistan for clearing claims for inter-Dominion transfer of accounts. The means of these offices, which should be properly manned for handling this business, should be announced in the Press so that constituents may refer their applications for transfer and any complaints in this regard to these offices. In this connection it may be mentioned that both Dominions have agreed not to place any restrictions on transfer of accounts or remittance of funds by banks in connection with such transfers. Only in the case of accounts of companies which continued to function in Pakistan, the Pakistan Government have stipulated that their previous permission should be obtained.

Registration Claims: - The West and the East Punjab Governments have issued Evacuees (Administration of Property! Ordinances under which all the property of evacuees is vested in a Custodian; and other Provincial Governments concerned are taking similar action. Where banks have any claims, whether in regard to their own property or the property of their debtors pledged, hypothecated, assigned or otherwise charged as security for loans advanced by them, they should take early steps to register their claims with the Custodian of Evacuee Property of the Province in which the property is situated.

Survey of Financial Position—The West Punjab Government bave also agrreed to give facilities to banks in making a survey of their financial position. For this purpose it is necessary that where possible banks should depute their staff to tour the affected areas after obtaining the necessary help, from Mr. Habib-ur-Rahmer. The Reserve Bark staff at Lahore will also assist them in making an appraisement of their financial position.

These arrangements will go a long way towards enabling banks to resume their normal working. They will be, however, of no avail unless the banks themselves take the initialize in this matter and make a determined effort to secure their staff, respen their branches and start functioning. It is only if they

(Continued in next column)

The Government of India some time ago directed the Reserve Bank of India to conduct an inspection of the Mutual Banking Corporation. Ltd. Calcutta, under the provisions of the Banking Companies (Inspectical) Ordinance, 1946, says a Press Note issued by the Ministry of Finance on Jan. 24.

Having received and considered the inspection report of the Reserve Bank of India and the explanation offered by the Mutual Banking Corporation, Ltd. the Government of India are satisfied that the affairs of the Mutual Banking Corporation Ltd. are being conducted to the detriment of the interests of its depositors.

In exercise of the powers conferred on them by section 5 (1) (a) of the Banking Companies (Inspectical) Orders 1946, the Government of India have accordingly issued an order prohibiting the Mutual Banking Corperation, Ltd., from receiving fresh deposits with effect from January 26, 1948.

A Similar Press Note was issued by the Ministry of Pinance on Jan. 31 with regard to the Discount Bank of India Ltd.

## CLAIMS ON SAVINGS BANK DEPOSITS IN PAKISTAN

It is notified for the information of the public that claims in respect of Savings Bank accounts standing open at post offices in Pakistan and postal Cash, Defence Savings and National Savings Certificates standing registered there can be made at all head and sub-post offices in India, says a Press Communique, issued by the Directorate-General, Posta and Telegraphs on Jan. 17. Special forms have been prescribed for the purpose and may be obtained from any head or sub-office.

Those depositors or holders of certificates who have already applied for transfer of their accounts or certificates but who have not received back their pass books or certificates should also submit claims in the prescribed forms.

Depositors and holders who have their pass books or certificates in their presentation need not submit claims in the forms now prescribed. Action for transfer of deposits and holdings of such persons will be taken by post effices as the pass books or certificates are presented for availing of the concessions announced last month.

## (Continued from previous column)

try to help themselves by such efforts that they would be able to overcome their present difficulties. No improvement can take place if they do nothing. It is earnestly hoped that in their own interest and that of their creditors banks will lose no time in taking action on the lines as indicated above.

## GANDHIJI'S DREAM COMES TRUE

## Sardar Patel Inaugurates United State of Kathiawar

NAUGURATING the United State of Kathiawar in Jamnagar on February 15, Sardar Vallabhbhai Patel, India's Deputy Prime Minister and Minister for States, said that the dream of Mahatma Gandhi about Kathiawar had come true. History had no parallel of 400 and odd States coming together so peacefully fusing into the unity of population as well as territory. If the way pointed out by Gandhiji were followed by the Princes as well as the people of Kathiawar, he was sure, they would set an example for the whole country and leave a precious legacy for the coming generations.

Sardar Patel paid a warm tribute to the Jam Sahib and other Rulers and said that without their patriotism, wisdom and willing co-operation the present achievement would not have been possible.

Present at the oath-taking ceremony were Sardar Baldev Singh, Defence Minister; Mr. V. P. Menon, Secretary, States Ministry; Mr. C. C. Desai, Additional Secretary; Mr. N. M. Buch, Regional Commissioner, Western India States and many Princes and leading citizens of Kathiawar.

Earlier, Sardar Patel administered the oath of office to the Rajpramukh, who, in turn, administered the oath to four other Princes, forming the Presidium and also to the Prime Minister and other members of the Interim Ministry.

Addressing the Rajpramukh, Ministers and the people Sardar Patel said that the present occasion was unique in India's history. All of them had played their part worthily towards this most great achievement. The present occasion would have appeared incredible even to the most optimistic among us a few months ago. But now it was a fact. It was a saint's dream come true. But for the hearty co-operation of the Jam Sahib and his brother Princes in fulfilling their "Rajdharma" this happy realisation would have been impossible. Sardar Patel said he had always believed that freedom from thraldom for the Princes would mean freedom for their people also and he was glad that after August 15, the independence of India had such happy repurcussions on Kathiawar. Without bloodshed and unrest, he continued, so many rulers had voluntarily

agreed to surrender their age-old privileges and sovereignty to their people. Even the history of Europe, considered to be the most civilised part of the world in recent history, has failed to provide an illustration of unification of such a magnitude.

#### Non-Violent Revolution

In Europe and elsewhere their plans of unification were prompted by the desire for conquest through fire and sword against their neighbours. But India's cultured heritage, left to us through Gandhiji's life and work, had taught us to bring about in India a nonviolent revolution. Gandhiji had departed and left Kathiawar as well as the whole country forlorn but the rich heritage which he had given, should be their guide at all times of stress. By doing this India would provide an object lesson for the whole world. Referring to the Jam Sahib's observations about pre-partition conditions in India, Sardar Patel said that the British had announced that after 200 years their paramountcy had lapsed. There was a vaccum and many of them wondered what was in store for them. There was a probability of more than two partitions dividing the country. In such an eventuality the plight of the country would be most miserable. But patriotic Princes like the Jam Sahib came forward and joined hands with the leaders of the people with

Digitized by Google

the result that despite partition India is strong and fully defended. The amputation of any limb from the body was a painful process, but hacking the human body would be unbearable and would leave only a corpse. But today India is alive and alert even after partition.

The oaths of office taken today had placed tremendous responsibility on the shoulders of members of the Presidium and the Ministers, continued the Deputy Prime Minister. He had assurance, however, that they would depend on everybody to fulfil their duties. The Jam Sahib was a brother to him and he would trust him to keep the oath like himself. Their aim should be the unification of the Kathiawar administration and the protection of the interests of its people. India's ancient civilisation is respected throughout the world but, he said, behind its enchanting facade, were many evils which tended to bring India into disrepute before the eyes of the world. The evil of untouchability was one such problem against which Gandhiji had fought throughout his life. It was up to the people of Kathiawar, now free, to mould their future according to their desire and remove this curse of untouchability from their midst so that India's name may shine all over the world and a happy memory of the great saint may be perpetuated.

Sardar Patel advised the Ministers that they should always bear in mind sacred oath they had taken, to treat one and all equally with justice and save them from fear or favour. The untouchables should also receive a square deal along with the downtrodden agriculturists of Kathiawar after the popular Ministry took charge of the administration.

### **Natural Resources**

Referring to the vast but untapped natural resources in Kathiawar, Sardar Patel said that if these resources were developed scientifically he was sure this beautiful land would prosper once again and be the centre of attraction for its migrant sons and others, throughout India.

Concluding. Sardar Patel announced that in the recognition of their valuable services the Jam Sahib had been promoted as Lt.-General and the Maharaja of Bhavnagar, to the rank of Commodore in the Indian Navy. He also announced that the obnoxious customs of cordon at Virangam would be abolished in the near future when a Customs Agreement had been reached with the new State.

### SERAIKELLA AND KHARSAWAN STATES

In accordance with the decision already announced the Government of India have appointed Mr. Justice Bavdekar of the Bombay High Court to act as the Tribunal to enquire into and report on the Province with which the States of Seraikella and Kharsawan should be integrated, says a Press Note issued by the Ministry of States on Feb. 9.

# LORD MOUNTBATTEN'S MESSAGE

Lord Mountbatten, Governor-General in a message to Rajpramukh on Feb. 15 on the occasion of inauguration of the United State of Kathiawar said: "I send heartiest congratulations to Your Highness on your installation as Rajpramukh and your new Government on the inauguration of the State of Kathiawar.

"The statesmanlike action you have personally taken and the leadership you have shown will, I believe, bear fruit in years to come. The new State will, I am sure, play its full part in the future progress of India and I wish you and your colleagues and the new Government all possible success".

In his reply the Jam Sahib said:
"On behalf of my Government and
myself I thank Your Excellency most
sincerely for your telegram of congratulations and good wishes which all here
appreciate. We fully share Your Excellency's hopes that the step we are
taking will prove beneficial to Kathiawar
and India".

# HYDERABAD PREMIER'S TALK IN DELHI

Mr. Laik Ali, the Prime Minister of Hyderabad, immediately on his arrival in Delhi on Jan. 29 had long conversations with the late Mahatma Gandhi and Sardar Vallabhbhai Patel over the general political situation in the country and issues concerning Hyderabad, says a Press Note issued by the Ministry of States on Feb. 2.

His subsequent conversations with H. E. the Governor-General, Pandit Jawaharlal Nehru and Sardar Vallabhbhai Patel took place under the gloom cast by the death of Mahatmaji. In the final meeting between Sardar Vallabhbhai Patel and Mr. Laik Ali it was agreed that both the Governments should work in close harmony to remove all causes of suspicion and distrust and to bring about immediately complete mutual confidence and goodwill and build up solid and lasting friendly relationship between Indian Union and Hyderabad. Such developments are also likely to contribute to the removal of communal tension and distrust throughout the country and ensure a healthy atmosphere.

# SARDAR PATEL'S ADVICE TO KATHIAWAR PEOPLE

Addressing a mammoth meeting in Jamnagar, on Feb. 15 Sardar Patel congratulated the people of Kathiawar on their success but reminded them that the freedom which they had won entailed responsibilities. The Ministers chosen were the representatives of the people and were his trusted colleagues. Sardar Patel referred to the passing away of Mahatmaji and said how deeply Mahatmaji was interested in the unification of Kathiawar. He was anxious to meet the Jam Sahib and Her Highness soon after he learnt of the Covenant. Gandhiji did not seek mere political Covenant. unification but unity in every sense of the word. They must eradicate untouchability and foster inter-communal unity and serve to bring about complete prohibition. They should try to follow in the footsteps of Mahatmaji in every walk of life. That would be a glorious tribute to the departed leader.

Sardar Patel revealed that certain portions of the Barcda territory which were in Kathiawar had to be integrated into the State of Kathiawar. The Rulers of Kathiawar and the Ministers would shortly negotiate with Baroda Durbar in this regard. The small territory Island of Diu under the Portuguese sovereignty had also to be acquired through negotiations.

Concluding, Sardar Patel said that one dream had been realised, namely, the United State of Kathiawar. The next objective should attract the neighbouring States, including Cutch, and thuspave the way for the ultimate realisation of the greater dream, Maha Gujrat which could be done by making Kathiawar strong and self-reliant.

Replying to an address of welcome in Jammagar the same day, Sardar Vallabhbhai Patel said now that Kathiawar, the birthland of Mahatma Gandhi, had emerged as Saurashtra, its people had a unique opportunity of perpetuating Gandhiji's memory by realising his ideals of "Ramraj".

He urged the people to maintain the traditional ties of mutual love and regard which existed between, the Panchayats and the Princes in ancient India. They were taught by Gandhiji that the people could be won over by love. The Jam Sahib and his brother Rulers were already converted to this way and he hoped that their co-operative efforts would take the new Saurashtra a shining example to the world.

The days of rule by force had ended, Sardar Patel said, and the people too should shed their fear while not feeling any hesitation to tell the truth. Their address to Princes should come from their hearts. The odd atmosphere of distrust should disappear, transforming Kathiawar into a Saurashtra. The change of hearts on the part of the Princes of Kathiawar after the advent of freedom was forescen by Gandhiji and he was glad to be in Jamnagar today to fulfil Gandhiji's incomplete dream of ovolving a new Saurashtra, through mutual regard and affection.

Concluding, Sardar Patel said that Saurashtra was Gandhiji's birthland. Therefore the best way of perpetuating his sacred memory was to undertake the experiment of "Ramraj" as desired by him through the same spirit of love which had bound the Jam Sahib and other Rulers with their people on this auspicious occasion.

# MAHARAJA AND PREMIER OF ALWAR ASKED TO REMAIN OUTSIDE STATE

NOTIFICATION in the Gazette of India Extraordinary dated New Delhi, February 7, 1948, says:

All available members of the Negotiating Committee of the States which have individual representation in the Constituent Assembly, having been individually consulted by the Governor-General, and having considered the material placed before them in regard to the activities of the R. S. S. S. in Alwar State, the possible complicity of this organisation in the assassination of Mahatma Gandhi and other serious crimes with the support or connivance of the State administration, agree that there are prima facts grounds for:

- 1. asking His Highness the Maharaja of Alwar and Dr. Khare, Prime Minister of alwar, to remain outside Alwar State temporarily in order that there should be no question of the investigations of the allegations being in any way prejudiced: and
- 2. the Administration of the State being carried on, as a temporary measure, by an Administrator appointed by the Ministry of States.
- 3. The Government of India accept the above advice and have decided that His Highness the Maharaja of Alwar and Dr. Khare, Prime Minister of Alwar, should remain outside Alwar State and have appointed an Administrator to carry on the administration of the State as a temporary measure. Arrangements have been accordingly made with immediate effect.

(Sd.) V. P. MENON, Secretary to the Govt. of India, Ministry of States.

# Ruler's Communication To States Ministry

The Maharaja of Alwarin a communication to the States Ministry says:

New Delhi, February 7, 1948.

Government of India Ministry of States Notification No. F. 200-P-48 dated February 7, 1948 has been handed over to me by the Secretary to the Government of India, Ministry of States, in the presence of the Governor-General and the Hon'ble the Minister for States. I am shocked to note the contents of this document referring to the activities of the R. S. S. in Alwar State, the possible complicity of this organisation in the assassination of Mahatma Gandhi and other serious crimes with the support or connivance of the State administration. It is extremely painful for me even to think that such an allegation should have been made against my State. As however the allegation is so

( Continued in Ool. 2)

## ADMINISTRATOR FOR ALWAR STATE

It was announced on Feb. 7 that Mr. C. S. Venkatachar, I.C.S., Regional Commissioner, Indore, is proceeding to Alwar to assume charge of the administration of Alwar State. Meanwhile, Mr. K. B. Lall, I.C. S. (of the Partition Office) has taken over charge of the administration temporarily.

## ORDER SERVED ON DR. KHARE

The District Magistrate passed the following order which was served on Dr. Khare:—

WHEREAS I am satisfied from information received that Dr. N. B. Khare, Prime Minister of Alwar State, at present residing at Keeling Lane, Delhi, has acted in a manner prejudicial to the public safety and maintenance of public order by furthering or promoting in Alwar State the activities of the Rashtriya Swayam Sewak Sangh which has been declared an unlawful orgainsation.

AND WHEREAS, it is necessary to prevent him from acting in any manner prejudicial to the public safety or maintenance of public order;

NOW THEREFORE, I, M. S. Randhawa, District Magistrate, Delhi, in exercise of the powers vested in me by section 4(1) (b) of the Punjab Public Safety Act, 1947, as made applicable to Delhi Province hereby make this written order directing the said Doctor N. B. Khare to reside or remain within the area of Delhi Province for a period of one month from today.

This order shall take effect immediately and has been passed ex-parte in face of an emergency.

(8d.) M. S. RANDHAWA,
7-2-48 District Magistrate Delhi.

#### (Continued from Col. 1)

grave, I do not wish to interfere in the least in the proposed investigations of the allegations and wish the position of my State to be cleared as best and as soon as possible. It is therefore ordered that the services of Dr. Khare, the Prime Minister of the State, be dispensed with. The administration of the State will be carried out by an administrator appointed for the period of the inquiry. The Administrator should be given full cooperation by the Services, both civil and military. I shall voluntarily reside outside Alwar State during the period of the inquiry which should not in any way be prejudiced.

(8d.) TEJ SINGH,
Alwarendra.

# Administrator for Bharatpur State

As a result of conversation between the States Ministry and His Highness the Maharaja of Bharatpur in which His Highness was apprised of prima facie evidence of complicity of the Bharatpur administration in R. S. S. S. activities, His Highness while feeling shocked at the report has agreed for the purpose of clearing the name of the administration and his own position to the appointment of an Administrator for the State who is expected to take charge forthwith, says a Press Communique issued by the Ministry of States on Feb. 10.

His Highness has assured that the Administrator, and the head of the Police Administration to be appointed by the States Ministry, will have the fullest cooperation of His Highness, the popular Ministers, the army and the police in their work.

## VOCATIONAL TRAINING FOR WOMEN

With a view to facilitating the resettlement in life of refugee girls and women from Western Pakistan, the Ministry of Labour, Government of India, has sanctioned a scheme of Vocational Training for them, says a Press Note issued by the Directorate-General of Resettlement and Employment on Jan. 28. To start with, training will be given in six principal trades, namely, spinning and weaving, calicoprinting, tailoring and dress making, stenographly. clerical and commercial work and typing.

For the present, seats for 115 refugee girls and women have been reserved at the ex-Service women's Training Centre, New Delhi. On the expiry of the term of the scheme for the training of ex-Servicemen on the 31st March 1948, the Centre will be engaged exclusively on the training of refugee girls and women, with a capacity of 300.

Besides free medical treatment, a consolidated allowance of Rs. 45 per mensem, will be paid to each trainee in lieu of board, lodging and stipend.

The period of training will vary from trade to trade and individual to individual, but, on an average, it will be about eight months.

The trainees will be selected by a Selection Committee appointed by the Women's Section of the Ministry of Relief and Rehabilitation, and will be posted to the Centre by the Director of the Women's Section of that Ministry.

Mr. S. S. Vasist, Chief Transportation Superintendent, G. I. P. Railway, is appointed to officiate as General Manager. G. I. P. Railway, in place of Mr. Hood, O. B. E., who proceeds on four months' leave from March 15, 1948, says a Press Note issued by the Ministry of Railways (Railway Board) on Feb. 17.

# STANDARDISATION AND QUALITY CONTROL CONFERENCE

### Shri Rajagopalachari's Address

DETERMINATION to pursue Mahatma Gandhi's ideals by practical work in the sphere of constructive activities which were so near his heart was reflected in the deliberations of the Conference on Standardisation and Quality Control which commenced its seven-day session in Calcutta on February 8.

In his inaugural address Shri C. Rajagopalachari, Governor of West Bengal, pointed out that it was throughout Gandhiji's life his principle that on an occasion of mourning no work should stop. He felt, the Governor continued, that he himself should set an example by coming to inaugurate proceedings of the Conference as has already been fixed, in spite of the overwhelming grief and mourning throughout the country as a result of the tragedy. By his presence at the Conference in this hour of sorrow His Excellency also wanted to impress upon the public that the Conference represented solid work. The application of statistics and quality control methods to Indian industry was a matter of supreme importance as it was expected to improve the standard of production both in quality and quantity. Standardisation which supplied patterns was as essential as was culture to social life. An actual survey of the best and worst goods were needed to bridge the gulf between the two. Such a survey would also be an inducement for reaching the goal. Unless the country produced quickly and properly India would loss in the race of economic progress and the newly achieved freedom might then prove a mere cause of anxiety to the people, he concluded.

### Dr. Mookerji's Message

In a message of good wishes to the President of the Conference, Dr. Syama Prasad Mookerji, Minister of Industry and Supply, and President of the Indian Standards Institution, also emphasised that people must carry on constructive activities even though their hearts were heavy and heads bowed. India has begun to appreciate the benefits that might accrue to her newly growing industries by adoption of quality control methods. Dr. Mookerji expressed his satisfaction at the enthusiastic manner in which the vast body of industrialists and technologists engaged in industry were showing a keen desire to explore new fields of knowledge which would help to accelerate the pace of industrial development.

Dr. W. A. Shewhart, American expert known throughout the world as Father of Quality Control, presided over the Conference. In his address he said that as a free nation, India was really in a certain sense just starting on her own. The object of industry and applied science in India should be to satisfy the wants of 400 million people. But one could not even find out what these wants were without the help of statistics nor could one take the final step on research concerning the design, specifications, and techniques on each of these fundamental aspects of production.

He emphasised the importance of the science of statistics to various industries which depended on one another. He referred to the problem of food in India as an instance and said that increased production of food involved the use of fertiliser which in its turn meant machinery and equipments. Similarly the accommodation problem of 4 million refugees involved new houses which could not be constructed without building material. The improvement of quality and the maintenance of proper standard were essential in making these different branches of production fit in into one

complete whole. There were many research organisations, plants and industries in India but what was lacking was co-operation between various groups India could not develop, Dr. Shewhart continued, her vast resources unless science laboratories and industrial concerns worked together as a co-ordinated whole, Quantity control would enable them to do this making different parts fit in and go together properly.

Earlier Dr. L. C. Verman, Director, Indian Standards Institution, in explaining the object of the Conference said that the Indian Statistical Institute and Indian Standards Institution, joint organisers of this Conference, had come together to take first step in initiating the introduction of statistical methods into India's industry on the lines which have been tried and proved a success in other parts of the world. Prof. P. C. Mahalanobis, Director of Statistical Institute, also addressed the Conference.

A technicolour film on quality control made by Mr. Johns Hyphen Manville of U. S. A. for training their own workers and sent on loan by the firm to India through Dr. Shewhart was shown at the Conference.

Nearly 200 representatives from various industries and research organisations all over India attended the Conference.

### INDIA'S SHIPBUILDING PROGRAMME

THE total coastal shipping tonnage in India is nearly 3 lakhs gross (including British tonnage) and the whole of it was built in overseas yards. The Government of India are considering the question of developing shipbuilding industry so as to enable India to build within the next five years a minimum of 50,000 gross tons per annum.

While giving this information in the Indian Parliament on Feb. 10 in reply to a question, the Hen'ble Dr. Syama Prasad Mookerji, Minister of Industry and Supply, re-affirmed the intention of the Government of India to encourage by all possible means the building in India of as many ships as possible. Government are releasing steel required for building ships and steel and cement for the extensions of shipbuilding yards and shipbuilding berths.

The total coastal shipping tonnage in India is approximately 3 lakhs gross (including British tonnage) and the whole of it was built in overseas yards.

There are 5 main shipbuilding concerns in India, who during the years 1944, 45 and 46 built small launches of a total tonnage of 10,270, 8,503 and 18,544 tons, respectively. These launches are not suitable for coastal shipping. Figures according to financial year are not available.

To build a 50,000 gross tons of shipping per annum it is estimated that three more ship-yards will have to be constructed and the existing ship-yard of Mesers. Scindia Steam Navigation Co., is being extended so that about 50 more shipbuilding berths may be added within the next 5 years. The allocation of the three new ship-yards is likely to be Calcutta, Bombay and Kathiawar Coast.

In this connection it may be pointed out that in a Government of India Resolution dated July 12, 1947, it has been stated that it is the Government's intention to assist Indian shipping as far as possible to attain the target of 2 million tons within the next 7 years as recommended by the Reconstruction Policy Sub-Committee on Shipping. Apparently the intention is that the difference in tonnage between the target and our shipbuilding plan should be purchased from foreign countries.

### TELEGRAMS TO MIDDLE EAST COUNTRIES

Senders of telegrams to Persian Gulf, Iraq, Iran and Saudi Arabia are advised to route their telegrams via OCS instead of via Karachi, says a Press Note issued by D. G., P. and T. on Feb. 7. The telegrams via OCS for these places will be charged for at the same rates as hitherto for via Karachi.

INDIAN INFORMATION, MARCH 1, 1948

Digitized by GOOGIC

# DISPOSAL OF WAR SURPLUS MATERIAL

REPLYING to a question in the Indian Parliament on Feb. 6, Dr. Syama Prasad Mookerji, Minister of Industry and Supply, explained Government of India's concern in disposing of war surplus material in the best interests of the nation. He said: "The prime objective of present disposal policy is to ensure the most beneficial use of surplus goods. For that reason disposals have recently been considerably slowed down to enable Government to ensure that the maximum use of surplus stores is made for the purpose of relief and rehabilitation.

"In order to assist Government in ensuring that suitable use is made of disposals stores for industrial purposes, it is proposed to establish a committee to inspect and examine surplus plant, machinery and raw materials and advise Government on the best methods of their utilisation in industry.

"The general policy regarding disposal is that the requirements of the Central and Local Governments should have first claim; that disposal of commodities which are subject to a Government control should be effected in the same way as obtains under the control system in operation; and that otherwise all.

disposals articles should be sold by auction or through open methods of tender with fixed reserve prices.

"The new Government, shortly after they took office on the 2nd of September 1946, appointed a Disposals Enquiry Committee. A copy of the Resolution setting up this Committee is tabled. Under the previous disposals policy, speed of disposal and the obtaining of the maximum price were the chief consideration, and considerable quantities of stores were sold on the basis of negotiation. As a result of the recommendations of the Enquiry Committee, the method of negotiation has been to a large extent given up. and the policy now is to give the greatest possible publicity to the stores available.

There have been many vague allegations of corruption. But the Disposals Enquiry Committee reported that they found no definite indications of it, and Government are satisfied that the revised methods of disposal now being adopted have reduced the possibilities of corruption to the minimum possible. When complaints of corruption are received they are investigated, but so far no case has ever been substantiated."

## **Results of Cloth Decontrol**

Enquiries have been made as to how the decisions regarding the control over cotton textiles announced in the Government of India Press Communique of the 20th January affect the public. The following are the main results of the relaxation of control as regards the ordinary consumer.

Consumers will now be able to purchase cloth without a ration card, unless the Provincial or State Government concerned decides to maintain a cloth rationing system after prior consultation with the Government of India. No Provincial or State Government has as yet taken such a decision.

As regards prices, statutory control will no longer be exercised. Mills have undertaken to see that cloth is sold to wholesalers at fair ex-mill prices fixed by the Industry and stamped on the material. The trade will be expected to sell to the consumer at a price not exceeding the retail price, also stamped by the mills on the cloth. These price marks are an indication to the consumer of the reasonable price which he may be expected to pay.

A cess has been collected on the cloth delivered by the mills during January and on this cloth the marked retail price may be enhanced by 25% in the case of coarse cloth, 12½% in the case of medium cloth, and 12½% in the case of fine cloth. Prices on cloth Texmarked in February 1948 and onwards will be the correct ones. The success of this

experiment of decontrol will be judged from the manner in which the undertaking given by the Industry to fix fair ex-mill prices, and to deliver cloth to wholesalors at these prices is implemented by the mills; and the extent to which the promises made by the trading community that they will give the consumer a fair deal, are kept.

Provincial and State Governments are being requested to send reports periodically on the levels at which cloth is being retailed and the effects of the new textile policy will be reviewed from time to time.

### IRRIGATION MAP OF INDIA

The Central Board of Irrigation, India, has recently issued a chart showing the development of irrigation in India prepared in the Board's Office and printed at the Survey of India Press, says a Press Note issued by the Central Board of Irrigation on Feb. 18.

The chart which is 301 inches by 40 inches shows in multi-colour development of irrigation from 1892-1944 in India of 1946 (provinces only). Areas irrigated from various sources viz., Government canals, private canals, tanks, wells, and other sources together with the total area cultivated during each year are plotted one above the other in different colours.

### SCHOLARSHIPS TO SCHEDULED CASTE STUDENTS

The Government of India will award during 1948-49 scholarships to students of the Scheduled Castes of the Dominion of India who wish to pursue their studies in scientific, technological and some of the professional subjects, beyond the Matriculation stage, says a Press Note issued by the Ministry of Education on Feb. 10.

The Scholarships are tenable in India only. The amounts awarded will include tuition fees and maintenance charges admissible under the rules, excepting the courses of shorthand and telegraphy for which short period stipends of small value will be awarded. The courses for which awards will be available are: (1) Intermediate in Science, (2) B. Sc., (3) M. Sc., (4) Engineering, (5) Technology, (6) Medicine (7) Agriculture, (8) Teachers' Training, (9) M. Ed. after obtaining B. T. degree, (10) Commerce, (11) Geography (Hons. & Post Graduate courses, (12) Telegraphy, and (13) Shorthand and Typewriting.

Women students offering Arts subjects in the Intermediate, Graduate and Post-Graduate courses will be eligible for the award of scholarships, provided the give an undertaking that they will pursue a Teacher's Training Course at the end of their approved course or study.

Applications for scholarships should be submitted in the prescribed form through the Head of the Institution of which the applicant is or was a student and should reach the Scretary, Scheduled Castes Scholarships Board, Ministry of Education, Government of India, New Delhi—3, not later than April 30, 1948.

## INDIAN INSTITUTE OF SUGAR TECHNOLOGY

The following candidates have passed the Final Examination held in October 1947, in the courses mentioned below, says'a Press Note issued by the Indian Institute of Sugar Technology on Feb. 8. The names are in order of merit and the figures in brackets indicate the divisions secured:—

#### Chemical Control

B. N. Shukla (2); D. S. Gore (2); S. B. Singh (2); Onkarnath Maewal (3).

#### Bacteriology

Indrajit Bagai (1).

#### Pan Boiling

Dewakar Prasad (2); Bishnu Dutt Bajpai (2); Girish Chandra Sharma (2); Daulat Ram (2) Sri Chand Bhatia (2); S. M. Rao Huddar (3).

#### Fuel and Boiler Control

Chandra Kumar Srivastava (1).

### Milling Plant Operation

Mohindra Nath Sharma (2); Kulkarni Shankar Ram Chandra (2).

A view of the University Grants Committee which met in New Delhi on Fob. 13. From (L to R.) Dr. M. R. Jayakar (Chairman), Maulana Abul Kalam Azad, Sir S. S. Bhatnegar, Mrs. Hansa Mehta and Dr. M. N. Saba (Members)

# UNIVERSITY GRANTS COMMITTEE MEETS

THE University Grants Committee met on Feb. 13 in the Council Chamber, New Delhi, under the Chairmanship of the Rt. Hon'ble Dr. M.R. Jayakar.

Before delivering his inaugural address, the Hon'ble Maulana Abul Kalam Azad, Minister of Education, said that the Committee was meeting under the shadow of Mahatma Gandhi's tragic death. He called upon the members to stand up in silence for a minute in memory of the Father of the Nation.

After this brief adjournment Maulana Asad addressed the Committee and said that the reorganized University Grants Committee, which had been formed in December 1947, had great responsibilities. The whole field of university education in the Indian Dominion was within the scope of the new Committee whereas their predecesor had looked after the three Central universities only. Maulana Azad added that when he took over charge of the Ministry of Education, the work of the University Grants Committee was one of the first questions that had come up for his consideration. He had felt that the terms of reference of the old Committee did not fulfil the purpose of its formation. Continuing Maulana Azad said it was the intention of the Government of India that this Committee should work on the same lines as the University Grants Committee in the United Kingdom. It should develop and co-ordinate university education all over the country. It should not merely meet once a year to approve grants for proposals that may be put up to it, but the Committee should keep in touch with the working of the universities all round the year and co-ordinate their activities. He hoped that the deliberations and advice of the Committee would initiate new and important schemes in our university education which are necessary in the new political set-up.

Maulana Azad pointed out that before partition, the old Committee had sanc-

tioned several schemes and grants for the three Central Universities of Delhi, Benares and Aligarh. The Committee woud have to examine all these schemes ds noop.

In conclusion, Maulana Azad wished all success to the Committee. The Committee will now meet again in the first week of May next in Bombay.

Among the members who attended the Session of the Committee were: Mrs. Hansa Mehte, Dr. Sir S. S. Bhatnagar, Dr. M. N. Saha, Sir Homi Mody and Mr. K. Zacharia. Other members are the Hon'ble Dr. B.C. Roy, the Hon'ble Dr. P. Subbarayan and Dr. Zakir Hussain.

Mr. B. B. Varma, Officer on Special Duty, Railway Board, is appointed to officiate as General Manager, M. & S. M. Railway, in place of Mr. W. G. W. Reid, who proceeds on 8 months' leave from the beginning of April, 1948, says a Press Note issued by the Ministry of Railways (Railway Board) on Feb. 21.

### OVERSEAS SCHOLARSHIPS

It is the policy of the Government of India to give every possible assistance to the expansion and improvement of facilities for university education in the country, but Government have been advised by the Overseas Scholarships Committee that it is necessary for some time yet to send selected students abroad for advance studies and training.

This was announced by the Hon'ble Maulana Abul Kalam Azad, Minister of Education, in reply to a question by Mr. R.K. Sidhwa in the Constituent Assembly of India (Legislative) on Feb. 5. The Education Minister added that the whole question of sending scholars to the United Kingdom, the United States of America and other foreign countries for technical training in the present year is still under consideration in the light of the interim report submitted by the Overseas Scholarships Committee which was appointed to examine the Overseas Scholarships Scheme in all its aspects.

Regarding the selection for these shoolarships, the Education Minister stated that some scholars were selected by the Provinces and others by the Central Government directly according to whether they are intended to serve a Provincial Government or the Central Government on their return.

### Two Higher Technical Institutions To Be Set Up

The Government of India have decided to establish within the first quinquennium commencing from 1947 two of the four higher technical institutions recommended by the Higher Technological Education Committee (Sarker Committee). These will be located in or near Calcutta and Bombay respectively. This information was given by the Hon'ble Maulana Abul Kalam Azad, Minister of Education, Government of India, in answer to a written question by Shri V. C. Kesava Rao in Parliament on Feb. 13.

Maulana Azad added that these institutions will cater to the needs of the country as a whole. He said that while the Government of India had not formulated any definite policy governing the location of the higher technical institution, they had accepted in principle the need for the establishment of four such institutions, one each in the East, West, North and South, the locations to be determined from the point of view of establishing and maintaining the right relationship between the public, industry and education. The Government will of course be guided by the advice of the All India Council for Technical Education which has been set up with a view to co-ordinating plans for the improvement of Technical Education in this country.

Asked as to whether the Government proposed to give priority to areas deficient in technically trained personnel when locating these institutions, Maulana Azad replied that all relevant factors including the deficiency in technically trained personnel will be given due consideration at the appropriate time.

# REHABILITATION FINANCE ADMINISTRATION BILL

THE Hon'ble Shri R. K. Shanmukham Chetty, Minister of Finance moved on Feb. 3 in the Constituent Assembly of India (Legislative) that the Bill to establish the Rehabilitation Finance Administration be referred to a Select Committee consisting of Dr. Bakshi Tek Chand, Pandit Thakur Das Bhargava, Shri Jaspat Roy Kapoor, B. Pattabhi Sitaramayya, Shri Khurshed Lal, Mr. R. K. Sidhwa, Shri Bikramlal Sondhi, Prof. Yashwant Rai, Shri T. T. Krishnamachari, Shri Jainarain Vyas, Kazi Syed Karimuddin, Diwan Chaman Lall, Shrimati Sucheta Kripalani, Shri Surendra Mohan Ghosh, and the Mover. Also, the Committee be instructed to report on or before February 10, 1948, and the number of members whose presence shall be necessary to constitute a meeting of the Committee should be five.

#### The Finance Minister said:

Honourable Members might remember that when we were discussing the motion to refer to a Select Committee the Industrial Finance Corporation Bill, I indicated that it was my intention to take up the question of setting up a separate Finance Corporation for the purpose of giving financial assistance by way of loans to refugees to enable them to settle down. We have been faced with the tremendous task of rehabilitating over four million refugees, a task probably unparalleled in the history of the world, because it did not face any Government in the form in which it has faced us.

The problem of the rehabilitation of the refugees must be considered from two aspects. (1) the rehabilitation of rural refugees, and (2) the rehabilitation of urban refugees. So far as the settling of refugees on agricultural land is concerned, this is essentially a problem for the provincial Governments to undertake. In fact the East Punjab Government which has been chiefly affected by this problem has already taken concrete steps to solve it and, as a matter of fact, a large number of refugees have already been settled on the Agricultural land available in the East Punjab.

### Urban Refugees

The problem of settling the urban class of refugees is somewhat more difficult and complicated. These refugees consist of professional men, artisans, traders and those who were engaged in industry. The task of enabling them to settle down is beyond the resources of individual provincial Governments. The Central Government have therefore to step in and undertake this responsibility. In helping even these refugees the East Punjab Government have already taken certain steps in their effort to give outright grants not exceeding Rs. 500 and to give loans not exceeding Rs. 5,000 in any one case to these

urban refugees. But the grant of loans up to Rs. 5,000 will not really solve the problem of a vast number of these people. In fact credit facilities on a very much larger scale are absolutely essential, if this class of refugees is to settle down in any useful occupation.

It is not obviously possible for the ordinary commercial banks to grant the necessary loan facilities to these people for the obvious reason that the loans to such persons must necessarily be for fairly long periods and an ordinary commercial bank is not expected to advance loans for such long periods. The active intervention of the Government of India therefore becomes necessary in this respect.

#### Small-scale Industries

It might be asked whether the Industrial Finance Corporation which we are going to set up very shortly cannot really-serve this purpose. Honourable Members will realise that the Industrial Finance Corporation is intended to be set up mainly for the purpose of helping large scale industries. It will be entirely outside the activities of this Corporation to advance loans for the setting up of cottage industries and for the setting up of small-scale industries which will probably be the aim of most of these refugees. The need for a separate organisation for providing this kind of finance is therefore very keenly felt. When I examined this problem it appeared to me in the very first instance that a shareholders corporation is not an appropriate means of establishing an organisation which will meet this purpose. I have therefore decided that the Central Government must take up the direct responsibility of setting up an organisation which will depend upon the Central Government for its financial resources. It is because of this peculiar feature that I have called it the Rehabilitation Finance Administration.

In drafting my proposals I had consultations with my Honourable colleague, the Minister for the Rehabilitation of Refugees, with Ministers from the East Punjab Government and also with officials of the Reserve Bank. As a result of these consultations, we have drafted the measure that is now before the House and which I want to be sent to a Select Committee. From the date indicated in my motion for the report of the Select Committee, Honourable Members would realise that I would like this House to deal with this measure in a spirit of urgency. We expect that the Select Committee will submit its report before the 10th of this month and we would make every endeavour to place it on the statute book during the current session and set in motion the organisation.

I, shall indicate at this stage some of the salient features of the measure that I have presented to the House. This Administration will be on an all-India basis. Even though the problem of the rehabilitation of refugees is experienced in its most acute form in the Province of East Punjab, Honourable Members will agree that other Provinces also are faced with this problem, more especially with the evacuation of refugees from Sind. The Province of Bombay and certain adjoining provinces will also be faced with this problem. The funds for this Administration, as I said, will be entirely provided by the Centre. It would, however, be a semi-autonomous body carrying on its operations on commercial and business lines as far as possible.

We have confined the jurisdiction of this Act to the Provinces of India be. cause it is competent for this Legislature to enact legislation applicable only to the Provinces and not to the States except in matters to which the States have acceded. But it is my intention that refugees, wherever they are settled, whether in a Province or in an Indian State, should get the benefit of this Administration. It has therefore been provided that such of the Indian States as would agree to provide the necessary facilities for the recovery of the loans in accordance with the provisions of our measure will also come within the opera-tion of this Bill. The Administration will be carried on by a Chief Adminis-trator and a Board of six Members to assist him. It is our intention that three of these should be officials and three non-officials—all nominated by the Government.

### **Advisory Body**

With a view to assisting the Board and to enable them to assess the needs of individuals and regions, it is also provided that there will be an advisory body consisting of not more than fifteen This Administration is members. empowered to grant direct loans to the extent of Rs. 7 crores. It can also re-discount bills of exchange to the extent of Rs. 1 crore. Over and above this the Administration is empowered to guarantee to banks and similar lending institutions against losses to the extent of 50 per cent in any individual case in respect of loans and advances that those institutions might grant to refugees. It will therefore be realised that the total resources that we place at the disposal of this Corporation will be Rs. 10 crores. So far as the limits of loans to individuals are concerned, it is the intention that the loans advanced by this Corporation should be Rs. 5,000 and above but not exceeding Rs. 1 lakh to any one single individual or party. The Administration will give 3 per cent interest on the monies that it draws from the Government, and in lending money to the refugees it is not permitted to charge anything more than 6 per cent by way of anything more than o per cent by way of interest. That, I think, is very satisfactory. The repayment of the loans granted should be for a period not exceeding ten years. These, Sir, are the salient provisions of this Bill.

It is my intention that in its actual operation this Administration will keep in close touch with the Provincial Governments and other bodies that tackle the problem of rehabilitation and as far as possible lend monies or grant assis-

tance to individuals who might be sponsored by the Provincial Governments and other various hodies, though the Administration will not be precluded from granting loans directly to individuals who may not be sponsored by Provincial Governments or the other bodies.

Sir, the Bill that I am now placing before the House is only one step among the various steps that Government have already taken and intend still to take in tackling this great problem of the rehabilitation of refugees, and I have no doubt that if worked in the spirit in which we have conceived it, this Rehabilitation Finance Administration will be a blessing to all these unfortunate brethren of ours who stand so much in need of help and assistance. Sir, I commend the motion to the House.

#### **REPLY TO DEBATE**

Replying to the debate, the Finance Minister, said:

I am glad to note that this Bill has been welcomed on all sides of the House It is as it should be because this is one of those ameliorative measures intended to do something to enable some of the refugees at least to settle down in useful occupations. A great deal of criticism has been made that this measure does not include loans or any form of assistance to agriculturists. My answer is very simple; it was not intended through this Agency to give loans or advances to Agriculturists. Sir, I have not introduced a comprehensive measure to set up one agency for dealing with every problem connected with the re-habilitation of refugees. In fact it will not be possible for one agency, however big or powerful it might be, to deal with all the manifold problems that arise in connection with the refugees. I thought after a great deal of consultation with some of the Provincial Ministers, the authorities of the Reserve Bank and my own colleague, the Minister for the Rehabilitation of Refugees, and his Officers that there is a need for a separate agency to give assistance to the middle class people who want to set up some business or industry. Those who think that we are again introducing a measure which will help the large industrialists are entirely in the wrong. Industry does not necessarily and always mean large-scale industry. There are a great many refugees, lakhs of them, belonging to the middle class who are after all the mainstay of society who require small advances ranging from Rs. 10 to 15 thousand in each case. Unless we set up a definite agency which will concentrate its action in giving relief to this large class of persons, whatever you do will be ineffective. I would therefore very strongly suggest that no attempt should be made in the Select Committee to enlarge the scope of this Bill so as to include Agriculturists.

My honourable friend Mr. Neogy gave some account of what is being done in the direction of giving help to agricultrists. What I would submit is this; if it is found that what is being done for the agriculturists already and what is contemplated are not enough and do not go long enough, by all means ask for another Corporation or Administration for this purpose.

PROF. N. G. RANGA: The need has already arisen.

THE HON'BLE SHRIR. K. SHANMU. KHAM CHETTY: If the need has already arisen we will certainly look into it. But if you overlap this agency with this work you are going to fritter away the energies of this organisation. I would therefore very earnestly urge that the scope of this Bill should be strictly limited to what it was intended to be, namely to give loans and to give assistance to the middle class people who want to set up some business. If there is one measure that can be considered to be a non-capitalistic measure, if there is one measure which is purely a nationalistic measure it is this one that I have brought before this House. It is hundred per cent a state concern. It is not intended to benefit the capitalists. It is not intende to enable individual to accumulate large fortunes. And I think, Sir, I should legitimately take credit that the first measure of that kind to be introduced in this House is by myself.

#### Rate Of Interest

There was some suggestion made that the rate of interest that we have suggested for the loans, namely, 6 per cent. is too high. Here again I would ask Honourable Members to bear one very important point in view. I hope it is not the intention of this House that the taxpayer should in any case be burdened as a result of the operation of this agency. We want that as far as possible it should be a non-profit-making agency, but at the same time a self-supporting agency. If this agency would give 3 per cent interest to all the money that it draws from Government. that means Government. ment would cover itself against the interest that it has to pay on loans that it has to borrow from the market. This margin of 3 per cent. is necessary for building up the administrative system necessary for the purpose.

SHRI M. ANANTHASAYANAM AYY-ANGAR: 6 percent is only the maximum.

THE HON'BLE SHRIR.K. SHANMU-KHAM CHETTY: That is so. I would suggest if you don't want to put a burden on the taxpayer and if you want this Administration to work on a self-supporting basis you should not prevent the fixing of 6 per cent as the maximum for interest on loans to be advanced.

Some criticism was made about the definition of the word 'displaced persons'. There was also criticism that there is a lacuna in the Bill in that the word 'displaced persons' did not occur in any of the clauses of the Bill. My honourable friend Mr. Chaudhury said that he can also obtain a loan through this Administration. But let me tell him that he cannot, because if Honourable Members will please refer to another definition, namely (e) 'loan' means a sum of money advanced by the Administration to a displaced person. In other words, every loan advanced under this Act or any loan referred to in this Act which may be given by a private bank must necessarily be a loan advanced to a displaced person. Instead of repeating the word 'displaced person' in a number of places we thought it more convenient from the drafting point of view to put it in this form and define 'loan' as meaning a sum of money advanced by the administration to a displaced person. We shall further examine this point and if we really find

that it will enable my friend Mr. Chaudhury to get a loan I will see that it is provented.

Another suggestion was made that the benefit of this Administration must also be available to persons who might migrate from one province of India to another. I have got the fullest sympathy with such persons who out of fear may have to migrate from one province of India to another, but I would submit that if you are going to include within the scope of this Bill all persons who may move from one Province to another, or from one place in the same Province to another place, you will be placing upon the Administration a responsibility which it will be very difficult to discharge. How are you going to distinguish a person who moves, for example from Delhi to Meerut from one who is actually a displaced person in the sense in which we intended? Here again the scope was expected to be restricted. There are, as my honourable friend said 55 lebbs of may be made as my honourable. friend said, 55 lakhs of people who have displaced and who have come from another country. Let us look after them. If really there is a case for giving some help to persons who have to move from one place in India to another for reasons not within their control, then that problem will have to be faced in an entirely different manner.

SHRI M. ANANTHASAYANAM AYYANGAR: Does a person include a bank?

THE HON'BLE SHRI R.K. SHAN-MUKHAM CHETTY: I am coming to that.

### Banks

With regard to the class of persons who were intended to be benefited, one suggestion that was made by my honourable friend Mr. Santhanam is that you must give these loans not to individuals but only to public limited companies. Well, I suggest, Sir, that you will entirely defeat the purpose of this Bill if you attempted to do anything of that kind. Is every refugee to take steps to form a public limited company before he comes to this institution for any assisance? Obviously it is impossible.

Again, my friend Mr. Ananthasayanam suggested that this Administration should also be enabled to come to the help of the Banks that have been put to some loss or trouble on account of the disturbances. There again it is a problem which this Administration cannot deal with. We have already taken steps in that direction. As a matter of fact the moratorium that we declared and the undertaking that we gave to supply funds to these banks to meet their obligations for their depositors are evidence of our anxiety to help such banks, and if there are still banks of that category which require further help we certainly would do what lies in our power after a careful examination of the position by Reserve Bank.

Another question was asked "How was this figure of 10 crores arrived at, and is it adequate?" I am free to confess that it is an arbitrary figure and it is not possible for us to make any accurate estimate of the number of people that may want assistance of this kind

(Continued on Page 252)

## SPEEDY, EFFECTIVE AND PROPER that is, we want as little obstruction as REHABILITATION

### Prime Minister's Statement

SPEAKING in the Constituent Assembly (Legislative) on Fab 2 debate on the Rehabilitation Finance Administration Bill, the Prime Minister

Sir, I beg leave to say a few words not directly connected with this Bill which my Hon'ble colleague has placed before the House, but rather with the question of Rehabilitation. I should like to inform the House of certain steps that Government intend taking in regard to this matter.

Government attach the greatest importance to speedy, effective and proper rehabilitation of the large numbers of people who have been displaced in Northern India. So far, a very great deal of our attention has been absorbed, firstly in evacuation, and, secondly, in giving relief. But obviously that is not good enough. In fact, the whole process of relief, unless it is accompanied by certain constructive and creative aspects of it, is likely to have unfortunate psychological and financial results. The proposal now is—which the Government is considering, and in fact it has come to a decision—to appoint a Rehabilitation and Development Board. The idea behind this Board is that it should be not only a planning body but an executive body, that it should have large powers; that, in fact, it should be able to work much more speedily than the average Government Department works. Governmental machinery sometimes-indeed very often—is rather slow; all manner of sanctions are necessary; all manner of references have to be made to various Departments, and hence there is delay. Meanwhile, we have deal with a human problem affecting millions of people, so that this Rehabilitation and Planning Board will survey, plan and execute and implement the plans in so far as it can.

#### **Board and Advisers**

Naturally, a general policy will be laid down by Government, the general sanction for various large schemes will come, but apart from that, they will be free to go ahead. We propose to appoint a Board—a relatively small Board-working whole time, which will consist of three persons to begin with. I said 'to begin with', not that we need necessarily be adding to that, but it may be that owing to developments we may have to add one or more members, but we would like to keep it a small Board. This Board of three will be assisted by Technical Advisers—for instance, an Engineering Adviser, a instance, an Engineering Adviser, a Financial Adviser, a Statistical Adviser, and may be one or two others.

This Board will consider first of all the existing development schemes. You will notice that we call it the 'Rehabilitation and Development Board', meaning thereby that we are combining the two functions, or, rather, looking at the two problems—relief and developmenttogether. We have been thinking of development for a larger number of years, and I am sorry that so far all our thought has resulted in schemes rather than anything more definite and practical. But many schemes are ready, and this new Board that we set up ought speedily to run through those schemes, specially from the point of view of rehabilitation and choose such as can be put into operation quickly.

The Board should also consider any fresh schemes from the point of rehabilitation, that is to say, schemes which gainful employment. It may be that we may have to set up certain techniques in areas which are ready for development, such as river valley schemes and development of ports and others. The Board will consider the whole country and will function in the whole country.

Naturally it will have to function in many parts of the country in co-operation with Provincial Governments. Generally, we expect it to have free play even in the areas under the Provincial Governments if the finances come from the Central Government. Where the Provincial Government and the Central Government share finances then they will co-operate.
Where the Provincial Government itself co-operate. provides the finances, then this Board will function in an advisory capacity. We would like naturally to have the fullest co-operation from the Provincial Governments. At the same time, we should like the Provincial Governsame time, ments to give this Board full play also;

possible. We suffer very much from checks so that Government cannot be carried on speedily, and we would like this Board to function with speed and efficiency. Therefore, we have chosen persons who we think will be able to function in that particular way.

#### Smaller Industries

We would like this Board again to concentrate to some extent on the development of smaller industries. Major industries, of course, are in the big plans and they would have to look into them. The major industries take a considerable time. We should like them to consider cottage and small-scale industries which can be developed almost immediately in those town-ships.

That is the information I should like to give to the House. I am sure the House would approve of this, and I hope this Board will lead to a fairly rapid rehabilitation of large numbers of people who are at present lacking in accommodation and sometimes home and shelter. The present scheme includes both town dwellers and agriculturists, but primarily this Board will deal with urban people. They will no doubt deal with others but most of the rural refugees or a large number of them have necessarily to be settled in the East Punjab. This Board will advise and will help in every way it can. But the very large number of urban refugees find it difficult to settle down and most of the Members know that Delhi is full of these urban refugees from other towns. So the problem for this Board primarily is one of rehabilitating urban refugees, secondly agriculturists.

PROF. N. G. RANGA: Is not a Bill likely to be introduced?

HONOURABLE THE PANDIT JAWAHARLAL NEHRU: No, there is no occasion to introduce a Bill. The Government appoints a Board and gives it power to function.

### MR. NEOGY ON REHABILITATION FINANCE ADMINISTRATION BILL

Speaking on the Rehabilitation Finance Administration Bill in the Constituent Assembly (Legislative) on February 3, the Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation, said:

The present measure, important and vital as it is, is only one of a series of measures that Government have either undertaken or have under contemplation in furtherance of the rehabilitation of refugees.

Let us consider the numbers that are involved in this question. Roughly speaking, the total number of refugees who will need to be rehabilitated in India would be about 55 lakhs. It is a very rough guess and I include in this figure those Hindus and Sikhs who have yet to be evacuated from Wewtern Pakistan. Out of this 55 lakhs very nearly 30 lakhs are likely to be followers of agriculture as an occupation or who follow other rural means of livelihood. The remaining 26 lakhs would be represented by people who would follow non-agricultural occu-pations more or less of an urban character.

So far as the 30 lakhs of agricultural

population are concerned this Bill deliberately and definitely excludes them from its purview. It is not as if the question of giving financial aid in regard to the rehabi-litation of agriculturists among the refugees has not received adequate attention. On the other hand, we have set no limits to our liability in regard to giving financial assistance in the matter of rehabilitation of agriculturists. We have advised the Provincial as well as the State Governments to grant taccoviloans on a liberal scale for this purpose. We have assured them that if they need the assistance of the Centre in this matter. the Central Government would be prepared to advance loans to the Provincial and State Governments.

Indeed, the East Punjab Government have already provided Rs. 1,57,00,000 by way of taccavi grants in their current budget. Take again the 25 lakhs of urban refugues. I imagine a large proportion of this figure would not need the assistance of the machinery that my honourable colleague is setting up.

(Continued on next Page)

They would be people who would require assistance of perhaps less than Rs. 5,000 each or free grants of smaller amounts. For these parties again. Government have already set apart adequate funds for giving necessary assistance. They would qualify for loans directly from Government and they would not need the assistance of the Administration that is now proposed to be set up.

There are certain specific loans which are contemplated, for instance loans to men following certain professions or other callings who would not come within the scope of any measure intended to benefit either agriculturists or industrialists or business men, loans which would benefit lawyers for instance or members of the medical profession and so on.

We have a definite scheme for granting financial assistance to these categories of refugees, and these schemes are already in operation. They are being operated by the Provincial Governments concerned on the basis of the scheme that has been propounded by the Cantral Government.

### Aid to Students

A mention was made about students. Now there again we have a scheme for granting financial assistance to students which is already in operation. In the Province of Delhi they have set up a committee specially to administer the loans that we have sanctioned for the benefit of the students among refugees. Sir, incidentally I might mention that we have also urged upon the authorities concerned in Delhi the urgency and the importance of giving the utmost facilities to the student community among the refugees. There was a reference to this point perhaps in the speech made by my honourable friend Mr. Kamath. That holds good in regard to Delhi and I dare say the same policy is being followed

elsewhere, but then the position of East Punjab is somewhat exceptions! In East Punjab all the available accommodation afforded by all the various educational institutions is at present being utilised for the housing of refugees, to which naturally the highest priority was given. These educational institutions are expected to open from the beginning of March next.

#### Prime Minister's Announcement

The Honourable the Prime Minister made an announcement of the appointment of a Rehabilitation and Development Board. He referred in connection to the many plans that were framed and to many reports that were written on those plans. I happen to be one who was associated with one such report at one stage. It has regretfully to be admitted that although there have been a number of plans and a number of reports on plans, very little practical action has so far been taken. On a previous occasion when I had the honour of addressing this House, I pointed out that the problem of rehabi-litation of the so-called refugees could be solved only as a part of the problem of the general development of the country. It is in pursuance of this idea that the new body, the formation of which was announced by the Prime Minister, will be charged with not merely planning but also the execution of the plans which they may either frame themselves or which they may adopt from those already in existence.

We may have to be grateful to the refugees for having drawn our attention to the urgency of the problem of planning for the development of this country, and perhaps future generations will acknowledge their gratitude to the so-called refugees for having furnished the man-power which is necessary for the purpose of developing the resources of the country as a whole.

### PAY OF PRE-1931 GOVERNMENT EMPLOYEES

The Government have further examined complaints that the rules sanctioning revision of pay in the case of pre-1931 employees of the Government of India operate inequitably when such employees olect the Pay Commission's scales of pay, says a Press Communique issued by the Ministry of Finance on Feb. 4.

A concession was recently announced that such employees finally electing the new scales will be allowed personal pay equal to the difference between the pay they were actually drawing before the election and pay to which they would be entitled on fixation in the prescribed scales under the present rules where it is lower. It has been brought to the notice of Government that in regard to a large number of categories where the option is exercised the absorption of personal pay in future increments would take several years, resulting in stagnation of such employees on the same rates of pay. In the case especially of persons with long service and those due shortly to retire the concession involves very little advantage from the general betterment of scales of pay.

As the improvements in the pre-1931 scales of pay have been sanctioned by the Pay Commission only on the basis that such scales were inadequate even for the pay levels at which they were sanctioned, Government have on further consideration agreed to grant a liberal concession both to promote contentment in the services and to encourage all employees to come on to uniform scales of pay in future. It has accordingly been decided to modify the existing rule and allow, in the case of pre-1931 entrants, fixation of initial pay in the prescribed scales on the same basis as for post-1931 entrants, i.e., the former category will also get their pay fixed in the prescribed scales at a stage not lower than their present basic pay and draw regular increments in the scale thereafter. This concession will however be limited to holders of posts which are not non-permanent posts for the purpose of the pay rules.

Government have also under consideration the extension of the above concession in a suitable manner to employees on the unified scales of pay.

# INCOME-TAX EVASION INQUIRY

The Commission appointed by the Government to investigate cases of income-tax evasion began its work on December 1, 1947, stated the Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance, at question time on Feb. 5 in the Constituent Assembly of India (Legislative).

In reply to supplementaries, the Minister said that the Central Board of Revenue had submitted a number of cases to the Government, and the papers were being examined by the Commission which had already paid a visit to Bombay. Probably 80 or 90 cases had been referred to the Commission. "What is contemplated," he added, is that as each case is completed by the Commission, it will forward a report and then Government will take action."

The Minister also said that he proposed to introduce in this session a Bill to amend the Income-Tax Act under which the Commission had been constituted. "The object of these amendments," he added, "is to make the work of the Commission really effective and to enable the Government to bring to book tax-dodgers. We have left the entire investigation to the Commission, and the Commission can ask anybody to appear before it and it can enquire in any manner. The Commission is being invested to call upon anybody to appear before it."

## ORDERS REGARDING GOVT. APPOINTMENTS

The Government of India having constituted an Economy Committee, departmental instructions have been issued that all further appointments should be on a temporary basis and all proposals for the conversion of existing temporary posts into permanent ones should be deferred.

The Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance, announced this on Feb. 5 at question time in the Constituent Assembly of India (Legislative). He added that fresh appointments were being made only against posts sanctioned after due scrutiny and with reference to the implementation of approved schemes and activities "which are in pursuance of accepted policy". All such appointments would be subject to review by the the Economy Committee.

## PRICES OF CONTROLLED FERTILISERS

The prices of Government Controlled Fertilisers f. o. r. main Indian ports are as follows, according to a Press Note issued by the Ministry of Agriculture on Feb. 15:

Sulphate of Ammonia; Rs. 271 per ton, Ammonium phosphate Rs. 308 and Ammonium Nitrate Rs. 371 per ton.

These prices will remain operative till March 31, 1948.

### INDUSTRIAL FINANCE CORPORATION BILL

# Finance Minister On Changes Made By Select Committee

MOVING that the Bill to establish the Industrial Finance Corporation of India, as reported on by the Select Committee, be taken into consideration, the Hon'ble Mr. R. K. Shamukham Chetty, Minister of Finance, said in the Constituent Assembly of India (Legislative) on Feb 9:

In making this motion, Mr. Speaker, lmust at the outset express my grateful appreciation of the very thorough manner in which the Honourable Members of the Select Committee dealt with this measure. As I said on an earlier occasion the draft of the Bill that I placed before this House was prepared some time back by the previous Government, and I expressed the hope that with the help of the Select Committee I would bring before this House a measure which would be more acceptable to the Honourable Members. I feel that that expectation has now been realised. In commending this motion I shall just say a few words regarding the main changes that have been made in the Select Committee.

### **Extent of Bill**

So far as the extent of the Bill is concerned, in the original draft it was intended that this measure would apply only to the provinces of India. In the course of the debate in this House expression was given to the feeling that the Indian States also must be in a position to get the benefits of this measure. The scope of this Bill has accordingly been amended by the Select Committee so as to include those acceding States who by their Instruments of Accession accept the subject matter of this Bill as a matter with respect to which the Dominion legislature may make laws for such States. If any of the acceding States are prepared to accept this obligation, then the citizens of these States will also obtain the benefits of this measure.

With regard to the actual scope and operation of this Corporation, the Select Committee thought fit to provide that the financial aid of this Corporation should be available only to public limited companies and to co-operative societies. I welcome this change that has been made by the Select Committee. We ought to encourage the formation of public limited companies in the matter of the development of industries, and by our restricting the help that this Corporation might extend only to such institutions there would be a direct incentive for the starting of public limited companies.

With regard to the capital structure, the Select Committee thought that while the grant provided in the original Bill, namely, Rs. 5 crores, was sufficient for the present, the Act itself must contain provision for the expansion of the

capital, if and when found necessary. It has accordingly been provided that the authorised capital of the Corporation will be Rs. 10 crores, of which Rs. 5 crores will be immediately issued for subscription and the balance may be issued by the Corporation as and when found necessary with the previous consent of the Central Government.

Amongst the class of institutional investors who would be eligible to become shareholders in this Corporation, the Select Committee has included Cooperative Banks also. It is a change which I am sure the House will welcome. After including the Co-operative Banks amongst the shareholders, the Select Committee came to the conclusion that the share capital should be confined to institutional investors and not to private individuals.

The Central Government has undertaken to guarantee the return both of the capital and the payment of a certain minimum dividend. In the Bill it was provided that the guaranteed dividend should not exceed 21 per cent. The Select Committee thought that the actual fixation of the minimum will depend on the conditions of the money market at the time that the shares are issued, and they have therefore left it to the Central Government to fix such rate of dividend as guaranteed as may be considered appropriate at the time of the issue of shares. I can assure the House that in fixing the guaranteed minimum, the Government will take into consideration the prevailing conditions in the money market and will guarantee only a minimum which is considered necessary to attract the necessary capital.

### Managing Board

The management of the Corporation will be entrusted to a Board of twelve members, including the Managing Director. Six out of these will be nominated by the Central Government and the Reserve Bank and the other six will be elected by the shareholders. I think from the point of view of safeguarding the interests of the public, the proportion is one which must be welcomed.

It has also been provided that the administration might appoint advisory committees. The main idea underlying this change is that before lending money to any industrial concern, it may become necessary to obtain technical advice and assistance regarding the various aspects connected with that industry, and these advisory committees, it is expected, will be composed of men with sufficient technical knowledge to advise the Corporation about the feasibility of lending money to particular individual concerns.

With regard to the powers of the

Corporation the Select Committee has provided that the maximum limit would be five times the paid up capital and the Reserve Fund of the Corporation. And with regard to the long term deposits that the Corporation is allowed to take from the public the Committee thought that the period of ten years originally fixed in the Bill was a bit too long. It has therefore now been previded that fixed deposits of the maturity of five years might be taken by the Corporation.

The Corporation is also given wide powers to prescribe the necessary conditions on the borrower and one of these conditions might be, in appropriate cases, that a nominee of the Corporation will be appointed to the Board of Directors of the borrowing company.

### Power to make Loans

The Corporation is empowered to make loans either in Indian currency or in any foreign currency if it is thought appropriate. This provision is necessary because in the present state of affairs industrial concerns in India would be requiring capital abroad for the purchase of plant and equipment, and in view of the difficulties of foreign exchange, which are bound to persist for some time to come, it may be difficult for an individual company to obtain the necessary exchange for the purchase of capital goods. A Corporation of this kind which would be enjoying the patronage of the Government of India might be in a better position to make arrangements for the supply of the necessary foreign exchange for this purpose. For example, the International Bank for Development and Resettlement or the Import and Export Corporation of the United States are bodies which are more likely to lend to a Corporation like the Industrial Finance Corporation of India than to any private individual or Corporation. In other words, this Corporation would, in the very nature of things, enjoy greater facilities for raising loans abroad than any private individual company. It has therefore been provided that in appropriate cases the Corporation may advance loans in terms of foreign currency also, and with regard to repayment the borrower will be at liberty to pay either in Indian currency or in the foreign currency at the rate of exchange then prevailing. This prevents any possible loss of exchange which might otherwise fall on the Corporation.

One of the important amendments made by the Select Committee is that for purposes of taxation this Corporation will be considered as a company as defined in the Indian Companies Act and the Indian Income-tax Act. I attach very great importance to this provision. As I have said on more than one occasion both on the floor of this House and outside, I consider that if the Central Government in India is to have ample resources for taxation it would be necessary that it should have powers to tax not merely private companies and individuals but corporations owned and managed by the State or partly owned by the State and partly by private individuals.

There is in the country a large volume of opinion which wants the large-scale nationalisation of our industries. Now if our Industries are to be nationalised

and if the Central and Provincial Governments are to pursue a policy of progressively bringing under state control and dwnership the whole industrial and productive mechanism of this country, then unless an obligation is placed upon these state enterprises to contribute to the Central revenues an amount equivalent to the income tax and corporation tax which these bodies would have paid if they had been privately managed concerns; it will be found in course of time that the most fruitful sources of the Central Government's revenues, namely income-tax, will disappear altogether. It must be remembered that the whole financial structure of the Central Government is very largely based on the receipts from income-tax and corporation tax. I hope, therefore, that this particular salutary principale that we have enunciated under this Bill will be followed in Bills of a similar nature. Apart from the need not to disturb the most fruitful source of central taxation, even from the point of view of ensuring business and commercial standards in these state corporations, it is necessary that they should undertake the obligation to pay tax as if they were private individuals or companies. It is then and then alone that these public corporations and state corporations will be impelled to apply sound commercial principles and will begin to realise whether their concerns are working at a profit or at a loss.

### Special Clauses

It was in fact with this object in view that the framers of the 1935 Government of India Act provided that the railways of India should be managed by a Statutory Railway Authority. Today the railways, though they may make a contribution to the Central revenues (the wisdom of which is questioned in certain quarters) are not making any contribution to the Central Government by way of taxes. If our railways, in which we have employed over 650 crores of rupees as capital, were a private concern, the Central Government would be receiving by way of income-tax and super-tax alone anything between 15 and 20 crores of rupees per year; and I hope when the constitution-making is taken up by the Constituent Assembly, appropriate steps will be taken to see that the railways and all other similar state-owned and state-managed concerns are placed under an obligation to pay to the Central revenues an amount equivalent to the income-tax and corporation tax.

Though the Government has under the Bill, even as originally drafted, ample powers to control the administration of the Corporation, the Select Committee thought it necessary to incorporate special clauses, under which the Central Government is empowered to issue from time to time directions to the Corporation on matters of policy. There are a great many things about which it might be necessary to issue such instructions. For instance, the desire was expressed in the Select Committee, and very rightly too, that the operation of this Corporation should help the industrial development of the more backward provinces and areas. It is very difficult to incorporate in a Bill of this kind appropriate provisions to ensure that result. But it is an appropriate subject to form the code of instructions that the Central Government may issue from time to

time. It was also thought that, in the distribution of shares, the tendency for the accumulation of shares in one big place like Bombay or Calcutta should be prevented and that the shares should be distributed as widely as possible throughout the country. It was also thought necessary that in certain cases where the Corporation lends money to a company, one of the conditions imposed should be that the borrowing company should limit its dividend to a particular rate until the loan is repaid. Matters covering such subjects are appropriate for instructions from the Central Government and I might take this opportunity of giving an assurance to this House that I shall see that when the Corporation starts functioning we will issue instructions to the Corporation along these lines.

Sir, these are the main changes that have been made by the Select Committee, and I hope that the House will be satisfied on the whole with the Bill as it has now emerged from the Committee. If this Bill is placed on the Statute Book, and when the Corporation comes into existence, it will fill a big gap in our industrial economy. Today we have not got the necessary agencies for helping industries with long term and medium term loans. That want has been felt for a very long time in this country. The want of an institution of this kind was pointed out by the Central Banking Commission which reported many years ago, and I hope that with the inauguration of this Corporation this gap will be filled and by the assistance and the advice which this Corporation will be in a position to give we should see a largeof industry in this scale expansion country as speedily as possible. Sir, I move.

### REPLY TO DEBATE

Replying to the debate on the motion on Feb. 10, the Finance Minister said:

Sir, the main discussion on the motion has practically centred round the question whether the proposed Corporation should be a completely State-owned Corporation, or whether the capital structure should be in the form in which the Select Committee has intended it to be.

Some Hon'ble Members have raised the wider question of the policy of nationalisation. I do not think, Sir, that this is the appropriate moment to call upon the House to give a verdict on that wider policy. The Hon'ble Member Mr. Karimuddin went to the extent of saying that a vote in favour of this policy as it is would be considered as a vote against the policy of nationalisation. I have no doubt that the House will not agree with this point of view of the Hon'ble Member. The Government of India have not yet formulated the policy of industrial and economic development of the country, especially with reference to the policy of nationalisation. I have no doubt that the Government, when they consider this question, will take into account the desire expressed both in this House and outside, the Resolutions of the Industries Conference and also the Report of the Economic Sub-Committee of the A. I. C. C.

I do not know if it is the intention of that Sub-Committee's Report that

the State should straightsway launch out on a policy of complete hationalisation of all the means of production and distribution. Hor'ble Members have placed different interpretations on that document. Reading that document myself, I interpret it to mean that the policy of nationalisation is recommended as the ultimate aim to be achieved and that the pace and the progress of nationalisation should be determined by the needs of the country, and more especially of the resources of the Government. If my interpretation of that document is correct, then whatever concrete shape a more definite enunciation of that policy might take, I feel that there would be scope for private enterprise in certain fields, and so long at that scope exists for enterprise, the need for a corporation of this kind is clear.

### State-owned Corporation

The more practical question which this House should take into consideration is whether in the present circumstances it is advisable to have a Corporation completely owned by the State. The most cogent and convincing answer to that question was given by my Hon'ble friend, Dr. Pattabhi. He himself at one stage of the discussion in the Select Committee strongly advocated consideration of the question whether we should not have a completely State-owned Corporation; and after consideration of the various points of view, he and the majority of the Select Committee came to the definite conclusion that, for the present, the structure of the Corporation as they have evolved it, was most suitable under the circumstances.

After all, when you come to analyse the various clauses of the Bill, the House will be convinced that the control exercised on this Corporation is indeed very rigid and there will not be the slightest scope for any group of private individuals to manipulate the operations of this Corporation to the individual advantage of any one person or group of persons. Forty per cent of the shares will be held by the Government and the Reserve Bank. The Co-operative Banks will hold 10 per cent of the shares, and as soon as we nationalise the Imperial Bank the shareholding of the Government will probably become 51 or 52 per cent altogether, including the shareholding of the Reserve Bank. The balance in the Board is such that Government can exercise very effective control. Over and above this, we have made a provision that Government would be entitled to issue, from time to time, directives to the Board on the question of policy and that Government will be the sole judge as to what are questions of policy and what are not.

With regard to the payment of dividends, it has been provided that until the Reserve Fund becomes equal to the share capital and until all subventions granted by the Government in virtue of their guarantee are repaid, the dividend declared shall not exceed the guaranteed rate of the Government dividend, which really means, Sir, assuming that the guaranteed rate is somewhere round about the marked rate of Government securities

(Continued on Page 249 Col. 8)

# NATIONALISATION OF RESERVE AND IMPERIAL BANKS

### Government of India's Policy

THE Government of India intends to take steps aimed at the nationalisation of the Reserve Bank of India as soon as possible after September 30, 1948. As regards the Imperial Bank of India, the Government accepts the policy of nationalisation, but before that policy is implemented relevant technical questions will be examined.

These points were made by the Hon'ble Mr. R. K. Shanmukham Chetty, Minister of Finance, in his reply to a short notice question on Feb. 4 in the Constituent Assembly of India (Legislative).

Shri Mohan Lal Saksena, the questioner, asked:

- (a) What steps have Government taken to implement the decision announced in the Budget speech for 1947-48 by the then Finance Member to nationalise the Reserve Bank?
- (b) Is it the intention of the Government to nationalise the Imperial Bank of India which manages the treasury business of Government all over the country as Agents of the Reserve Bank?
- (c) If the answer to (b) above is in the affirmative can the Government give an indication of the basis on which compensation will be paid to the existing shareholders of both these Banks?
- (d) Is it the intention of Government to nationalise the other Commercial Banks also?

In reply, the Finance Minister said:

- (a) Nationalisation of the Reserve Bank can be effected only after September 30, 1948 when the Reserve Bank ceases to be common banker to India and Pakistan under the terms of the Pakistan (Monetary and Reserve Bank etc.) Order, 1947. Government propose to take steps to see that the nationalisation of the Bank is effected as soon thereafter as possible.
- (b) Government accept the policy of nationalising the Imperial Bank of India but as the Bank has branches outside India, Government propose to examine carefully the various technical questions that would arise in connection with the nationalisation of the Bank before the policy is implemented.
- (c) As regards the Reserve Bank, Government's intention is to acquire its shares at the average of the monthly market value of the shares during the period March 1947 to February 1948, taking the opening quotations for each month, and to issue in lieu thereof to the shareholders 3 per cent long-dated stock of equivalent value of appropriate maturity. In regard to the Imperial Bank of India, Government propose to

adopt a similar basis for the acquisition of its share capital. The period for which the average of the market value of the shares is to be taken will be determined at the time of nationalizing the Bank.

- (d) It is not the intention of Government to nationalise other Commercial Banks. The Imperial Bank of India, which has been incorporated by a Special Act of the Indian Legislature, stands on a separate footing.
- "Since the Government have accepted the policy of nationalising the Imperial Bank of India, all the various technical and other problems involved in the process will now be taken into consideration and whatever action is necessary will be taken", said the Finance Minister, replying to supplementaries which followed the short notice question.

The Minister declared that every possible step necessary to safeguard interests of the Government and the shareholders would be taken. Many questions would arise concerning the safeguarding of the Imperial Bank's assets, and unclaimed deposits if any, would be one of the assets to be safeguarded. "When we nationalise a bank," he continued, "the Government takes over the entire assets and liabilities of the bank, including the Reserve Fund, and we compensate the shareholders on the basis that I have explained".

Asked whether the management of the Imperial Bank would be advised to stop all foreign recruitment, and also recruitment in India until the Bank was taken over, the Minister said: "I think that recruitment of foreigners to the Imperial Bank has been stopped now for many years".

### SUPPLY OF TEA TO U. K.

It is understood that India has agreed to supply 300 million pounds of tea this year to the United Kingdom by the bulk purchase contract system.

This is an increase of 40 million pounds on last year's figure and has been agreed to by India on H. M. G.'s representation that shortage and irregularity of supplies may upset the U.K. tea rationing system.

The cost of tea production in India has risen in recent months, and it is expected that the U.K. will pay more per lb. this year than last year.

# INDIA TO PARTICIPATE IN MILAN FAIR

The Government of India has decided to participate in the Fair to be held at Milan, Italy, from April 12 to 27, 1948, says a Press Note issued by the Ministry of Commerce on Feb. 4. It is proposed to collect exhibits of the following Indian manufactured goods and raw materials for inclusion in the Government of India Pavilion:

Paints and varnishes, silk and wool, toilet requisites, leather and canvassware, jute goods, sports goods, oilseeds and nuts, shellac and mica, electrical goods, cotton textiles, Fine Art, toys, cottage industries products, surgical goods, tea and coffee and tobacco.

Intending donors are advised immediately to contact the Officer on Special Duty, Ministry of Commerce, 96-Council House, New Delhi, or the Directors of Industries of their respective areas for further particulars.

### R. L. A. F. CADETS' PARADE

The customary celebraticns were absent at the passing out parade of cadets of the Advanced Flying School, R.I.A.F., which took place in Ambala on Feb. 6 under the shedew east by the tragic death of Gandhiji in New Delhi. Men of the R. I. A.F. on parade stood in silent homage to the Father of the Nation for two minutes.

Air Marshal Sir Thomas Elmhirst, Air Marshal Commanding the Royal Indian Air Force, in his address to the cadeta announced the Government of India's decision to grant permanent commissions in the R. I. A. F. to cadeta passing out creditably. He emphasised the need for discipline and team work among all ranks.

His Highness the Maharaja of Patiala took the salute and presented the wings. He complimented the R. I. A. F. on its fine achievements in Kashmir and called upon the cadets and the men of the R. I. A. F. to set a high standard of efficient and loyal service to the country.

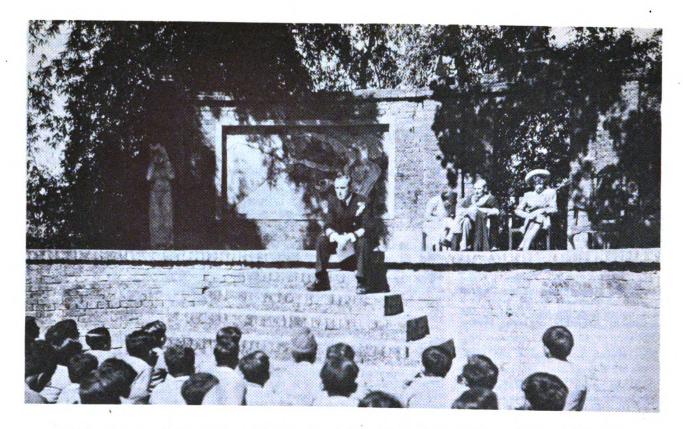

The Patials Trophy and the Jodhpur Sword of Honour were awarded to Officer Cadet O'Brian who was adjudged the best service pilot and all round pupil. The Nabha Trophy was won by acting Filot Officer Michael.

### FINANCE CORPORATION BILL

(Continued from Page 248)

the dividend cannot exceed that rate for at least ten years to come, and even after that period, the maximum dividend permissible is 5 pér cent. I put it to you, Sir, whether anyone could have reasonable apprehensions that in spite of these rigid controls there is any chance of this Corporation being manipulated to the advantage of private individuals or groups. I have no doubt in my mind on this point.

Taking all factors into consideration, and more especially the present resources of the Government, I feel, Sir, that to set up a Corporation on the basis of the Bill that is now before the House would be the wisest thing to do and I hope, therefore, that the House will accept this measure.

His Excellency Lord Mountbatten addressing the students of the Indian Military Academy, Dehra Dun, during his visit on February 13

### Lord and Lady Mountbatten Visit Dehra Dun

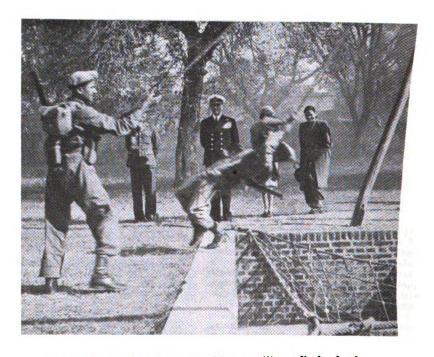

Their Excellencies the Governor-General and the Countess Mountbatten of Burma paid a one-day visit to Dehra Dun on Feb. 13. They visited the Indian Military Academy, the Royal Indian Military College, the Doon School and St. Dunstan's Training Centre for Indian War-Blinded.

His Excellency addressed the men and spoke individually to a number of those who had served under him in Burma. They were informed that 314 men had passed through St. Dunstan's hands, and resettlement in their villages was now in full swing, St. Dunstan's attending to matters of housing, land, marriage and equipping the men for the trades they had learnt. A fund is being held in reserve with which to give them lifelong after-care service. Their Excellencies were also told that Indian and Gurkha troops had responded splendidly to the training.

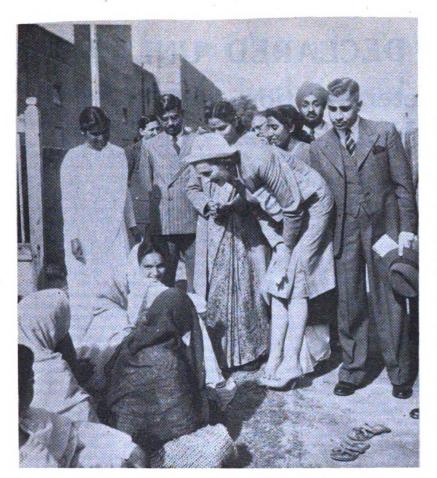

Her Excellency remained on to visit the Combined Military Hospital and the Red Cross Disabled Soldiers' Home. She had met many of these men previously at Sialkot, from where they had recently been moved.

Lady Mountbatten also visited blinded women and children from the Sharp Memorial Home who sang songs for her and showed the handiwork they had been doing.

Before leaving for Delhi, Her Excellency paid a visit to the refugee camp at Prem Nagar.

Lord and Ledy Mountbatten watching a military display by the students of the Indian Military Academy, Dehra Dun

### LADY MOUNTBATTEN VISITS MATERNITY CENTRES

Her Excellency the Countess Mountbatten of Burma visited on Feb. 11, Maternity and Child Welfare Centres at Reading Road and Chandni Chowk in Delhi. Lady Mountbattan was accompanied by Colonel Narain, Director, Health Services, 'Delhi Province; Major M. S. Chadha, Medical Officer of Health, New Delhi and Dr. M.C. Passi, Medical Officer of Health, Delhi, and met the officials, lady doctors and lady health visitors at both these Institutions. Her Excellency was much impressed by the excellent work which was in progress and expressed the hope that it would be possible to extend the Centres which are of the highest national importance.

### LEGISLATORS VISIT INDIAN MILITARY HOSPITAL

Some members of the Standing Committee of the Legislature for the Ministry of Defence and members of the Constituent Assembly visited on Feb. 14 the Indian Military Hospital at Delhi Cantonment where the sick and wounded of the Jammu and Kashmir Force are undergoing treatment.

The members spoke to the patients in the wards and were much impressed by the spirit and high morale of the Jawans who all expressed a desire to go back and fight. They made detailed enquiries of the amenities that are available at the hospital and inspected the kitchen and the patients' mess. The quality of the food given to the patients was also examined by the members.

Earlier the members paid a visit to the Central Ordnance Depot at the cantonment and saw how ordnance stores are kept, accounted for and issued to units.

The party consisted of members of the Standing Committee of the Legislature for the Ministry of Defence, Shri C. M. Poonacha, Pandit Thakur Dass Bhargava, Shri H.V. Kamath, Shri Mohanlal Gautam, and Sardar Gurmukh Singh Musafar, Shri R. K. Sidhwa and Shri Junjunwala, members of Constituent Assembly of India. Mr. R. K. Ramadhayani, I.C. S., Joint Secretary, Ministry of Defence, accompanied the party.

(Above) Countess Mountbatten, who visited the Child Welfare Centre, New Delbi, on February 11, is seen talking to an out-patient in the Centre.

(Bottom Left) Lady Mountbatten with Mrs. Handoo, Organiser of the Refugee Women's and Children's Home at Subzimandi which Her Excellency visited on February 4.

(Bottom Right) Lady Mountbatten and Mrs. Ambrose Diehl, President of the National Council of Women of the United States, who is on a world tour, visited the Harijan Sewak Sangh Industrial School on February 4. The distinguished visitors took great interest in the Carpentry Section

## R. S. S. SANGH DECLARED UNLAWFUL

# Government's Determination To Root out Violence

THE following resolution of the Government of India was published in a Gazette of India Batraordinary issued on Feb. 2:

The manner of Mahatma Gandhi's death is a grim and urgent reminder of the forces of hate and violence that are at work in our country and which imperil the freedom of the nation and darken her fair name. These forces must be swiftly controlled and rooted out. Only thus can India proceed along her appointed path and fulfil her destiny. Success in this endeavour demands the willing help of her people. Government have no doubt that the great majority of the Indian people demand that this action be taken and this duty performed. Government will, therefore, act with determination and justice, and they trust that the people, while offering their co-operation, will not take the law in their own hands.

There is no place today in India for any organisation preaching violence or communal hatred. No such organization will, therefore, be tolerated. No private armies will be permitted. Government call upon all citizens, and particularly those serving Government in any capacity, to abide by these standards of behaviour and to act strictly in accordance with the declared policy of Government in this respect.

## SANGH'S DANGEROUS ACTIVITIES

In their Resolution of 2nd February 1948, the Government of India declared their determination to root out the forces of hate and violence that are at work in our country and imperil the freedom of the nation and darken her fair name, says a Press Communique issued by the Ministry of Home Affairs on Feb. 4.

In pursuance of this policy, the Government of India have decided to declare unlawful the Rashtriya Swayam Sevak Sangh in the Chief Commissioners' Provinces. Similar action is also being taken in the Governors' Provinces.

As democratic governments, the Government of India and the Provincial Governments have always been anxious to allow reasonable scope for genuine political, social and economic activities to all parties and organisations including those whose policies and purposes differ from, or even run counter to, their own, subject to the consideration that such activities should not transgress certain commonly recognised limits of property or law. The professed aims and objects

of the Rashtriya Swayam Sevak Sangh are to promote the physical, intellectual and moral well-being of the Hindus and also to foster feelings of brotherhood, love and service amongst them. Government themselves are most anxious to improve the general material and intellectual well-being of all sections of the people and have got schemes on hand which are designed to carry out these objects, particularly the provision of physical training and education in military matters to the youth of the country.

### Acts of Violence

Government have, however, noticed with regret that in practice members of the Rashtriya Swayam Sevak Sangh have not adhered to their professed ideals. Undesirable and even dangerous activities have been carried on by members of the Sangh. It has been found that in several parts of the country individual members of the Rashtriya Swayam Sevak Sangh have indulged in acts of violence involving aron, robbery, dacoity and murder and have collected illicit arms and ammunition. They have been found circulating leaflets exhorting people to resort to terrorist methods, to collect fire-arms, to create disaffection against the Government and suborn the Police and Military. These activities have been carried on under a cloak of secrecy, and Govrnment have considered from time to time how far these activities rendered it incumbent on them to deal with the Sangh in its corporate capacity.

The last occasion when Government defined this attitude was when the Premiers and Home Ministers of Provinces met in Delhi in conference towards the end of November. It was then unanimously agreed that the stage when the Sangh should be dealt with as an association had not yet arrived and that individuals should continue to be dealt with sternly as hitherto. The objectionable and harmful activities of the Sangh have, however, continued unabated and the cult of violence sponsored and inspired by the activities of the Sangh has claimed many victims. The latest and the most precious to fall was Gandhiji himself.

In these circumstances, it is the bounden duty of Government to take effective measures to curb this reappearance of violence in a virulent form and, as a first step to this end, they have decided to declare the Sangh as an unlawful association. Government have no doubt that in taking this measure they have the support of all law-abiding citizens and of all those who have the welfare of the country at heart.

### SARDAR PATEL'S APPEAL

The Honourable Sardar Vallabhbhai Pâtel, Deputy Prime Minister issued the following appeal on Feb 1.

I am much distressed to find that in some places, particularly in the Province of Bombay and in the Kolhapur State, some misguided members of the public have indulged in acts of goondaism against members of the Hindu Mahasabha and the Rashtriya Swayam Sevak Sangh and their offices. Some minor incidents are reported to have occurred in Delhi also. We shall prove ourselves unworthy of Gandhiji's teachings and his trust in us if we yield to feelings of anger and revenge. I should like to assure the members of the public that Government are fully alive to their responsibilities in bringing to book those who are guilty of this dastardly crime. They would leave no stone unturned to unearth any conspiracy that may have proceded this most tragic and cruel outrage. It behoves the public, however, to leave this task, to Government and not to take the law in their own hands, even in the face of gravest provocation. I hope they will heed the advice I gave in my broadcast on the 30th January and avoid letting anger get the better of their judgment. Any outbreak of violence on this occasion would be most unbecoming and would be quite contrary to the life-long teachings of our great and revered Leader whose loss we ull mourn. I would appeal to all sections of the people to keep calm and peaceful and to let each one of us settle down as quickly as we can to our normal tasks. Let them allow the law to take its course and not resort to the unlawful acts of private revenge or public out. bursts of frenzy.

### FINANCE MINISTER'S SPEECH

(Continued from Page 244)

and the total amount of money that may be required. I personally think, Sir, that if an administration with resources amounting to Rs. 10 crores starts its business, a very large class of persons will be materially benefited. and in the light of the experience that we gain, we may consider further whether we might place at the disposal of this administration further funds. After all when you ask me to place larger funds at the disposal of the administration, Honourable Members should not forget that it is the taxpayers' money that is to be placed in the hands of the administration. No private shareholder is connected with this administration, and when we who are trustees of the public funds have to place such funds at the disposal of a semi-autonomous administration for the purpose of granting loans, we have to be extremely cautious.

I have no doubt that the numerous other points that were referred to in the course of the debate will be looked into by the Select Committee, but I would once again most earnestly urge that whatever might be done, I hope the Select Committee will not try to extend the scope of the activities of the administration and thereby endanger its effectiveness.

## Muslim League National Guards And Khaksar

## Organisation Declared Unlawful

Press Communique issued by the Ministry of Home Affairs on Feb 8. says:

In pursuance of their policy of rooting out the forces of hate and violence that are at work in our country, announced in their resolution of February 2, 1948, Government, as a first step to this end, declared unlawful the Rashtriya Swayam Sewak Sangh. The resolution also announced Government's decision not to permit private armies.

organization known as the Muslim League National Guards must share the blame for creating a poisonous atmosphere in the country which it is the determination of the Government to eradicate. The organisation is communal and semi-military and is disposed to resort to violence. With the inde-pendence of India, members of this organization could have been expected to settle down as loyal and peaceful citizens of the country. Government, however, regret to have to say that this expectation has proved to be ill-founded. Members of the Muslim League National Guards are still persisting in their propagands of communal hatred and violence. They have been carrying on secret propaganda for fostering amongst the Muslim citizens of India extra-territorial loyalty with the object of disintegrating the country and, this end, they have been secretly collecting arms, training its members in the use of arms and fomenting agitation in liaison with members of the organization across the border. In the light of recent events, Government cannot tolerate any longer this potential menace cannot to the security and integrity of the country and have therefore decided to declare unlawful the Muslim League National Guards in the Chief Commissioners' Provinces, and similar action is being taken in Governors' Provinces.

The organization of Khaksars has been equally wedded to communal hatred and violence. On several occasions members of the organization have been guilty of violent acts. It convened an all-India rally of their members at Delhi last year. Soon after, the organization was officially disbanded by its founder but his followers have refused to abide by his mandate. They congregated in large numbers in various places, particularly in Delhi, and made no secret of their ambition of disintegrating the country. As a result, the organization was declared unlawful in the Delhi Province. They are, however, still carrying on underground propa-ganda on the same lines as the Muslim League National Guards. They have been circulating posters exhorting people to collect arms, to extricate certain parts of the country from the clutches of the Congress and to make preparations for iehad to this end. Members have been known to be also collecting arms. The threat to the peace of the country

from this source in the present orisis is obvious and there is no place in India for an organization of this kind. Government have, therefore, decided to declare the Khaksar organization to be unlawful in the remaining Chief Commissioners' Provinces and similar action is being taken in Governors' Provinces.

Government wish to make it clear, and are certain that all right-minded Muslims will recognise that, this action is not aimed at the Muslim community in any way. India has now gained independence and all sections of her people must now rely, for the protection of their life, property and civic rights, on the forces of the State and not on any private armies. Government have repeatedly declared that India is to be a secular State in which all communities, irrespective of their strength, religion and culture, shall enjoy equal rights. Government repeat their determination to afford to all minorities in India the fullest possible protection against any unlawful activities. They are confident that this further measure taken up by them towards eliminating the evils of hate and violence would be regarded by the Muslim community as a decisive step towards ensuring that protection and not as a measure that will impair it.

### **FOREIGNERS'**

The Foreigners' Order, 1948, published in the Gazette of India dated February 14, 1948, says that no foreigner shall enter India without the leave of the civil authority.

The Order which is issued under Section 3 of the Foreigners' Act of 1946 and in supersession of the Foreigners' Order of 1939 and all notifications amending the same, shall come into force immediately. It specifies conditions under which leave to enter India shall be refused. Leave to enter India may be made conditional or even prohibited in the interest of public safety and a foreigner who is refused leave to enter may be detained.

The Order also lays down the conditions under which seamen or members of the crew of an aircraft, who are foreigners, can enter India. The Order further says that no foreigner shall leave India without the leave of the civil authority and leave to depart shall be refused if the foreigner has failed to comply with the prescribed procedure or if his presence is required to answer a criminal charge or if his departure is otherwise prohibited by a competent authority.

The Order further specifies the liability incurred by the master of a vessel or a pilot of the aircraft in which a foreigner has arrived, to remove a foreigner

## COMPENSATION CLAIMS AGAINST RAILWAYS

The Bill to amend section 80 of the Code of Civil Procedure passed on Jan. 30 by the Dominion Parliament, will help expedite the disposal of cases relating to suits, which concern compensation claims against railways.

Introducing the Bill the Hon'ble Dr. John Matthai, Minister for Railways said that section 80 provides for notices of suits against the Central Government being served on a Secretary to that Government, and against the Secretary of State or a Secretary to the Central Government, the Political Secretary, or a Secretary to the Provincial Government of the Province where the suit is instituted. At present notices under this provision relating to the affairs of Indian Government Railways, a major portion of which concern compensation claims, are received in the Railway Board's office either direct or through other Ministries of the Central Government and in a few cases from Provincial Governments. Notices have then to be forwarded to the Geheral Managers of the Railways concerned for disposal.

This procedure entails considerable avoidable work in the office of the Ministry of Railways, and delays the receipt of notices by Railway Administrations, in some cases with prejudicial results. Hence the need to amend section 80 C. P. C. to provide for notices of suits relating to affairs of a Government Railway being served on the General Manager of the Railway concerned.

### **ORDER 1948**

who has been refused permission to enter India.

The Order further says that foreigners entering India shall obtain from the Registration Officer a permit indicating the period for which they are authorised the period for which they are authorised to remain in India and shall, unless this period is extended, depart from India before the expiry of the said period. The Order also prohibits foreigners from visiting or residing in any prohibited place or protected area. It also prohibits employment of foreigners without written permission in any undertaking for the supply to the Government or to the public of light, petroleum, power or water or any other undertaking which may be specified by the Central Government. The Order empowers military authorities to direct any foreigner to remove himself from a cantonment and the civil authorities are given power to close any public resort or place of entertainment or club frequented by foreigners if it is conducted in a disorderly or prejudicial manner. Civil authorities may also impose restrictions on foreigners about their movements, place of residence, etc.

The Order further lays down that in the interest of public safety any foreigner may be arrested without a warrant or detained by the civil authority, a report of such arrest or detention shall be forwarded forthwith to the Central Government with a statement of reasons.

# NEARLY 43 MILLION NON-MUSLIMS LEAVE WESTERN PAKISTAN

Pakistan and crossed over to India, and there are still more than half a million non-Muslims awaiting migration from Western Pakistan, according to a Note on the progress of relief and rehabilitation for the three weeks ending January 22, 1948, issued on Feb. 7.

Before the rioting in Karachi on January 6, there was a large movement of Hindus and Sikhs out of Sind. This unhurried evacuation received impetus when disturbances broke out. Up to January 5, the total number of non-Muslims who left Sind by air, sea and rail was 4,78,000. Since then all the available shipping space from Karachi to Bombay and Kathiawar has been requisitioned for refugee transport, and considerable movement by rail is taking place from Hyderabad (Sind) to Marwar Jn. in Rajputana. It is estimated that from January 6 to 26 about 35,000 refugees were brought to India by sea and another 35,000 by rail. There is also some movement of refugees by foot from Southern Sind to Cutch State.

### **Motor Transport**

The Military Evacuation Organisation (India) continued to clear non-Muslims from pockets in West Punjab and N. W. F. P. from January 7 to 22, about 4,731 non-Muslims were evacuated by motor transport to India. Among them were 274 abducted women and children. Rescue operations in West Punjab and N. W. F. P. extend to outlying villages where refugees are stranded in small pockets. In West Punjab, refugees from pockets are brought to transit camps in Sialkot, Gujranwala, Chuharkana, Montgomery, Lahore, Sargodha, Multan, Jhelum, Lyallpur and Sheikhupura, where they are guarded by Indian Troops and eventually sent under escort to India. Non-Muslims rescued from pockets from January 7 to 22 numbered, 2,859, including 271 abducted women and children. In N.W. F. P. there are still about 25,000 non-Muslims awaiting evacuation. Most of these refugees are in tribal areas, D. I. Khan and Bannu. Small numbers of non-Muslims are still left at Peshawar and Mardan. The responsibility for evacuation in N. W. F. P. is that of the Government of the province and after the recent attack on non-Muslims in Parachinar, the Pakistan authorities have agreed to evacuate people of that area as well as those from D. I. Khan. Evacuation by train from Bannu has been temporarily held up after the Guirat tragedy but one train which left Bannu soon after, carrying 2,500 non-Muslims has reached India safely.

The number of non-Muslims still awaiting evacuation from West Punjab and N. W. F. P. is estimated to be 50,000. From Bhawalpur, nearly 1,50,000 non-Muslims have reached India safely, but there are still about 70,000 awaiting evacuation apart from a large number of those non-Muslims who have been forcibly converted.

To cope with the fresh influx of refugees from Sind, the Government of India have set up an organisation in the Ministry of Relief and Rehabilitation, under the charge of a Director-General. He is assisted by a Director of Evacuation and Movement and a Director of Relief (Transit Camps and Supplies) at Delhi and by a Director of Evacuation each for Rajputana, Kathiawar, Bombay and C. P. with headquarters at Marwar, Rajkot, Bombay and Nagpur respectively. With the setting up of this Directorate-General, the work of evacuation from Sind as well as of reception and temporary shelter for refugees has been taken well in hand. It is also proposed to increase the staff of the High Commissioner in Karachi to enable him to facilitate evacuation of those non-Muslims who are anxious to leave Sind.

The Government of India's decision to give all possible facilities for evacuation from Sind was the result of recrude-scence of attacks on Hindus and Sikhs. It was felt that facilities for evacuation should be provided to those who wanted to come away to the Indian Dominion. The total population of Hindus and Sikhs in Sind in 1941 was 12½ lakhs and it was estimated to be 14 lakhs at the time of partition. Of this 4,78,000 had left Sind up to January 5, 1948. Inspite of the Sind Government's apparently strong, effecting and sincere action to restore order after the Karachi riots, Hindu and Sikh opinion is unanimous that it will not be possible for the Sind Government to create conditions of safety for non-Muslims. Measures are being taken to provide all available shipping for the refugee movement and special trains from Hyderabad (Sind) to Marwar Jn. to evacuate those who want so leave for India in safety. It is estimated that already 4,00,000 non-Muslims are awaiting evacuation.

#### Camp at Rohri

Arrangements are being made to establish a camp at Rohri from where special trains will be run to Hyderabad (Sind) to Karachi.

To receive refugees, immediate action is being taken to arrange for reception facilities at Marwar, Bombay and Kathiawar ports. A proper plan for dispersal movement from these receiving points to transit camps and for movement from the transit camps to ultimate destinations is also being worked out. At present refugee ships docking in Bombay are met by officers of the Relief and Rehabilitation department and the Sind Hindu Sewa Samiti. Free hot meals are given to them, their destinations ascertained or fixed and those unable to support themselves are sent to Government Relief Camps.

Evacuation by rail which was progressing satisfactorily was suddenly disrupted by an ugly incident on January 12, 1948 at Gujrat when a refugee train bringing 2,400 non-Muslim refugees from

Bannu escorted by a V.C.O. and 60 other ranks of the Bihar Regiment was attacked by armed pathans on the Gujrat railway platform. Survivors were brought to Gujranwala and Lahore and refugees who ran into neighbouring fields for cover were traced. These survivors were later brought by road up to Atari under escort, and will be accommodated at Kurukshetra. Apart from the original list of 1473 survivors, it is believed that another 500 refugees have been traced. Likewise 31 women from among the refugees considered to be lost have now been rescued and brought to India.

A later train which left Bannu carrying 2500 non-Muslims reached India safely and the refugees were taken to Kurukshetra.

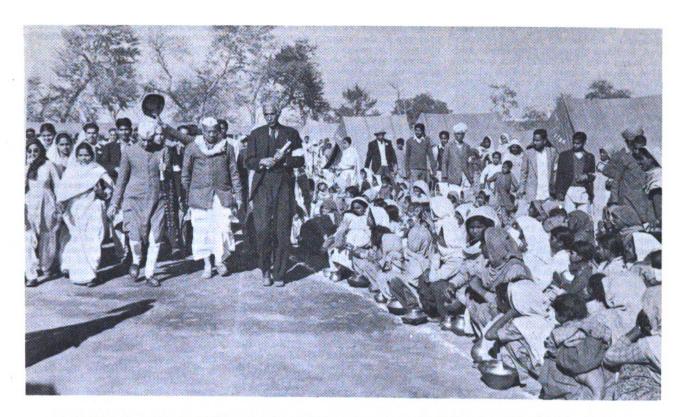

### Recovery of Women

Concerted efforts continued to be made for the recovery of abducted women and forcibly converted persons during the fortnight January 7 to 22. Nearly 1000 such persons were brought to India from the districts of Gujranwala, Sialkot, Gujrat and Montgomery. Four women and three children were rescued from the Nowshera and some have been brought from village Mankisharif in N. W. F. P. There are still a large number of abducted women and forcibly converted persons to be rescued. The Pakistan Government, however, have placed fresh obstacle in the way of implementing the decisions arrived at between the two Dominions in early December that mixed parties of troops and police accompanied by women social workers would launch operation for the recovery of abducted women and converted persons. The Pakistan Government now maintains that troops should not be allowed to accompany the police and social workers to villages for recovery of abducted persons and desire that the troops should be restricted to guarding transit camps and provide escort for transport of recovered persons to their own Dominion. The Pakistan Government have even gone further and have stopped the entry of Indian troops in some of the districts of West Punjab.

One of the main obstructions facing our rescue parties today is the fear harboured by the majority of abducted Hindu women that they may not be received again into the fold of their own society, and the Muslims being aware of this misgiving have played on the minds of these unfortunate women to such an extent that they are reluctant to come away from their captors back to India. It has been mutually agreed between the two Dominions that in such cases they should be forcibly evacuated.

Mahatma Gandhi appealed to all Indians that 'these Hindu and Sikh sisters who have been abducted, molested or converted by Muslims should be received with open arms and given the same place which they occupied before in society.' This appeal has been reinforced by similar statements by the Prime Minister and other Indian leaders.

Under the auspices of the Women's section of the Ministry of Relief and Rehabilitation, Miss Mridula Sarabhai and Mrs. Premawati Thapar are leading

Pandit Nehru during his recent visit to Amritan visited a refugee camp with the Premier of East Punjab and others

rescue parties for recovery of abducted women both in West Punjab and East Punjab.

Transit Homes for the recovered women have been established at Jullundur, Amritsar, Kurukshetra and Delhi. The Transit Home in Delhi will accommodate nearly 400 women. There are at present in this Home 100 destitutes and unprotected women and children. This Home is meant primarily for giving shelter, but work of various types will be taught and corporate community life will be emphasised.

Three Relief and Work Centres are already functioning in various parts of Delhi where literary and work classes are being conducted. Women work here on payment and at the same time learn tailoring and embroidery.

The Marriage Bureau set up by the Women's Section of the Ministry of Relief and Rehabilitation have registered a large number of names of men willing to marry destitute refugee girls.

The Displaced Persons' Enquiries and Search Service Section of the Ministry of Relief and Rehabilitation has recently taken photographs of unattached children now in a Transit Home at Amritsar and has placed them on view at Kingsway and Kalkji Camps in Delhi, and also in its main office at 'P' Block. There were over 23000 enquiries received by this section for missing persons from Pakistan. It helps to establish contact between missing persons and their relatives, and has already succeeded in several cases. The section works in close conjunction with the Indian Red Cross and has searchers spread out throughout

the refugee camps in Delhi, East Punjab and elsewhere.

Nearly two to three thousand refugees from Kashmir are arriving daily in East Punjab. Most of them are coming by lorries from Pathankot. It is estimated that already about 1,00,000 people have come over to East Punjab from Kashmir. These refugees are being given temporary shelter and immediate relief in East Punjab and it is proposed to open a camp outside the Province at Muttra in the United Provinces.

#### Relief and Reception

Of the 4½ million refugees who have come over to India, nearly one million are in refugee camps where they are being given shelter, food, clothing and medical attention at government expense. A large majority of the destitute refugees is in East Punjab, about 456,000 in camps scattered in its eleven districts and about 200,000 in Kurukshetra camp which is run by the Central Government. Threre are a number of small camps in the U.P., Bombay, Madras, Bihar and some of the Indian States. Here the refugees are not under canvas and have been accommodated in buildings.

The immediate problem facing Government is the provision of roofed accommodation before April to all those refugees who are at present under canvas. The two-crore scheme for the construction of some permanent accommodation in 25 towns of East Punjab is being put into operation. It can be hoped that there will be roofed accommodation for the two lakhs of refugees before next April. Simultaneously, dispersal of refugees from towns to the interior of East Punjab is proceeding. Loans are being advanced

for repair of houses which have damaged by Muslim evacuees. district officers are also making efforts to requisition large buildings which might be used for housing refugees without shelter. In Delhi, a vigorous drive has been launched to find roofed accommodation for those refugees who are without shelter. Officials of government have been asked to make available spare accommodation to deserving refugee families. At Purana Qilla, repairs have been carried out and water and electricity have been laid in order to receive nearly 6000 refugees. The Bela Road barracks and Anand Parbat barracks have also been placed at the disposal of homeless refugees. Outhouses of large buildings and all other available accommodation is being requisitioned. First priority is being given to those who have no shelter at all and those who were preoccupying mosques. In the viously case of destitute refugees, accommodation is being enlarged at the Kingsway Camp.

### Cloth and Garments

Distribution of cloth and garments among refugees by the Ministry of Relief and Rehabilitation continues. Up to January 22, 1948 this Ministry had despatched approximately 15,00,000 ready-made garments such as cotton kurtas, great coats and shorts (mazri) to various refugee camps in East Punjab.

In addition, the Ministry also sent about 23,00,000 yards of various kinds of cloth like China sheeting, malmal, drill dyed, cameric, dasuti, calico and cellular shirting.

Cloth and garments actually received up to January 22, 1948 in refugee camps

in East Punjab, including Kurukshetra, Amritsar, Jullundur, Ambala, Ferozepur, Phillaur, Gurgaon, Hoshiarpur and Ludhiana were 3,84,200 Kurtas (cotton) 8700 Shorts (mazri) 1,66,6600 shorts (khaki drill) 10,000 great coats, 2,40,000 yards of China sheeting, 1,27,000 yards of malmal, 29 bales of drill dyed 'A' grade, 67,400 yards of drill dyed 'B' grade, 1,06,000 yards of drill dyed 'B' grade, 1,06,000 yards plus 2 bales of clasuti (various shades) 31,000 yards of Calico and 1,78,000 yards plus 44 bales of cellular shirting.

The total number of blankets and razais despatched to various refugee camps up to January 22, 1948 was 15,02,021. Kurukshetra received 3,41,104 and Delhi 9230 and the rest were distributed to East Punjab camps. Bundies supplied to all camps totalled 2,75,000 and jersies 1,50,000. Tents and tents (bivouc) so far supplied to East Punjab refugee camps, including Kurukshetra is 1,90,948.

### **Medical Supplies**

Kurukshetra, where there are over two lakhs of refugees, received special attention of the Health Ministry. From February 15, 1948 the administration of the camp now under the Central Government will pass from military hands into those of the civil authorities. Arrangements are accordingly being made to replace military medical personnel and ambulances at the Camp by civil personnel. To supplement the medical staff, authorities have opened up a training school where refugee girls are being taught nursing and public health. This step will aid considerably in staffing the expansion that is proposed to be made in the hospitals. Four more dispensaries are to be opened and X-ray and Dental centres are being started. The eye and E. N. T. laboratories are being expanded. The Infectious Diseases Hospital is to be expanded to hold 300 more beds. The total strength of the medical personnel at Kurukshetra at present is 1023 functioning in 14 dispensaries.

Recently 180 hospital beds were obtained from the American Surplus Disposal Directorate. Another 200 iron bedsteads have been obtained from the American Disposals and kept in reserve.

One million tablets of M & B and two million tablets mluti-vitamin were also supplied from the Medical Store Depot, Bombay. 16,705 lbs. of drugs and 54,570 doses of vaccine were issued during the last month.

1912 lbs. of drugs and 9,92,595 doses of vaccine were sent to East Punjab during December 1947. In the same month Delhi received 2466 lbs of drugs and 1,08,070 doses of vaccine. 42,208 lbs. of drugs and 13,000 doses of vaccine were despatched to Kashmir.

The West and East Punjab Governments have issued Evacuee (Administration of Property) Ordinances under which all the property of evacuees is vested in a Custodian and other provincial governments concerned are taking similar action. Where banks have any

claims whether in regard to their own property or the property of their debtors, pledged, hypothecated, assigned, or otherwise charged as security for loans advanced by them, they should take early steps to register their claims with the Custodian of Evacuees' Property of the Province in which the property is situated.

The East Punjab Ordinance excludes cash deposits in banks from the scope of evacuees property and defines "Evacuee" as a person ordinarily resident in or owning property or carrying on business within the province of East Punjab, who on account of civil disturbances or the partition of India left the said territory for a place outside India or cannot personally occupy or suprvise his property or business.

The Ordinance also deals with transfers of Evacuee Property. No sale, mortgage, pledge, lease, exchange or other transfer of any interest or right in or over any property made by an evacuee or by any person in anticipation of his becoming an evacuee, or by the agent, assignee or attorney of the evacuee or such person on or after 15th August 1947 will be effective so as to confer any rights or remedies on the parties to such transfer or on any person claiming under them, unless it is confirmed by the Custodian of Evacuee Property.

Applications for confirming such transfers must be made before the Custodian by March 31, 1948, or within two months from the date a transaction is entered into, whichever is later. The Ordinance prescribes a procedure for a summary enquiry into such applications by the Custodian, who may confirm a transcation unconditionally or subject to such conditions and terms as he may consider proper.

The Government of India have also in view the promulgation of an Ordinance on the lines of West Punjab Ordinance V. By this Ordinance the defini-tion of 'Evacuee' and 'Evacuee Property ' will be reconsidered to secure that all prospective transfer of urban property of intending evacuees are effectively stopped for the centrally admin-istered areas, Provinces and States. It was felt in this connection that the volume of urban property was so large that it would be well nigh impossible for the Pakistan Dominion to meet it. And in this respect, however, it would be an advantage if free exchanges of urban property were allowed. The result would be that after some time a great deal of property would have become automatically liquidate. There was another difficulty that most of the disposal of property in this way would take place after March, 1948, when the Pakistan Dominion would have its own currency. It would not then be possible for our people to bring their money from Pakistan. On the other hand, Muslims in India were quickly disposing off their property and taking away money. It was therefore thought fit that it would be advantageous if all exchange and sale of property could be stopped during this intervening period by the promulgation of the Ordinance.

As regards agricultural land a subcommittee will take up the matter with the Pakistan Government when the question of the exchange of urban property will also be discussed.

Arrangements have been made for the registration of claims of non-Muslims who have lost or left property both immoveable and moveable in Western Pakiskan. In Delhi, upto January 26, over 90,000 claims were registered with the Registrar of Claims. Similar arrangements have been made in the Provinces.

In the United Provinces the Deputy Commissioner, Refugees, has been appointed Provincial Registrar of Claims. The District Magistrate in each district will be the District Registrar of Claims. The Refugee Office and the District Collector in Bombay have been authorised to register claims of the refugees. The Special Deputy Collectors for Madras City and the Collectors of the districts in Madras province have been authorised to register claims. They will forward the claims to the Special Officer and Protector of Emigrants who will consolidate and submit the claims to the Government of India. The Central Provinces Government have issued instructions to Deputy Commissioners to get sworn declarations in duplicate from each claimant. In Orissa it is proposed to authorise Collectors of districts to register claims. In Bihar, sub-divisional officers have been appointed as registrars of claims. In Assam the Assistant Director, Re-settlement and Employment Exchange has been appointed as the Registrar of claims. In Ajmer, claims will be claims. In Ajmer, claims will be registered by the Deputy Director of Relief and Rehabilitation.

Agreement was recently arrived at between India and Pakistan that claims in respect of Savings Bank accounts standing open at Post Offices in Pakistan and postal cash, Defence Savings and National Savings Certificates standing registered there can be made at all head and sub-post offices in India.

#### Amnesty

Claims can also be made by depositors or holders of certificates who have already applied for transfer of their accounts or certificates but have not received back their pass books or certificates.

Depositors and holders who have their pass books or certificates in their possession need not submit claims, but action for the transfer of their deposits and holdings will be taken up by post offices as the pass books and certificates are presented.

Consequent upon an agreement arrived at between the two Dominions that a general amnesty should be granted to certain military forces of the two Dominions who were convicted of diverse offences in the course of discharge of their duties connected with internal defence or protection or evacuation of refugees, an Ordinance has been issued by the Government of India which states that no legal proceedings shall be instituted in any civil court, criminal court or court-martial in India against any member of the military forces of Pakistan who was engaged in duties connected with internal defence or the protection or evacuation of refugees in any part of India, in respect of any act done or

purporting to be done between August 15, 1947 and January 10, 1948.

The Ordinance further clarified that any legal proceedings pending would be withdrawn, and in respect of those who have been convicted the sentence or punishment ordered would be remitted. If the person was under confinement he would be released and any forfeiture or penalty imposed shall be set aside and fine realised shall be refunded.

From January 13, 1948 it was agreed between India and Pakistan that the programme of exchange of under-trial and prisoners would begin between East and West Punjab. This agreement however, has not worked as the Pakistan Government have taken the attitude that the question of repatriation of prisoners from the States in the Indian Union should be first settled. In the meantime nearly 4,000 Muslim prisoners have all the same been collected in the jails of Amritsar, Jullundur, Ludhiana, and Ambala, while the West Punjab Government have brought nearly 6,000 non-Muslim prisoners to Lahore.

#### Non-Muslim Banks

As a result of discussions between the representatives of the Governments of Pakistan and India, West and East Punjab and the Reserve Bank and other banks, arrangements have now been made for facilitating resumption of business by banks which have closed their offices owing to disturbances, or which find themselves unable to carry on their normal functions owing to paucity of staff.

The West Punjab Government have agreed to make all the necessary arrangements for the protection and housing of non-Muslim staff of banks in Lahore and also to provide guards at bank premises in Lahore at the expense of the banks.

Notice has been taken of complaints made by evacuees in both Dominions about cheques and matured fixed deposit receipts being returned by banks on flimsy grounds. In order to avoid inconvenience and distress to the evacuee depositors and in their own interests, banks are requested to desist from such practices and to co-operate by giving all possible facilities to their constituents. To the extent that the difficulties in regard to transfer of accounts from one Dominion to the other are due to the non-functioning of banks and difficulties of communication, these will largely disappear when the business of banks consolidated and some of their branches start functioning properly and when communications improve. facilitate transfers, it is suggested that each bank should designate one office in India and one in Pakistan for clearing claims for inter-Dominion transfer of accounts. Both Dominions have agreed not to place any restrictions on transfer of accounts or remittances of funds by banks. Only in the case of accounts of companies which continue to function in Pakistan, the Pakistan Government have stipulated that their previous permission should be obtained.

### REHABILITATION LOANS SCHEME

Under the general scheme of rehabilitation loans for displaced persons belonging to urban areas, the Ministry of Relief and Rehabilitation have announced that the maximum limit up to which advances may be granted to traders, shopkeepers and those persons wishing to start their own workshops or cottage industry will be Ks. 5,000.

Exceptions already announced cover the cases of doctors, including dentists, radiologists, vaids, hakims and hor eopaths, and legal practitioners in whose case the maximum limit has been fixed at Rs. 3,000. In the case of Delhi, it has been announced that displaced persons wishing to buy a tonga and a horse to ply the vehicle on hire may be granted loans up to Rs. 1,000.

Other displaced persons, who do not come under the categories mentioned above, are covered by the general loan scheme under which the maximum limit has been fixed at Rs. 500.

### Fer Displaced Persons Only

The grant of loans under the scheme has been extended all over India and the Indian States, and it has been laid down that the grant of loans should be confined to displaced persons who decide to settle finally in a particular town or place and who can be fitted into the economy of the area.

The advances will be paid by the District authorities of the district in which the displaced person decides to settle finally. The amount of advance

will be determined according to individual requirements.

Those who wish to apply for the advance are required to produce proof of their having been registered as refugees and affidavit to the fact that they have not previously received similar advance from any other source. The advance will be free of interest for the first year, but interest will be charged at 3 per cent for subsequent years. No recovery will be made in the first year. Instalments for repayment in the subsequent years will be fixed by the sanctioning authority in each case, subject to the condition that the advance should be completely repaid within four years from the date it is given. Payment will be subject to an undertaking to repay, and two sureties will be taken. If default is made in repayment of any instalment the whole advance will become recoverable as arrears of land revenue.

The authorities sanctioning the advance will ensure that it is utilized for the purpose for which it is granted, and will also keep a watch on the displaced person's resettlement. The authorities concerned will give every assistance to persons to whom loans are sanctioned to obtain the necessary equipment, raw materials, stock-in-trade, premises etc. so that the loan is utilized to the best advantage. Where there are no reasonable prospects of an applicant being able to secure the requisite facilities either through his own effort or with Government assistance it would obviously be wasteful to sanction the loan.

## GRANTS FOR DISPLACED STUDENTS

Under the scheme for the grant of financial assistance to displaced students from Western Pakistan recently announced by the Ministry of Relief and Rehabilitation, a displaced student in need of a loan should apply for the same through the head of the Educational Institution concerned to the sanctioning authority nominated by the Government of the Province where his guardian is now residing. The heads of the institutions are authorised to sanction immediate financial relief to a student up to Rs. 200.

Displaced students whose guardians are new residing in the centrally administered areas of Delhi, Ajmer-Merwara and Coorg should apply through the heads of their institutions to the Chief Commissioner concerned. The application forms can be obtained from the Ministry of Relief and Rehabilitation, or from Mrs. E. Rudra, Special Officer to assist Refugee Students, Ministry of Education, Government of India in Room No. 44, 'M' Block, New Delhi.

### REFUGEE'S GIFT TO RELIEF FUND

A cheque for Rs. 20 and an offer of a day's pay every month is made by a refugee from West Punjab, Mr. Bhagat Ram Datta, to the National Relief Fund in a letter to the Prime Minister.

"I am a refugee from Western Punjab", he says, "but by the grace of Almighty Father I feel better placed than millions of refugees from that area. The task of rehabilitating refugees is great and our donations, whatever the amount may be, are far less, to do anything to console them for the losses incurred and tortures inflicted".

Regretting that he is not able to send more, he recalls, "the services of a little squirrel were appreciated by Rama when he was preparing for an attack on the mighty Ravana".

## CONCESSION TO REFUGEE CONTRACTORS

Refugees from Pakistan who desire to start their career in India as contractors for C. P. W. D. will be allowed a special concession.

The Government of India have decided that no security in cash will be demanded from those persons, who produce a certificate of their being bona fide refugees from the Ministry of Reliet and Rehabilitation, and apply to Chief Engineer, C. P. W. D. for enlistment as class IV and V contractors, provided they submit a personal bond signed by two persons of known probity and wealth for the amount required to be deposited under the rules.

This concession will be allowed up to December 31, 1948.

# SCHEMES FOR REHABILITATION OF DISPLACED PERSONS

THE East Punjab Government are setting up a Development Board which will be entrusted with the over-all task of stepping up industrial development of the Province, according to a Note on the progress of relief and rehabilitation for the three weeks ending January 22, 1948 issued on Feb. 8. Simultaneously plans for the development of Simla Hill tracts and Kulu Valley are under consideration.

There is close co-operation between the Ministry of Relief and Rehabilitation and the Provincial Government in the framing of these schemes for the rehabilitation of displaced persons and their progress is reviewed every fortnight at the meetings of the Joint Rehabilitation Board, presided over by Mr. K. C. Neogy, and attended by representatives of both the Centre and the Province.

According to latest information, about 17 lakhs displaced persons have already been resettled on land in East Punjab on about 27 lakh acres. There is still about 5 lakhs of cultivated land available for allotment. To re-establish village economy, the East Punjab Government is expediting dispersal of refugees in villages, specially those who have been allotted land or shops and others who are essential artisans and those who wish to go to the villages. Hutted accommodation is being provided for the new settlers and grants are being made for the purchase of food. Taccavi loans amounting to Rs. 1,66,50,000 have also

been sanctioned by the East Punjab Government for distribution among rural settlers for the purchases of bullocks, seed and fodder. Repair of wells and houses in villages is also being financed from these loans. Another Rs. 5,00,000 have been sanctioned for distribution as loans to destitute refugees settling in villages in the districts of Hissar, Karnal, Ambala, Ferozepur, Rohtak, Hoshiarpur Jullundur, Gurgaon, Amritsar and Gurdaspur.

#### In Patiala

In Patiala, 135,671 refugees have been settled on land available in 640 villages. The Ruler has placed a sum of Rs. 5 lakhs at the disposal of the Relief and Rehabilitation Commissioner for the grant of taccavi loans to those settlers who need financial assistance. The Patiala State authorities have also absorbed 700 refugees in their various departments. A large number have also found employment in factories and business concerns. The target for resettlement on land in Patiala is two lakhs.

Over 10,000 men have been sent to the Bharatpur and Alwar State by the Ministry of Relief and Rehabilitation for settling on land. More are being sent.

The Ministry of Relief and Rehabilitation are setting up a co-ordination body representing the Ministry, the Ministry of States, East Punjab Government and

### Rehabilitation And Development Board

THE Government of India have had under examination for some time a number of Post-War Development schemes for the economic development of the country, says a Press Communique issued by the Ministry of Relief and Rehabilitation on Feb. 7. The objective is to promote, as early as possible, the planned development of the country as a whole. It has not been possible so far to make much progress with execution of these schemes for want of capital goods and other reasons. The necessity of rehabilitating a very large number of refugees who are without any gainful occupation now emphasises the urgency of the economic development of the country. For this purpose the Government of India have decided to set up a Rehabilitation and Development Board consisting of the following:

- Mr. Aftab Rai
   Mr. Mehr Chand
   Khanna.

  Chairman.
  Member.
- 3. Colonel G. N. Naidu Member.

Mr. D. R. Kohli will be the Secretary of the Board.

Mr. C. G. Kale will be the Technical Adviser and Prof. P. C. Mahalanobis the Statistical Adviser. The functions of the Board will have particular reference to the rehabilitation of refugees and will include both planning and execution of schemes suitable for this purpose. The Board should make a quick survey of the resources of the country from this point of view, examine the schemes already in existence, and prepare such other schemes as may be found suitable. The Board should also consider the development of cottage and small-scale industries and where possible their integration to major industries.

The Board will assist the Provincial and State Governments in expediting the execution of schemes financed wholly by these Governments. In regard to schemes financed partly by the Centre, the Governments concerned will function in close collaboration with the Board. In regard to schemes financed wholly by the Central Government, the Board will seek the co-operation of the Provincial and State Governments in order to achieve quick results. For these purposes the Provincial and State Governments will be invited to appoint liaison officers or to set up some other suitable agency to ensure effective collaboration.

The Board will function under the Ministry of Relief and Rehabilitation.

representatives of Indian States to secure concurrence on rehabilitation schemes and to organise machinery for implementing these schemes.

For the resettlement of displaced persons coming from Sind and Bahawalpur and who wanted to settle on land, the Ministry of Relief and Rehabilitation are examining possibilities of resettlement in Bastar and Tripara. It is stated that in Bastar there is a population of 7 lakhs but the total cultivable land is 14000 square miles.

Further details are now available of the U. P. Government scheme for absorbing refugees on 10,000 acres of land in the Nanital Terai region. The present plan envisages a system of co-operative farming so that co-operative enterprise may develop into Joint Farm Manageme t. No sub-letting or fragmentation will be allowed. The area will be divided into four farms of 1500 acres each. For each colonist who settles on land, the Government of India will pay a subsidy of Rs. 500 and a similar sum will be paid by the provincial government. In the initial stages all possible facilities will be given to the new settlers such as free fencing, use of tractors, building of roads, drainage, hospitals and water supply system. Short-term loans will be advanced and plans are also in hand to encourage industries in the area.

In Bihar, an ambitious rehabilitation scheme for resettlement of refugees on land in Purnea and Bhaga has been evolved and the total expenditure on the scheme is estimated to be Rs. 82 lakhs.

In Bombay, the Collector of Karwar, at the instance of the Provincial Government made 2000 acres of land available to those displaced persons who would move there and take to farming. Other District Collectors have also been asked by the provincial Government to keep arable land open for refugees.

In Delhi Province, about 125 'gardens' covering an area of approximately 640 acres are being leased out to those refugees who have experience and have lett similar gardens in Pakistan. These gardens have fruit trees such as mangoes, lemons etc.

### Urban Rehabilitation

Recently the Government of India senctioned a scheme for the grant of loans up to maximum of Rs. 500 to those displaced persons belonging to urban areas who wish to settle down in trade or any profession in a particular town or place they are likely to be absorbed permanently. Exception has been made in the case of Doctors including dentists, radiologitls vaids, hakins and homeopaths, and legal paractitioners, raising the maximum limit of the loan from Rs. 500 to Rs. 3000. Similarly in Delhi the Central Government has announced that those displaced persons who wish to acquire a tonga and/or a horse to ply on hire, the local authorities might grant loans up to a maximum of Rs. 1000. The general scheme of giving loans up to Rs. 500 and the exceptions which have been announced have been communicated by the Ministry of Relief and Rehabilitation to all Provinces and States where displaced persons seek resettlement.

The East Punjab Government have decided to allot a large number of industrial concerns left by evacuees to deserving displaced persons from Western Pakistan at reasonable rent. It is estimated that nearly 4000 factories, both registered and unregistered, have been idle in the province since August 15, involving about 100,000 workers.

The expanded industrial training facilities in the Province are expected to provide facilities to about 8000 refugees to receive training in vocations which were previously carried on by Muslims.

#### 250,000 Settled in Bombay

In Bombay, about 250,000 displaced ersons have already been settled, including about 100,000 absorbed in the Bombay city alone. Most of the refugees in Bombay Province are from urban areas of Western Pakistan where they were engaged in trade or commerce or employed in mercantile and commercial houses. About 15,000 to 20,000 have been accommodated in Government established townships in Powai, Chembur, Mulund and Borivili where schools, hospitals and other civic amenities have been provided. About 775 have secured admission in the different colleges in the Province and 570 have been enrolled in Science and Arts Institutes. 130 students have been admitted in the three Medical Colleges in Bombay.

The U. P. Government have plans to absorb refugees in small and medium size industries in which both men and women will be employed. Special attention is being paid to sports and allied industries. A number of firms having workshops in Sialkot in Western Punjab are being helped to establish themselves in Meerut and Agra where they will undertake manufacture of sports and leather goods. The Provincial Government are also considering schemes of dairy and mixed farming. Manufacture of surgical apparatus, steel trunks, buckets, agricultural implements and domestic utensils is being taken up at Allahabad, Lucknow and Kanpur. Nine Khadi centres for weaving, spinning and soap-making classes are shortly to be opened in its various districts. Investigations among refugees have shown that 2,275 trained workers could take up spinning, embroidery, tailoring and oilcrush-industries. Others, nearly 1,100, were being trained to take up handloom, hosiery, mechanical Gur and sugar making industries.

In Delhi, a Rehabilitation Board has been set up under the chairmanship of the Chief Commissioner to help in the resettlement of refugees. The Board will explore employment opportunities created by the exodus of Muslims and utilise them for resettlement of refugees after training. Efforts will also be made to help refugees who want to shift their trade and commerce previously concentrated in Amritsar and towns of West Punjab. The Board is also responsible for providing accommodation to refugees and a Rehabilitation Commissioner has been appointed charged with the responsibility of finding roofed accommodation for refugees and for giving them financial and other assistance which have been sanctioned by the local authorities.

The Delhi Improvement Trust has framed a Town Expansion Scheme which

will help in the rehabilitation of a large number of refugees. It is proposed to expand townships in Mehrauli, Kalkaji, Tehar and Sheikh Sarai in the supurbs of Delhi. These will cover a total area of 3,425 acres and will include 16 villages. Sites are also being reserved for refugees in the Shadipura extension scheme of the Improvement Trust.

The Fruit Development section of the Ministry of Agriculture have reserved 20 seats for women refugees in their fruit preservation course to be held in February, 1948.

The Ministry of Education have addressed all provincial governments not to charge capitation fees from refugee students who are obliged to join Indian Universities after leaving Pakistan.

With a view to ameliorate the difficulties of refugee holders of insurance policies, the Government of India have addressed letters to insurers doing life insurance business and Provident Societies requesting that such refugees should be given generous treatment. A favourable response to this request has been received by the Government of India from the Insurance and Provident Societies.

The Government of India have pointed out the difficulties of the policy holders which prevented them from paying either premia, and have requested that such policy holders be given the benefit of having the surrender value adjusted in each policy towards the payment of outstanding premium and interest calculated on overdue premium at the lowest practicable rates. In cases, where owing to inadequate surrender value, the policy had lapsed, the Company should be prepared on application to revive the policy at the previous rates of premium for full sums assured without medical examination or with an appreciably easier one.

#### Indian States' Offer

A number of Indian States have offered to employ refugee contractors in the various nation-building schemes. There are openings for contractors in electrical works, roads and buildings, and irrigation projects. Such projects are awaiting construction in Baroda, Bikaner, Kapurthala, Rewa, Nabha, Benares, Alipura, Datia, Rajgarh Darbar, Orissa States, Chhattisgarh States, Narsinger, Jhallagar, Kotah, Rajkot, Dharangbhara, Bundi, Indore, Banswara, Ratlam and Suket.

To assist refugee employment seekers in finding employment the Director. General of Resettlement and Employment have sent out an officer on a tour of East Punjab. He has been entrusted with the task of ensuring that employment opportunities are being adequately exploited by the Employment Exchanges and District Employment Offices and to initiate steps to combat the reluctance of refugees to take up manual employment. The ad-hoc Committee set up to advise the Regional Director of Resettlement and Employment, Delhi, also considered all matters relating to the employment of refugees. Arrangements were also made for the maintenance of close liaison with the Women's Section of the Ministry of Relief and Rehabilitation in connection with the resettlement of women through the Employment Exchange Organisation.

The month of December saw the high est placement figure recorded in the Employment Exchanges and District Employment offices of the Ministry of Labour in the Indian Union. 24,631 refugees registered themselves and 3,899 involving 15,697 dependants were placed in employment. The total number of refugees so far, who have registered themselves with the various Exchanges, was 64,224 of whom 10,566 involving 47,342 dependants have been placed in employment.

In the technical centres established at Jullundur, Ambala, Ferozepore, Ludhiana and Delhi 881 persons have been placed under training.

An All-India statement shows that up to December 15, 1947 in Delhi and Ajmer-Merwara 15,820 persons have registered themselves and 848 were placed in employment. In East Punjab 27,592 registered and 5,695 were given employment. In West Bengal and Assam 23 were registered and one was given employment. In Bihar and Orissa 234 registered and 10 got employment. In Bombay out of 3,255 registered, 610; in Central Provinces and Berar out of 320 registered, 44; in Madras out of 69 registered, 5: and in the United Provinces out of 5,908 registered 954 were placed in employment.

### Refugees Registered

The following shows the number of refugees who have registered themselves in Employment Exchanges throughout the Indian Union according to their occupational groups. These figures include 40,397 men and 815 women as up to December 15, 1947, in Bihar and Orissa, Bombay, Central Provinces and Berar, Delhi and Ajmer, East Punjab, Madras, United Provinces, and West Bengal and Assam.

	Men a	ınd	Women
Technical	11,102		319
Clerical	19,503		375
Agricultural La- bourer.	144		29
Agriculturists not require own land.	108	**	
Domestic workers	637		22
Unskilled factory workers.	564		2
Outdoor labourers	654		21
Unskilled Govern- ment & Office workers.	4,300		17
Land colonists	235		
Other assistants	32	,,	
Appointments Branch Standard.	3,100		30

Not less than 5,160 displaced Government servants from Western Pakistan have been registered by the Transfer Bureau from August 29, 1947 (when it was set up) to January 15, 1948. These include refugee Government servants from N. W. F. P., Sind and Baluchistan and also the Central Government staff rendered surplus owing to partition.

Out of the total number registered, 979 persons nominated by the Transfer Bureau were reported by the Ministries, etc., as having joined duty, 139 others were reported by the Ministries, etc., as having been absorbed.

The Transfer Bureau is not yet aware of 1,462 persons who were nominated as to whether they have joined duty or not.

# INDIAN ARMY'S AID TO FORSAKEN MILLIONS

VER 9,000,000 refugees crossed the Indo-Pakistan border in both directions up to January, 1948. Of this, nearly 4,750,000 consisted of non-Muslims who were brought over to India from the West Punjab, N. W. F. P.. Sind and Baluchistan. Organized movement on a large scale was completed by the Military Evacuation Organization in the first week of December, a week earlier than the date fixed. Cloarance of small pockets and rescue of adbucted women and forcibly converted persons are still in progress.

During the same period about 5,000,000 Muslims were moved to Pakistan from the East Punjab and Delhi, the Government of India contributing a much larger number of troops, trains and other facilities than Pakistan for the purpose.

### M. E. O. Set up

From September 1, 1947, the Indian Army took over the duties of evacuating non-Muslims from the West Punjab and the Pakistan Army became similarly responsible in the East Punjab. A Military Evacuation Organization was set up under a Major-General with troops and transport at his disposal. Pakistan's resources in military personnel and means of transport being limited, the main burden of evacuating not only non-Muslim refugees east but also non-Muslim refugees east but also Muslim refugees west foll on the Indian Army. The collection of refugees, Muslims as well as non-Muslims, arrangements for camping them, moving them on foot and by road, rail and air, loacting them in camps at destination, protection throughout, transport of food and medical supplies in all these and other matters, the Indian Army and the R. I. A. F. set up a fine record of achievement. Officers and men were subjected to prolonged fatigue, to moral and physical strain, and frequently to considerable measure of physical danger. The Indian Army raised civilian motor transport companies, loaned officers to the East Punjab Government for administrative work, provided equipment for camps, and offered assistance in numerous other

Up to October 31, 1947, an independent organisation set up by the Royal Indian Navy at Lahore evacuated 830 non-Muslim personnel of the R. I. N. to the Indian Union. The R. I. N. intend to appoint a Welfare Officer attached to the Rehabilitation Committee at Jullundur to assist in the resettlement of naval families.

Foot columns provided the means of movement for the largest number of refugees. Fleeing from towns and villages close to the Indo-Pakistan border, non-Muslims began to enter India in large numbers in numerous small disorganised parties towards the end of August and

early part of September. Later, when the Indian Army took charge, huge foot convoys, each 30,000 to 40,000 strong, embarked upon a 150 mile march from the fertile colonies of Lyallpur and Montgomery districts. Thus in 42 days (September 18 to October 29), 24 non-Muslim foot columns 849,000 strong, with hundreds of bullock carts and herds of cattle crossed the border into India. Movement of these columns raised problems of deep complexity. In some instances the Government of India had to drop cooked food as well as foodgrains and sugar for starving people from

R. I. A. F. aircraft which flew from Amritsar and Delhi to Jaranwala, Lyallpur, Churkhana, Dhabbansinghwala, Balloki headworks and Bhai Pheru. Drugs, vaccines and doctors were sent. Field ambulance units were sent to Raiwind to inoculate refugees before they crossed the border. Often on the way the columns were attacked, resulting in heavy casualties. Women and children were abducted, and unauthorised search deprived the refugees of the few valuables they carried. The columns suffered at the hand of not only man but also nature. Exposure and devastating floods thinned their ranks. Nevertheless the determined carvans moved on.

Next to foot columns, trains carried the largest number of refugees. More than 670 trains moved over 2,799,368

# Mr. Neogy Outlines Government Schemes

THE different schemes of financial assistance to refugees of various categories so far sanctioned by the Government of India were described by the Hon'ble Mr. K. C. Neogy Minister for Relief and Rehabilitation, while replying on Feb. 4 to a question by Diwan Chaman Lall in the Constituent Assembly of India (Legislative).

Mr. Neogy said that for agriculturists there was a scheme of loans for the purchase of bullocks, seeds and agricultural implements to be given to those settling on land. Free grants will also be given for their upkeep for the period from now onwards to the next harvest. For the urban displaced persons leans will be given to shopkeepers, traders, artisans, etc., up to a maximum of Rs. 500; for medical and legal practitioners up to a maximum of Rs. 3,000. In all these cases, the Central Government, said Mr. Neogy, had intimated their readiness to advance the necessary funds to Provincial and State Governments concerned and to share the free grants and the losses of loans.

### For Small Industrialists

To assist small industrialists, the Rehabilitation Finance Administration is being set up which will advance loans for Rs. 5,000 and more, whereas big industries will be catered for by the Industrial Finance Corporation. Government have also sanctioned a scheme of loans to students for studies overseas and to students receiving training or education in India. The Central Government have recommended these schemes to all Provincial Governments for adoption.

Mr. Neogy added that the scheme for loans to students and trainees abroad will be administered directly by the Ministry of Relief and Rehabilitation while other schemes will be administered by Provincial or State Governments or administrations concerned.

Replying to another question by the same member Mr. Neogy gave details

of the steps taken by the Government of India for the rehabilitation of teachers, doctors and lawyers from West Punjab.

He stated that the Ministry of Education have already absorbed 300 teachers in Delhi. The possibilities of introducing double shift in educational institutions are being investigated. This is expected to provide employment to more teachers. Lists of names of displaced teachers are being sent periodically to Provincial Governments and Universities with a request to absorb as many as possible. The Ministry of Education are also collecting statistics of displaced teachers. When this information has been collected Government will be in a position to decide whether it is necessary to ask the Provincial Governments to reserve a certain number of vacancies for displaced teachers so that they might be absorbed in their expansion schemes.

Particulars of refugee doctors have been circulated to all Provinces and the larger Indian States with a view to their permanent absorption. Some of the doctors have also been provided employment at various refugee camps.

All Provincial Governments and Ministries of the Government of India have been requested to consider sympathetically applications from displaced lawyers for suitable judicial and administrative posts for which they are eligible. The Ministry of States is also addressing the States to absorb lawyers in the same manner. Provincial High Courts are being approached to relax their rules so as to enable displaced legal practitioners to appear before them and their subordinate courts.

Lawyers and doctors (including Vaids, Hakims, Homeopaths, dentists and radiologists) who wish to re-establish themselves in their professions can be granted loans up to a maximum of Rs. 3,000 per head.

INDIAN INFORMATION MARCH 1, 1948
Digitized by

refugeer across the border. Of these about 1,120,407 were non-Muslims and about 1,668,961 Muslims. Refugee trains were also attacked by armed mobs in the East and the West Punjab, thus necessitating heavy military protection, introduction of stern measures against villages through which the trains passed, imposition of collective fines and curfew in the affected areas along the railway track. Thanks to these measures, attacks on refugee trains dwindled and disappeared. Each train was escorted by a detachment—sometimes a Company strong, sometimes two platoons.

Over 427,000 non-Muslims and over 217,000 Muslim refugees were moved in motor transport under military protective escort, the Military Evacuation Organization of India alone using 1,200 military and civilian vehicles for this purpose. Motor transport was used primarily for collecting people stranded in villages and other small pockets and also for bringing them to rail heads. In one month alone 1,000,000 gallons of petrol were used in the East Punjab area, mostly by the Military Evacuation Organization.

### Floods in East Punjab

The Royal Indian Engineer Units were engaged in restoring communications which had been disrupted by the flooding of the Beas and Sutlej rivers towards the end of September, 1947, in the East Punjab.

Roads in the Punjab had never before been subjected to such heavy cart traffic as in August and September, when the mass movement of refugees was in progress. One of the finest road net works in India was breached in many places and washed away in parts in one night on account of torrential rains.

Lt. Col. P. S. Bhagat, V. C., R. I. E. commanding RIE units in this area. gave top priority to restoring the damage to the Grand Trunk Road, so that Juliundur and Amritsar, which had been cut off from the Eastern districts both by road and rail, could be linked with Ambala again. Accordingly the 1st and the 4th Companies RIE (both of Bengal Sappers and Miners) built Bailey bridges over the Bein river, five miles east of Jullundur Cantonment. In spite of many difficulties and with only one bulldozer to help build the approach roads, the work was done in five days and the bridge was opened on Oct. 9 This was the first time that Bailey bridges had been erected over gaps in the Grand Trunk Road and put to public use.

Filling the breaches on the Grand Trunk Road between Jullundur and the Beas river was an even bigger task. Here in the space of 16 miles, 15 large breaches had occurred together, and many small ones. The 132 Assault Field Coy. (Madras Sappers and Miners) was assigned the difficult task of restoring this sector. One bulldozer and one road roller were all the mechanical equipment that could be made available.

Using local sources for road metal, some army trucks and much sapper ingenuity and knowledge, this unit did good work and had the road open to traffic in aix days. Where diversions were

possible and necessary, they were made, and where large gaps on embankments had occurred, bridges were constructed.

The railway bridge over the Bein, which was partly destroyed, was repaired by engineers of the East Punjab Railway and 101 Railway Construction Company, R.I.E. (Madras Sappers and Miners).

Besides these tasks Indian Army engineers made wide and frequent surveys and kept open roads used by refugues.

### Refugee Routes

In August and early part of September, before the Military Evacuation Organizations of India and Pakistan were set up in order to control the movement of Muslim and non-Muslim refugees, Muslims immediately east of the new boundary and non-Muslims west of it crossed over on their own. Thus the areas east and west of the new boundary became clear of the minority populations.

When the Military Evacuation Organisations were set up they discussed arrangements for foot convoys and planned specified routes. These convoys sometimes contained as many as 70 or 80 thousands men each, with their bullock carts, cattle, horses and belongings. The problem of moving such convoys was, therefore, extremely difficult specially in view of the communal tension in those areas.

Non-Muslim foot convoys from Montgomery and Multan districts came past the Sulemanki Headworks into Ferozepore in September and October, Non-Muslims from Lyallpur, Jaranwala, Sheikhupura and adjacent areas used a road which crossed Balloki Headworks, where there was a bottleneck and convoys were detained for hours or even days. After crossing the Headworks, the convoys passed through Bhai Pheru and Raiwing and moved thence to Amritsar or through Chunian to Ferozepore.

Further north many non-Muslims from Lahore district crossed into Amritsar by the Grand Trunk Road or by any track or path that was handy. Still further north many non-Muslims from the Pakistan portion of Gurdaspur district and west of it crossed into the Indian portion of Gurdaspur district through Batala, Dera Baba Nanak and Jassar.

All these foot convoys were protected by Indian and Pakistan troops according to the agreement reached between the representatives of the two Dominions at a conference. Indian troops provided close escort and Pakistan troops wide escort to non-Muslim refugees while they were in Pakistan territory.

The largest number of Muslim refugees to move west took the Grand trunk Road from Jullundur to Amritsar and thence to Lahore. For a while the military authorities found it difficult to take the Muslim refugees through Amritsar city where reports of attacks on convoys in the West Punjab roused the fury of the local population who refused

to allow Muslims to go through the city. General Thimayya's men made a diversion north of Amritsar in order to send these caravans through but the diversion became unserviceable after rains. For a while all convoys were diverted along the road running on the bank of the Upper Bari Doab Canal, but this road could not take heavy traffic and broke down. Thereafter when tempers cooled down in Amritsar city, all the Muslim caravans were routed through the city along the Grand Trunk Road to the frontier post at Wagha where Pakistan auhorities took charge of them and sent them on to Lahore.

Muslim refugees from Gurdaspur district took the same route as non-Muslims to cross the border, namely through Dera Baba Nanak and Batala. Care was taken to see that one-way traffic was maintained.

From Ludhiana and Jullundur districts large columns of Muslim refugees were routed through Jagraon, Moga, Ferozepore and Sulemanki Headworks.

Muslim convoys from the southern districts of the East Punjab such as Rohtak, Hissar and Gurgaon took the route which ran through Hissar, Sirsa, Dalwali and Fazilka.

### **Escort by Troops**

All Muslim refugees moving on foot from the Indian Union into the West Punjab were escorted by Indian troops, on foot and in lorries, and sometimes when these columns had to pass through areas where great tension prevailed Armoured Corps units escorted them. Although according to the agreement Pakistan troops were supposed to provide close escort to the Muslim refugees while they were in Indian Union territory, most of the escort were Indian owing to the fact that the Pakistan army was unable to send an adequate number of troops.

In the third week of September, major attacks on foot convoys took place on both sides of the border, but after that such attacks dwindled in number and decreased in intensity and the end of October saw speedy and safe movement of refugees.

In October Muslim and non-Muslim refugees often took the same route and crossed each other without any untoward incident.

In October, however, there were unprecedented floods in the Punjab which rendered most of the routes taken by the refugees unserviceable for over a week. Bridges were washed away and strips of road also disappeared under water. Many refugees died of exposure and many were carried away by the floods. All foot movements were at a standstill during this period but both the Army and Civil engineers worked hard on the roads and got them going again within a week.

Fifty-six camps were set up to accommodate refugees and over 40,000 tents have been placed at the disposal of the various provinces for the same purpose. The largest of these camps is at Kurukshetra which was organised in October to billet non-Muslim refugees from Pakistan. The

Army was called upon to organise this camp and this meant the employment of 1,200 army men. This camp has a capacity of about 2,50,000 and is divided into separate towns of 50,000 each. It has a hospital of its own and contains up-to-date arrangements for vaccination and inoculation. Steps are also being taken to electrify the camp. At its peak period 20 major Indian Army units were employed.

The Army's medical services were fully used for the benefit of the refugees. Mass in equiations and vaccinations were carried out and ambulance cars accompanied the foot convoys. One thousand three hundred beds were made available for refugees in Combined Military Hospitals in Jullundur, Ambala and Delhi. Medical officers were detailed for refugee work in various stations in East Punjab and Medical Inspection Rooms were established in refugee camps. Penicillin, sulpha drugs, D. D. T. and surgical instru-Penicillin. ments and equipment, field dressings, etc., amounting to about 250 tons were made available to treat refugee casualties.

A contingent of two Veterinary officers with two complete Veterinary Sections and a number of Ferriers were sent to Jullundur for shoeing and rendering medical aid to animals, arriving from Pakistan with the refugees.

### Supplies and Stores

The Army supplied 30,000 tents to the Ministry of Reliof and Rehabilitation. Certain accommodation stores such as camp kettles, hurricane lanterns, entrenching tools, and cooking utensils were also made available by the Army for use in Kurukshetra camp. A small supply of blankets was also made to the Bihar Government.

In several different stations the Army has placed at the disposal of the various Provincial Governments and the Ministry of Relief and Rehabilitation accommodation sufficient to house at least 2,00,000 civilians.

Six transport companies and supervisory staff to raise five civilian transport companies were provided by the Army for the movement of refugees.

Over one million gallons of petrol, oil and lubricants were used up in a month by the Military Evacuation Organisation. Aviation spirit for retugee work during peak period reached about 600,000 gallons a month.

### KHAIRADIN-GIRJAPUR RAIL SURVEY

The Ministry of Railways (Railways Board) have sanctioned a Final Location Survey being carried out by the Agency of the E. I. Railway Administration for an alternative alignment between Khairadin and Girjapur via Bisrampur, a distance of about 34 miles in connection with Barwadin-Chirmiri (Bijuri) project. The survey will be known as the Khairadin-Girjapur survey of the Barwadih-Chirmiri (Bijuri) Railway Project.

# EVACUATION OF NON-MUSLIMS FROM BAHAWALPUR

THE following statement of negotictions regarding evacuation of non-Muslims from Bahawalpur was issued by the Ministry of Relief and Rehabilitation on Feb 11:

Of the estimated population in 1947 of 2.7 lakhs of non-Muslims, about 45 to 50,000 came out on their own in September and early October 1947, following serious disturbances in the Bahawalpur District of the About 25,000 more from that District were evacuated by the State in accordance with arrangements reached between them and the Ministry of States, Government of India, prior to the accession of the State to Pakistan. About 70,000 non-Muslims are now estimated to be living in Rahimyarkhan District of Bahawalpur, most of whom are desirous of coming out. Over a lakh is un-accounted for, and a large portion of this probably represents forcible conversions, which have been particularly heavy in this state.

### **Negotiations for Evacuation**

Negotiations for the evacuation of those non-Muslims among the remaining 70,000 as desired to migrate to India were at first being carried by the Ministry of States. At this stage, the Bahawalpur Government appeared inclined to provide some facilities in the shape of escorted special trains and represented certain difficulties regarding coal, railway stock, etc. Negotiations were also being made to carry out air evacuation from Khanpur Air field. Apparently the Bahawalpur Government were finding difficulties in obtaining the necessary railway stock and coal in the ordinary course. In the meantime, India and Pakistan had established a common pool of railway stock and were smoothly running through refugee specials between the two Dominions. In view of this and the further fact that Bahawalpur had since acceded to Pakistan. the Ministry of States felt that the best course would be to extend to Bahawalpur the arrangements in force in West Punjab. This was suggested to the Bahawalpur Government towards the end of October. The Bahawalpur Government did not agree to accept Indian troops in Bahawalpur territory, but at the same time, stated that such non-Muslims as wished to go to India would be provided with facilities to do so under their own military and police escort and undertook full responsibility for their safe transit to the State border. In actual practice, however, practically no movement facilities were provided by the Bahawalpur State except to a few persons who obtained permits from the Bahawalpur Military authorities.

On the 7th November an Officer of the Ministry of States went to Bahawalpur in connection with various matters and discussed the question afresh with the Bahawalpur Government. That Government, refused to recognise the actual factual position viz., that a large

number of non-Muslims wished to leave and were—forced to stay on only owing to lack of facilities, and refused to provide any special facilities for evacuation.

This new attitude taken up by the Bahawalpur Government was still under consideration by the Government of India when the State sent one of its Hindu Ministers to India in the middle of November with a view to persuading Bahawalpur non-Muslims who had already left to return to the State. Assurances were brought on behalf of the State that action would be taken to create such conditions as would not only enable non-Muslims to remain there in safety, but also persuade those who had left to return. The Government of India welcomed the sentiments and felt that every effort should be made to see if this desirable object could really be achieved. A meeting was thereupon called at which above mentioned Minister of the Bahawalpur Bahawalpur non-Muslims already in India were present. These representatives were asked carefully to consider the proposal that they should return under the assurances mentioned above. Some of these representatives were given special facilities to visit other centres where Bahawalpuris had come in appreciable numbers in order to consult them and also persuade them to return. These representatives, after careful consideration of the conditions then prevailing in Bahawalpur and the trend of affairs in the State, came regretfully to the conclusion that the conditions in Bahawalpur were not such as to enable non-Muslims to remain there in safety and with honcur and that in those conditions people could not really be persuaded to remain there, much less to return.

#### Facilities Refused

The Government of India were informed to that effect on the 27th November 1947. In particular it was pointed out that several thousands of villagers had been deprived of their lands and had been forced to come to the towns where they had been staying for several weeks under conditions of utmost hardship and were already in the last stages of destitution.

With a view to securing at least same facilities for those who were absolutely destitute or were not State subjects, an Officer of the MEO India went to Bahawalpur but although he contacted both the authorities at Bahawalpur at Karachi, all facilities for evacuation were completely refused.

The matter was next raised with Raja Ghazanfar Ali Khan, Refugee Minister, Government of Pakistan Ly Hon'ble Shri Gopalaswami Ayyangar, Ministor without Portfolio during discussions at Lahore on the 9th December. The situation as stated above was represented to Raja Sahib who agreed that as Bahawalpur was

now a part of Pakistan, it was up to the Government of Pakistan to ensure the necessary facilities. He also agreed that non-Muslims who did wish to leave should be enabled to do so. He said that he would take up the matter with His Highness the Nawab of Bahawalpur at Karachi about a week later, he would fix a meeting at Bahawalpur itself where the matter might be discussed with a view to making necessary arrangements. He asked that some representatives of India should be sent to the meeting and Shri Gopalaswami Ayyangar agreed to do so on hearing from Raja Sahib.

### Telegram to Raja Sahib

the 11thDecember Shri Gopalaswami Ayyangar sent a telegram to Raja Sahib pointing out that complete absence of any tran port facilities to India was only increasing panic and asking for the enriest possibly arrangements. He also enquired as to the date of the moeting. Further he prossed for the establishment of camps for destitutes at Khanpur and Rahimyarkhan, and distribution of food to them. No reply to this telegram was received, but in another connection Raja Ghaznafar Ali Khan informed Shri Gopalaswami Ayyangar that a meeting was being held on the 19th at Bahawalpur. No invitation to the Government of India to send any representatives was extended. On the 21st Shri Gopalaswami Ayyangar cent a further telegram repeating his earlier telegram and asking for any early decision. Yet another telegram was sent by Shri Gopalaswami Ayyangar on the 24th December pointing out the impossible conditions under which the destitutes were living and reiterating the request for opening of camps and distribution of food. Reference was also made to reports of further violence including the shooting down of 20 leading Hindus of Ahmadpur Lamma in broad day light on the 10th December. With a view to obtaining more information regarding conditions in Bahawalpur, suggestion was made that a liaison Officer at Bahawalpur may be accepted by the state authorities. In reply a telegram and a letter were received from Raja Gnaznafar Ali Khan towards the end of December reiterating the decision of the Bahawalpur State not to permit non-Muslims to leave the State and repeating assurances of continued protection and restoration of normalcy within a short time. No reference was made in these communications to the question of distribution of food to destitutes, the opening of camps, the evacuation of forced converts and the recent instances of renewed violence.

In reply to the above Shri Gopalaawami Ayyangar addressed Kaja Ghaznafar Ali Khan on the 1st January 1948 pointing out that while the Government of India did not wish to encourage migration, facilities ought to be provided for those who none-the-less wished to leave. The cases of thousands of destitutes in various towns in the State and of the 60 to 70,000 forcible converts were specially mentioned. Offer was made of provision of railway stock and other facilities out of the pool with the two MEOS and it was suggested that details should be discussed in tripartite talks between the Government of Pakistan. Bahawalpur and India. No reply was received to this telegram or the earlier representations on these subjects.

waiting for several days. during which panic in Bahawalpur further increased due to events in Sind, and particularly rioting at Karachi, the Hon'ble Minister for Relief and Rehabilitation again addressed Raja Ghiznafar Ali Khan, drawing attention to previous telegrams and to the immense hardship being caused by the protracted delay to which this matter was being subjected Again a request was made for a conference to discuss the matter as well as concurrence to the appointment of a Livison Officer at Bahawalpur. In the meantime, it was understood that the State Government were proposing to send out the destitutes, mainly Oads, by a foot convoy involving them in a strenuous journey of several days, involving considerable danger and hardship instead of allowing them to be evacuated safely by escorted train. An offer was made that the Government of India would supply special rakes, if necessary, from the Government of India's own stocks. An offer was also made to send the Director-General of Evacuation to Lahore or Bahawalpur to fix up details. Again no reply has been received to this communication. On the 28th January, 1948, the Hon'ble Minister for Relief and Rehabilitation has again addressed personal communication to Raja Ghaznafar Ali Khan on various subjects including the question of evacuation from Bahawalpur.

# United Nations Appeal For Children

The United Nations Organisation has sponsored a scheme called the "United Nations Appeal for Children" for the purpose of collecting voluntary contributions from people of all countries of the world with the intention that the contributions collected should be used for the benefit of children, adolescents and expectant and nursing mothers without distinction of race, creed, nationality or political belief, says a Press Note issued by the Ministry of Health on Feb. 9. In view of the great humanitarian purpose and the international character of the appeal, the Government of India have decided that India should associate herself with the scheme. All the funds collected in India will be utilised in India for the benefit of children, adolescents and expectant and nursing mothers in the country without distinction of caste or creed.

With a view to implementing the scheme, it is proposed to set up under the chairmanship of the Hor'ble Raj-Kumari Amrit Kaur a National Committee in India which will be voluntary and non-governmental organisation, and will include representatives of leading national organisations as also distinguished individuals in the country. The committee will be responsible for organising the appeal, making collections and allocating and distributing the proceeds thereof for the purposes specified. Invitations have been sent to leading national organisations and distinguished individuals to serve on the National Committee.

# Attack on Parachinar Refugee Camp: Strong Representations to Pakistan

Replying to a short notice question by Shri Deshbandhu Gupta in the Constituent Assembly (Legislative) on Feb. 4, the Hon'ble Mr. K. C. Neogy, Minister for Relief and Rehabilitation, disclosed that the strongest representations have been made to the Pakistan Government regarding the attack on the Parachinar Refugee Camp indicating the views of the Government of India on the attitude of the Pakistan authorities on the question of protection and evacuation of the refugees at Parachinar and the necessity of immediate evacuation of other non-Muslims from the .N. W. F. P. and the tribal areas. He added that the Government of India had also emphasised the responsibility of the Pakistan Government for the immediate recovery of the abducted persons. He added that so far only an interim reply had been received from the Pakistan Government.

Mr. Neogy added that the only information so far available about the attack has been supplied by the local representatives of the Government of Pakistan to our representative at Peshawar. According to information supplied by them, it appears that 130 non-Muslims living in the Parachinar Camp were

killed, 81 wounded and 50 abducted. Inquiries made of people who have been evacuated to the territories of the Indian Union, however, indicate that 138 non-Muslims were killed, 223 abducted and 150 injured more or less severely.

## R. I. A. F. COMMUNICATION SQUADRON

The formation of a Communication Squadron of the Royal Indian Air Force has been announced by Air Headquarters, (India).

Apart from being available for communication purposes, this quedren will also enable officers of the General duties branch (flying) on the staff of Air Headquasters, (India), to keep in flying practice.

The Squadron which is located at Palam will be attached to No. 3 Wing, RIAF.

### CEYLON INDEPENDENCE CELEBRATIONS

# Lord Mountbatten's Speech at Flag Hoisting Ceremony

IS Excellency the Governor-General Lord Mountbatten delivered the following speech at the flag-hoisting ceremony in New Delhi on the occasion of the Ceylon Independence Celebrations on Feb. 14:

I am particularly pleased to have the opportunity of speaking at this Flag-Hoisting Ceremony because I am fortunate enough to have a close personal acquaintance with Ceylon. During the last war my South-East Asia Headquarters were at Kandy for over eighteen months, and as the island was very much a base of operations for all three services I visited many parts of it and so was able to see much of its tropical beauty. I have never met a more friendly and cheerful people and I cannot believe that there is a lovelier island anywhere in the world.

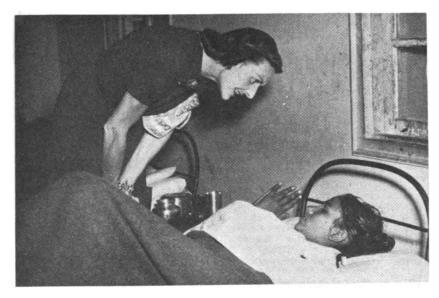

But I had close interests with the island from another different point of view. A month after I arrived in the island, I called a meeting with Their Excellencies the Governor, Sir Andrew Caldecott, and the Commander-in-Chief, Ceylon, Admiral Sir Geoffrey Layton. As a result of this meeting I sent home a report which, I understand, contributed materially to the decision to send out the Soulbury Commission to the island, one of the members of which was the recent Governor of Bengal, Sir Frederick Burrows. The independence of Ceylon within the British Commonwealth which we are celebrating today is the direct result of the Soulbury Commission's report

and I am naturally proud to have had the privilege of playing a small part in Ceylon's achievement of freedom.

Fortunately, Ceylon, like India, has escaped the fate of Burma in being a major battlefield of the past war, and has emerged unscathed apart from the short air raids in 1942. In these circumstances there is a solid foundation on which to build for the future, and with economic stability and a good export trade I feel that Ceylon can look forward to the future with every confidence. I should have liked to have been able to visit Colombo again for the Independence Celobrations, but this has not proved possible. I am therefore particularly pleased to have had this opportunity of joining in the ceiebrations here in Delhi, and to wish Ceylon all good fortune in the years to come. I am asking Mr. De Silva, the Ceylon Government's Representative here in Delhi, to pass these good wishes of mine on to his Government in Colombo.

### THEIR EXCELLENCIES VISIT ALLAHABAD

Their Excellencies the Governor-General and the Countess Mountbatten of Burma paid a one-day private visit to Allahabad on Feb. 9. Accompanied by the Prime Minister, Pandit Jawaharlal Nehru, Their Excellencies witnessed the Kumbha Mela and paid a visit to the Kumba Nehru Memorial Hospital. Her Excellency also visited the Dufferin Hospital.

Her Excellency Lady Mouatbatten talking to a pictient in the Kamla Nehru
Memorial Hospital

## INDIA'S ENVOY TO SWITZERLAND

The Rovernment of India and the Swiss Government have decided to exchange diplomatic missions at Legation level, says a Press Communique issued by the Ministry of External Affairs and Commonwealth Relations on Feb. 9. They are sonfident that the friendly relations existing between them will thereby he further strengthened to the benefit of the people of both countries.

The Gorernment of the Swiss Confederation have decided to appoint M. Armin Daeniker as their Envoy Extraordinary and Minister Plenipotentiary in India. The Government of India are appointing Mr. Dhirajlal Rhulabhai Desai as their Envoy Extraordinary and Minister Plenipotentiary in Switzerland.

### ENQUIRY INTO RELATIVE STRENGTH OF LABOUR BODIES

The Government of India, it is learnt, have asked the All India Trade Union Congress and the Indian National Trade Union Congress for information regarding the number of Trade Unions affiliated to them, membership etc. This has been done with a view to facilitating an enquiry for ascertaining their relative strength so that delegates and advisers could be selected in consultation with the most representative workers' organisation for the I.L.O. Conference to be held at San Francisco in June 1948.

Provincial Governments have been requested to co-operate in this enquiry.

Several Cash Certificates and a Defence Savings Certificate standing in the name of Suraj Prakash, Swatantar Prakash, Snehlata (all members of the family of Dr. Gian Chand), and in the name of Kamla, daughter of Mr. Ram Chand, purchased from Rawalpindi, Multan city and Dinga post offices, have been recovered from looted property in the West Punjab, says a Press Note issued by D. G., P. and T. on Feb. 4. Claimants are advised to apply to the Director-General, Posts and Telegraphs, Simla with proofs of their claims.

The Governor-General has been pleased to appoint the Honourable Mr. Justice Mahommedali Currim Chagla, acting Chief Justice of the Bombay High Court, to be the permanent Chief Justice of that Court in the place of Sir Leonard Stone who resigned the effice with effect from the 3rd January 1948, says a Press Communique issued by the Ministry of Home Affairs on Feb. 5.

# Dr. Syed Hussain's Broadcast

taneously worked for national freedom and national unity. He was able to achieve the one but not the other. Let us all work conscientiously to complete his unfinished job—that would be a true homage to his blessed memory," thus said Dr. Syed Hussain, India's Ambassador-designate to Egypt on the eve of his departure in a broadcast from All-India Radio Delhi on Feb. 15.

Dr. Syed Hussain said:

"It is with a heavy heart that I leave India. The joy and pride of serving her abroad have been dimmed by the shadow of a national calamity which is also a deep personal loss.

Although I saw him several times afterwards, the last real conversation I had with Mahatma Gandhi was on the first day of his last fast orr January 13th. He was keenly interested in Egypt, and in my mission to Egypt. Not to tire him by unnecessary conversation on a day like that I twice offered to leave but he bade me stay. I would have taken a personal message of greetings from him to His Majesty the King of Egypt, but that alas remained unwritten.

For more than a quarter of a century it was the personality of Mahatma Gandhi, more than any other single factor, that had helped to raise and sustain the prestige of India and Indians abroad. Today that prestige has suffered an eclipse. It seems to me that we can retrieve our position, and redeem our national honour in the eyes of the world only by observing a stricter fidelity in the pursuance of his aims and ideals now that he is gone from amongst us than we were able to render while he lived.

### World's Eyes on India

For thirty years Gandhiji simultaneously worked for national freedom and national unity. He was able to achieve the one but not the other. Let us all work consciontiously to complete his unfinished job—that would be a true homage to his blessed memory.

The representative of a country abroad can only represent, in the last analysis, the strength, dignity and unity of his nation at home. The eyes of the world are on India today, and increasingly we will be called upon to play in international affairs a part worthy of our traditions and our actual and potential greatness. Let us then close our ranks and move forward to the destiny which awaits us—to a future that shall be worthy of our past.

During the whole course of my adult life I have never discriminated between Indian and Indian. Unofficially I was ever a champion of India and her cause. Officially I will continue to be the same. "JAI HIND."

M. Jaroslav Sejnoha, Czechoslovak Ambazsador to India (left), who arrived in Delhi on Feb. 1, presented his oredentials to H. B. Lord Mountbatten, Governor-General, on Feb. 14. (Below) The Czechoslovak Ambassador called on Pandit Nehru on Feb. 7

### INDIAN AMBASSADOR IN BURMA PRESENTS CREDENTIALS

T a simple, brief and solemn ceremony held on Feb. 2 in the President's House, the Indian Ambassador, Doctor M. A. Rauf, presented his credentials to the President of the Union of Burma.

Dr. Rauf was introduced to the President by U Tin Tut, Burmese Foreign Minister.

Addressing the President after presenting credentials, Dr. Rauf referred to centuries old historical and cultural associations between India and Burma and said: "Our relations in the past have been close and friendly. In more recent times our connection has been still closer. Thus politically, economically and culturally we have been bound to one another".

Dr. Rauf said: "The tragic death of Mahatma Gandhi has caused deep sadness across the hearts of not only all Indians cut also to all peace-loving people of the world. I am grateful to Your Excellency and to the Government and people of Burma who have joined us in mourning our great loss and who have expressed sincere and heartielt condolences".

Making reference to large number of Indians who live in Burma, Dr. Rauf said: "These people have been lawabiding citizens who have for many years carried on business and professions within the territories of the Union. Our labourers have contributed to the development of this country. Many of them have lived and died here. I wish to commend to Your Excellency the population of Indians who have made Burma their home. Those of my countrymen who accept citizenship of Burma would become one with the great Burmese nation. Those others would still remain friends of Burma and would do everything to assist the Union of Burma in the great task of reconstruction"

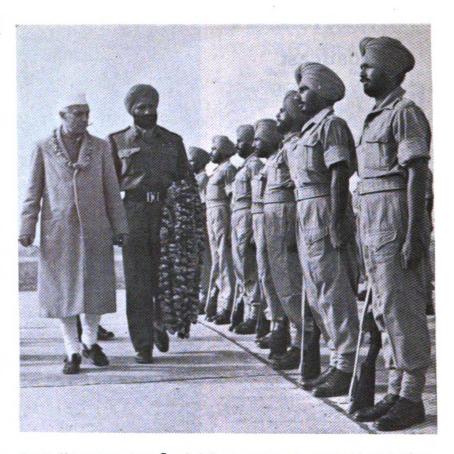

### Burmese President's Reply

The President of the Burmese Republic, replying to the Indian Ambassador who presented his credentials, said:,

"I regret that we should meet under the shadow of the tragic death of Mahatma Gandhi, an event which has cast a gloom on this country as much as on yours. Nevertheless, I have special pleasure in welcoming, in your new capacity as Ambassador, one so specially fitted by his knowledge of both India and of Burma to interpret the Indian people to the Burmese and the Burmese people to Indians.

"It will be the endeavour of myself and of my Government to maintain and strengthen our happy relationship, not only in politics but also in the fields of economics and culture".

Referring to Indians in Burma, the President said: "I fully acknowledge the great part which Indians have played in the past in the development of Burma.

Pandit Nehru inspecting a Guard of Honour during his recent visit to Amritsar

of them you know, those qualified to become who are Union citizens and who desire to do so will be a welcome element in the body politic of this country. Those who elect to retain their status as citizens of the Indian Dominion will, however, have the goodwill of my people and the protection of my Government while they reside in Burma, and the high regard in which we hold India and her Government will be guarantee of their good treatment in this country".

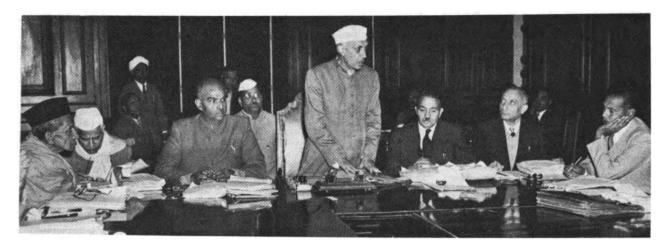

## RE-ENTRY CERTIFICATES FOR BURMA

Information has been received that the Government of Burma have decided to continue to accept departure and residence certificates, as evidence though not as conclusive proof of holders thereof having left Burma after reoccupation, in considering their claims for re-entry into Burma, says a Press Note issued by the Ministry of External Affairs and Commonwealth Relations on Feb. 10. All such persons seeking re-entry after January 15, however, will be treated as new immigrants for purposes of entry into Burma and will be given temporary immigration permits by the Burma Government Immigration Officers at ports in India.

On arrival in Burma if they prove within three months that they are bona fide residents and have trade and family connections in Burma and went out of the country on temporary visit before the enactment of Burma Immigration (Emergency Provisions) Act, 1947, they will be allowed to stay on in Burma.

Pandit Nehru at the frontier between Amritsar and Lahore where he talked to officers and men of joint India and Pakistan Army check post

Pandit Jawaharlal Nehru presided over the meeting of the Governing Body of the Council of Scientific and Industrial Research on Feb. 6. The picture shows (L. to R.) Sir Shri Ram, Mr. N. V. Gadgil, Dr. S. P. Mookerji, Pandit Nehru, Sir S. S. Bhatnagar, Sir Ardeshir Dalal and Mr Bahadur, Secretary of the Council

## SYNTHETIC PETROL—DRUG RESEARCH— ELECTRO-CHEMICAL INSTITUTE

### Scientific and Industrial Research Schemes

THE establishment of an Electro-Chemical Research Institute in South India with the Rs. 15 lakhs donation made towards it by Dr. Rm. Alagappa Chattiar, plans for setting up a Central Institute for Drug Research and preparations for founding a synthetic petrol industry in India were among a number of proposals adopted by the Governing Body of the Council of Scientific and Industrial Research which met in New Delhi in the first week of February. Pandit Jawaharlal Nehru, Prime Minister presided.

Recommending the early establishment of an industry for the manufacture of synthetic petrol from Indian coal, the Governing Body set up a Committee to work out the details of the scheme for the consideration of the Government of India. The committee which consists of Mr. G. D. Birls, Sir S. S. Bhatnagar, Sir J. C. Gosh and Mr. D. N. Wadia will draw up the scheme in consultation with foreign experts.

For the proposed industry in India, second and third grade qualities of coal will be utilised for the production of synthetic petrol and this in itself, is an additional advantage, because India's resources of first grade coals are limited. The Ministry of Industry and Supply has already taken initial steps in the matter and has arranged for the testing in America of Indian coals for their suitability for the manufacture of synthetic petrol.

Simultaneous with the manufacture of synthetic petrol, the council decided that intensified geological and geophysical exploration of possible areas of occurrence of petroleum in India should be carried out by the Government. It has also recommended to the Government that the possibility of buying crude petroleum from the Iranian and Burma Oil fields and refining it at two or three refineries at Indian ports should be explored.

On the recommendation of the Fuel Research Committee, the Governing Body of the Council approved of the establishment of three field survey stations for research in coal in the C. P. Raniganj and Bokhro-Ramgarh coal fields at a cost of Rs. 9 lakhs. It was also recommended to the Government that a statutory cess of \( \frac{1}{2} \) anna per ton of coal despatched in India should be levied for aiding fuel research in the country.

The Governing Body, also decided to have detailed plans prepared for carrying out work on underground gasification of coal which has brought about revolutionary changes in fuel technology in the world, particularly Russia and the U.S.A.

### Dyestuff Technology

With a view to promoting development of dyestuff both on the education and on the industrial recearch sides, the Council agreed to provide additional funds to the Bombay University for the creation of a Professorship in Dyestuff Technology and for the institution of six research fellowships. The Council has been granting for some time to the Bombay University an annual recurring grant of Rs. 25,000 for the Department of Dyestuff Technology which will now be increased to Rs. 54,000. Fifty per cent of the seats in the Department will be

reserved for students belonging to provinces other than Bombay.

Two important schemes in the field of atomic research, viz. theoretical studies in the properties of meson field, and biological aspects of atomic research were sanctioned at a cost of Rs. 50,000. The latter scheme will be investigated at the Tata Memorial Hospital in Bombay.

The Council also considered a draft bill for Governmental control of development of gronic energy and disposal of the raw materials. The bill is to be further examined by the President and the Vice-President of the Council and the Director of Scientific and Industrial Research.

#### Drug Research

Revised plans of the Central Institute of Drug Research, the establishment of which was approved last year, were accepted by the Council at its meeting. The Institute will be established at a capital cost of Rs. 20 lakhs and will cover a very wide scope of activity extending at one and from systematic scientific studies of crude drugs which have been in use in indigenous system of medicines for countries to the highly developed field of synthetics and antibiotics at the other.

The Government of India have approved in principle the establishment of the Institute and have provided necessary funds for the planning work connected with its establishment. The Indian Chemical Manufacturers' Association also have agreed to finance the Institute to considerable extent. A Special Committee with Dr. Jivraj Mehta as chairman has been set up to select a suitable place for the location of the Institute.

A comprehensive scheme of research including nutritional and feeding tests as well as chemical studies from the scientific point of view of Vanaspati was approved for investigation at the University College of Science, Calcutta, the Indian Institute of Science, Banglore, the Nutrition Research Laboratories, Coonoor and the Department of Chemical

Technology, Bombay. This scheme was drawn up by the Vanaspati Research Advisory Committee set up by the Council and will be financed by the Vanaspati Manufacturers' Association.

Considerable controversy has been raised in recent times regarding the nutritional value of Vanaspati and the projected scientific investigations will, it is certain, help to decide the various issues. These investigations will be carried out simultaneously and correlated by Prof, B. G. Guha, Prof. Subrahamanyan, Dr. Patwardhan and Dr. Venkataraman.

### **Electro-Chemical Institute**

Dr. Rm. Alagappa Chettiar has made a munificent donation of Rs. 15 lakhs towards the establishment of Electro-Chemical Research Institute in South India under the auspices of the Council. This Institute will be in the chain of India's National Laboratories, which are in the course of establishment through the efforts of the Council. Five of these National Laboratories are fast coming up and concrete proposals are under way for the establishment of a few more such as Leather Research Institute in Madras, Road Research Institute in Delhi and Building Research Station at Roorkee. Dr. Chettiar's donation, which has been thankfully accepted by the Council is significant of the keen interest evinced by the public in the promotion of national welfare through scientific research and development.

On the recommendation of the Board of Scientific and Industrial Research, the Governing Body of the Council has sanctioned a sum of Rs. 6.5 lakhs for the renewal of 100 research schemes which are in operation in various universities and research institutions all over India under the auspices of the Council.

The Governing Body of the Council of Scientific and Industrial Research sanctioned the following new schemes of research entailing a cost of Rs. 87,000 and recommended by the Board of

Scientific and Industrial Research which also held its meeting on the 5th February in New Delhi under the presidentship of Pandit Jawaharlal Nehru:—

- (i) Investigations on Uranium, Thorium and Radium content of Madras granites, gneisses and their intrusive suits, including the Cuddappah traps, by Dr. R. S. Krishnan.
- (ii) Recovery of primary metals from non-ferrous scray by Mr. G. C. Mitter.
- (iii) Investigation of a general effect of light on the electrical conductivity of systems activated by various types of discharge by Dr. S. S. Joshi.
- (iv) Study of the properties of crystallin quartz, particularly the piezp electric, elastic, optical and twinning properties in relation to its crystal-structure by Dr. Bishambar Dayal Saxena.
- (v) Scheme of research on synthetic fibres from proteins by Dr. Sir S. S. Bhatnagar.
- (vi) Preparation of Vinyl plastics from alcohol and chlorine by Dr. S. K. K. Jatkar.
- (vii) Pilot plant investigations on the production of acetic anhydride and acetic acid from ethyl alcohol by Dr. Sir J. C. Ghosh.
- (viii) Effect of radiation on moulds, bacteria etc. in relation to their metabolism by Dr. B. C. Guha.
- (ix) Manufacture of vitamin C from Sorbose by Dr. M. Damodaran.
- (x) Study of surface active higher alkyl ammonium cations as antibacterials by Dr. M. Damodaran.
- (xi) Study of micro-biological methods for the estimation of complex organic substances of industrial and nutritional importance by Dr. M. Damodaran.
- (xii) Preparation of phosphanilic acid and related substances by Prof. S. V. Bhide.

### JAPANESE CLOTH TO BE RE-EXPORTED

REPLYING to a question in Parliament on Feb. 10, the Hon'ble Dr. Syama Frasad Mookerji, Minister of Industry and Supply, assured the House that 80 million yards of cloth purchased by Government from Japan would be re-exported from India without causing any loss in the transaction.

The quantity of cloth purchased is 80 million yards. The prices of the cloth, f. o. b. Japanese port, vary from 9 annas per yard to 12½ annas per yard. No yarn has been purchased. The prices had been settled before the purchases were made.

The f. o. b. price varies from 35 per cent to 85 per cent more than the (controlled) ex-mill prices of corresponding varieties of Indian cloth. If to the f. o. b. prices are added freight, insurance charges etc. the landed cost in India of the more expensive varieties would come to more than double the (controlled) exmill price of corresponding Indian cloth. The total f. o. b. value is about Rs. 6 crores payable in dollars.

It has not been possible to cancel the contract for cloth but it has been decided to re-export the cloth.

The original intention was to distributute this cloth to the Provinces and States in the same manner as cloth manufactured indigenously. On reconsideration, however, it has been decided to relieve the acute shortage, which necessitated this cloth contract, in another way. It is the intention now to re-export this cloth, since it is more expensive and will earn more foreign currency than a corresponding amount of Indian cloth. As it is proposed to debit the re-exports against India's cotton textile export quota during 1948 a corresponding quantity of indigenous cloth, which would otherwise be exported and which would be cheaper, will be retained in India for the benefit of the Indian consumer.

# DR. ALAGAPPA'S CONTRIBUTION TO SCIENTIFIC RESEARCH

The Electro-Chemical Institute to be opened under the auspices of the Council of Scientific and Industrial Research, it is understood, will belocated at Karakandi, South India. Dr. Rm. Alagappa Chettiar, whose donation of Rs. 15 lakhs is enabling the establishment of the Institute, has already established a college at that town at a cost of Rs. 21 lakhs granted by him and it is planned to have the Electro-Chemical Institute attached to it. It is expected in certain quarters that the Institute may be shortly opened by the Prime Minister of India.

The charities of Dr. Chettiar, who

is a well-known industrial magnate and donationist of South India, have been of the order of lakhs, projects of scientific and industrial research being the most important among their beneficiaries. The Dr. Alagappa Chettiar's College of Technology in the University of Madras, the College of Technology attached to the Annamalai University, Pharmaceutical studies in a college at Ernakulam (Cochin), Tamil Research in Travancore University and the Thakkar Baba Vidyalaya may be cited among a large number of research organizations and objectives which have benefited by his benefactions which now amount to nearly Rs. 50 lakhs.

## MICA WORKERS' DISPUTE FOR ADJUDICATION

The Industrial dispute between the owners of mica mines in Bihar and their workers has been referred for adjudication to Mr. F. Jeejeebhoy, Chairman of the Industrial Tribunal at Dhanbad, says a Press Note issued by the Minsitry of Labour on Feb. 6. The issues raised include wages and bonus, dearness allowance, leave and holidays with pay, hours of work and overtime, compensation for forced idleness, permanency of service, standing orders regarding service conditions, medical facilities and rations.

An order to this effect was published in the Gazette of India (Extraordinary) dated February 5, 1948.

### SPECIAL MACHINERY FOR FAMINE RELIEF

### Mr. Jairamdas Daulatram On Food Problem

SCHEME for the establishment of special machinery at the Centre, to deal with the immediate problems of famine relief and to bring to early fruition, schemes of development which would prevent the recurrence of famine conditions was outlined by Shri Jairamdas Daulatram, Food Minister, speaking on a resolution moved in the Dominion Legislature by Shri M. Ananthasayanam Ayyangar on Feb. 4.

Below is the full text of the speech:—

"I have tried to intervene in the debate at this stage because as I have been listening to the speeches of the mover and other speakers one thing that has struck me is that on most points they seem to be speaking out my thoughts. I have been feeling whether it is necessary to prolong the debate beyond the present stage. I have welcomed the moving of the resolution and I have also welcomed the debate because I feel that the food problem of the country is a subject on which we cannot have sufficient discussion with a view to help the country out of the difficulty in which it finds itself. Speaking generally, I feel that there are three points which stand out prominently as a result of this debate. One point is that food ought to be given a very high priority when we are discussing the problems of our country.

### First Priority for Food

I would welcome a unanimous decision that food ought to be given the first priority. That is my view. If it becomes the view of the Provinces and of the Assembly then I have no doubt that we shall be able to solve all our difficulties much earlier than we may think. The second more or less common idea expressed was that we should endeavour to make our country self-sufficient with regard to food. In this also I find myself in completest agreement with the opinion of the House. The third point that has been made out is that in some manner, in some measure, the Centre ought to take a more active, hand in dealing with the food question and certainly in dealing with the famine question. It is not yet clear to me as to what exactly is the extent to which the Central Legislature would wish the Government of India to take up the responsibility with regard to famines and also the production of food.

There is a certain amount of difference of opinion expressed today. But on the whole, apart from the difference of opinion as to the extent and measure of responsibility which the Centre should take up, there is common expression of view

that the Centre ought to take, as I have said, a more active hand in the matter.

Except one or two speakers, others have more or less omitted any reference to the very great work which the Provincial Governments have to undertake and have undertaken whenever local famines have occurred. As I suppose most of the Honourable Members know, we have got a very extensive and detailed Famine Code which has been functioning for many many years. Under that Famine Code the Provincial Governments are expected and empowered to anticipate and prepare for meeting the situation whenever they find that famine has overtaken any part of the Province. I have no evidence to indicate that the Provincial Governments have not risen to the occasion whenever this distress has come. But it may be that that matter also may need a little more examination. Somehow most of the speakers made no reference to the first part of the Resolution and most of the speakers contented themselves with elaborating their ideas on the second part. The second part deals with permanent or final remedies. It is with regard to that aspect of the question that I think we might go a little into detail. Whether today is the occasion for going into detail I cannot say, I wish we could sit through and have a full

dress debate on various methods of developing those special famine areas, which year in and year out, or once every four or five years, have to meet this calamity. But probably the procedure that I am suggesting may find some favour with them.

I find also one very promising and interesting feature of today's debate and that is that the representatives of some of the States also want that the Central Government should help them in regard to famine and the States should not be isolated from the rest of India. I am glad that on every occasion and on every question the Indian States feel that no difference now exists between their territory and the territory of India proper, so called. I will be only too glad, willing and anxious to do the utmost I can as Food Minister to help our States, to win their co-operation and in conjunction with them deal with the situation function their own territory.

What I feel on the whole is that if I accept this resolution, it means that there is to be a permanent Commission dealing with the immediate problems of famine and also putting forward and executing schemes of development which will prevent famine. If this permanent Commission is to prevent famine there can be no permanency in its own tenure, because it must dissolve itself once it succeeded in achieving its objective. Therefore, I have hesitation in accepting this Resolution in this form. I have also a feeling that such as I would wish that the Central Government

### CENTRE'S HELP TO MADRAS

Accelerated supplies from the grain allotted to the Province for the first quarter ending March, 1948, a cent per cent. increase over the grain allocation for the current year, and assistance for increasing the out-turn of the spring and autumn short-term crops, are among the immediate measures which the Central Government decided to take as a first step to meet the difficult food situation in Madras, in the beginning of February.

As against a total grain allotment of 200,000 tons for Madras for the current year, made earlier by the Central Government, it is understood that the new allocation will aim at 400,000 tons. In case Government efforts to secure increased supplies' both from within and without the country are successful, it is stated that the share of Madras might also be increased accordingly. At the moment however, nothing more precise can be stated, because of several uncertain factors such as the out-turn of the ensuing Rabi crop and the increasing requirements of refugees and availability of imports.

By persuading surplus provinces to expedite their allotments and by their

recent Food agreement with Pakistan, the Central Government have been able to accelerate supplies for Madras. According to the original programme Madras was to receive in January about 21,000 tons of foodgrains only against the 92,000 tons allotted to that Province for the first quarter of the year. As a result of the acceleration of supplies, the original quota for January has been raised to 45,000 tons of which 16,000, tons is rice and 9,000 tons is other grain. In the current month, it is likely that Madras will receive an additional 10,000 tons rice by way of accelerated supplies.

### Unrationed Population

During the recent discussions with the representatives of the Madras Government, the Food Ministry of the Government of India is reported to have advised the Provincial Government to assure some supplies to the unrationed population. For this the most energetic action will have to be taken to increase production during 1948 itself, and to step up internal procurement. The Food Ministry is contemplating further measures to assist Madras in its present difficult position.

should have an active hand in dealing with famine in India wherever it takes place, I am doubtful whether the time is ripe for the Centre more or less to assume completest responsibility. If the Central Government has to function in terms of this Resolution all that it will mean is that the Development Board must completely replace the Agriculture Department of the Provinces and also the same Department of the Centre. I am therefore anxious to find some kind of via media and I propose to make a brief statement—a kind of formula which may enable the Centre to function, which may enable the Provinces also to share the responsibility and yet which may provide them some kind of speedy and quick machinery both to deal with famine when it occurs and also to inaugurate those schemes of development which will prevent famine hereafter in this country. I expect that after I have stated my position the mover of the resolution and also the mover of the Amendment will both withdraw their proposals.

### Special Machinery

This is what I propose to do. I propose to set up at the Centre some special machinery capable of speedy action to deal with the immediate problems of famine relief in co-operation with the Provinces. I also propose, in consultation with the Provinces, to examine the question of creating special machinery to bring to early fruition schemes of development calculated to prevent the recurrence of famine conditions. I am not able at this stage to commit myself to details, but I will discuss this question with members of the Assemnly who have participated in the debate and later with representatives of the Provincial Governments and I hope to evolve an arrangement which would give general satisfaction, my idea being that by adopting this out of the way procedure of consulting Members of the Assembly off the debate hour and in an informal way, probably a suitable via media might be discovered.

In view of the statement that I have made I hope the honourable the mover of the resolution would withdraw his resolution and so also the mover of the amendment".

#### GRAIN ALLOTMENT TO BENGAL

It is understood that during 1948, West Bengal will receive from the Centre 200,000 tons of foodgrains. Of this quantity, 140,000 tons will be wheat and the balance other grains. The average supplies from the Centre for the four years ended 1946-47 amounted to 273,000 tons. Food officials stress the fact that this quantity was for unpartitioned Bengal and during years when Government commitments under rationing were larger than at present.

As regards rice, the Food Ministry is reported to be of the view that Bengal should try to be self-reliant and concentrate on internal procurement. With the new rice crop estimated at 3 million tons, there is little reason for Bengal at this stage to approach the Centre for rice allocation. The prospects of imports are still not clear, and the urgent demands among others, of Madras and the refugoes have to be met,

### NATIONALISATION OF AIR SERVICES

### Standing Advisory Committee's Views

ATIONALISATION of India's air services was generally favoured by the Standing Advisory Committee to the Ministry of Communications when it met in New Delhi on Feb. 14 with the Hon'ble Mr. Rafi Ahmad Kidwai in the Chair.

It accepted the Minister's suggestion that a Departmental Committee, which would include some members with practical experience of aviation, should be appointed to go into the question of the Government starting an experimental service on one route.

Figures were given to the Committee indicating the development of civil aviation in India during 1947. Last year the number of passengers flown was 2,800,000, the freight carried was 4,400,000 lbs., the number of passenger miles flown 137,000,000, the capacity in ton-miles 18,500,000, the number of routes operated 21 and the number of air companies running scheduled transport services 8, as against 1,000,000, 1,300,000 lbs., 61,000,000, 8,500,000, 16 and 5 respectively in 1946. The number of aircraft increased by 60 per cent and personnel 300 per cent during 1947.

### Training in Civil Aviation

The Committee approved the Government's scheme for imparting training in civil aviation, the capital works programme for improvement of airports and the development plans regarding the India Metereological Department. Among other schemes agreed to by the Committee were the opening of a direct mail route to Assam, the starting of mail motor transport in large cities and the establishment of the new Complaints Organisation by the Posts & Telegraphs Department, and the issue of India's new postage stamps.

The scheme for civil aviation training envisages the continuance of the Communications School at Saharanpur, the establishment of Flying and Aerodrome Schools at Allahabad pending a decision on the permanent location of the centre and the running of a Ground Engineering School and Repair Organisation by a commercial contractor under the general supervision of the Civil Aviation Directorate. It is proposed that 'pre-entry' training should be given by the Flying Clubs subsidised by the Government. The Flying School would take in the 'pre-entry' pupils who passed out of the Clubs and give them training both in twin-engined and single-engined aircraft up to 'B' Licence standard. The output of the School during the first year would be about 56 and double that number thereafter. The Aero-drome School is expected to turn out about 300 officers trained in flying control, communications, navigation, etc. during the first 3-year period. Control operators also would be trained at the rate of 100 per year in the School. Under the Ground Engineering School scheme, it is proposed to train about 300 men in the maintenance of airframes, 150 in the maintenance of engines and 50 in instruments and electrical services

The capital works programme in respect of civil aviation is estimated to cost Rs. 15.5 crores during the first 10-year period. Nearly Rs. 2 crores has been budgeted for expenditure in 1948-49 on improvements to sirports at Bombay, Delhi, Calcutta, Madras and 9 other places. This also includes the construction of a Central Research Laboratory at Delhi.

#### Direct Mail Route to Assam

The proposed direct mail route to Assam will be from Calcutta to Kishanganj or Siliguri by train and thence to Cooch Bihar by road and again from Cooch Bihar to Golakganj by train. As the rail route between Cooch Bihar and Golakganj goes through Pakistan over a short distance, it is also proposed to improve the road from Cooch Bihar via Tufanganj, Bukshihut and Azamganj. This route, when completed, will provide a direct mail route entirely inside Indian territory. The Committee agreed to all unsurcharged first class mail between Calcutta and Gauhati being carried by air until the direct mail route between Calcutta and Golakganj is established.

## POSTAL SERVICES BETWEEN INDIA AND PAKISTAN

Government propose to have a comprehensive agreement with Pakistan on postal matters to have effect from April 1, this year. Steps are being taken to arrange a meeting between the representatives of the P. & T. Departments of the two countries for this purpose. This was disclosed on Feb. 3 by the Hon'ble Mr. Rafi Ahmad Kidwai during question hour in the Indian Parliament.

tion hour in the Indian Parliament.

Referring to V. P. articles and money orders scnt before August 15 last year by persons who had later migrated from Pakistan, the Minister added that under the postal services standstill agreement with Pakistan, which would be in force until March 31, 1948, such articles and money orders could be redirected to any place in India and Pakistan.

#### New Telephone Equipment

Answering another question, Mr. Kidwai said that in view of the great demand for new telephones in all parts of India, Government had placed orders in certain countries abroad and were also considering a plan to manufacture telephone equipment in the country. The orders related to auto-equipment, switch-board wires and under-ground cables. The dates of arrival of these would vary from three months to two years. The equipment would be installed soon after receipt in Delhi, Calcutta, Bombay, Madras and other places which were in need of additional machineries. The installation was expected to take about 3 to 9 months after receipt.

### DAMODAR VALLEY CORPORATION BILL

### Mr. Gadgil's Speech In Parliament

NOVING for consideration of the Bill to provide for establishment and regulation of a Corporation for the development of the Damodar Valley in the provinces of Bihar and West Bengal, as reported by the Select Committee, in the Constituent Assembly of India (Legislative) on Feb. 13 Shri N.V. Gadgil, Minister for Works, Mines and Power, said:

When this Bill was referred to the Select Committee in the last session, a comprehensive description of the whole scheme that has been contemplated and for which an agency called the "Damodar Valley Corporation" has been evolved, was given by me. The Bill was welcomed here in the House unanimously, and to the extent to which I was able to ascertain public opinion as expressed in the various newspapers all over the country, and particularly from the Provinces of Bihar and West Bengal, I should say that this Bill has been well received.

The Select Committee, on which were representative members from West Bengal and from Bihar, has gone very carefully into the various provisions of the Bill, and has suggested a few modifications. As I stated in my speech while making reference to the Select Committee, it is the intention to make this Bill as model, as perfect and as grammatically correct as my Hon'ble friend Mr. Naziruddin Ahmad would have it, and yet it is possible that several amendments may be moved in this House. To those amendments, if and when moved, I shall certainly make a suitable reply, but just now I want to give the House some idea as to the changes made by the Select Committee.

#### Financial Adviser

The first important change that has been suggested by the Select Committee is one which deals with the provision which has now been made for a financial adviser for this Corporation. In the original Bill there was no such provision; it provided for a treasurer to be appointed by the Central Government. The members of the Select Committee thought that this was going to be a Corporation, the first of its kind in this country, and the enormous task this Corporation will be called upon to perform was such as to justify the assistance of a financial adviser. From the provisional estimate as to capital expenditure that will be required for this scheme it appears that nearly 55 crores would be required; it is possible that this figure may go up when the work actually starts. But this is enough to show that when the scheme is completed the annual budget of this Corporation may be round about 5 to 7 crores.

If that is the position it is only meet and prepare that this Corporation should have—so to speak—an expert in financial matters. It is not the idea of the framers of this Bill—certainly it was

not the idea of the members of the Select Committee—to create impediments or to give opportunities for red-tapism or create scope for delay in the normal and day-to-day work of this Corporation. It is only fair to the taxpayer of this country who will be in the first instance asked to supply this huge amount of Rs. 15 crores or thereabouts that he should at least have fair confidence that the finances of this Corporation are well looked after.

#### An Autonomous Body

The general principles on which this Corporation will have to work are that for all purposes it is going to be an autonomous body, that it will be free— within the framework as contemplated in the provisions of this Bill-to manage the affairs of the Corporation. There is only one limitation—and the House will agree that it is a very good limitation—that in matters of policy the Central Government will have the final voice. That provision was already in the Bill. Indeed the provision for the financial adviser is only carrying out what was implied in the said provision. I want to assure this House-because I find that two members of the Select Committee have shown their disagreement with respect to this particular provision-that there is not the slightest intention to create any difficulties in the smooth working of this Corporation. I therefore want to bring to the notice of this House that this provision is salutary; it is in the best interest of the Corporation, a sort of safeguard for the taxpayer and to give a sufficient faith for him that whatever he has contributed for the successful working out of this scheme will be well spent.

### Subject to Central Taxation

Then the second important change that has been introduced by the members of the Select Committee is about the Corporation being subject to central taxation. Originally there was no provision; in fact the provision was that this Corporation should be exempt from any central taxation. Now this was a matter of very high importance from several points of view. In fact while the Bill that has just now been passed was under discussion this very issue was discussed fairly sufficiently, and I do not want to take the time of the House by going over the same grounds which have been covered by my Honourable colleague the Minister for Finance. There are undoubtedly two views held with equal sincerity, and sometimes when two experts disagree it is very difficult for a layman like me and many others in the House to find what the better course is. In such circumstances I have always believed that the best guide is one's common sense. We have followed a policy in which wherever the State, whether in the Centre or in the Provinces, enters upon commercial undertakings, whether it should

should not contribute to the revenue is a question which must be decided not dogmatically but in the context of circumstances existing on the relevant occasion.

Today, the Central Government has the monopoly of railway transport; it has the monopoly of posts and telegraphs and telephones. It is possible that in future years to come the State activities will embrace more and more fields; and altogether we cannot immediately accept a position in which there will be no taxation whatsoever and services will be admissible to every citizen free, probably on the payment of cost. But until such a millenium comes it is only practical wisdom that we should move cautiously and not bring into trouble the financial system of the country. Therefore after giving a good deal of thought the members of the Select Committee—and on this point there was unanimity—came to the conclusion that the Corporation should be subject to Central taxation whatever be its nature.

#### Claims of Provinces

The opposite view was that if this is done the provinces are deprived of their legitimate share. So far as the activities of the Corporation are concerned, by broad categories they may be said to embrace irrigation and generation of power. So far as irrigation is concerned, it is a provincial subject and even electricity is a provincial subject. Irrigation dues are recovered by the provincial Governments and they will be recovered by the provincial Governments are they will be recovered by the provincial Governments and they will be recovered by the provincial Governments and they will be recovered by the provincial Governments and they will be recovered by the provincial Governments and they will be recovered by the provincial Governments and they will be recovered by the provincial Governments and they will be recovered by the sales tax is already there.

Quite a large proportion of the selling price of electricity is consumed by the same tax. Having given both the provinces their dues, it would be only fair if the Central Government claims just a little. After all, whatever the Central Government gets by way of income-tax, they have a partner in that business also. Under the provisions of the Government of India Act as it stands today, if the yield from the income-tax from all sources is about a certain figure, then it is shared by the Central Government along with the Provincial Government. So if this Corporation is made subject to income tax it is not going to work any hardship. But at the same time it will have a good feature about it, namely, that the affairs of the Corporation will be conducted on sounder and commercially acceptable principles. If we are to leave the Corporation with the autonomy which we have contemplated for it, then probably the budgetary position which may be made available may not be exactly in compliance with ordinary commercial standards. Therefore, taking every point of view into consideration, this important change has been suggested by the Select Com. mittee and I have no doubt that this House will accept it.

Then another important change that has been suggesged by the Select Committee is about the presentation of the annual budget and the annual report,

flot only to the Central Legislature but to the Legislatures of both the Provinces concerned. It is just possible, that the affairs of this Corporation may evoke certain criticism and if we did not make any provision by way of a forum where such criticism can be ventilated, that state of things would not be one which ought to exist in a democratic Government. The original provision was that the annual budget estimates and the annual report should be kept on the table of the Central Legislature, questions could be asked, information solicited and possibly even resolutions could be moved. Now it is possible, Sir, that the Members of the Central Government may not be so much interested in the affairs of this Corporation as may be the members of the Local Legislatures of Bihar or Bengal. Naturally they will be much nearer the activities of this Corporation and this point of view was appreciated by the members of the Select Committee and a provision has now been made under which copies of the annual budget and report will be laid not only on the table of the Central Legislature but as well as on the tables of the provincial Legis-

#### Removal of Members

Then another provision, somewhat important, has also been made. In the original Bill provision has been made for the removal of members under certain specified circumstances. We are moving on the assumption that these three persons—two Members and the Chairman who will constitute this Corporation-will act up to the high ideals which are absolutely necessary in order to work this scheme, a scheme which s going to bring prosperity to nearly 50 lakhs of people and to two provinces. But it is possible that either owing to political pressure or other influences, or circumstances which we may not be able to visualise now and here, they may not discharge the duties, they may not carry out the functions or the directions of the Central Government. What then? Therefore, a provision has been made. Although in the report itself, it is in somewhat wider terms described, still I am prepared to accept certain amendments. The provision will be that the two members and the Chairman should be removed in those circumstances and replaced by others. And, Mr. Chairman, you will agree that this is a salutary provision and a safeguard that is absolutely necessary in the circumstances which I have just detailed.

There are other minor suggestions of no great consequence, but which have been suggested in order to make the whole thing complete and cohesive.

I hope that this House will pass this Bill because already five years have been lost in thinking, in putting on paper, in revising, doing this, that and the other. Already in anticipation, some work has started. How urgent is the scheme has been described by me when I made a speech while referring

(Continued in next Column)

# CONSTRUCTION OF TOWNSHIPS FOR COALMINERS

STEPS are being taken to construct two townships for India's coalminers. They will consist of 9,000 houses in Mohuda and 2,500 houses in Bhuli (Bihar). Experimental houses have already been built in the latter place and the construction of the first 750 houses has been ordered. In Mohuda a detailed engineering survey is being arranged by the Central Waterways, Irrigation and Navigation Commission, whose report is expected shortly.

These facts were disclosed by Mr. Jagjivan Ram, the Labour Minister, during question hour on Feb. 11 in the Indian Parliament.

The Labour Minister also revealed that the scheme for the construction of 50,000 houses for coalminers was the main preoccupation of the Coalmines Labour Welfare Fund during 1947. Each house was estimated to cost Rs. 3,500. Owing to the difficulty in acquiring suitable plots of coal-free land for building townships, it was now proposed to construct about 21,000 houses on land owned by collieries on condition that the houses after construction were transferred to the Housing Board, which was being set up under the Welfare Fund Act. 5,300 of these houses would be on railway collieries.

In addition, 15 sites in the Raniganj coalfield, each to contain 500 miners' houses, had been selected and steps were being taken to acquire such of the sites as were suitable after examination by experts.

### (Continued from Column 1)

this to the Select Committee. I gave figures as to the additional acreage that will be brought under irrigation, as to the killowatts of power that will be generated, the fish culture and all other advantages. The sooner we pass this Bill, the better it will be an encouragement to those of us who are determined to see this through. In fact, I should think destiny is beckoning the members of Bihar and Bengal, and asking them to have the progress of this Bill made quicker.

As I find from the paper, the amendments are far more numerous than the tributaries of the Damodar itself. But in the case of the Damodar River tributaries, they contribute wealth and happiness. But I wish I could say that of all the 120 amendments that have been tabled, I have no desire to belittle the efforts and pains taken by those who have drafted these amendments. I have every respect for them but let not grammar dominate the sense and meaning of the sentences. I therefore appeal to every member of this House to cooperate with me by moving only those amendments which I am advised by those who are going to work this Corporation to accept.

The Labour Welfare Fund, added Mr. Jagjivan Ram, had assumed direct responsibility for the execution of the housing scheme. A Superintending Engineer with the necessary staff had been appointed for this purpose.

Mr. Jagjivan Ram also gave a brief account of the other activities relating to coalmines labour welfare.

14 demonstration centres for women's welfare have started functioning in the coal area. Visual and craft education is provided in these centres to women and children. They also run shops where consumer goods are made available to miners at less than market rates. The Women's Section also runs a mobile cinema for free shows to the miners. On an average twenty shows per month were put up.

### Medical Facilities

Regional hospitals and Maternity and Child Welfare Centres at Tisra, Katras, Chora and Searsole have been constructed and are being equipped. Some of the medical equipments are being obtained through the Directorate-General of Disposals. Selection of staff will be made shortly. Arrangements for water supply, electricity etc. are being made.

Anti-malaria operations are being continued as before and the incidence of malaria in the coalfields has been considerably reduced. On the preventive side, intensive larvicidal measures directed against aquatic stages of mosquitoes are reinforced by their spray-killing with D.D.T. The new anti-malaria drug Paludrine is used on the curative side. With effect from March 1, 1948, the Malaria Institute of India will take over the malaria control operation in the Korea coalfields also under their direct control.

With a view to tackle the problem of tuberculosis, it is proposed to construct during 1948-49 three static clinics at places to be selected by the Coal Mines Labour Welfare Fund Advisory Committee. The clinics are expected to cost about Rs. 6,00,000!- non-recurring and Rs. 1,29,000!- recurring. The possibility of reserving ten beds for T. B. patients in each of the two Central Hospitals under construction in the Jharia and Raniganj coalfields is also being considered.

A grant of Rs. 25,0001- has been made for the purchase, from the Coal Mines Labour Welfare Fund of an 'X' Ray Unit for the benefit of colliery workers in the Central Provinces coalfields.

Another grant of Rs. 14,000!- has been made to the Bengal Coalfields Sub-Committee of the Coal Mines Labour Welfare Fund Advisory Committee for organising and conducting a second retresher course of training for the medical officers in collectes.

# I. L. O. CONFERENCE AT SAN FRANCISCO

THE 31st Session of the International Labour Conference opening at San, Francisco (U.S.A.) on June 17, 1948 will consider the following subjects, says a Press Communique issued by the Ministry of Labour on Feb. 7.

- I. Director-General's Report.
- II. Financial and budgetary questions.
- III. Reports on the application of Conventions.
- IV. Employment Service Organisation (second discussion) and Revision of the Convention concerning feecharging employment agencies, 1933 (No. 34).
- V. Vocational Guidance (first discussion).
  - VI. Wages:
- (a) General Report (preliminary discussion);
- (b) Fair Wages Clause in public contracts (first discussion);
- (c) Protection of wages (first discussion).
- VII. Freedom of Association and Protection of the Right to organise (single discussion).
- VIII. Application of the principles of the right to organise and to bargain collectively, collective agreements, conciliation and arbitration, and cooperation between public authorities and employers' and workers' organisations (first discussion).
- IX. Revision of the Conventions concerning the night work of women and young persons.

In addition to the above, the Conference will be called upon to elect eight representatives each of workers, employers and Member States (other than those which hold a non-elective seat as one of the eight Member States of chief industrial importance) for the new Governing Body for the next three years.

### Selection of Delegation

The delegation from each Member State will consist of two Government Delegates and one Delogate each of Employers and Workers who will be assisted by advisers. The responsibility for nominating the personnel of the entire Indian Delegation rests with the Government of India. In accordance with the terms of the Constitution of the International Labour Organisation, the Employers' and Workers' Delegates will be nominated in agreement with the Industrial organisations which are most representative of employers or workpeople as the case may be.

Industrial Organisations desirous of submitting recommendations in regard to the selection of Employers' and Workers' delegates and advisers are requested to submit these after obtaining the consent of the persons concerned to the Secretary to the Government of India, Ministry of Labour, as early as possible and, in no case later than March 15, 1948. The Organisations concerned may recommend panels of names for selection as delegates and advisers. In submitting their recommendations or drawing up a panel, industrial organisations are advised to take into account considerations relating to proper regional distribution.

Travelling expenses and subsistence allowance etc. will be paid by Government to the selected Delegates and advisors.

## ADVISORY COMMITTEE FOR MICA MINERS' WELFARE

A Mica Miners' Labour Welfare Advisory Committee for Madras has been constituted with the Collector of Nellore (Chairman), Shri B. Venkata Narayana Reddi, M. L. A. (Vice Chairman), Shri T. Rama Reddi, two representatives each of mica mine owners and workers and Miss M. L. Mary Gnaniah Naidu to represent women workers, says a Press Note issued by the Ministry of Labour on Feb. 13.

A notification to this effect is published in the Gazette of India dated February 14, 1948.

## RESERVED RAILWAY VACANCIES

In connection with the filling of vacancies in non-gazetted Railway Service reserved for candidates with "war service", it has been found that the response from qualified and suitable "war service" candidates has, in general been slow, says a Press Note issued by the Directorate General of Resettlement and Employment on Feb. 10.

As these vacancies cannot be left open indefinitely, the Ministry of Railways (Railway Board) have decided that March 31, 1948 shall be the final date for receipt by Employment Exchanges or District Employment Offices of applications for these vacancies. "War Service" candidates interested in reserved Railway vacancies should accordingly apply in person or in writing to the Employment Exchange or District Employment Office nearest their place of residence not later than March 31, 1948. Applications for consideration for appointment to reserved Railway vacancies received after that date will not be considered.

### COAL MINES HOUSING BOARD

A Coal Mines Housing Board has been constituted by the Central Government under the Coal Mines Welfare Fund Act, says a Press Note issued by the Ministry of Labour on Feb. 13. It will consist of the Coal Mines Welfare Commissioner, Dhanbad (Chairman), the Chief Inspector of Mines and three representatives of each of colliery owners and workers.

A notification to this effect is published in the Gazette of India dated February 14, 1948.

### Anti-Corruption Drive On Railways

Three more persons have been convicted as a result of investigations by the Delhi Special Police Establishment in connection with anti-corruption drive on Railways, says a Press Note issued by the Minister of Railways on Feb. 5.

On the E. I. Railway, Sheo Bhagwan (Proprietor of Pirpainti Oil, Mills, Pirpainti, Bhagalpur), and J. P. Srivastava (Market Supervisor, E. I. Railway) conspired to cheat the Railway of Rs. 13,000/- by supplying oil below specification and in lesser quantity. The First Class Magistrate of Bhagalpur convicted Sheo Bhagwan under Section 420 and 511 I. P. C. and sentenced him to rigorous imprisonment for one year and to pay a fine of Rs. 1,000/-, in default, to undergo further rigorous imprisonment for three months. Sheo Bhagwan and J. P. Srivastava were both convicted under Sections 120 B and 420 I. P. C. and sentenced to rigorous imprisonment for one year and to pay a fine of Rs. 1,000/- each, in default, to undergo further rigorous imprisonment for three months each. The sentences

of imprisonment in the case of Sheo Bhagwan will run concurrently and the centences of rigorous imprisonment in default of fine will also run concurrently.

On the O. T. Railway, Ruder Pershad, Station Master of Risia, was convicted and sentenced to six months' rigorous imprisonment and a fine of Rs. 500 for accepting bribes in connection with the booking of goods and allotment of wagons.

Owing to a temporary shortage in supplies of paper for printing match banderols, Government have authorised the issue of matches by certain large factories on payment of excise duty but without banderolling, says a Press Communique issued by the Ministry of Finance (Revenue Division) on Feb. 16. This will be resumed as soon as stocks of banderols are adequate.

## **COALFIELDS**

A Standing Industrinal Tribunal for the coal area has been constituted by the Government of India. It will consist of a single member Mr. F. Jeejeebhoy, who was formerly the Chief Judge of the City Civil Court, Rangoon and lately Legal Adviser to the Government of Burma. The headquarters of the Tri-bunal will be at Dhanbad.

A notification to this effect was published in the Gazette of India dated February 7, 1948.

Although the Tribunal is intended primarily for resolving disputes in the coalfields, it is understood that other disputes may also be referred to it at the discretion of the Central Government.

#### DISPUTE COAL. FOR **ADJUDICATION**

The dispute between Sir Lindsay Parkinson (India) Ltd., and their workmen employed in the State Railway Collieries, Bokaro has been referred to the Industrial Tribual at Dhanbad for adjudication, says a Press Note issued by the Ministry of Labour on Feb. 13.

A notification to this effect published in the Gazette of India dated February 14, 1948 says that the dispute is as to what portion of the total cash wages paid in October 1947 should be regarded as constituting basic wages for the purpose of fixation of dearness allowance in accordance with the Central Government's decision on the report of the Board of Conciliation (Colliery Disputes).

#### DEVELOPMENT OF DEEP-SEA **PORT**

An announcement on the development of a deep-sea port between Mormugao and Cochin on the West Coast of India is expected to be made shortly by the Government of India, said the Hon'ble Dr. John Matthai, Minister for Transport answering a question put by Mr. S.V. Krishnamurti Rao, in the Dominion Parliament on Feb. 13.

The Hon'ble Minister added that the subject had recently been reviewed by the Central Board of Transport. The tripartite conference between the Governments of Bombay, Madras and Mysore held in June, 1947, could not reach final conclusions on the questions in view of the constitutional changes then impending. The sense of the Conference. however, was that it was desirable to appoint a technical committee with comprehensive terms of reference to undertake a traffic and engineering survey to determine whether there was need for a deep-sea port between Mormugao and Cochin; if so, where the port should be sited and what improvements were necessary in communications to the existing ports.

The whole question, he concluded, was recently reviewed by the Central Board of Transport and an announcement was expected to be made shortly.

### INDUSTRIAL TRIBUNAL FOR FIXING OF MINIMUM WAGES WILL **INCREASE PRODUCTION**

### **Labour Minister's Speech**

REPLYING to the debate in the Indian Parliament on Feb. 6 on the motion to consider the consider the the motion to Minimum Wages Bill as reported by the Select Committee, the Hon'ble Mr. Select Committee, the Hon'ble Mr. Jagjivan Ram, Labour Minister, claimed that the measure was not merely in the interest of agricultural labour but also of the entire nation.

While other speakers had characterised the Bill as revolutionary because it contained something concrete for the welfare of agricultural labour, he would call it so because it conceived of a situation in which India might be made selfsufficient in the matter of foodgrains.

The Labour Minister stressed that India could not depend for all times on imported food grains and that agricultural production must increase if the country should survive. He pointed out that the yield from a plot cultivated by the labour of its owner was usually larger than that obtained from a plot cultivated by hired labour. This was so, he said, because the wages paid to agricultural workers were inconceivably low and the labour was not interested in production. This, he stated, led to a great loss in food production.

Mr. Jagjivan Ram emphasised that the human factor should not be neglected when there was a cry for more production. Efficient machinery, implements and capital were, no doubt, necessary for increased production. But all such facilities, he said, would not go to increase production if the human factor were to be ignored.

The Labour Minister assured that with the other Ministers in the Government of India, it was equally his responsibility to see that the wealth of this country increased. Whatever might be his concern and anxiety to improve the lot of the working class, he recognised that it would not be possible unless the wealth of the country increased. He stated that he was convinced that this measure was bound to help in the industrial expansion and in the increase of agricultural products. He would not bring forward any measure which was likely, even in the smallest degree, to affect either industry or agriculture adversely.

#### Capacity to Pay

Dealing with the argument that the minimum wage for a labourer should depend upon the capacity of an employer to pay, Mr. Jagjivan Ram emphasised that if that principle were accepted it would be putting a premium on the exploitation of helpless men by resourceful and more influential persons. If an industry or agriculture was not in a position to bear the cost, he would rather let it close down. If it was found, he added, that such industries were necessary in the interest of the State and the country, it was open to the State and the country to subsidise them. He maintained that in no case should any industry or agriculture be allowed to exist and subsist on the exploitation of the workers.

The House adopted the motion after the Labour Minister's reply.

### Modifications In Provisional Constitution Of India

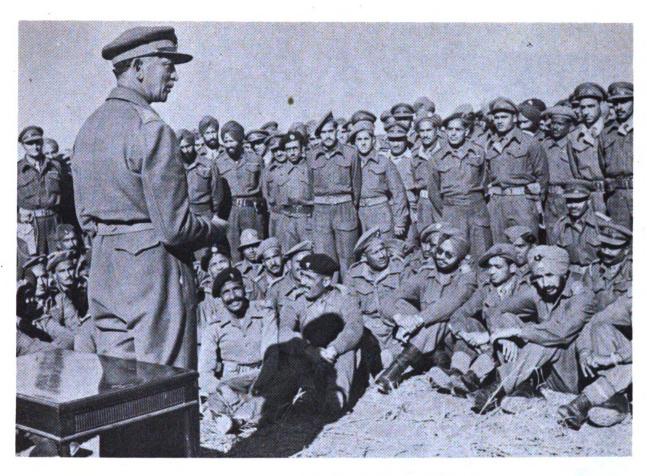

Two important modifications have been made in the provisional Constitution of India by an Order of the Governor-General under the Indian Independence Act published today, says a Press Note issued by the Ministry of Law on Feb. 5. They further emphasise the independent status of India even under the present Constitution. The power to constitute, reconstitute or amalgamate High Courts, which until now was vested in the King under section 229 of the Government of India Act, 1935, has been Government of India Act, 1935, has been made exerciseable by the Governor-General. Then, under section 220 of the same Act as originally adapted the removal of any High Court Judge on the ground of misbehaviour or infirmity required a reference to the Judicial Committee of the Privy Council. This section has been further adapted substituting the Federal Court for the Judicial Committee as the authority to which such references should be made.

Provisional Consti-The Indian tution Amendment Order also makes one

or two minor changes in the provisions of the Government of India Act relating to the former Secretary of States services.

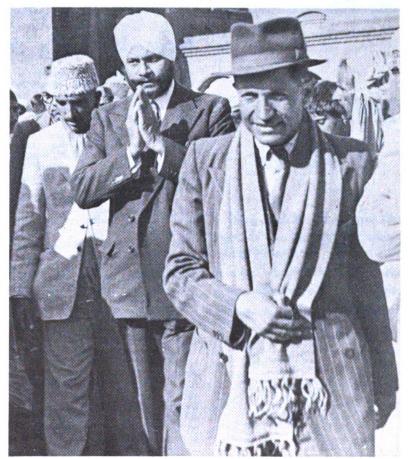

By an Order under the Indian Independence Act, the Indian Provisional Constitution has been further amended so as to provide that the quorum for the meetings of the Constituent Assembly of India (Legislative) shall be one-tenth of the total number of members of the Legislature instead of the present one-sixth, says a Press Note issued by the Ministry of Law on Feb. 10.

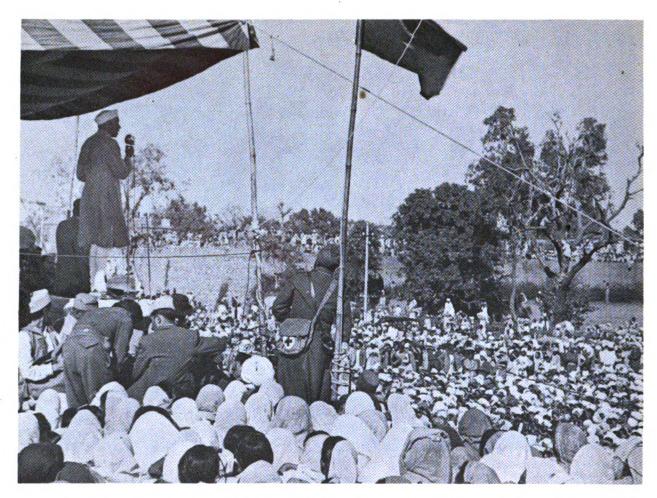

This change has been necessitated since there are several members who being also members of the Provincial Legislature are often unable to attend. In the British House of Commons consisting of more than 600 members, the prescribed quorum is only 40 which is less than one-fifteenth of the total strength of that House.

### DEFENCE MINISTER AND LT. GEN. CARIAPPA VISIT JAMMU

Picture above shows Lt. Gen. Cariappa G. O. C.-in-C., Delhi East Punjab Command, addressing officers and men at a forward area during his recent visit to Jammu. (Right) Sardar Baldev Singh, Defence Minister, accompanied by Bakshi Ghulam Mohd, Acting Head of the Emergency Administration of Jammu and Kashmir State, is seen greeting the refugees in one of the camps in Jammu city.

## PRIME MINISTER IN JAMMU

Pandit Jawaharlal Nehru paid a flying visit to Jammu on February 15, when he inspected Indian troops and addressed several meetings. In the picture above he is seen addressing a public meeting.

### Brig. Usman's Activities in Naushehra

"He never sleeps and no sooner there is any sign of trouble anywhere than you will find him on the spot with his men", said one of the sepoys in Brigadier Usman's headquarters.

Brig. M. Usman, who commands Indian troops in Naushehra, works ceaselessly, he seems to have an untiring energy. A long flag post in his hand one finds him rushing from one post to another personally supervising, leading and looking after his troops. He rarely sits down even in his spare time.

He has organised a Balak Sena with 100 refugee children. A teacher has been appointed to look after them. When he has an opportunity Brig. Usman rushes to the school to meet his boys and find out how they are getting on and to play a game or the two with them. Then off he rushes to his own troops. The children flock round him and refuse to let him go. He has also organised an orphanage where children are properly looked after: The other day an Indian Army patrol brought back a child who had been lying beside his dead mother for two days. That child is now in good hands in the orphanage. There are ever 1,500 refugees in Naushehra who refusing to leave say, "So long as Brig. Usman is there, we are safe".

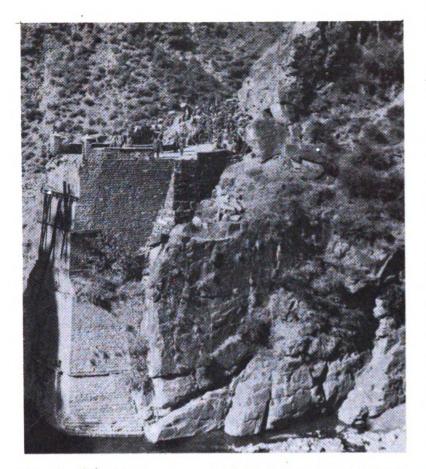

Under Brig. Usman there are troops from all the communities-Jats, Mahrattas, Madrassis, Sikhs, Christians and Muslims. When Brig. Usman first took over command two months ago he made it a point to meet every soldier under him. He went from unit to unit, speaking to his men and it did not take him long to take them all into complete confidence. He told his men why they were there and what the country expected of them. Brig. Usman felt that more could be done for the welfare of his men, so he started his own wireless radio system by which he speaks to all his Jawans in every unit wherever they are on duty. Off duty Brig. Usman is the most likeable personality on this front. He talks freely to you and inspires one with confidence.

### RIAF EXTENDED SERVICE COMMISSIONS

Extended Service Commissions in the General Duties (Flying) and Technical branches of the R. I. A. F. have been granted to 178 officers now holding Emergency Commissions.

The Selection Board at Air Heade quarters, India will shortly announcthe names of officers of the Administrative and other branches, who have been selected for the grant of Extended Service Commissions.

#### MAJ-GEN. THORAT APPOINTED G. O. C. DEI HI AREA

Maj. Gen. Shankar Pandurang Patil Thorat, D. S. O., has been appointed General Officer Commanding. Delhi area, in place of Maj. Gen. Rejendrasinghji, D. S. O., who recently became G. O. C.-in-C., Eastern Command with the rank of Lieutenant-General.

Born in 1906, Maj. Gen. Therat was commissioned in 1926 from Sandhurst and joined 1-14th Punjab Regiment after a period of attachment to the 2nd Middlesex Regiment. He saw his first spell of active service in the Molmand operations of 1935. Two years later he took part in the Waziristan operations 1937-1938 and later in the Ahmedzai Salient operations.

After serving on the staff at General Headquarters he was promoted second in Command of the 9-14 Punjab Regiment in 1944. The following year he took command of the 2-2 Punjab Regiment then fighting in the Arakan, where he won his D. S. O.

In 1946 Gen. Thorat was a Deputy Director in the Adjutant General's Branch at GHQ and later he become the Secretary of the National War Acedomy.

Until recently Gen. Thorat was Director of Staff Duties at Army Head-quarters, India.

#### INDIAN MILITARY MISSION

An officer of the Indian Civil Service, Mr. Khub Chand, will head the Indian Military Mission in Germany and left for Berlin by air from Bombay on Feb. 13. He will have the rank of Brigadier in the Indian Army. He succeeds Col. Wadalia who has become Brigadier General Staff, Delhi-East Punjab Command.

Brig. Khub Chand crowned his academic career by heading the list of those who passed the I. C. S. entrance examination. He entered the I. C. S. in 1935. After serving in the United Provinces he was posted to the Defence Department during World War II. Later he returned to the United Provinces as Regional Food Controller but subsequently rejoined the Ministry of Defence as Deputy Secretary.

It will be recalled that the Indian Military Mission in Berlin was set up in January, 1946, to safeguard the position of Indian Nationals in Germany and represent the Armed Forces of India as a victor nation.

### Facilities For Military Pensioners

A Press Note issued by the Ministry of Defence on Feb. 7 says:—VCOs, IORs and enrolled non-combatant Military Pensioners and their families who have recently migrated from the Jammu and Kashmir State to any other part of the Indian Dominion should take the following action to facilitate payment of pensions:—

They should apply in writing by registered post giving their regimental number, rank, name, unit, (in the case of family pension, number, rank and name of the unit of the deceased), name of Treasury or Post Office from which they last drew their pension and from where they now desire to draw it, the date up to and for which the pension date up to and for which the pension was last drawn, Treasury or Post Office serial number, if known, the rate of their present address. The pension and their present address. The applications should be supported by a Certificate of Identification, in duplicate, signed by a Magistrate or a Civilian Gazetted Officer, or a King's Commis-sioned Officer or a King's Commissioned Indian Officer or an Indian Commissioned Officer of the Indian Army or a serving Viceroy's Commissioned Officer of the Indian Army. The Certificate of Identification will contain the Identification marks of the pensioner, and an undertaking from him to repay any provisional payment to which he is not entitled.

Those pensioners who have their Pension Certificates with them will address their applications to the Controller Military Accounts (Pensions), Old Indian Military Hospital Lines, Allahabad, supported by the Pension Certificate or a true copy thereof certified by a King's Commissioned officer or a King's Commissioned Indian Officer or a Magistrate, or a Civilian Gazetted Officer or the Secretary, District Sailors', Soldiers' and Airmen's Board.

Those who have lost their Pension Certificates will send their applications containing the above particulars to the Regimental Centre or Record Office concerned. Such of those pensioners whose Regimental Centres or Record Offices are in Pakistan will apply direct to the Controller of Military Accounts (Pensious), Old Indian Military Hospital Lines, Allahabad.

#### R. I. A. F. RECONNAISSANCE FLIGHT FORMED

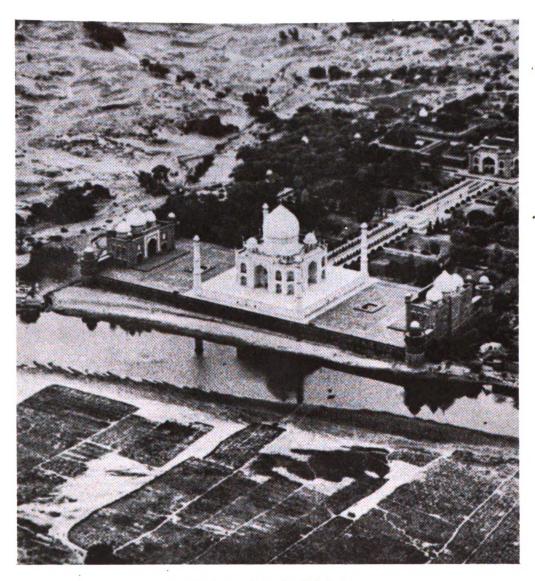

The formation of a Reconnaissance Flight of the Royal Indian Air Force, announced recently, is composed of specially equipped R. I. A. F. aircreft and will carry out both tactical and photographic reconnaissance. It will be under the control of No. 1. R. I. A. F. Operational Group.

The formation of the Reconnaissance Flight fulfils a long felt need and is part of the programme for the development and expansion of the Royal Indian Air Force.

#### **WEIGHTS AND MEASURES**

Weights and measures in India vary not only from district to district but also for different commodities.

The principal units in all the scales of weights are the maund, seer and tola, and the standard weights for each of these are 82.28 lbs., 2.057 lbs. and 180 grains troy respectively.

The Indian tola is the same weight as the rupee, viz., 180 grains troy; the standard or railway seer is equal to 2.057 lbs. while the standard or railway maund of 40 seers is equivalent to 82 lbs. 4 oz. 9 drams. There are numerous local variations.

#### COINAGE—RUPEE IN DOLLARS AND POUNDS

Re. 1 is approximately 1sh. 6d. or 30.05 cents.
Rs. 100 are approximately £779/6 or \$30.05.
Rs. 1,000 are approximately £74/14/10 or \$300.53.
Rs. 1,000.000 (a lakb) are approximately £74/3/19/2 or \$30,053.
Rs. 1,00,00,000 (a crore) are approximately £747,396/16/8 or \$3,005,259.
10,000,000 is one lakb (1,00,000)
10,000,000 is one crore (1,00,00,000)

## DOMINION'S FIRST ANNUAL BUDGET

## Record Provision For Development And Capital Expenditure

THE Hon'ble Mr. R. K. Shan-mukham Chetty presented the first annual Budget of the Dominion of India to the Constituent Assembly (Legislative) on February 28, 1948, three months after his interim stocktaking of the country's financial and economic position.

After paying a moving tribute to the memory of the Father of the Nation, Mahatma Gandhi, "to whom many ran in times of stress, national or personal, and came back with renewed confidence", he expressed the conviction that the country would nevertheless be able to meet "the great challenge of the situation".

In a world "still in the meshes of those economic maladjustments which are the inevitable aftermath of total war." he said, India was to-day called upon, in addition, to deal with her special problems—Rehabilitation of Refugees, Food shortage, rising price spirals, the Kashmir operations etc.

In such an economic setting the new financial year 1948-49 is opening. The budget estimates for the year, at the existing level of taxation, are Revenue Rs. 230-52 orores; Expenditure charged to revenue Rs. 257-37 crores; Deficit Rs. 26-85 crores. The current year's deficit will be Rs. 6-52 crores against Rs. 24-59 crores in the interim Budget. Defence Services are expected to cost Rs. 121-08 crores, next year with additional expenditure of a capital nature amounting to Rs. 14-99 crores.

#### **Provision for Refugees**

For refugees' relief and rehabilitation, there is a provision of Rs. 10.04 crores. Besides, the Government will advance Rs. 10 crores for the setting up of the Rehabilitation Finance Administration. Expenditure on relief and rehabilitation in the current financial year will amount to Rs. 14.89 crores against Rs. 22 crores included in the interim Budget. Expenditure on food subsidies in 1948-49 is estimated at Rs. 19.91 crores. In this connection the budget stresses India's need to increase her internal production of food. In anticipation of the Economy Committee's report a cut of Rs. 2½ crores has been made in the civil estimates.

The Governments of India and the United Kingdom have agreed that the interim agreement on sterling balances signed in August 1947 should be extended to June 1948 with some modifications. The United Kingdom will transfer to India's No. 1 account a further £18 million, of which however only £10 million will be available for multilateral convertibility.

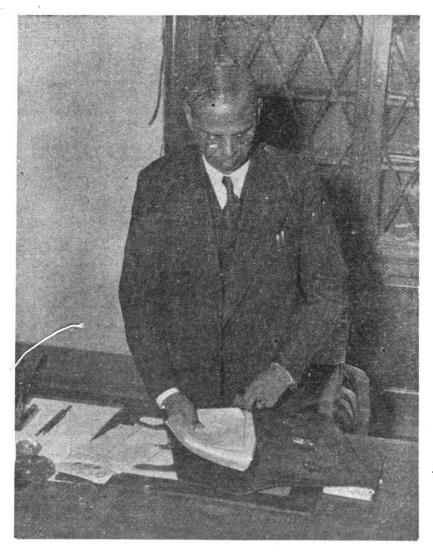

Import of foodgrains is still a heavy drain on the country's foreign exchange and the Finance Minister stressed the need for increased internal production of food.

There will be no reduction in the extent of the Centre's assistance to the provinces in the matter of development schemes. Provision in the Capital Budget for normal requirements and for the financing of the Central and Provincial schemes will be of the order of Rs. 165½ crores in the coming financial year.

Borrowings from the market are

expected to amount to Rs. 150 crores. This will be stepped up if circumstances are propitious.

The Finance Minister concluded his speech on a note of optimism. He hoped that the picture of the financial position which he had unfolded would have a reassuring effect on the public and instil a spirit of confidence all round. From August 15th, 1947, the chains of our bondage had been broken and we were free to translate our dreams into reality but our freedom had been born in an era so fluid and fast changing that any pre-determined step other than the next became obsolete before it could be taken and like the pilgrim at the end of a day's journey finding his destination still afar we were inspired to pray in the spirit of Gandhiji's favourite hymn "Lead, Kindly Light". "The next step is enough for us if it is illuminated by

Mr. R. K. Shammukham Chetty, packing the first annual budget of Independent India into the case before leaving his residence for Parliament

the star of our ambition and fortified by the faith in our destiny".

Here is the text of the Finance Minister's Speech:

When I presented my Interim Budget to Free India's first Parliament a few months back, our nation had been shaken to its very foundations by the great Punjab tragedy. Thousands of our people had been brutally butchered, and millions of innocent men, women and children driven out of their tral homes and forced to make a dusty. deadly trek in search of a new home. Our crying concern then was to dress the wounds of uprooted humanity, and to mobilise all our financial resources to set aright an unhinged economy. new found freedom, however, weathered the storm, and as the eve of my first annual Budget approached, I could see a silver lining around the cloud. Then, suddenly, like a thunderbolt that rends the sky and spins the globe, calamity struck us once more and orphaned our infant State and enveloped the country with a darkness even more complete. The hand that nailed Jesus to the Cross reached out of the evil recesses of history once again and slew the latest in the line of Prophets. Along with Bernard Shaw one wonders: "Must then a Christ perish in torment in every age to save those that have no imagination? In Mahatma Gandhi the world has lost an uplifting standard, our nation its Founding Father, and each one of us his friend, philosopher and guide. Many ran up to him in times of stress, national or personal, and came back with renewed confidence. Our fledgling freedom felt warm and secure under the protective wing of Gandhiji. The way ill fortune has dogged our heels makes one doubt whether our people had made a tryst with disaster rather than with destiny. But that is a most un-Gandhian mood; for he remained cheerful and buoyant and hopeful even in the darkest hour. Indeed I rise to-day under a shadow, but I know it is the shadow of his Cross, and so I feel confident that our nation will be prepared to meet the great challenge of the situation. In the faith that looks through death we shall shape the destiny of our nation on the pattern which he cherished and lead it from the dark abyss of hatred and despair to the sunlit pastures of eternal

#### Economic Conditions .

The third year after war finds the world still in the meshes of those economic maladjustments which are the inevitable aftermath of total war-the nemesis that inexorably pursues the victor and the vanquished alike. Western Europe is still in a sad plight and intolerable economic conditions prevail in many of the devastated areas. The efforts at rehabilitation by the United Nations Organisation and the United States Government have so far borne little fruit. All hope is now centred round the Marshall Plan. But its gestation is unduly delayed, and it has worsened the already strained relations between the Big Three. The United Kingdom is making a heroic effort to rehabilitate her wartorn economy and shattered trade. There has been serious economic dislocation in many Asian countries owing to violent internal

struggles or fight for freedom from foreign domination. Thus, over a large part of the world economic conditions are still worse than in war time; production has fallen, even below pre-war levels in some cases, and prices have been soaring to new heights. The world food situtaion is still a cause for serious anxiety; while the world's population has increased by about 200 millions since 1939, the total food production has fallen by 7 per cent. At the same time, there has been a tremendous increase in the money in circulation. The many high-powered international bodies lately set up for rectifying the world's currency and food troubles have so far made little headway. In the result, inflation is still holding the world in its firm grip and the standards of living of the great majority of the world's population remain at depressingly low levels. Especially in Asian countries, the economic situation has greatly deteriorated owing to violent internal struggles and the consequent dislocation of normal economic activity.

#### Food Position

There has been no material change in the general economic conditions in our own country since I reviewed them last when presenting the budget for the current year last November. The dislocation caused by the mass migration of people between Western Pakistan and India still remains to be surmounted and only the fringe of the problem of rehabilitating the millions of people who have crossed over to India has so far been touched. While active steps are being taken to provide the necessary financial assistance to the refugees to enable them to start on useful careers in their new surroundings, the process of rehabilitation is necessarily bound to take some time. The budget for next year provides a substantial amount for relief and rehabilitation and the House may rest assured that everything possible will be done to place these refugees in useful occupations as early as possible. It is not merely a matter of humanitarian relief but one of economic investment, for the sooner these people, many of whom are skilled workers and agriculturists with experience, are placed in occupations in which their productive capacity would add to the wealth of the community the better for the country. In this task of rehabilitation the Government of India are working in close cooperation with the neighbouring States and Provinces and the plans for their relicf and rehabilitation are being drawn up in co-ordination with them.

The food position still continues to cause anxiety and conditions have definitely become worse in large parts of the Madras Presidency following the failure of the monsoon. Steps are being taken to make additional supplies available but the position is bound to be difficult until the new harvest comes on the market. It is not necessary for me to explain in detail the reasons which led to the policy of gradual decontrol of food which was approved by this House. The effects of this policy on the internal sources of supply still remain to be seen but if the expectation behind this policy that it would bring more supplies to the market and, to that extent, reduce our dependence on foreign

imports is realised, it would be completely justified.

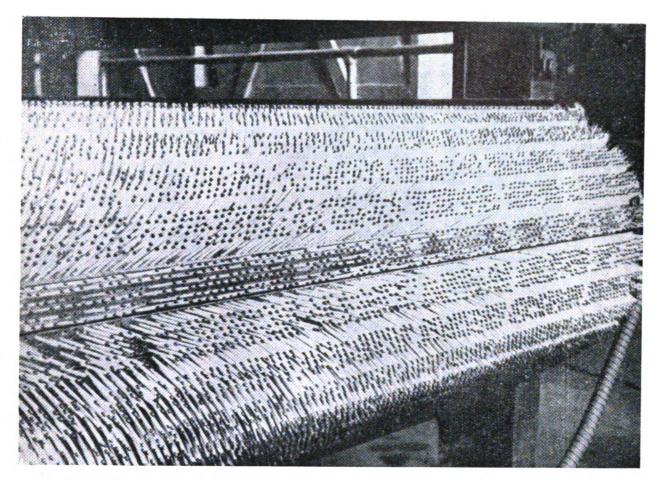

In my speech last November I mentioned the rising trend of prices as the most unwholesome feature in our economic situation. This, as I explained then, was the result of a number of factors some of which, like the accumulation of surplus purchasing power in the hands of the community, have been in operation for some time while the all round fall in production, both industrial and agricultural, was of more recent origin. I stressed then the, need for increasing production in every possible way and I gave details of the steps taken to promote the increase of textile production as an example of what the Government are striving to do. But the House must realise that any substantial increase in production is impossible until the shortage of materials, the bottleneck in transport and other impediments are removed. If the increase in production requires the import of equipment from overseas, this again takes time to obtain and is also limited by considerations of foreign exchange on which the more urgent requirements of food have necessarily the first claim. These difficulties are inherent in the situation but it does not necessarily follow that Government are doing nothing in the matter. One serious hindrance in the way of production, even with the available resources, has been the frequent disputes between capital and labour, resulting in strikes and other interruptions of work. If the recent truce agreed upon between capital and labour for a period of three years in the recent Industries Conference can be implemented in letter and spirit, the way would be clear for a considerable increase in production.

#### Inflationary Pressure

A view that has in recent years almost unanimous hecome economists and financiers is that each economists and manciers is that each year a Government's financial policy should be so planned as to rectify the economic maladjustments of the time, and to serve as a compensatory device to offset fluctuations in the private sector of economy. In a time of inflation, budgets should not only be balanced but there should be a comfortable surplus for mopping up the excess purchasing power and to encourage economy in private spending. On the other hand, when a depression is on, Government should launch bold schemes of public expenditure and should boldly budget for a deficit if necessarv.

An inflationary pressure resulting from too much money chasing too few goods has been the key-note of our present economy, and there is no indication that a reversal of this trend is in sight. At such a juncture, we should exert every nerve to budget for a surplus, if possible, by increasing revenue and curtailing expenditure. The methods by which these aims are achieved are important, because as the present phase of inflation is due to an abundance of spending power without the goods to spend on, we must see that. a surplus is achieved in such a way as to curtail spending and create suitable incentives for increasing production. In other words, the tax-burdens laid must be met by cutting down expenditure on consumption and not by saving less.

Digitized by Google

Manufacture of Matches: Matches as they appear when they go around in their steel-belt in the continuous machine

Similarly, the borrowing made must be from genuine savings and not from inflated bank credit. The practial application of principles is indeed difficult, but we must bear them in mind in shaping our financial policy.

I should like to draw the attention of the House to a matter which has been causing some concern to Government, namely, the emergence, in recent times, of a substantial adverse balance in India's external payments. India's balance of trade has in the past always been substantially in her favour, the surplus of exports over imports being used by her to meet the interest and amortisation charges on her sterling debt, to pay the pensions and leave salaries of British Officers and to make other invisible apayments such as the remittance of the profits of foreign investments in India and banking, insurance and shipping charges. During the war years India's balance of trade became even more favourable than before, due not only to restrictions on her imports on account of war time conditions but to the large payments which accrued to her on account of supplies and services to the allied nations and the Defence Expenditure Plan. The result of India's earnings, both visible and invisible, being vastly in excess of her expenditure, was the rapid accumulation of our sterling balances. Part of these balances was used to purchase the Indian railways and to repatriate compulsorily almost the whole of the Indian sterling debt; part was

used through Indian nationals acquiring British investments in India. All these measures served greatly to lessen the annual drain on India while the interest earned on the sterling balances added in some measure to our income. If therefore, all the other factors in the situation had remained the same, India should have had now a substantially more favourable balance of payments than she had before the war.

Far from having a favourable balance, however, India had in the first post-war year, 1946-47, a substantial deficit in her balance of payments on current account. The tendency which then manifested itself for the first time still continues and had it not been for the restrictive import policy which was inrtroduced in June 947 the deficits we have had would have been substantially greater. The reasons for this are two-fold. Firstly, it is the inevitable result of the absence of imports during the many years of war that the long pent up demand should seek to satisfy itself as soon as goods become available. This is true not only of consumer goods but also of producer goods and plant and equipment, the arrears of maintenance of which have to be made good as soon as possible if production is not to be interfered with. The second, and by far the more important reason for this deficit is, as is well known, our imports of foodgrains. India has of course been a regular importer of food for many years but quantities and prices have both been recently going up. In 1944-45 and 1945-46 the value of foodgrains imported into India was Rs. 14 crores and Rs. 24 crores respectively. In 1946-47 the figure was Rs. 89 crores. These figures are in addition to the import of supplementary food articles which cost a further Rs. 15 crores in 1946-47. In 1947-48 the amount expected to be spent on the import of food-grains is Rs. 110 crores.

The money required for the purchase of food is of course a first charge on our available foreign exchange resources. These consist of our export earnings and of our sterling balances but on the latter we have necessarily to draw in moderation. These resources are not sufficient to finance both the heavy drain caused by food imports as well as to pay for all the other imports we should like to purchase. As food must have the highest priority, we have necessarily to restrict the import of other commodities. It is undesirable that this should be so, particularly at a time when inflationary tendencies persist in the country. It is therefore imperative for us to take all the steps in our power, not only to increase the production of food in this country so as to reduce imports, but to increase production in every other field of economic activity so that it may be possible to increase our export income without reducing home consumption. I fear, however, that in spite of all the action that may be taken in this direction

it will take a few years before it will be possible for India to bring her foreign paymonts into equilibrium and that, therefore, it will be necessary to continue with our present restrictions on imports.

#### Hard Currencies

It will be appreciated that with India's limited resources currencies, it would have been impossible to continue the policy of non-discrimination regarding the source from which Indian imports came, which was a feature of Indian import policy during the last half year. Hon'ble Members will remember that I indicated to them in my last Budget speech that the dollar shortage whould cause us to reimpose discrimination and I fear that we have had, in framing the import policy for the present half year, to make the most drastic cuts in imports from the hard currency areas. It is unfortunate that this has to be so, for we are being compelled either to do without a large number of useful articles which are obtainable only in the hard currency area or to pay for them a higher price in the soft currencies. As long however, as the world dollar shortage caused by the disequilibrium in world trade continues, I fear we have no alternative but to proceed on the basis which has been in force ever since the war broke out and to which we have now had to revert. I am, however, glad to be able to report to the House that we have been able slightly to decrease the rigour of the import control from the sterling and other soft currency areas which we had imposed during the last half year. It was neither desirable nor indeed possible to continue import control from all over the world with that degree of restriction which we had introduced, for not only would it have led, if continued for any length of time, to an increase in the inflationary potential but would also have interfered with production.

One other recent trend in our external financial position is deserving of special Till 1945-46 not only did we mention. have an overall favourable balance of payments but we were in substantial surplus with U.S. A. Since 1946-47 that situation has also changed, both because goods have become much more freely available in that country and because we have to purchase there a substantial portion of our food requirements. In 1946-47 our deficit with the U.S. A. was Rs. 15 crores. In the subsequent months it increased substantially, being Rs. 131 crores and Rs. 22 crores respectively for the second and third quarters of 1947, Preliminary figures for the two months October and November disclose a deficit of Rs. 14 crores. With the other hard currency countries the position is no better and during the period April to November 1947 our deficit with them has been Rs. 51 crores. Our total net earnings of hard currencies durning the period September 1939 to November 1947 were about Rs. 37 crores.

The most important lesson to be drawn from a study of our external financial position is that so long as food imports continue on the present scale, we would be confronted with the problem of an adverse balance of pay-

ments and the disequilibrium in our economy will persist. Such a state of affairs will be a source of anxiety and even danger. The only way to redress the balance is to increase the internal production of food. While an expansion of our export trade will go a long way to mitigate the seriousness of the problem, it will be impossible to bridge the gap by exports alone. It will be observed that, though I have indicated the trends in our external financial position, I have not given any figures for our overall deficits in the balance of payments This is for the simple reason that such figures have so far not existed, though steps have now been taken to see that they are collected in future. I would, nevertheless, like to give the House some idea of our position as it is likely to be during the first half of 1948 and propose to mention certain figures on the clear understanding that these arc to be taken more as an indication of the magnitude of the figures involved than of the actual figures as they are likely to be. Forecasts of balance of payments are notoriously liable to be inaccurate because of the uncertainties of the factors involved; but in preparing the forecast for the first six months of 1948 we have suffered from the additional handicap that it is imposible to say what effect the partition of the country will have on its external trade and that there are no past actuals to guide us. The figures I shall mention relate to the balance of payments on current account of the Dominion of India with the rest of the world excluding Pakistan. For our balance of payments with Pakistan, I fear it is not possible to make even the roughest of estimates. In the half year January to June 1948 we hope to earn through exports and other sources Rs. 208 crores. We expect to spend during the same period Rs. 260 crores. We therefore anticipate an overall deficit of Rs. 52 crores. Out of our total expenditure during the half year, no less than Rs. 61 crores will be spent on the purchase of food.

#### Sterling Balances

Hon'ble Members will appreciate more fully in the light of what I have stated above the significance of the second interim agreement on the sterling balances which has been concluded between the Government of India and the Government of the United Kingdom by an exchange of letters. In brief, the exchange of letters. In brief, the effect of the exchange of letters is that the financial agreement dated 14th August 1947, which expired on the 31st December 1947, has been extended upto 30th June 1948 with some modifications. The first agreement was on behalf of both India and Pakistan but the present extensian is on behalf of the Dominion of India alone. Hon'ble Members will remember that in December last, when an agreement was reached between Pakistan and ourselves on all outstanding financial issues including the division of the sterling balances, it was agreed that from the 1st of January 1948 the exchange accounts of the two countries should be kept reparately. As a consequence of this separation, it was also agreed that negotiations for a further interim settlement between the United Kingdom and the two Dominions should be carried on separately by each. Hence Pakistan was

not a party to our recent negotiations. The object that we kept in view in our recent discussions with representatives of the United Kingdom Government was to make available to us sufficient foreign exchange resources to meet our estimated overall deficit in the balance of payment during the first half of 1948. As I have indicated earlier, we estimate our overall deficit for this period at £ 39 million or Rs. 52 crores. It has now been agreed that a further £ 18 million (or Rs. 24 crores) will be transferred from Account No. 2 to Account No. 1, the existing balance in which will, of course, be carried forward at our disposal except for a certain amount to be transferred to Pakistan under the Indo-Pakistan Agreement of December last. This fresh transfer, together with the balances that we have at our disposal under various accounts and some borrowing from the International Monetary Fund, will enable us to meet our anticipated deficit. As our Account No. 1 would now stand, I have no anxiety on account of the external financial position of the country so far as currencies other than the hard currencies are concerned.

#### Limit of Convertibility

One important feature of the agreement is the limit on convertibility. Under the original agreement the whole of our sterling in Account No. 1, whether it arose by transfer from Account No. 2 or through the proceeds of current earnings, was fully convertible for current transactions into any currency including that of the U.S.A. In other words, the whole of the sterling that we held in Account No. 1 was multilaterally convertible. Under the present agreement, however, we have been put to the necessity of limiting our right to multi-lateral convertibility to the extent of only £ 10 million or Rs. 13:33 crores. This restriction will necessitate our borrowing to some extent from the International Monetary Fund. I am, however, satisfied that the extent of our borrowing from the Fund during the current halfyear will be well within the limits of our rights of borrowing from that Fund. Hon'ble Members are entitled to know why we agreed to limit the right to full multilateral convertibility which is possessed by every member of the sterling The answer is that, like all international agreements, this agreement was a compromise, and in the light of the circumstances that faced us I consider it in the best interests of the country to accept this condition. I am not unmindful of the great difficulties under which the United Kingdom is labouring today, nor am I unappreciative of the valiant efforts being made by that great country to restore equilibrium in her economy and discharge her international obligations. I am fully aware that the gold and dollar resources of the sterling area are small, are rapidly being exhausted and require to be husbanded with the greatest care. It is for this reason that we agreed last September, soon after our first interim agreement was concluded and when the United Kingdom was forced to suspend the convertibility clause in the Anglo-American Loan Agreement, to cooperate by restricting dollar expenditure as far as possible. For the half year as far as possible. For the half year in question our expenditure in hard currency has been severely limited to essentials. Nevertheless, I cannot help feeling that it should have been possible

to avoid introducing this very undesirable and harmful principle of a limit on the convertibility of sterling for members of the sterling area who are pledged to holding sterling without limit of amount. We have honoured that pledge perhaps even beyond the bounds or prudence. Even from the point of view of the necessity for safeguarding the central reserves of the sterling area, I cannot feel happy about the low limit of convertibility forced upon us. After all, our proposed drawings on the central reserves were the merest fraction of what the United Kingdom herself proposed to draw therefrom. Undesirable as this feature of the agreement is, we accept it in the hope that it would be possible to remove this condition at the earliest passible moment. We have decided in fact to make a long-term settlement with the United Kingdom on this vexed question as soon as possible. I feel that it is unsatisfactory that there should be negotiations every six months on this subject for the element of uncertainty as to the results of these periodical negotiations makes it impossible for any long-term co-ordinated trade policies to be stimulated. I have, therefore, conveyed to the Leader of the British Delegation my desire that steps should be taken for initiating talks for a longterm agreement.

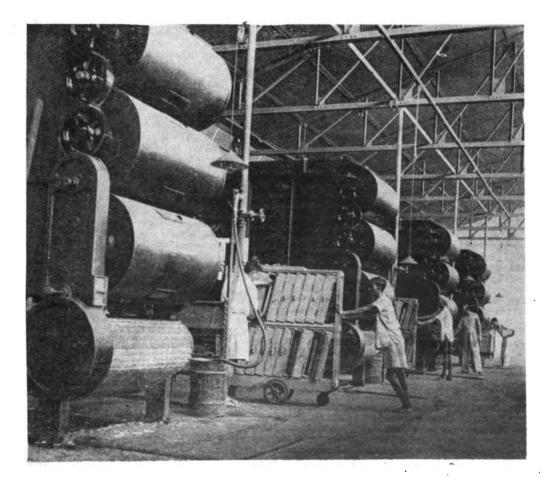

#### Settlement with Pakistan

When I gave a brief account to the House in my last Budget speech of the details of the partition and its financial and economic results, I mentioned that

a number of important points connected with the partition still remained unsettled and were likely to be referred to arbitration. As the House is aware, these outstanding questions have been the subject of further consultation between the two Governments and all of them have been settled so that so far as the two dominions are concerned, it became unnecessary to resort to arbitration on any issue. Now that a final settlement has been arrived at, although the details would necessarily take some time to work out, I propose to give the House a short account of these decisions.

The position of the undivided Government as on the date of partition was that its outstanding liabilities exceeded its assets so that ultimately it is the debt that is being divided between the two Governments. On a rough estimate the outstanding debt of the Central Government as on the 14th August 1947, including in this not merely the outstanding public debt but all its obligations to outside parties such as deposits in Postal Savings Banks, outstanding balances of Post Office Cash and National Savings Certificates, Provident Fund Deposits of Government servants, the amounts likely to be paid to the British Government for surplus stores and other property acquired by the Defence Services and the capitalised value of the liability for pensions in payment on the date of partition and pensions earned by serving officers up to that date, is likely to be of the order of Rs. 3,300 crores. The Government of India's assets on that

date are represented by the capital spent on the great Commercial Departments like the Railways and the Posts and Telegraphs, the Security Printing Press, the Irrigation Works in the Centrally Administered Areas, the Post of Vizagapatam and New Delhi, the buildings, stores and equipment of the Defence Services and the various branches of the Civil Administration, the cash balance with the Reserve Bank and investments such as the Silver Recemption Reserve and the subscriptions to the International Monetary Fund and the International Bank; and the miscellaneous debts due to it such as the outstanding loans made to Provincial Governments and local bodies and institutions. The total value of these assets is of the order of Rs. 2,800 crores leaving a net excess of liabilities over assets of about Rs. 500 crores. As I said earlier, it will be some time before the final figures are available and the machinery for obtaining them as early as possible as being set in motion. The arrangement with Pakistan is that for all assets located in her territory such as the Railways and the Posts and Telcgraphs system operating in Pakistan, the stores and other movable equipment allocated to her, the administrative buildings and installations taken over by her in her territory she takes a debt equal to the book value of these assets. An exception has been made in the case of strategic railways the bcck value of which, for purposes of the cettlement, will be written down from a little over Rs. 32 crores to Rs. 14:45 crores. In addition Pakistan will take over a debt equal to the amount of the cash balance

Manufacture of Matches:

::

44

of Rs. 75 crores allocated to her cut of the cash balances of the undivided Government and 171 per cent. of the net excess of the Central Government's liabilities over assets which, as I mentioned earlier, is likey to be of the order of Rs. 500 crores.

The total of Pakistan's debt as calculated above will be reduced by the liability she takes over direct in regard to Postal Savings Banks, Postal Cash and National Savings Certificates outstanding in her area, the pensions of the undivided Government paid in Pakistan and the liability for pensions earned by officers who have opted for service in that Dominion. For purposes of the financial settlement the outstanding debt of the Central Government will be valued after taking into account the interest payments, discounts, the date of redemption and so on. Similarly the actuarial value of the pensionary liability will have to be calculated. The closing of the accounts for the pre-partition period, without which the outstanding assets and liabilities connot be determined, will also take some time to complete. It is not therefore possible to give anything more than a very rough indication of the amounts involved in the settlement or the share of Pakistan in the outstanding debt. Pakistan's share will take the form of an inter-state debt to India. On a very rough estimate this debt is likely to be of the order of Rs. 300 crores, and the rate of interest may be near about a per cent. Pakistan's total debt is to be repaid in Indian rupees in fifty annual equated instalments for principal and interest. As a measure of assistance to the new Dominion in its earlier years it has been agreed that the first repayment should commence only in 1952.

In addition to the Rs. 75 crores given to her out of the cash balance of the undivided Government it has also been agreed that India would make available to Pakistan a further sum of Ks. 6 crores for meeting the expenditure on the setting up of Ordinance factories and similar special institutions required by her. This amount will also be added to Pakistan's debt. With this settlement, the terms of which, as the Deputy Prime Minister has already told the House, are generous and conceived in a real spirit of assistance to Pakistan, the purely financial problems arising out of the partition may be said to have been satisfactorily solved.

#### Sterling Reserves

The allocation of the sterling reserves that the Reserve Bank will hold when it ceases to be the currency authority and banker to the Pakistan Government on the 30th September next also raised difficult issues and I am glad to say that a satisfactory solution has been reached here also. It has been agreed that out of the sterling assets in the Issue Department, l'akastan would receive a share in the proportion of the notes in circulation in Pakistan. In addition she would also be entitled to 171 per cent. of the excess of the sterling held by the Reserve Bank on the 30th September 1948 in both the Banking and Issue Departments after allowing for the payments to be made to the British Government for surplus military stores and fixed assets and the capitalised value of pensions paid in sterling and

for the retention of a reserve in the Issue Department which, together with the gold, would be equal to 70 per centof the liabilities. This additional sterling will be released to Pakistan by India
as and when required, till the 31st December 1967, against payment in Indian
rupees.

#### FINANCIAL YEAR 1947-48.

#### REVENUE

I shall now proceed to give a brief review of the financial position in the current and the ensuing years.

In my interim Budgets I estimated the deficit for the current year covering 71 months at Rs. 24.59 crores. The House will be glad to know that I now estimate the deficit at only Rs. 6.52 crores. The improvement is due to some increase in the anticipated revenue and a decrease in expenditure.

The revenue receipts during the period 15th August 1947 to 31st March 1948 are now estimated at Rs. 178-77 crores against Rs. 172.8 crores in the Budget passed by this House last November. The improvement of nearly Rs. 6 crores is mainly due to an increase of Rs. 2.35 crores under Customs and a windfall of Rs. 3 crores from the levy on old stocks of cloth released for sale at increased prices following the recent decontrol of textiles. The estimates also include Rs. 2.25 crores on account of Govern ment's share in the increased prices of sugar, stocks of which were frozen by Government when sugar was decontrolled last December, and Ks. 2 crores on account of the receipts of the Cotton Textiles Equalisation Fund. The revenue under Central Excise Duties is now esti-mated to show a reduction of Rs. 1.36 corporation Tax is now estimated at Rs. 115 crores, a reduction of Rs. 3 crores in the original estimate. The divisible pool of income-tax is now estimated at Rs. 65.49 crores of which the Provincial share would amount to Rs. 29.74 crores. The credit of Rs. 2.25 crores on account of the increase in sugar prices mentioned above will however be set off by a corresponding provision in the expenditure estimates as the intention is to fund these receipts for the benefit of the industry and the sugar producing Provinces. Similarly the receipts of the Cotton Textiles Equalisation Fund will be transferred to it by provision in the expenditure estimates.

#### EXPENDITURE

The total expenditure this year is now estimated at Rs. 185.29 crores showing a reduction of Rs. 12.1 crores in the original estimate. The expenditure on Defence Services is expected to show a saving of Rs. 6.11 crores, Civil estimates accounting for the balance of Rs. 5.99 crores.

The current year's budget for Defence Services included a substantial provision for new schemes and for the acquisition of land but owing to changes in the plans on strategic and other considerations and the pre-occupa-

tion of the Defence authorities with matters such as the operations in Kashmir to repel the invaders from that State, it is expected that a saving of Rs. 5.75 crores is likely to be effected this year. The budget also included a provision of Ks. 1.68 crores for payment to an equalisation Fund for the replacement of certain vessels of the Royal Indian Navy and aircraft of the Royal Indian Air Force. On further consideration it has peen decided that this contribution should wait until conditions become more stable and the provision on this account will accordingly lapse.

The saving of Rs. 5.99 crores in Civil expenditure is mainly due to a reduction in the provision for expenditure on the relief and rehabilitation of refugees. The House will remember that a lump sum of Rs. 22 crores was provided for this purpose in the budget. At that time when the large scale movements of population were still taking place it was impossible to frame a close estimate of the expenditure likely to be involved. On the indications then available, I considered it advisable to provide a substantial figure. The position has since been reviewed and although it is still difficult, in view of the constant changes in the position and the fluid nature of the relief plans to make a close estimate it is now expected that the expenditure this year may not amount to more than Rs. 14:89 crores. A saving of Rs. 2-36 crores is also expected in the provisions of Rs. 22.52 crores for subsidies on imported foodgrains. Interest charges are also expected to show a saving of Rs. 1.29 crores. These savings are partly set off by the provision of Rs. 2.25 crores for funding the special receipts following the decontrol of sugar and the provision of Rs. 2 erores for the transfer to the Cotton Textiles Equalisation Fund of the receipts realised for it, both of which I have mentioned earlier.

#### FINANCIAL YEAR 1948-49.

I now turn to the estimates for 1948-49. At the existing level of taxation, 1 place the total revenue for the year at Rs. 230-52 crores and the expenditure charged to revenue at Rs. 257-37 crores leaving a deficit of Rs. 26.85 crores. Before I deal with the detailed estimates, I must warn the House that the revised estimate for the current year does not provide a basis for comparison when considering the estimate for the current year covers only "I months while the provision in the budget for next year covers a full year.

#### REVENUE

The total receipts from customs have been placed at Rs. 81.75 crores. This provides for a full year's revenue from the enhanced duty on exports of cotton cloth and yarn imposed in the current year's budget. The effect on our revenue of the restriction on imports so as to conserve foreign exchange has been taken into account as also the restriction on the exports of raw cotton. Central excises are expected to bring in Rs. 34 crores and receipts from income-tax, which include Rs. 12 crores on account of Excess Profits Tax and Rs. 17 crores on account of the Business Profit Tax, have been placed at Rs. 130 crores.

Digitized by Google

The divisible pool of income tax is estimated at Rs. 80.24 crores of which the Contre will retain Rs. 42.37 crores leaving Rs. 37.87 crores as the Provincial share. The profits from Currency and Mint, after allowing for the share of Pakistan under the arrangement for the management of the currency of both the Dominions by the Reserve Bank upto the 30th September 1948, are estimated at Rs. 9.4 crores.

The revenue of the Posts and Telegraphs Department is expected to amount to Rs. 26.2 crores and working expenses and interest to Rs. 25.82 crores leaving a small surplus of Rs. 38 lakhs. In the current year, the surplus will be shared between general revenues and the Department in the ratio of three to one while next year only half the surplus will accrue outright to general revenues. The department will get a rebate of interest on its share of the accumulated profits in the past which at the end of the budget year are expected to amount to about Rs. 8 crores.

In my estimate of receipts for 1948-49 no credit has been taken for any contribution from the railway surplus. The position with reference to this matter was explained by the Hon'ble Minister for Transport in his Budget speech the other day.

#### EXPENDITURE

The total expenditure for next year is estimated at Rs. 257.37 crores of which Defence Services will account for Rs. 121.08 crores and Civil Expenditure for Rs. 136.29 crores. Following the cutomary procedure, I shall first deal with the Defence estimates.

Defence Services .- The reconstitution of the Armed Forces of the undivided Government of India into separate forces for the two dominions is now virtually complete. It was envisaged at an earlier stage that the reorganisation of the Armed Forces would be largely completed in the financial year, 1948-49. With the alteration in the role of the Armed Forces as a result of the partition a redistribution of the available financial resources between the three available services to allow for a more balanced development was contemplated. Unfortunately, however, the recrudescence of communal disturbances and necessity in present circumstances of having to retain substantial forces till normal conditions roturn have made it impossible to undertake the long term planning of the Armed forces so as to keep the expenditure on thom at a level appropriate to the financial resources of the country.

As the House is alroady aware, the process of demobilisation of the Armod Forces was arrested by the partition of the country in order to facilitate the division of the forces between the two dominions and to enable them independently to determine the size and composition of their respective Armod Forces. In the altered strategic situation following the partition and also in view of the recent disturbances in the country, it has not been possible to resume demobilisation in the Armed Forces of the Indian Domin'on. The future

Coffee being dried in a coffee factory

strength and composition of these forces still remain to be decided and it may be some time before a decision is taken. Meanwhile, the Army is expected to be maintained at its present level.

Certain decisions for the expansion of the Naval and Air Forces have been taken and a delegation was sent to the United Kingdom last November to discuss with the British Government the question of acquiring certain Naval vossels and aircraft and the provision of training and other facilities for officers and men of the Indian Forces. These d'scussions were successfully completed and arrangements have been made for the acquisition of certain assets and for the training of Indian personnel. Honourable Members are aware of the decision by Government to strengthen the Navy with new type of ships, notably a cruiser and three destroyers. A party of officers and men of the Royal Indian Navy has already been despatched to the United Kingdom to undergo the necessary specialised training in order to ensure that these ships are manned as far as possible by Indian nationals. The Royal Indian Air Force is also being expanded.

#### Defence Services

The budget estimate for Defence Services for 1948-49 is, as I have mentioned, Rs. 121.08 crores. This exclusive of expenditure of a capital nature amounting to Rs. 14.99 crores to be incurred on the acquisition of land, the construction of training institutions, the provision of accommodation for personnel, the acquisition of new naval ve sols, air-craft and connected equipment for the expansion of the Navy and the Air Forces which I have mentioned earlier. Provision for this expenditure has been included in the Capital Budget. As the House is aware, this practice of providing for capital expenditure outside the revenue account was introduced during the last War, and was discontinued only in 1947-48. I trust the House will agree with me that in the present abnormal conditions the decision to charge to

capital the expenditure on the acquisition of permanent assets is unobjectionable.

The partition of the country placed heavy responsibilities on the Armed Forces of this Dominion when they were in the process of reconstitution both in the matter of maintenance of law and order and in assisting the Civil authorities in the evacuation and relief of the minorities in the Punjab. A Military Evacuation Organisation was set up during September 1947 with its headquarters at Amritsar and an advance headquarters at Lahore and this organisa. tion succeeded in evacuating over 4 million non-muslims [from Western million non-muslims [from Western Pakistan and about 5 million m slims from India within a period of 3 months. This stupendous task had to be performed under the most trying conditions and the troops which took part in it have responded most magnificently to the call. While the energy and resources of the army were mobilised for this humanitarian work further calls were made on them for the defence of Kashmir. The fighting in Kashmir is being carried on in difficult terrain and evere climatic conditions. I am sure the House will join me in paying a tribute to the Army and the Royal Indian Air Force for the magnificent way in which they have responded to the call made on them.

Civil Estimates.—Details of the estimates under individual heads are, as usual given, in the Explanatory Memorandum circulated with the Budget papers and I do not propose to weary the House by repeating them here. I should like however to refer briefly to the provision included in these estimates for certain special items like the expenditure on refugees and the subsidy for food. The expenditure on the relief and rehabilitation of refugees next year is estimated at Rs. 10.04 crores. The expenditure next year will be largely on relief and rehabilitation as the evacuation of refugees has now been nearly completed, except from Sind and to some extent from the N.-W. F. P. This estimate is necessarily tentative because in the

rapidly changing conditions, it has not been possible to frame a close estimate. In addition to direct relief and grants for rehabilitation a comprehensive scheme for granting advances to the refugees to enable them to settle down in various walks of life has also been drawn up. A Rehabilitation Finance Administration to which Government will advance Rs. 10 crores is also being set up. I hope that the facilities provided by the Industrial Finance Corporation will also be available for the assistance of industries which have had to be transferred to India on account of the communal disturbances. In addition to the provision of Rs. 10.04 crores in the revenue budget a sum of Rs. 10 crores has been included in the capital budget for the Rehabilitation Finance Administration and Rs. 5 crores for loans and advances for rehabilitation, including loans to Provinces for this purpose. The expenditure on food subsidies including the bonus to Provinces on the internal procurement of grain under the new food policy announced recently is esti-mated at Rs. 19.91 crores next year. The estimates also include a total provision of Rs. 102 crores under various heads for expenditure upon development schemes and resettlement.

The House would doubtless wish to know if in framing the budget for next year any allowance has been made for the implementation of the recommendations of the Economy Committee the appointment of which under the Chairmanship of Shri Kasturbhai Lalbhai was announced by me. The House will realise that it is obviously impossible to forecast the directions in which the committee may suggest economies and the total amount that could be expected to be saved. I have however made a lump cut of Rs. 21 crores under the various heads of civil expenditure in order to ensure that some economy is effected pending the report of the Committee. If the Committee's report suggests economies on a larger scale I propose to take steps during the course of the year to see that they are realised. I wish to make it clear however that this lump cut is mainly in the nature of a token and should not be taken as giving any indication of the size of the economy which I consider could be effected. This must necessarily depend on the considered judgment of the Committee after they have examined the various departmental authorities and I do not wish in any way to anticipate their findings.

#### Expenditure on Refugees

Of the total expenditure of Rs. 136.29 crores provided in the budget for next year Rs. 29.95 crores are accounted for by the expenditure on refugees and the payment of subsidies and bonus for foodgrains, leaving Rs. 106.34 crores for normal expenditure. This includes Rs. 8.98 crores for tax collection, Rs. 43.86 crores for obligatory expenditure on payment of interest and pensions and provision for debt redemption, Rs. 3.15 crores for Planning and Resettlement, Rs. 2.2 crores for expenditure on the Mints and the Nasik Press, Rs. 2.95 crores for grants-in-aid to Provincial Governments and Rs. 20.93 crores for expenditure in the nation-building sphere such as Medical, Public Health. Education,

Broadcasing, Aviation and the conduct of scientific surveys and institutions in which the Central Government supplement the work of the Provincial Governments and provide valuable technical assistance and research. The balance of Rs. 24.27 crores represents the provision for ordinary administration, Civil Works, etc., and this constitutes only 18 per cent. of the total civil expenditure. In addition to Rs. 20.93 crores in the nation-building sphere mentioned above, provision has been made in the capital budget for a grant of Rs. 30 crores to Provincial Governments for development and Rs. 34 crores for loans.

On the basis of the estimates of revenue and expenditure that I have so far explained, the anticipated deficit in the Budget for 1948-49 is Rs. 26.85 crores. In a later part of my speech I shall revert to the question of how I propose to deal with this deficit.

#### Planning and Development

When I addressed this House last November I mentioned that the question of re-examining the development schemes of the Provincial Governments with reference to the reduced resources likely to be available to the Centre for financing development and the changes resulting from the partition will be taken up. I have since had this further examined and it has been decided that so far as the Centre is concerned there should be no reduction in the extent of assistance promised by it to the Provinces when the Provinces were asked to draw up their plans for development. The House will remember that the Provinces were informed in 1945 that they could draw up their plans of Post-war development on the assumption that in the five years beginning with 1947-48 they could expect assistance by way of grants of the order of Rs. 250 crores. This amount was provisionally distributed among the Provinces in the ratio of their population. But some special weightage was given to the backward provinces of Assam, the N. W. F. P. and Orissa and to Bengal which with Assam, had been affected by the impact of war in the north-east frontier. With this weightage the Centre's promised contribution in 5 years rose to Rs. 273.88 crores. The Provinces given advance grants to cover the expenditure incurred by them on development schemes in 1945-46 and 1946-47 to be taken against their share of the grant for the five year period.

The progress of expenditure on the development schemes has been somewhat slower than anticipated mainly due to the shortage of material and man-power and the time taken to formulate detailed schemes. In the current year a provision of Rs. 20.39 crores was included in the budget for the period 15th August 1947 to 31st March 1948 but it is unlikely that the whole of it will be spent. After allowing for the expenditure incurred up to the partition and for the areas now in Pakistan and reallocating the balance to the Provinces in the Indian Dominion the outstanding balance of the assistance from Centre to the Provinces at the end of the current year, on approximately the same scale as was promised by the then Government of India in 1945, is estimated roughly at between Rs. 170

and Rs. 180 crores. I have carefully considered whether in the altered circumstances the Centre should reduce its assistance to the Provinces but I have come to the conclusion that in the larger interests of the development of the country as a whole it would be unwise to do so, particularly as the Provinces have framed their plans on the assumption that the promised assistance would be forthcoming.

In reaching this decision I have been influenced by the fact that in actual practice the grants are likely to be spread over a somewhat longer period than the four years that remain out of the original five year period fixed for this assistance. This, to some extent, will relieve the strain on the resources of the Centre. But it is being made clear to the Provinces that in future the grants from the Centre upto the maximum agreed to will be contingent on the Provinces spending from their own resources at least an equal amount and that the whole scheme of assistance would be subject to readjustment if in the new constitution there is any substantial transfer of resources from the Centre to the units. I trust that with this assurance the Provinces will now be in a position to go ahead with their schemes of development and that they will conserve and exploit all the available resources for this purpose. The budget for the next year includes a provision of Rs. 30 crores for grants to Provinces for development and Rs. 34 crores for loans to them.

#### Central Schemes

For Central schemes of development, including resettlement, a provision of Rs. 101 crores has been made in the revenue budget and Rs. 251 crores in the capital budget. Details of the porvision are given in the Explanatory Memorandum circulated with the Budget papers and I do not propose to dilate at length on the individual schemes for which provision has been included in the budget. But they cover a very wide field and among the important schemes I would mention the expansion of the Forest Research Institute, Dehra Dun, the development of the valuable forests in the Andamans, the preliminary work on the Kosi, Sone Valley, Ghandak and Assam Valley projects, all of which form part of the large scale schemes of river development, the reorganisation of the Central Waterways Navigation and Irrigation Research Stations, the setting up of a Tractor Testing Station, the establishment of a Central Agricultural College, the expansion of the Indian Agricultural Research Institute, the loan of Rs. 2 crores to the Damodar Valley Corporation and the investment of Rs. 1 crore in the Industrial Finance Corporation. In addition to provision for expenditure on the individual schemes just mentioned the budget also provides for an expenditure of over Rs. 2 crores for buildings for development schemes, Rs. 61 crores for the construction and improvement of National Highways, Rs. 61 crores for the Fertiliser Factory under construction at Sindri, Rs. 4 crores for the expansion of civil aviation and Rs. 70 lakhs for the expansion of broadcasting facilities.

A coffee picker

Before I pass on to deal with the ways and means position I shall give the House a brief account of the provision included in the budget for normal capital expenditure. The revised estimate for this year includes a provision of Rs. 261 crores of which the Railways account for Rs. 162 crores, Posts and Telegraphs for Rs. 21 crores and schemes of State Trading for Rs. 41 crores. For next year the provision amounts to Rs. 76 crores of which Rs. 241 crores are for Railways, Rs. 31 crores for Posts and Telegraphs, Rs. 15 crores for Defence to cover expenditure on the purchase of naval vessels, aircraft and spares for the expansion of the Navy and Air Forces, the acquisition of land and the construction of accommodation for Defence Services personnel, Rs. 31 crores on the provision of additional accommodation in New Delhi, Rs. 2% crores for administrative buildings and communications costing over a lakh of rupees, the cost of which is now met from capital, and Rs. 27 crores for the building up of the central reserve of 6 lakhs tons of foodgrains in accordance with the recently announced food policy of Government. The total provision in the Capital Budget for normal requirements and for financing

the development schemes both of the Centre and the Provinces comes to the impressive figure of Rs. 70 crores this year and Rs. 165½ crores next year.

#### Ways and Means

I now turn to a brief consideration of the ways and means position. During this year owing to the uncertain political conditions in the earlier months the partition of the country and the widespread communal disturbances in certain parts of the country it was not possible to borrow from the market the substantial amount which was originally planned. Next year in addition to the interest-free prize bonds, with an outstanding of a little over Rs. 5 crores, which mature in January 1949, Government have the option of repaying the outstanding balance of the 2½ per cent. Loan 1948-52 and the 4 percent. Loan 1948-53. A decision on the exercise of this option will be taken in the course of the year with reference to the conditions then prevailing. The market borrowings next year have been taken at Rs. 150 crores but if circumstances are propitious the scale of borrowing will be stepped up. I

would, in this connection, reiterate the appeal I made on the floor of this House last November for the utmost co-operation from the public in the borrowing opera-tions of the Government. Apart from the need which still remains for withdrawing surplus purchasing power from the hands of the community as a measure of anti-inflation, the requirements of funds for financing the large scale plans of development which the Government have in view and for assistance to the Provinces for implementing their schemes is as great as ever and unless the public co-operate whole-heartedly with the Government by lending their savings it will be impossible to undertake all the schemes of development necessary for raising the standard of life of our people.

I shall now pass on to the consideration of the all important problems of how to deal with the deficit of Rs. 26.85 crores.

I just mentioned a deficit of Rs. 26.85 crores. This is exclusive of any contribution from the railway surplus. As Hon'ble Members are aware, it has now been decided that out of the railway surplus a conr.bution of Rs. 4.5 crores should be made to general revenues during the next year. The estimated deficit is therefore reduced to Rs. 22.35 crores.

#### Reliefs in Taxation

The House will remember that in my Budget Speech last November I referred to the widespread criticism that the level of taxation in the 1947-48 Budget had seriously affected the incentive for saving and investment and I undertook to make a careful examination of the consequences of our taxation policy before I presented the annual Budget. Since then I have given very anxious thought to the question and I have reached the conclusion that there is a considerable measure of justification in that criticism. As I have emphasised elsewhere, the paramount need in present conditions is to stimulate production and any fiscal or administrative measure which restricts or curtails the expansion of industry will stunt our development to our future difficulties. and add While industry should be called upon to pay its just contribution to the common exchequer, the burden placed upon it must be such as to allow business to expand. At the same time the aim of our policy should be to secure that while the level of taxation is reasonably high so that the wealthier sections of the community are placed under an equitable contribution for the common needs of the State, a genuine margin is left for savings which would flow back into investment and thereby add to the productive wealth of the community, which the State itself could subsequently tap. It is also necessary so to adjust our taxation as to provide a real incentive to the ploughing back of profits into fresh business. In making my pro-posals in the field of direct taxation, I have kept these considerations prominently in mind.

I shall pass on to deal first with the various measures of relief which I propose to give.

My first proposal is with reference to the Business Profits Tax. This measure gave room for a good deal of controversy when it was introduced for the first time in the budget for 1947-48. The sudden withdrawal of the Excess Profits Tax gave this tax a considerable measure of justification. During the discussions on the floor of the House the then Finance Member stated that this tax would be in operation for one year, leaving it to his successor to decide whether it should be continued or not. In view of the criticisms levelled against this measure, both inside this House and outside, I have given a good deal of thought to this matter. I have come to the conclusion that, in the present circumstances, there is no justification for the complete withdrawal of this tax. Hon'ble Members might know that in the United Kingdom a tax of this kind was introduced some time back as a National Defence Contribution. The tax is retained though its nomenclature has been subsequently changed to Profits Tax. The need for additional funds for reconstruction and especially for the rehabilitation of refugees would justify the continuance of this measure in India for some time. I have, therefore, decided to retain this source of revenue but to reduce the burden of this tax considerably. The abatement allowed at present is Rs. 1 lakh or 6 per cent. of the capital employed, whichever is larger. The rate of the tax is 16? per cent. I propose that the abatement should be Rs. 2 lakhs or 6 per cent. of the capital employed, which ever is larger, and that the rate of the tax should be reduced to 10 per cent. I hope this reduction will be welcomed by the business community. The net result of this proposal will be a gross loss of Rs. 2 crores. Rs. 1 crore of this loss will, however, be recovered by the increase in income-tax receipts and the net result will therefore be a loss of Rs. 1

#### Super Tax

My second proposal is to reduce the existing rate of super-tax. The House will remember that last year the limit of income at which the maximum rate of 101 annas is attracted was reduced in the case of earned income from Rs. 5 lakhs to Rs. 12 lakhs and in the case of unearned income from Rs. 31 lakhs to Rs. 1,20,000. The effect of this was to take away from any person with an income of over Rs. 1,20,000 nearly the whole of the income beyond this amount. This hardly left any incentive to save and I has no doubt myself that such severe taxation at this level would seriously hamper the growth of savings and retard our industrial development. I have accordingly raised the limit at which the maximum rate of tax will be attracted to Rs. 31 lakhs for both earned and unearred income. I trust the House will agree with me that this measure of relief is justified. I have also rearranged the rate of the tax within the slabs and the rates as they now stand seem to me to fulfil the double purpose of keeping the level of taxation sufficiently high while leaving at the same time a margin for saving. The changes in super-tax are estimated to cost Rs. 1 crore.

In the budget for 1946-47 a complicated system of levying super tax at

steeply graded rates on dividends above a datum line was introduced and last year these rates were further stiffened. The object of this was to deter the distribution of large dividends and secure the ploughing back of profits into business. In actual practice very little revenue was collected from this source and the purpose with which it was introduced does not appear to have been realised. I feel that something more positive is required to induce industrialists to return more of their profits into investment than taxing those who distribute large dividends. My proposal to secure this end is to reduce the tax on the undistributed profits of companies by one anna. The effect of my proposal will be that on distributed profits the present rate of 5 annas will remain, while the tax on undistributed profits will be at the rate of 4 annas. I trust that this concession will produce better results than the present complicated system. The cost of this concession is estimated at Rs. 2 crores.

#### Income Tax on Companies

My next proposal is to reduce the income-tax on companies with an income of Rs. 25,000 and below to half the usual rates. Among the dangers to be avoided in the rapid industrialisation of this country is the one of concentrating too many businesses in the hands of large companies, and I feel that every encouragement should be given to the growth of smaller companies. This will broadbase our economy and will also be in line with our general pattern of industrial development with its constant emphasis on the development of cottage industries and a fair distribution of industry over the various Provinces. My contribution towarda such a development is to allow this concession in favour of small companies with moderate incomes. The loss of revenue from this is estimated at Rs. 12 lakhs.

There is a widespread feeling that with the heavy taxation to which incomes are now subject there is very little scope left for assistance by the public to deserving institutions and charities. I have received a number of representations on this subject and after careful consideration of the matter I feel that a measure of relief on contributions made to recognised institutions and charities would be justified. In this country there is a far too general a tendency for charitable and other institutions to look to the State for assistance and not to the public. To the extent to which there is a larger flow of private benefaction to such institutions, the burden on the State for supporting them will be reduced. I accordingly propose that donations to approved institutions and charities should be exempted from taxation so long as they do not exceed 5 per cent of the net taxable income in the case of companies and 10 per cent in the case of individuals, subject to a maximum of Rs. 21 lakhs in both cases. I trust the House will welcome this concession and I hope it will encourage our industrialists and the public to subscribe more generously to deserving institutions and purposes. It is my intention to have a list of approved

institutions and bodies drawn up in consultation with the Provincial Governments. It is difficult to estimate the loss of revenue involved in this concession and I have taken a rough figure of Rs. 75 lakhs.

I also propose to give a further measure of relief, in regard to the payment of municipal taxes on house property. I have felt that the absence of such an exemption is an anomaly in our tax system and that there is a justifiable claim for relief here. I accordingly propose to exempt these payments from taxation. The cost of this concession is estimated at Rs. 75 lakhs.

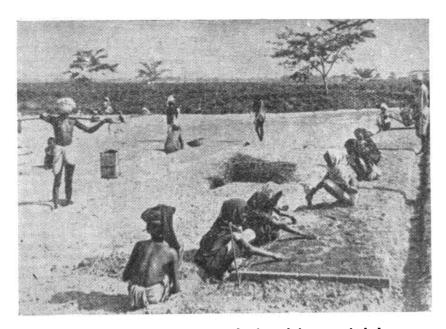

#### Corporation Tax

Before I pass on to deal with reliefs in indirect taxation, I should like to mention briefly a point in which it seems necessary to readjust our Corporation Tax. Hon'ble Members are aware that under the law as it stands we are entitled to recover supertax on dividends paid by companies incorporated outside this country to their shareholders abroad in respect of their Indian business. For this purpose it is necessary to ascertain from the companies particulars about their shareholders abroad and the dividends distributed to them. This information is rarely available in full with the result that very little of the tax due is collected. It is necessary that some effective arrangement should be made to protect our revenue against this leakage and I think that this can best be done by raising the general rate of Corporation Tax and giving an appropriate rebate on their income to those companies which declare and pay their dividends in India. I accordingly pro-pose that the rate of Corporation Tax be raised from 2 annas to 3 annas and a rebate of one anna allowed to the companies which declare and distribute their dividends in India. The effect of this proposal will be that companies in India will pay the present rate of Corporation Tax at 2 annas while foreign companies having business in India will have to pay a Corporation Tax of 3 annas on their profits earned in this country. change is expected to bring an additional revenue of Rs. 2 crores.

I may now summarise the net effect of the reliefs in income-tax and the proposed change in the Corporation Tax. The various concessions I have just detailed will result in a loss in revenue of Rs. 6.62 crores of which the Provincial share will amount to Rs. 2.41 crores. This will, however, be partly set off by the additional revenue of Rs. 2 crores from the change in the Corporation Tax and Rs. 1 crore from the ordinary collection of tax resulting from the reduction in the Business Profits Tax, of which the Provincial share will amount to Rs. 45 lakhs. The net effect of my proposals on the Centre is a reduction of Rs. 1.66 crores.

I shall now turn to the reliefs in the field of indirect taxation.

During the debate on the interim Budget there was some criticism about the increase in the export duty on cloth and I promised to consider the suggestion

Tea Industry: Picture shows seeds of tea being sown in beds

that the duty should be converted into an al valorem duty. I have received a number of representations that the present specific duty is pressing too heavily on handloom cloth and on certain categories of mill-made cloth. The duty of 6 annas a pound on cotton yarn has also proved burdensome and on a careful review of the matter in all its aspects I have decided to convert the export duty into an ad valorem duty of 25 per cent. to exempt handloom cloth from the duty and to withdraw the duty on exports of cotton yarn. These concessions will involve a loss of revenue of Rs. 4.5 crores.

I also propose to withdraw the present excise duty on betelnuts. The administration of this excise has always been difficult and it has been prolific source of complaint from the areca-growing Provinces. I trust the House would welcome this concession which I hope will mean cheapening of this article to the poor man. The loss of revenue involved is Rs. 30 lakhs.

#### New and Additional Taxes

The net effect of all the reliefs mentioned so far and the changes in income tax is a roduction-in revenue of Rs. 6.46 crores, raising the prospective deficit to Rs. 28.81 crores.

In an earlier part of this speech I expressed the view that in the present inflationary conditions it is necessary to reduce, as far as possible, the gap between revenue and expenditure and if it is at all possible to have a surplus budget. I am sure the House will agree with me that the prospective deficit is too large to be left uncovered and that in a transitional time like this we should take every step possible to strengthen our revenue position. In raising additional taxation it is, in my view, necessary to sceure that as little of the burden as possible falls on the poor man.

Before I deal with my proposals for

raising additional revenue I shall briefly digress to mention a change in accounting which will reduce the prospective deficit by Rs. 10 crores. Advance payments of income-tax under Section 18-A of the Income Tax Act are not credited as revenue but held in deposit till the complicated process of assessing the tax is completed. These advance payments of tax are not really refundable deposits and there is no reason why they should not be credited to revenue straightaway. I propose to introduce this change with effect from next year. But the change will be made in stages so that) the budgetary position is not violently disturbed. The advance payments will be credited to a separate minor head with the major head and transferred to the final heads on completion of the assessments. The change in procedure will be given effect to next year, in respect of advance payments of Corporation Tax and will be extended to advance payments of income-tax subsequent Ι years. in hardly mention that this in procedure will not in any way affect the provincial share of income-tax. The result of this change will be to divert to revenue next year Rs. 10 crores which would have otherwise been credited as a deposit. This will reduce the deficit to Rs. 18.81 crores.

I shall now address myself to the problem of coverin this deficit by new taxes. The House will appreciate that with the existing shortage in the foreign exchange resources of the country and the need to conserve them as far as possible to meet our heavy commitments in respect of our food purchases, it is not possible to expect any substantial relief from the expansion of customs revenue from import duties, although the country could absorb all the imports likely to flow in if the restrictions on imports are relaxed. For a considerable time we shall have to rely on Central excises and, to some extent, on the yield of export duties. In framing my taxation proposals I have turned as much as

possible to the field of export duties which do not involve any additional burden on our people and to such of the excises as do not affect the poorer classes.

My first proposal is to levy an export duty of Rs. 80 per ton on oilseeds and Rs. 200 per ton on vegetable oils. There is a wide disparity between the internal prices of these commodities and their export prices and I am satisfied that the imposition of this duty will not affect our export market. The yield from this duty is estimated at Rs. 2.5 crores.

My next proposal is to levy an export duty of Rs. 20 per ton on Manganese to yield Rs. 80 lakhs.

#### **Import Duties**

I propose to make only two minor changes in the import duties. The duty on motor cars will be raised from 45 per cent. to 50 per cent, with a preference of 7½ per cent. in favour of the United Kingdom. The yield from this increase is estimated at Rs. 50 lakhs. The import duty on cigars, cigarettes and manufactured tobaccoo will also be slightly raised following the changes in the excise duty, to which I shall presently refer. The increase in revenue from this change is estimated at Rs. 12 lakhs.

In the field of Central excises my main proposals concern Tobacco. It is only in recent years that the Tobacco excise has been developed and the system of taxation could, in my opinion, be rationalised so as to increase the revenue from this source. But this will take some time. Meanwhile, I propose to levy an excise duty on cigarettes amounting to roughly 25 per cent. on the ex-factory prices. I estimated the yield from this change at Rs. 7 crores. Simultaneously the duty on certain categories of unmanufactured tobacco will be raised from 9 annas per lb. to 12 annas per lb. in some cases and 3 annas per lb. to 4 annas per lb. in others in order to secure that that there is no diversion from the consumption of cigarettes, of the cheaper varieties. This increase is estimated to yield Rs. 2 стогов.

The excise duty on Tea will be raised from 2 annas per lb. to 4 annas per lb. to bring it to the same level as the export duty. The additional revenue from this increase is estimated at Rs. 1.8 crores.

The duty on Coffee will be similarly raised to 4 annas per 15. to yield Rs. 30 lakhs.

The duty on Vegetable Product will be raised by 50 per cent. to Rs. 7-8-0 per cent. to yield Rs. 40 lakhs.

The duty on Tyres will also be raised by 50 per cent. The additional revenue is estimated at Rs. 40 lakhs.

The House will remember that in the budget for 1946-47 the excise duty on Matches was reduced from Rs. 2-8-0 per gross to Rs. 1-12-0 per gross for boxes containing between 40 and 50 matches. In actual practice this reduction has not been passed on to the consumer and I propose that this should be withdrawn

Digitized by Google

and the minimum duty fixed at Rs. 2.8-0 per ross on all boxes containing up to 50 matches. The additional revenue from this will amount to Rs. 150 lakhs.

I also propose to make two minor changes in the Postal and Telephone rates. The registration fee will be raised from 3 to 4 annas while the surcharge on trunk telephone calls will be raised from 40 to 60 per cent and amalgamated with the basic rate. These changes which will be introduced by executive orders, will bring in an additional revenue of Rs. 40 lakhs.

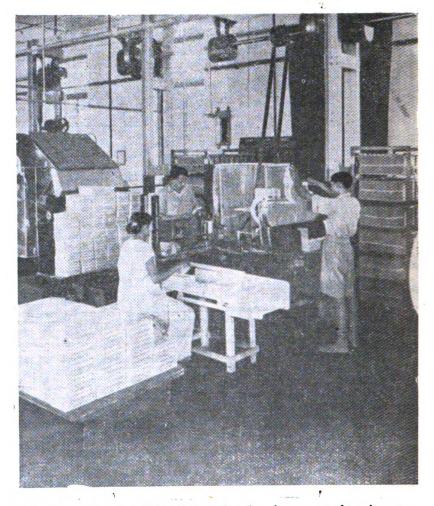

#### **Net Result of Proposals**

I may now summarise the net effect of all the proposals that I have made. The reliefs and the changes that I have proposed in income-tax, supertax and Corporation Tax will result in loss of Rs. 1.66 crores. The abolition of the export duty on handloom cloth and yarn and the reduction of the export duty on mill-made cloth will mean a loss of Rs. 4.5 crores. The abolition of the excise duty on betelnuts will cost Rs. 30 lakhs. The total loss to revenue on account of relief and readjustments of these taxes will be Rs. 6.46 crores. On the basis of this loss the original deficit of Rs. 22.35 crores will be increased to Rs. 28.81 crores. This deficit will again be reduced to Rs. 18.81 crores by taking the advance payments of Corporation Tax next year direct to revenue. With regard to the additional taxes, the proposed export duties will bring in Rs. 3.3 crores. The increase in the import duties will bring in Rs. 62 lakhs. The increase in excises will bring in Rs. 13.4 crores. The changes made in the Postal and Telephone charges will bring in Rs. 40 lakhs. The total net revenue resulting from these new taxes and the enhancement of certain existing taxes will thus bring in an additional revenue of Rs. 17.72 crores. The final deficit for the year will therefore stand at Rs. 1.09 crores. In the present circumstances I feel fully justified in leaving this small deficit uncovered. In considering this deficit the House must remember that the estimates do not include any credit on account of the interest due from Pakistan on its partition debt which, but for the moratorium, would be available to the credit of our revenues. Though it is not possible to know accurately at present the amount of the interest due from Pakistan, it may be assumed on a very rough calculation that it would be of the order of Rs. 9 crores. If this amount, which is legitimately due to us and the payment of which is only postponed, was available to me in the next year, the deficit would really be converted into a substantial surplus.

Much has been said in the past on the floor of this House and elsewhere regarding the maintenance of a proper balance between direct and indirect taxes in our tax structure. The House will appreciate that this is not a matter which could be regulated by any set principles and that, in the ultimate analysis, it is merely a question of arranging the taxation to the best advantage of the community and with reference

to the economic conditions of each country. Thus, while in an industrially advanced country it may be possible to raise a substantial revenue by direct taxation it will obviously be unwise to pitch the direct taxes too high in a country in the process of development as the inevitable effect of high direct taxation is to retard the formation of capital without which industrial development is not possible. Similarly, when the main consideration is to curtail consumption, as during a period of shortage of goods and inflation, it may be necessary to raise the level of indirect taxation to secure a reduction in consumption. There is also a common fallacy that the larger the amount of indirect taxation the heavier the burden on the ordinary man. While it is of course true that over a considerable field consumption taxes reach a wider section of the population than direct taxation, consumption taxes on such luxuries as motorcars, the costlier varieties of tobacco and cigarettes, duties on wines spirits, export duties which do not affect the internal consumer, all of which go to swell the total of indirect taxation do not touch the life of the ordinary man. In this connection I am sure the House will be interested to know the pattern of our tax structure. !n 1937-

38 out of a total revenue of Rs. 75.8 crores direct taxation accounted for only 21 per cent. while the bulk of the revenue came from indirect taxation This proportion has naturally varied during the war years when there was a steep rise in direct taxation due to the large increase in incometax and the levy of the Excess Profits Tax. In the budget for next year which I am now presenting to this House the proportion of direct to indirect taxation will be about equal. It would be interesting to compare our position in this respect with the United Kingdom. In a highly industrialised country like the United Kingdom, the scope for raising large revenues from direct taxation is greater. The United Kingdom budget for 1947-48 discloses that in that country the percentage of direct taxes to the total tax revenue is only 52. This compares very favourably with our tax structure in which, with a comparatively poor industrial economy, we collect about 51 per cent. of our taxes from direct taxes. Another interesting feature of our economy is that, as compared with 1937-38, the direct taxes would have increased eight and half times in 1948-49 while the indirect taxes would have increased only by a little over twice. Considering the relatively undeveloped state of our country, I do

In a cigarette factory: This photograph taken in an up-to-date cigarette factory in Hyderabad State, shows how machinery packs the cigarettes which are not touched by hand

not think that any one could say that the burden of direct taxation in this country is unduly light or that there has been any shifting of the burden on the shoulders of the ordinary man.

On the estimates as they finally emerge, the total revenue next year will stand at Rs. 256.28 crores and the expenditure at Rs. 257. 37 crores, leaving an uncovered deficit of Rs. 1.09 crores. I must, however, warn the House that this cannot by any means be regarded as the normal figure of revenue and expenditure for the subsequent years. The estimated income-tax receipts for 1948-49 include collections relating to the Excess Profits Tax which will practically disappear in the subsequent years. The Business Profits Tax in subsequent years will also be less and other factors being equal, the net proceeds of income-tax accruing to the Central Government for 1949-50 will be approximately Rs. 20 crores less than the corresponding receipts for 1948-49. The total revenue for 1949-50 will therefore be at least Rs. 20 crores less than in 1948-49. As against this, it should be borne in mind that certain items of expenditure appearing in the budget for 1948-49 may reasonably be expected to show a considerante decrease. The expenditure provided for next year under relief and rehabilitation and food subsidies amounts to Rs. 29.95 crores. It may reasonably be anticipated that the expenditure under these two items will go down considerably during the subsequent years. If normal political conditions are restored, a reduction in the defence expenditure may also be anticipated. Taking all the factors into consideration, it is not unreasonable to hope for a balanced budget in the future. The House will realise that in the transitional phase through which we are passing, it is difficult to make any precise estimate of our financial position for the next two or three years. On any reasonable view of the situation, I feel it is the path of prudence to strengthen our revenue position and keep down our expenditure as much as possible. As a precautionary measure, in tapping new sources of revenue I have decided to re-introduce in the current session the Estate Duty Bill. Even though the proceeds of this duty will go to the benefit of the Provinces, any augmentation of the revenues of the Provinces would, to some extent, reduce the strain on Central finances. Apart from this, it is possible under the proposed measure to levy surcharges for purely Central purposes.

Although I have not been able to present a balanced or surplus budget, much as I wish to, the size of the deficit next year which I propose to leave uncovered is very small in relation to the total expenditure. It may be considered an index of the efforts that we are making to close the era of war-time deficits and bridge the gap between revenue and expenditure. In my interim Bugdet I ventured to express the view that the financial position of the country was intrinsically sound and that we were not living beyond our means or heading towards bankruptcy. The Budget that I am now presenting fully supports this view. While it will be

folly to ignore the difficulties ahead, I feel that we can face the future in a spirit of sober confidence.

#### **Public Debt**

The debt position of a country is a sure index of its financial strength and here again I think our position is inherently sound. At the end of the current year the total outstanding public debt is expected to stand at Rs. 1,795 crores and to rise by a further Rs. 56 crores during next year to Rs. 1,851 crores. The total of the interest bearing obligations is estimated at Rs. 2,182 crores at the end of this year and Rs. 2,231 crores at the end of this year and Rs. 2,231 crores at the end of this year roughly Rs. 1,161 crores and at the end of next year Rs. 1,237 crores by way of interest yielding assets representing the

investments in the two great commercial departments of Government, namely, the Railways and Posts and Telegraphs, outstanding amounts due to us from the Provincial Governments, Indian States, Burma and others, and the probable debt of Pakistan to us. In addition, we shall be holding cash and other investments on treasury accounts amounting to Rs. 246 crores at the end of this year and Rs. 130 crores at the end of next year. The total interest bearing obligations not covered by interest bearing assets and our cash and interest yielding investments would thus amount to no more than Rs. 775 crores at the end of the current year and Rs. 864 at the end of the next year. The House will realise that these figures are to some extent approximate and it is not possible to give precise figures until Pakistan's share of the obligations, which she would assume direct and her

debt to India have been finally worked out. Allowances have, however, been made for this on the best guess that could be made and I think the House may accept these figures as giving a broad indication of the position.

The debt burden is to be judged primarily by the size of the deadweight debt. The amount of deadweight debt which I estimate at Rs. 864 crores is indeed very small when compared with the resources of the country and the national income. The debt position may be compared with the national income for assessing whether the debt is one which the country can afford to carry. For this purpose, we may take the whole of the interest bearing obligations of the Government of India which are expected to stand at Rs. 2,231 crores at the end of next year. Unfortunately, we have no accurate data regarding the national income of our Various estimates country. been made from time to time, but none of them has been made on a really accurate and scientific basis and I do not think we shall be far wrong if we assume that our national income is of the order of 4,500 crores of rupees. Our public debt is less than half of our national income. It is interesting to compare our position with that of more advanced countries like the United Kingdom and the United States. The national debt in the United States is more than 11 times its national income and the national debt of the United Kingdom is nearly three times its national income. The burden of the debt may also be assessed in another manner by studying the interest charges in relation to the annual revenue. For the year 1948-49 our gross payment of interest charges will amount to Rs. 61.82 crores. From our Commercial Departments like Railways, Posts and Telegraphs etc, and by way of interest receipts from Provincial Governments and other sources we get Rs. 25.66 crores. The net interest payment therefore is Rs. 36.16 crores. From this must again be deducted the interest due to us from Pakistan which I have estimated at approximately 9 crores of rupes. Our net interest burden is therefore about Rs. 27 crores. The anticipated revenue is Rs. 256.28 crores. Our net interest payment therefore represents only about 101% of our revenue. The inference that may legitimately be drawn from these figures is that we could carry even a larger volume of debt and that there is still a large source available here for financing the development of the country. The savings of the community could be mobilised on a very much larger scale for financing productive schemes of development. I appealed earlier in my speech for public co-operation in the borrowing programme of Government. The picture of our financial position which I have unfolded before this House will, I hope, have a reassuring effect on the public and instil a spirit of confidence all round.

Mr. Speaker, I have completed my survey of the economic condition of our country, my estimate of our income and expenditure and my proposals for the coming year. I must apologise to the

(Continued in next Column)

## Ceylon A Good Market For Indian Goods

N spite of its small population, Ceylon is a good market for foreign goods; and because of her proximity and the close relationship between the two countries, India is naturally the largest single supplier of goods to the Island.

A "Memorandum on Trade between India and Ceylon", issued by the Office of the Economic Adviser to the Government of India, points out that India has provided Ceylon with the necessaries of life when supplies from other countries have been difficult to obtain due to import and export restrictions. Her goods satisfy the needs of a population with low purchasing power. "In certain commodities, like cotton piecegoods, woollen and silk goods", it continues, "India has an assured market in Ceylon which other countries can scarcely hope to surmount". The general economic development of the new Dominion is expected to lead to increasing trade with India.

#### (Continued from Column 1)

House for the length of my statement. In the first annual Budget, I thought it my duty to give the House a fairly full picture of our financial position. In my interim Budget I struck a note of subdued optimism and ventured to express my opinion that our financial position was intrinsically sound. A more detailed examination over a longer period has confirmed that opinion. In spite of all the trials to which our infant State has been subjected, we have the solid foundations on which we can confidently build the superstructure of our economic and social edifice. The pattern of that structure is entirely in our hands to draw. While fighting the uphill battle of freedom we dreamt the dream of an India free from want and insecurity, a land in which our people would have in abundance the material and moral contents of a good life. But then our hands were tied and so we merely made plans which would improve our agriculture and industrialise our country, and thus provide a higher standard of living to our masses. From August 15th, 1947, the chains of our bondage have been broken and we are free to translate our dreams into reality. The plans are there, but we find that our freedom was born in an era so fluid and fast changing that any pre-determined step other than the next became obsolete before it could be taken. We feel like the pilgrim who drags his weary limbs finally to the mountain top, only to find higher peaks stretching before his eyes. It is by no means the journey's end and the night falls and ongulfs him in darkness. And like him we are inspired to pray in the spirit of the favouite hymn of Mahatma Gandhi-Lead Kindly Light. The next stop is enough for us if it is illuminated by the star of our ambition and fortified by the faith in our destiny.

It is, however, emphasized that Indian manufacturers should study intensively the needs of the Ceylon market. Lack of interest on the part of Indian exporters and no long-range study and planning for a potential market may result in severe shrinkage of our exports at a time when competitors are returning to the field to renew their pre-war trade operations.

Ceylon being predominantly an agricultural country, her trade with India is more competitive than complementary. India, therefore, purchases a comparatively smaller share from, than she sells to, Ceylon. The Island, however, has a favourable balance of trade with many other countries, and the opinion is expressed that she could well utilise the same in purchasing a large number of articles from India.

India's exports to Ceylon in 1938 amounted to Rs. 51,274,000, being 21.77 per cent of the Island's total trade. The figure, however, rose to Rs. 167,331,000 in 1946, the percentage share of the total trade being 29.24. This rapid increased exports from India of food and clothing. India's imports from Ceylon in the corresponding years were of the order of Rs. 9,017,000 and Rs. 25,050,000 respectively, the percentage share of the total trade rising from 3.42 in 1938 to 4.23 in 1945.

#### Main Items of Export

India's principal items of export during the war were: cotton manufactures, grain, pulses, and flour, fish (excluding canned fish), fruits and vegetables, spices, oilcakes, seeds, coffec, provisions and oilman's stores, animals, (Living), manures and jute manfactures.

Giving details of the trade in these articles, the "Memorandum" says that India being one of the principal producers of cheap goods is likely to have a flour-shing market in Ceylon despite the latter's efforts to increase local production.

Supplies from India formed a large proportion of the Island's cotton piece-goods imports before the war. The United Kingdom and Japan were also in the field, and supplied mainly grey, dyed, printed and coloured piecegoods. But after the outbreak of war, the share of the U. K. in all categories decreased considerably, while Japan went out of the market. India, therefore, was able to increase her share in practically every variety of cotton piecegoods, and exports reached their peak in 1943-44 when they amounted to 37 million yards valued at Rs. 484 lakhs, as compared with 26 million yards valued at Rs. 90 lakhs in 1937-38. In 1943-44 cotton piecegoods alone made up nearly 35 per cent of the total export trade with Ceylon and pulses which till then had topped the

Digitized by Google

list. It is felt that India has now established a firm footing in this market, and her cotton piecegoods are improving in quality.

Ceylon requires rice and other foodgrains, even though she is trying to extend her acreage and yield. It is not likely, however, that India will be able to resume her exports of foodgrains on any substantial scale, at any rate for some years to come.

There is scope for India to develop her exports of fruits and vegetables. Since 1941, she has been supplying nearly 90 per cent of Ceylon's requirements, Australia, Iraq and the Union of South Africa together sharing 8 per cent of the remainder. So far India has supplied only fresh fruits and vegetables to Ceylon.

Due to high railway rates on perishable goods and "faulty marketing organisation of fruits", it has not been possible for the Indian article compete with imports of preserved fruits from other countries. With increased use of refrigerators for fruit and vegetable preservation, however, India should have a better and assured market in Ceylon. There is also scope for Indian fish, because the waters around the Island do not provide fish in sufficient quantities to meet the demand.

There is already a growing demand for Indian films. Indian pictures are popular as they can be appreciated by the masses.

Other articles needed by Ceylon include curry stuff, onions, potatoes, glee, eggs, fertilisers, coal, sugar etc. There is an expanding market for Indian coffee if it is properly graded and standardised.

#### Imports from Ceylon

During the war India purchased goods from Ceylon in quantities greater than ever before. Coconut products formed the bulk of these imports. In 1945, this country received nearly 25 per cent of the Island's total export of this commodity, valued at Rs. 16,278,509. The most important product among them was copra, which accounted for Rs. 9,611,679. Coconut oil and desiccated coconut figured second and third respectively.

The next biggest item of India's imports is spices, including arecaunuts, cardamons and cinnamon. During 1939-45, India imported from Ceylon 18 per cent of her rquirements.

India is Ceylon's leading customer in hides and skins. But recently imports have declined due to their absorption in local manufacture.

Other articles imported by India are rubber, cintronilla oil etc.

Telegrams to Chefoo, Kalgan and Mukden in North Manchuria are now admitted, says a Press Note issued by D. G. P. and T. on March 2.

## INDIA'S STAKE IN AUSTRALIAN IMPORT MARKET

URING the war India shared with the United Kingdom and the United States of America the bulk of the import trade in cotton piecegoods into Australia, "a fair indication of the capacity of India to supply all the major items of these goods needed in that country". While in 1938-39, textiles, wholly or partly made of cotton, imported from India formed only a fraction of the total imports into Australia, the value being about £(stg.) 413,000 or roughly 3 per cent of the total value of imported textiles, they rose to the peak figure of £(stg.) 5.2 million, or about 18 per cent. in 1944-45. India was thus able to achieve a very important position in the Australian market for cotton textiles; and the retention of this market must be a matter of great concern to the Indian cotton textiles manufacturer and shipper.

#### Competitors in the Market

In a pamphlet entitled "Prospects for Indian Piecegoods in Australia", the India Government Trade Commissioner in Sydney emphasizes that India was able to schieve this "pre-eminent position" largely as a result of the elimination of Japan from the Australian market and the pre-occupation of the U. K. and the U. S. A., with the wara position which no longer obtains. After examining the relative positions of various competitors in the Australian market the Commissioner considers it probable that in the immediate future. the Australian market for cotton textiles will be shared principally by the United Kingdom and India. But he adds that if India wants to hold this market permanently, she must act quickly and must consolidate her position.

Apart from the United Kingdom, which enjoys privileges in the Australian market under the British Preferential Tariff, competition is likely from the U.S. A. and, to a lesser extent, Canada. Availability of dollars may prove a governing factor in Australia's import of cotton textiles from these countries, but this may not be a permanent disability and the possibility in the future of free trade with dollar currency countries cannot be overlooked.

The Commissioner thinks that the rehabilitation of the Japanese cotton textile industry which is reported to be under is likely further to aggravate the situation.

By the end of 1946, this industry had 3 million workable cotton spindles, with a further 250,000 likely to be available after repairs. Against this, the installed capacity in 1941 was 13 million spindles. For looms, the 1941 figure was 360,000, and the 1946 figure, 120,000.

It is possible, says the Trade Commissioner, that India may not feel Japanese competition in the Australian market for a few years to come, "mainly because of the antagonism that has developed

in that country against Japan as a result of the war". But in matters of trade, he adds, "no reliance can or should be placed on sentiment, and Indian exporters must be prepared to face this competition".

He emphasizes that in order to be able to sell India will have to supply goods which the Australian consumer prefers to buy and at prices which are competitive. During the war, he points out, the Australian had no opportunity to choose between one or more competing varieties; but the position in the future will be vastly different. There is great need to pay attention to quality, finish and packing. "Shipment of some shoddy materials and hadly packed goods has, in the past", he created resentment in the market. Bad marketing methods similarly destroy the goodwill which is slowly and perseveringly built up by some manufacturers and exporters. All this must be corrected and a fresh start made to study the market situation in Australia ".

A few suggestions are that Indian cotton textile experts should visit Australia in order to study public taste in cotton textiles; Indian textiles should be exhibited in big retail stores in capital cities as a means of building up demand; suitable changes in the tariff rates under which Indian cotton textiles are admitted into Australia, and which discriminate against Indian goods, should be seriously considered.

#### Cotton Goods

A list of major items of import by Australia from India under the group Apparel, Textiles and Yarns" includes, besides cotton piecegoods, yarn and other cotton goods, commodities such as boots and shoes, hats, buttons, silk, rayon, staple fibre and woollen goods, blankets and rugs, floor coverings, mats, bags and sacks and woolpacks. But, from the point of view of the imports from India, the head "cotton goods" is the most important. Under this head. the main varieties of cotton piecegoods in demand are: bookbinders' cloth and bunting, canvas and duck, piecegoods for hemstitched cosies etc., calico for beg making, grey unbloached, white bleached, cotton piecegoods—dyed or coloured, shirting cloth, printed cloth dyed or coloured, etc. drills, dungarees and jeans, leather cloth, cotton tweeds, oil baize or similar fabrics knitted or lockstitched cottons, tapestries etc.

The Governor-General has been pleased to appoint Mr. Sashi Bhusan Sinha, Advocate, to act as a Judge of the Calcutta High Court during the absence on leave of the Honourable Mr. Justice N. G. A. Edgley, I.C.S., says a Press Communique issued by the Ministry of Home Affairs on March 2.

## PAKISTAN—FOREIGN TERRITORY FOR LEVYING CUSTOMS

NDER the arrangements put into effect at the time of Partition by the Dominions of India and Pakistan, there was to be freedom in the movement of goods between the two Dominions and no customs duties were to be levied in either Dominion on goods imported from or exported to the other, says a Press Communique issued by the Ministry of Finance on Feb. 27. This standstill agreement was to cover the period August 15, 1947, to February 29, 1948.

In connection with the claim by the Pakistan Government for a share of export duty on jute collected at the port of Calcutta, the Pakistan Government were informed that a particular item of revenue could not be dealt with in isolation, and that the whole matter would have to be considered comprehensively over the entire field of freedom of trade and commerce between the two Dominions. the levy of customs and central excise duties, their pooling and allied matters. The Government of India further expressed their willingness to enter into a comprehensive and reasonably longsettlement between the two term Dominions which could be given effect to retrospectively 1947, if necessary. from August 15,

It has, however, not been possible to start these negotiations for a variety of reasons, and as the standstill agreement in respect of customs and excise lapses on February 29, 1948 in the normal course, the Government of India have been constrained to declare, with effect from March 1, 1948, Pakistan to be foreign territory for the purposes of levying customs, that is, import and export duties.

Necessary notifications to implement this decision are being issued in the Gazette of Inaia under the Indian Tariff Act, the Sea Customs Act and the Land Customs Act.

The scheme for grant of loans to non-Muslim refugee students and trainees from Western Pakistan has now been extended to those non-Muslim students and trainees who were alruady studying in India but have either lost their parents or guardians or whose parents or guardians have migarted from Western Pakistan to the Indian Union and are unable to continue their studies or training for lack of funis, says a Press Note issued by the Minstry of Relief and Rehabilitation on March 2.

Loans will be granted to such students and trainees under the scheme for grant of financial assistance to non-Muslim refugee students and trainees already announced.

#### CASH SALES BY MAIL

According to a new procedure established by the Joint Export-Import Agency for over-the-counter and cash sales by mail, Indian buyers can now purchase from German exporters goods valued up to 5,000 dollars and available for immediate delivery without signing a formal contract, says a Press Note issued by the Ministry of Commerce on Feb. 18. A signed order from the buyer will be sufficient for the purpose. Payment will be made directly to the Joint Export-Import Agency (U. S./U. K.) Branch office in sterling by money order, travellers' cheque or bank cheque.

In order to enable Indian business men to take advantage of this procedure, it has been decided to grant import licences wihout the approval of the Joint Export-Import Agency which is otherwise required for transactions outside this scheme. Intending buyers should obtain import licences before placing orders for licensable goods, a list of which is given in I. T. C. Notification dated December 12, 1947.

#### **MOVEMENT OF TEXTILES**

Under General Permit No. 1 issued under the Cotton Textiles (Control of Movement) Order, 1946, the country was divided into a number of Surplus and Deficit Zones which are not identical with provinces, says a Press Note issued by the Ministry of Industry and Supply on Feb. 19. Thus the South Zone includes not only the Province of Madras but also Coorg, the Madras States and the States of Mysore, Baganapple and Sundur. As a result of relaxation of the control over cotton textiles it has been decided that movement of textiles will be free within a zone, and not within a province as stated in the Press Note issued on January 19, 1948, while inter-zonal movement will continue to require the approval of Textile Commissioner, Bombay.

### STERLING BALANCES AGRELMENT BETWEEN INDIA AND U.K.

THE financial discussions between the Indian and United Kingdom Delegation relating to India's sterling balances have concluded and the Financial Agreement of 14th August, 1947, has been extended to 30th June, 1948, says a Press Communique in used by the Ministry of Finance, on Feb. 22.

As a result of this extension, the balance of the No. 1 Account, including the working balance of £ 3 million, will be carried forward. Out of this a certain sum, to be determined in accordance with the agreement between India and Pakistan relating to the division of the assets of the Reserve Bank, is transferable to Pakistan. An additional transfer of £18 million for India is being made immediately from the No. 2 Account to the No. 1 Account.

In view of the world-wide dollar shortage and the strain to which the central reserves of the sterling area are being subjected, the Government of India have agreed to restrict their net drawings on the central reserve for hard currencies to a total of £10 million in the current half year. India will, of course, have available at her disposal her own earnings of hard currencies in addition to the £10 million. India will seek permission to draw from the International Monetary Fund any additional amounts needed to cover her deficit in United States dollars.

It has been decided to lift price control over exports of handloom cloth to Ceylon which was instituted by the Government of Madras under powers delegated by the Government of India, says a Press Note issued by the Ministry of Commerce on Feb. 21. The relevant notification under the Imports and Exports (Control) Act, 1947, appears in Part I of the Gazette of India published on February 21, 1948.

### India's Share Of German Reparations

Invited to state India's share of reparations from the European zone, the Hon'ble Mr. C. H. Bhabha, Minister for Commerce, said in the Dominion Parliament on Feb. 25 that under the Paris Agreement on German reparations undivided India had been allotted 2 per cent of general reparations (called category 'A') and 2.9 per cent of industrial and capital equipment removed from Germany, merchant shipping and inland water transport (called category 'B').

Consequent upon the partition of India, it had been mutually agreed that the Dominions of India and Pakistan should hold 82.5 per cent and 17.5 per cent respectively of the total allotted to India as a whole. The Dominion of India's share was thus 1.65 per cent of category 'A' and 2.39 per cent of category 'B'. The Minister made it clear that

Germany was the only European country from which India was receiving reparations.

"It is proposed to utilise the capital goods allocated to India to the best interests of the Dominion", he added. The Government had not yet laid down any definite policy regarding the disposal of these goods, but their present intention was to make allocations to such private industries as were most likely to utilise them to the best advantage of the Dominion as a whole, after retaining such as might be required for any industrial schemes sponsored by the Government.

He declared that India had not been able to secure any ships from Germany by way of reparations.

Dr. John Matthai

## Rs. 9.85 CRORES SURPLUS ANTICIPATED No Increase In Fares And Freights

PRESENTING the Railway Budget for 1948.49 in the Dominion Parliament on February 16, the Hon'ble Dr. John Matthai, Minister for Railways, said that they seemed to be set for the time being in the direction of gradual improvement and unless any untoward development occurred he expected a marked improvement by March, 1949.

The net revenue in 1948-49 was expected to be Rs. 32.38 crores. Deducting Rs. 22.53 crores as interest payable for the money borrowed by the Railways out of this amount, they were left with a net surplus of Rs. 9.85 crores.

The Railway Minister said that there would be no increases in fares and freights. Referring to the prospects of traffic movement, he said they had now reached a stage when he could say with a certain degree of assurance that they had turned the corner.

During the past few months there has been a perceptible improvement in the delivery of orders of spare parts from the United Kingdom. There is also an improvement in the number of mandays worked in the workshops.

The Minister annouced that various schemes for doubling the line capacity at various points of heavy congestion had been taken in hand.

4,050 general service wagons were scheduled to be delivered by the end of 1948. Order had been placed in Canada for oil-tank-wagons which were also expected to be delivered by March 1949. 146 new locomotives were expected to be delivered in the course of 1948 and this together with the improvement noticeable in the workshop position must make a difference for the better as regards locomotives.

Below is the text of the speech :-

It is now hardly three months since I had the honour of introducing the Interim Railway Budget, and the House will therefore appreciate that there is not much that is new that I can tell it today regarding the working and the administration of our railways. There is not much in the circumstances that I can add to what I said then regarding the problems and the difficulties by which the railways are faced and the endeavours that we are making to meet these problems and these difficulties. My task therefore this evening is a simpler one, and I propose therefore to take the straightforward course of dealing first of all with the budgetary position and then, having done that, to give the House few indications of the directions in which things have altered either for better or for worse since I spoke to the House last time.

I do not want in explaining the budgetary position to weary the House with many financial and statistical details because for one thing, Hon'ble Members will be able to get these details from the Explanatory Memorandum, copies of which will be in their hands before the House rises: and also it is my experience, as a legislator for a brief priod, and also to the House long ago, that a budget speech which is packed with details has invariably the effect of making Hon'ble Members groan almost visibly. I want to avoid that tonight and I propose therefore to give only a brief summary of the financial position of the railways today.

I will take first of all the budgetary position as disclosed in our figures relating to the 7½ months since the 15th August. We placed certain budget estimates before the House for that period, beginning the 15th August. I want briefly to tell the House how these budget estimates have been revised

# THE RAILWAY BUDGET FOR 1948-49

in the light of actual experience. The House will find that there are considerable discrepancies between the budget estimates and the revised estimates. That is inevitable in the position in which we are placed at present. We had to frame budget estimates in the first place for a divided India, based upon our experience of an undivided India.

In the second place, we had to frame estimates for a broken period, based upon our experience for a whole pre-vious year, and it is a very difficult matter in actual practice to make allowance for those seasonal variations which occur between one period and another in the course of a year. And another circumstance which placed us at a disadvantage in framing these budget estimates last year was that we were then right in the thick of the period of civil disturbances and refugee movements, and these had caused such a degree of dislocation in our finances and in our general administration, that it was difficult even to determine the current trends. As the result of these various elements of uncertainty, the House will find that our revised estimates vary somewhat considerably from our budget estimates.

#### Fall in Earnings

I will give the main figures. The revised estimates for the 7½ months ending 31st March, 1948, show a fall in earnings of Rs. 8 crores as compared with the budget estimates. That fall in earnings occurs under goods earnings and under passenger earnings. But there is one item of earnings under which there is an increase, and that is what is called "Other coaching" earnings. What these earnings mean is breifly this: There is a considerable amount of parcels traffic now as the result of the congestion in regard to goods traffic. That is to say, when you cannot send a thing by goods train, then you try to send it by a parcel traffic therefore shows an increase. Then, there was a considerable amount of military movement as the result of demobilization and as the result of movement of troops in connection with the disturbances.

Our earnings under goods according to the budget estimates were Rs. 57.33 crores, while according to our revised estimates, they have come down to Rs. 53.38 crores. Our passenger earnings according to budget estimates were Rs. 52.12 crores which have come down in the revised estimates to 45.8 crores. Other Coaching earnings which we estimated at Rs. 5.03 crores have gone up to Rs. 7.87 crores. The net result is a drop of Rs. 8 crores. As against that there is also a drop in

our ordinary working expenses. We estimated that our ordinary working expenses would be somewhere about Rs. 99 crores: while revised estimates show that our expenses have been Rs. 93.55 crores. I should like to flatter myself that this fall in working expenses indicates that we have been able to do with less expenditure. The position is not quite so gratifying as that. What really has happened is that the expenditure that we estimated for the year 1947-48 could not for various reasons be incurred before the end of that year, and the expenditure therefore has not been reduced but has been only post-poned.

These drops in earnings and in working expenses have resulted in an increase in the net loss that we estimated from Rs. 2.7 crores to 5.2 crores and the result of that increase in the net loss is that we have had to make larger withdrawals from our Reserve Fund. And the Reserve Fund, therefore, in March 1948 will stand at a figure of Rs. 3.8 crores. That briefly summarises the position as regards the current year.

#### The Budget Year

Now with regard to the year 1948-49, the budget year. There again we are faced with several elements of uncertainty which prevent us from making anything like accurate forecasts. The year 1948-49 is complete year. The usual practice, as the House knows, is that in framing your Budget Estimates for the coming year you rely mainly upon the basis of your revised earnings for the current year. The revised earnings for the current year represent a broken period, and on the basis of that broken period you have to frame your estimates for a whole year—a necessarily difficult process. Then although we have now come to the end of the more serious phase of the civil disturbances which have occurred since Partition, we are still much too near this period of disturbances to be able to determine with any degree of reasonable precision either the current trends or the probable trends in the coming year.

Such estimates as we have been able to make, the best informed and the most intelligent estimates that my advisers have been able to make, give us thesefigures. We expect that in 1948-49 the gross traffic proceeds would be Rs. 190 crores. As against that we estimate that the ordinary working expenses would be Rs. 147.15 crores. To that you have got to add the depreciation which, as the House knows, is calculated at present at 1/60th of the capital at charge of the Railways at the end of the current year. The capital at charge is somewhere of the order of Rs. 678 crores and 1/60th of that would give you Rs. 11.18 crores. Then there is the payment that we have to make to lines that we work on behalf of outside concernstheir share of the traffic receipts which would come to Rs. 1.45 crores.

Deducting working expenses, depreciation and payment to worked lines, we are left with a net traffic receipt of Rs. 30.22 crores. To that Rs. 30.22 crores you have to add various miscellaneous proceeds—and we get a very wide range

of them. After deducting the charges which are appropriate to these miscellaneous receipts, you get a net revenue from this source of Rs. 2.18 crores. Altogether, therefore, in 1948-49 we expect to have a net revenue of Rs. 32.40 crores. From that you have to deduct the interest which is payable to Government for the money borrowed by the Railways.

That has been calculated at a rate of 3.25 per cent which represents the weighted average rate of interest payable on the different classes of Governments' borrowings. That, on the average capital at charge which we expect during 1948-49 is somewhere about Rs. 690 crores, will give us altogether a liability on account of interest charges of Rs. 22.53 crores. Deducting Rs. 22.53 crores from the total net revenue of Rs. 32.40 crores, you are left with a net surplus for 1948-49 of Rs. 9.85 crores.

#### No Increase in Fares

The House will be relieved to know that it is not my intention on this occasion to propose any increases in fares and freights. Probably the only redeeming feature of my Budget is that I do not propose on this occasion to pursue this evil tradition.

The question arises: what is to be done with this net surplus of Rs. 9.85 crores which we expect for the year 1948-49? First of all, there is the question of the contribution payable by the Railways to General Revenues. That question at present is determined. by a Resolution which the Legislature passed in 1943, which practically lays down that the contribution to General Revenues is to be fixed with reference to the requirements of the Railways and of General Revenues in each particular year. We have for many reasons considered it advisable and satisfactory that this question should be entrusted for decision to a Committee composed of Honourable Members of this House.

A Committee has therefore been appointed consisting of three Members of the Standing Finance Committee and three Members of the Railway Standing Finance Committee, under a Chairman having the authority and the judgment of no less a person than the Hon'ble the Speaker of the House. Pending the receipt of the findings of this Committee, Government do not propose to make any allocations out of the surplus. When the findings of this Committee have be a received and Government have been able to arrive at their decision upon these findings, then in the ordinary course proposals will be made before this House for the necessary appropriations. That, Sir, brings me to an end as regards what I wish to say about the financial position of the Railways.

Now I will go on to a more general question, the question, I take it, in which the House is most deeply interested, and that is the question of the prospects of traffic movement on our Railways in the future. When I presented my Budget statement to the House last November, I told the House that the circumstances with which the Railways were faced were more difficult than any

that I had anticipated in my most pessimistic moments. What I am inclined to say today looking at the trend of things is that probably we have reached a stage where the steady process of deterioration which began with the Partition and the consequences that flowed from Partition has now been definitely checked. From such evidence as I have been able to see, I believe we have now reached a stage when I could say with a certain degree of assurance that we have turned the corner which does not mean that there is any striking and decided improvement that I can report. What it means is that we have reached a stage where we can go forward expecting steady progress. I do not anticipate that we shall be called upon to retrace our steps or to look back.

What exactly are the reasons which lead me to make this statement to the House? I want, first of all, to deal with the immediate future, that is to say, the next few months. Firstly, there is this very obvious fact that we have come to the end of the period of serious civil disturbances. We have come to the end of the period of these vast refugee movements. The House will remember that altogether during a period of two and a half months the Railways were called upon to move as many as 3 million refugees, which represents the capacity of exactly a thousand passenger trains. That was a terrible strain on the Railways and we have come to the end of that period of strain.

#### Marshalling Yards

Secondly, I told the House last November that one of the problems we are faced with-have been faced with since the end of the war-is the large diversion of traffic which has occurred as the result of various war developments. A large volume of traffic is now moving along routes which are not equipped for dealing with this large amount of traffic and I said therefore that it would be necessary for us to consider the question of improving and extending our Marshalling Yards, that is to say, those yards where you distribute wagons with reference to their ultimate destination. These marshalling yards, at the points where heavy traffic occurs, are not today equipped sufficiently to cope with this growing volume of traffic.

Now, pending a large extension of our marshalling yards, what we have been setting up an arrangement for much more intensive and effective supervision of our marshalling yards. We have been doing in order to meet the present crisis, is that we have been setting up an arrangement for much more intensive and effective supervision of our marshalling yards. We have also set up a more effective system of control of train movements. And these two factors already are yielding satisfactory results.

I will give the House some figures. I will take some of our typical, most important marshalling yards. At Asansol, when I spoke to the House last November, the period for which a wagon was detained in the marshalling yard there was 46.6 hours. Today the latest figure that I have is 31.1.1-At Cawnpore, last October the period of

detention was 53.9 hours. Today it is 31.7. At Moradabad it was 39.9 hours. Today it is 22.8. At Ondal which represents the place where most of the coal traffic occurs, it was 22.1 and today it is 18.2 On the whole, taking these representative centres, there is a reduction in the period of detention to somewhere about one-third. The target that we are going to place before the Railways and on which we are going to insist is that no detention should occur in marshalling yards for a period in excess of 24 hours and we are going to see to it that that target is observed.

#### **Workshop Position**

The next factor that I want to deal with is our workshop position. The importance of that is this. Practically the greater part of our more serious troubles today is due to our locomotive position. The House will remember that I said last time that of the total number of locomotives that we possess today, about a third are over-age locomotives which have done their normal period of service and which, if locomotives were available in the world market, would be replaced almost immediately. There are countries in the world like the U. K., for example, where there is a large proportion of over-age loco-motives. But they are able to carry on with this large proportion of tired, old locomotives, because they have got effective workshops where in point of spare parts they are not at the disadvantage at which we happen to be. Therefore, the position of our locomotives is very closely bound up with what happens in our workshops.

There are two elements of importance in connection with the workshops. First of all, there is the question of the availability of spare parts. There is secondly the question of labour and the amount of output that we can expect from labour.

I take first of all the question of spare parts. I am glad to be able to report to the House that during the past few. months, there has been a perceptible improvement in the delivery of orders of spare parts from the United Kingdom. Secondly, it has been possible for us, with the co-operation of the Defence Ministry, to utilise increasingly the spare capacity for manufacturing these small parts in our Ordnance Factories and a very considerable progress is being made in this direction. Thirdly, as the result of consultations with my Hon'ble colleague the Minister for Industry and Supply, we have been able to get some relaxation of the arrangement under which all orders for spare parts for machinery of all kinds is to be placed through the Industry and Supply Department. The formality and the delay that sometimes occur-quite necessarily-have, to some extent, held up the work done in the workshops by the delay of the arrival of spare parts.

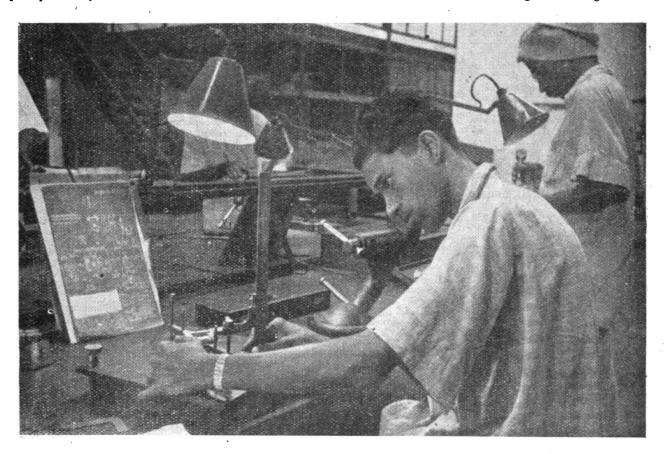

As a result of the relaxation I have

been able to get from my Hon'ble colleague, Local Administrations are in a position today to exercise a great deal more initiative in canvassing and investigating the possibility of getting spare parts in local areas. The position will be illustrated by the fact that in 1948 the orders that we have been able to place in India for spare parts show an improvement of nearly 37% over the orders placed in India in 1947. That is as far as spare parts are concerned.

#### Labour Co-operation

I now come to the question of labour. I have been having the figures carefully examined and I am glad to be able to say that on practically all our principal Railways today there is an improvement in the number of man-days worked in the workshops. We find that on the B.N.R., on the E.I.R., on the S.I.R., on the M.S.M.R. and to some extent on the G.I.P.R.

Now that is a cheering fact, but that is not the whole problem as far as labour is concerned, because it is not merely the question of attendance but it is also the question of the work turned out during the period of attendance. I have had an expert examination made recently in respect of two of our most important workshops and that expert examination has revealed the somewhat depressing fact that the quantum of work which is being done during the normal

In an Indian Railway Workshop: An important section of the Workshop is now devoted to the manufacture and use of precision instruments which in pre-war days were usually imported and also sent abroad for repair. The Gauge maker in the foreground is testing the accuracy of an assembly jig with a Vernier Height Gauge

prescribed period is considerably below what we might reasonably expect. The basis on which this examination is done is this: First of all these people with a very considerable amount of experience of this class of investigation, determine the amount of standard output which under given conditions may be expected of a labourer and then they take the actual amount of work done and between the two, they notice between these two workers there is a very considerable margin. There are two ways of meeting that problem. First of all, we have to provide administrative devices which would automatically secure that each labourer renders his full quota of work. There is, secondly, the co-operation to be secured from labour organizations themselves. We are considering the question of administrative devices and as far as co-operation from labour is concerned, I am confident that there are more responsible elements in the labour organisation representing the Railways and among them there is a very keen awareness of what is required of them in these circumstances.

Taking the question of the improvement that I have noticed in respect of the availability of spare parts and the improvement in respect of attendance in the workshops, the result of these two factors must necessarily be reflected in the turn-round figures. Turn-round, as the House knows, is the period which a wagon takes to perform a journey and return to take up fresh traffic. When I spoke last November I said the average period of turn-round of a broad gauge wagon was 48 days. The latest figure that I have is 45.9. On metre gauge lines, the average figure that I gave was 51. Now the latest figure that I have which corresponds to the end of 1947 is 60.7. This shows deterioration, but it requires a certain amount of explanation. One of our biggest metre gauge workshop is Ajmer. At the end of 1947 Honourable Members will remember there were very serious disturbances in Ajmer; curfew order had to be imposed and there was a general atmosphere of unsettlement and dislocation. Now if you leave out Ajmer, then the average figure for the turn-round of metre gauge wagons comes to 45, as against the figure of 51 which I gave the House last November.

#### Labour Shortage

Next I will deal with the difficulties that arose from the transfer and exchange of staff between India and Pakistan. That was a factor which led to a very great deal of disorganization of the Railways, about 100,000 men being exchanged and settled in new positions in the course of about 2½ months. Now that general dislocation is rapidly disappearing and men are beginning to settle down in their new positions. But one of the most serious difficulties that we had to face was that this transfer resulted on our side in a shortage of essential workers in particular categories. The house will remember that where the most serious difficulty arose on this account was the East Indian Railway in regard to their engine crew, which created, as I said, a first-class national crisis in respect of coal move.

I told the House that by various means we were able to reduce the shortage which at first was 47 per cent. to 25 per cent. in November. My latest figures show the shortages have come down to 9 per cent.

Then I wish to deal with a factor which has been becoming increasingly important in recent months and that is undue detentions of wagons at destinations by our customers, by factories, by trade and sometimes by Government Departments in Provinces and States. I wish to give the House a few illustrations, because this is one of the more serious difficulties with which we are faced at present. Take jute. Towards the end of last year in the Cossipore Road area in Calcutta the number of wagons which were waiting for unloading was 700 to 800 wagons in excess of the normal figure, which means to that extent the wagons are prevented from doing normal service. At important industrial centres in India, such as Dalmianagar, Haripur, Tatanagar, we notice there is an increase of 20 to 25 per cent. in the number of wagons waiting to be unloaded in excess of the normal figure. Similarly, with regard to collieries. I find that of the wagons which are supplied to collieries for being loaded with coal, very often a considerable number come back without being loaded, for reasons which are connected entirely with the colliery position. It may be lack of labour; it may be the inability to get stocks of coal ready in time. The last month, lanuary 1948, for which I have formers January 1948, for which I have figures shows that altogether 1,375 wagons came back empty without being loaded, which represents in terms of coal about 30,000 tons. I am mentioning these figures in no spirit of criticism, because I am well aware of the difficulties by which trade and industry are faced, in the matter of handling of wagons, but I do think when railway transport is in the difficult position in which it is today, we have a right to ask industry and trade to give us more co-operation.

#### Counteracting Delay

As against this position the measures that the railways have taken are: We have reduced the free time allowed for demurrage purposes from 9 hours of daylight to 6 hours. After that demurrage will be charged. Sundays are to count for demurrage purposes. They will no longer be exempt. We are raising the demurrage fees on some of our Railways like the E. I. Ry. and the B. B. & C.I. and the G. I. P. Railways. A great deal of handling is done by the Railways themselves and we have asked the Railways now and we are going to insist on it that they should set before themselves a target of a maximum of 3 hours for placing a wagon for unloading immediately it arrives at a terminal station, and as I said before, we are going to insist also that the period of detention in marshalling yards should on no account exceed 24 hours.

These various factors which deal with goods traffic would which in my opinion make for a certain degree of improvement, are reflected in the average figures of turn-round on some of the most congested of our railways. Take the G.I.P. When I spoke last time the turn-round of wagons on the G.I.P.

Railway was 10.6 days. The latest figure that I have is 9.5, a reduction of 10 per cent. On the E. I. Ry. it was 17.4, and the latest figure is 14.1, a reduction of 20 per cent. And speaking of the E. I. Railway, I want to make a passing reference to the question of coal despatches. I said last time at the beginning of October when we were faced with this great shortage of engine crew, the total number of wagons that we could send on the E. I. and on the B. N. Railways to the collieries direct was somewhere about 1,400. In November last when I spoke to the House we raised that number to somewhere about 2,600. The latest figure that I have of the total number of wagons despatched from the E. I. R. and the B. N. R. with coal for the week ending the 7th February is 2,900.

#### **Decontrol Disorganises Traffic**

I have been speaking of the directions in which a little improvement occurred as regards the operation of the Railways. Now this operational improvement has been to some extent offset by the disorganisation of traffic which has been caused by the policy of decontrol. What has happened is this. Take the question of foodgrains. Before we introduced the policy of decontrol, all the more essential movements were sponsored by Government and all movements sponsored by Government were given top priority—they were all grouped in Class 1. When Government decided to reduce their commitments and it became necessary therefore to make it possible for private movements to move more freely, we raised all movements of food-grains on private or trade account from Class 4 to Class 2.

The result of that is that in class 2, in the second grade of priority, today, there is so large a number of indents for wagons that the Railways are unable to cope with all the demands made on them. It does not mean that the quantum of traffic has come down; what it means is that when you have a large number of indents in respect of commodities all of which are in the same grade of priority and some of them are turned down and others are accepted, naturally there is a great deal of complaint, resentment and heart-burning, which is what is going on in the country today. I have been giving a great deal of attention to this question, because I realise that unless the Railways are able to meet the situation, the policy of decontrol would be made difficult.

There are two problems that arise. When you allow unregulated movements on private account, you find there is a large number of what we call cross movements. I have come across a number of cases recently where goods are despatched by traders to a particular destination and immediately the goods are rebooked and sent on to another destination which is much nearer the original point of consignment—which means that there is a great wastage of transport. Similarly, when you allow trade in an unregulated manner to move foodgrains then sometimes you find that food-grains are sent across to stations which are much too long from the station

of consignment; it might be possible, for example, for that particular centre to be supplied with foodgrains from nearer point.

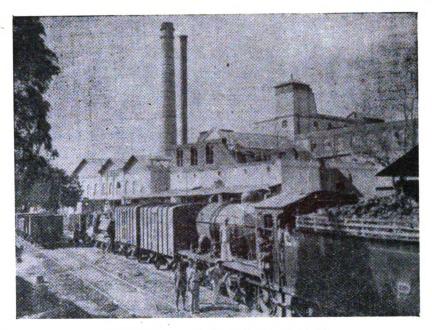

These cross-movements and these uneconomic movements are putting a very great strain upon the Railways. Since in the higher grades of priority you have now a large variety of commodities included it looks to me, if we want to maintain the economic stability of the country, it will be necessary for us to take into consideration a programming of movement of essential commodities.

In other words, we have got to take up the question, in the circumstances with which we are faced today, of determining with reference to priority both the nature and the direction of the traffic. We have got to consider the fixation of quotas and regulation by zonal control. I am not going to suggest for a moment that we are going to do this immediately. We are not. We are, however, watching the situation very carefully and if we find that the policy of decontrol is going to be defeated by the unnecessary load which is being put on the railways it will be necessary for us to take this matter up for active consideration.

#### Railway Priorities

As regards the question of Railway priorities, the House will remember that the whole subject is now regulated by the Railways Transport of Goods Act which the late Assembly, passed last year. That Act will come up again before the House for consideration. As far as I can express a personal view-I do not commit Government in any way-as far as I can express my personal opinion on this question, my feeling is that it would be necessary for us to continue the control of Railway priorities, but I think it is up to us to take steps for regulating these priorities more in accordance with the opinion and the wishes of the trades concerned. At present, as you know, there is a Chief Controller of Priorities, who is assisted by various Regional Controllers. And I am applying my mind to the question of providing these Regional Controllers with a small effective authoritative committee in each region which will represent the best business opinion of that area.

I have been dealing with the immediate future, and I will repeat the statement with which I started, that we seem to be set, for the time being, in the direction of a gradual improvement. I want to go further and indicate to the House, so far as I can, what are the prospects for the year 1948-49. The statement I would put before the House is this. Unless any untoward developments occur, I expect of a marked improvement by March 1949. My reasons have so are these. I saying told the House already that in view of a vast diversion of traffic that has been occurring recently, our line capacity and our marshalling capacity are being over-strained. As regards the line capacity, we have already taken in hand various schemes for doubling the line capacity at various points of heavy congestion. Itarsi—Bhopal, Lucknow-Bareilli, Cawnpore-Etawah, the Moradabad section and various other lines-Hon'ble Members will find a complete list of it in the ex-

Wagons being loaded outside a cotton mill

planatory memorandum. The point I wish to stress is this: We have set ourselves a target for completing these works by March 1949 and if we are able to do that, then it seems to me that we should be in a position to relieve congestion at some of the most important points on our railway system. The House is aware that a couple of months ago we re-opened what used to called the Dufferin Bridge, now called the Malaviya Bridge, which was regirded and has now been opened for doubleline traffic. It is a very important gateway of railway communications in the U. P. and I think its doubling will make considerable difference to the movement of traffic.

With regard to the remodelling and the extension of marshalling yards, we have a number of schemes on hand all of which are expected to be completed by March 1949,—Ujjain, Lucknow, Cawnpore, Tundla, Gorakhpur and Arkonam and Tuticorin in the South—and I hope to take in hand soon the extension and remodelling of the Station yard at New Delhi. If we are able to achieve our object and finish them by the end of 1948-49, then I expect there would be considerable relief.

#### New Stock Expected

Next I want to give some figures with regard to the additional rolling stock which we expect to get in the course of 1948-49.

The number of general service wagons which are scheduled to be delivered by the manufacturers in India by the end of 1948 is 4,050. In addition to that we expect that oil-tank wagons of the order of about 150 will also be delivered by the end of 1948. Then we have placed an order in Canada for oil-tank wagons which are also expected to be delivered by March 1949. There are other classes of wagons numbering about 177, all scheduled to be delivered by the end of

1949. It comes to a total of over 4,000 wagons.

I am not so foolish as to think that in the present strained conditions in India regarding labour and material it would be possible for our manufacturers to deliver these things according to schedule. But I have strong reasons for thinking that at least half this number will be delivered. And if we number will be delivered. are in a position to put on the lines at least two thousand additional wagons in the course of the next year it would make a perceptible improvement. Similarly we are expecting 146 new loco-motives to be delivered in the course of 1948; and this together with the improvement which is noticeable in the workshop position must I think make a difference for the better as regards locomotives.

#### Shipping Position

My third reason for being hopeful about 1948-49 is that the shipping position appear to show some improvement. If we are able in 1948-49 to divert to the sea route some of the heavy traffic from Calcutta to Bombay which now goes by rail it would, I think, very considerably ease the railway position. I have taken this matter up with my Honourable colleague, the Minister for Commerce, and between us we expect to find some solution of this problem. The real point is that if you send a commodity like coal from Calcutta to Bombay you have to pay about Rs. 20 more by sea than you would by rail. Although we have increased our freights a good deal we still have in the railways today, I believe, the cheapest form of transport.

The last point to which I wish to refer is this. I make no dogmatic statement about it—nobody in the present circumstances can afford to do so—but all the indications that I see give me a feeling that there is something like a marked improvement in the prospects of the

world food position. This break in prices that his now occurred in the United States is variously explained. I do not want to commit anybody. I do want even to commit myself officially. But I cannot help thinking, from such authoritative reports as I have seen, that there is a feeling that the prospects of the next harvest in the United States are a good deal better than people expected a few weeks ago. That probably coupled with the possible cuts in the Marshall Plan may account for this break in prices. But supposing there is an improvement in the general food position and supposing correspondingly there is an improvement some time towards the end of 1948 in India, it seems to me that a very heavy load will have been lifted off the railways. I want so tell the House what I have felt very strongly for over a year. One of the biggest prolems that the railways have had to face since the end of the war is this problem of moving over long distances large quantities of foodgrains from part to up-country, from surplus provinces to deficit provinces, and this along routes which are not equipped for coping with that traffic. If fortunately there is a general improvement in the food position, it seems to me that one of the most serious factors which today are impeding the railway traffic will have been removed

Having said all this I want to reaffirm what I said last November that in spite of these little indications of improvement I do not think that we shall be able to return to normal conditions in less than three years. And when I say 'normal conditions' what I mean is that if you ask me when our railways will be in a position to accept all the traffic that offers, I say that we shall not reach that position in less than three years.

#### Passenger Traffic

I have been speaking of goods traffic: I want to say a word about passenger traffic. The great problem regarding passenger traffic today-and when you consider the question of amenities the problem that worries you most--is that of overcrowding. We have today, as far as we can estimate, more than twice the number of passengers that we used to carry in 1938-39; but the amount of passenger train capacity that we are in a position to offer today is 14.5 percent less than in 1938-39. That gives you straightaway in statistical terms the problem of overcrowding. I expect to see a little, improvement and I want to tell the House why. It is one of the most interesting features of passenger traffic on our railways today that there is a steady decrease in the average distance travelled by third class passengers. If there is a steady decrease in the average distances travelled by passengers the inevitable result is that at any point of time you will find a steadily decreasing congestion. Take the points between which trains run.

If between these points passengers travel over shorter distances, obviously at each point you will find that the amount of congestion in the train would correspondingly be less. I have been trying to understand why it is that there is this steady decrease in the average distances travelled by passengers, and

the best explanation that I can give is that while there has been a very great increase in the habit of travel due to various reasons the railways have been able to provide an increase not to anything like the extent required but have been able to provide some increase in facilities which is greater than the increase in facilities offered by road transport.

The result, therefore, is that people who would ordinarily have travelled short distances by bus are now travelling by trains. And it seems to me, therefore, that until we are in a position to restore the bus position—during the war the extent to which bus traffic decreased was somewhere about one third of what it was in 1939-you are going to have these steadily decreasing average distances travelled by passengers. Apart from that in 1948-49 we expect to place on the lines somewhere about 700 to 800 new coaches; 350 of them are coaches that we have ordered and a little over 400 coaches would, I expect, be returned by the Defence Department to whom they have been loaned.

#### Ticketless Travel

Another factor which is going to react on overcrowding is ticketless travelling. I told the House last time that the problem was particularly acute in the United Provinces, and in consultation with the Hon'ble Premier of the United Provinces we have started a schome there which consists of a considerable police force and a considerable complement of special magistrates devoted entirely to the problem of ticketless travel. We have put altogether 17 platoens of police and 34 railway magistrates, the whole cost of which will be borne by the railways. And with the co-operation of the Hon'ble Premier we have been able to start this on the 15th January; and the results that I have been definitely seen so far have encouraging.

Similar arrangements are contemplated for West Bengal, for Bihar and for Assam. As I told the House more than once, this problem of ticketless travel is much more than a railway problem; it is ascial problem. It is one of these things which seem to reflect the gradual decline in the sense of law, which results when big political changes have occurred.

I was looking the other day into the report of the Madras Government Railway Police for 1947. It disclosed the interesting fact that the number of cases that they had to handle in 1947 showed an increase of 90 percent over 1946 and showed an increase of 130 percent over the average of the previous five years. That, I think, would be equally true of other provinces.

I want to make a reference to the passenger guides that we have been appointing recently. I believe very strongly that conditions of third class railway travelling today provide an enormous scope for social service of the highest quality. I have instructed the railways in consultation with various recognised social service organisations to select people with the right training, the right spirit and the right outlook to take up this work. We have made

a beginning on various railways and I am watching with some hope and; attempts the same time, with some anxiety how this arrangement will work. If it works successfully I think we shall have done something to tackle a very important problem in the railways.

Lastly, I would like to make a reference to the Betterment Fund. Last year when I placed the railway budgetbefore the old Assembly there was a great deal of discussion as to what was the right object for expenditure from the Betterment Fund. My own feeling is, if one reads the other papers and studies them with some care, the primary purpose of the Betterment Fund is to provide expenditure which will result in an improvement in amenities for third class passengers and we are going to see now that such expenditure as we are in a position to provide from this Fund will hereafter be devoted in the main to this problem of amenities. That brings me to an end of this problem of traffic generally.

There are just one or two matters to which I would like to refer before I sit down. I said last time that we were going to set up a Railway Rates Tribunal and that I would have it put into force by the 1st of April. On examination it is found that unless this tribunal is vested with statutory authority it will not be able to function in the way in which we intend it to and for that purpose, therefore (I thought originally that it could be done by executive order) we are going to place a Bill before this House in the course of the session to set up a tribunal on these lines, that is to say, with a much wider scope than the present Rates Advisory Committee and with a mandatory and not merely an advisory jurisdiction. I hope with the co-operation of the House it will be possible for us to put it in operation at the earliest possible date.

#### Inquiry Committee

With regard to the Railway Enquiry Committee, as I told the House in answer to a question, the Committee will begin to function in the course of a week or two. Mr. Neogy, who with great ability set the line on which the enquiry is to proceed, will now be replaced by my Hon'ble friend Pandit Hirday Nath Kunzru, who I am sure, will bring to bear on this important work his unique knowledge and experience of public affairs. That covers more or less the range of subjects with which I want to deal.

There is just one thing more to which I want to refer before I resume my seat. In the remarks I have offered to the House this evening the note that I have tried to strike is what I might cell a note of restrained or subdued optimism. I believe we are looking forward and we are moving forward. That is as far as the near future is concerned. I want to tell the House also from a study such underlying forces as I have been able to perceive that I believe. in spite of the difficulties through which we are passing today, there is a great future before the Indian Bailways. I believe also that that future will dawn

within a definitely measurable period of time.

I have reasons for thinking that, but one of my principal reasons is that we have a fine body of men operating our railways today. From the Chief Commissioner and the Railway Board down to the Railway Administrations and from them to the humblest employees on our railways we have in the main, as fine a body of men as any country in the world today. I am saying that with a certain degree of assurance. It is my habit by reading journals deeling with transport matters in other countries to keep in touch with transport developments in those countries and this gives me a fair amount of assurance in making this statement to the House. My reason for raising this point is that in recent times, both in this House and outside, many allegations and charges have been levelled against our railways in unqualified and widely generalised terms. It hurts me to hear these allegations and charges, because we are at present making a great and earnest effort to place increased responsibilities upon the people of our own country, our own kith and kin. At this stuge, if it is suggested by people holding responsible positions in the country that things are as bad as they are sometimes painted to be, it has an extremely discouraging effect upon the men and there are many of them who are trying to do their best to rise to the tasks of a new age.

#### Spirit of Responsibility

Honourable Members are no doubt aware of the special train that we ran the other day to convey the remains of the great leader of our people from this city of tragic memories to his final resting place; where the sacred rivers meet. In the preparations which were made for that special train I happened to be a good deal behind the scenes and I was in a position to observe not merely the enthusiasm; but the touching loyalty, the almost pathetic devotion, with which not merely the officers in the top positions but the humblest gangmen laboured in order that this effort of the railways may be the unqualified success that it has proved to be. I mention this fact, because it is symbolical of the new spirit of responsibility which has been gradually spreading among our railwaymen ever since the day of Independencea slowly unfolding sense of what is required of them in the changed conditions of today. There are black sheep, Sir, in every organisation. It is for responsible leaders, when they are inclined to make charges and allegations, to distinguish the few from the many and not to visit upon the many the sins of the few. I am speaking today as Minister of Railways responsible for this vast army of men who are operating our railways. I want therefore today, not merely as a matter of official convention but as an honest expression of what I think and feel, to pay a genuine, a warm, a very cordial tribute of appreciation and sympathy to India's railwaymen. For, remember Sir, upon the shoulders of our railwaymen today rest as difficult a problem and as grave and heavy a burden as any by which we are faced in these disordered and turbulent times.

## PRODUCTION, NOT TRANSPORT, THE REAL BOTTLENECK

### Need For Efficient Statistical Machinery

REPLYING to the general discussion on the Railway Budget on Feb. 19 Dr. John Matthai dealt at length with economy and efficiency standards attained by railways, manufacture of locomotives, wagon turnound and post-war development schemes.

The Hon'ble Minister said:

The discussion has ranged as usual over a very wide field of matters and as usual I find it a little difficult to pick out the points which are most important and which call for immediate reply. There is one distinguishing feature of the general discussion today and that is that a very large portion of the discussion was confined to matters of a general character raising questions-if I may say so-of fundamental importance. There was, for example, the very important question that was raised, whether the kind of purliamentary machinery that we have set up for the scrutiny of railway matters is adequate for the purpose that we have in mind.

I am ready straightaway to confess that I am myself not by any means satisfied that the kind of machinery that we have set up meets the very important purpose that we have in view. When, for example, my Hon'ble friend Mr. Santhanam spoke of the rather meagre way in which the Standing Finance Committee for Railways in the very nature of the circumstances is compelled to deal with the important matters, that come before it, I found myself very much in sympathy with him. But then the House must remember that there are certain inherent difficulties in the situation. I should personally like that the financial matters relating to the working of railways should be subjected to a much closer and more thorough scrutiny by a representative committee of this House.

#### A Fundamental Problem

The Standing Finance Committee for Railways has been set up precisely for that purpose; but the Committee cannot in the course of a two-hour sitting, at meetings which are not held more than about four or five times in the year, discharge its duties satisfactorily and to the real advantage of the country. Therefore, to my mind, the problem that the whole thing raises is a deep underlying fundamental problem, namely, if as an independent country and as a parliament representing an independent country we, here, are to do our duty by the people of the country in such important matters as railway administration, the legislature, in the first instance, must be prepared to devote a great deal more time than it has done in the past to the work of legislation. And therefore, it necessarily

follows that the Committee of the legislature should also be prepared to give a great deal more time to public work. I should personally like, for example, that in regard to the Railway Standing Finance Committee, particularly the meetings that are held in connection with budgetary matters, each sitting must last at least a fortnight; otherwise I do not think we should be able to carry the scrutiny of the Finance Committee to the limits really required in view of the importance of these matters.

#### Question of Expansion

That is one consideration that arises. The other consideration, as far as I can understand, is this. Suppose you have longer sittings of the Standing Finance Committee for Railways, as I think there should be. In that case the responsible officials of the Railway Ministry such as the Chief Commissioner and the Financial Commissioner for Railways ought to be in a position to spare very much more time from their day-to-day normal administrative duties for the purpose of attending these meetings and help the members of the Standing Finance Committee with regard to detailed matters that come before them. It seems to me, therefore, that if we are going to widen and expand the machinery it would involve necessarily the question also of an expansion of the Secretariat part of our parliamentary machinery.

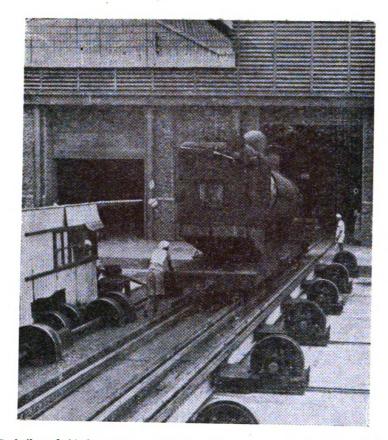

PROFESSOR N. G. RANGA: Are you quite sure—that—they—are—sufficiently worked—today?

THE HON'BLE DR. JOHN MATTHAI: Having had some experience I am in a position to answer that question, at any rate to my own satisfaction. In the course of a rather long and chequered life I have sampled life at many points and have had experience of working many different types of institutions; I have been an industrialist, a Government official, and also a Minister. And I am prepared to say that as far as the top officials in the Railway Board are concerned they have got quite as much work as you could expect them reasonably to do.

#### Poor Statistical Equipment

There is another point which is also a point of fundamental importance. If you are going to submit matters relating to the working and administration of railways to a much more prolonged and much more thorough scrutiny by Parliament and the Committees of Parliament, it necessarily means that very much fuller material must be placed before them. That also is a suggestion which has my full sympathy. But then the problem is this, as I think Hon'ble Members who have a correct understanding of the statistical aspect of administrative problem in this country will realise.

The boiler of this locomotive undergoing heavy repairs in an Indian Railway Workshop has been removed from the erecting shops and is being taken by the special traverser to the boiler shop for a thorough overhaul

One of the weakest points about our administrative structure and set-up for many long years has been the poor statistical equipment with which our administrative machinery has been provided: at the best of times our statistical equipment has been very poor, entirely inadequate. On top of that we have had the partition and we have had also the disturbances arising from the partition. I was concerned with the railway administration all through the time when the arrangements consequent on the partition of the railways were being worked out and I know the strain that it imposed upon the administrative staff of the Railway Ministry-a concern, mind you, with a capitalisation of 800 crores, a railway with the dimensions of the Indian Railways, working for a long period of years over an undivided, unified And it was being asked to make in the course of two months all the arrangements required for this partition.

That was a problem which put an enormous amount of strain on the railway administration. Necessarily, therefore, during that period it was impossible for them and I accept full responsibility for the statement I am making—to have given attention to a preparation in sufficient detail of the materials required in connection with the budgetary statements which had to be put up almost within a couple of months after the completion of the partition arrangements. If you want really an acceptable and useful body of statistical materials, they must be of a kind which would give proper

scope for effective and useful comparisons.

Now, the partition has simply cut the ground from under our whole set-up and structure of our statistics with the result that you are now in a position where all the statistical material of the past cannot automatically be completed with the statistical material that you apply now.

#### Control Figures

The basis of comparison has been cut into in such a serious manner that unless you are prepared to set up a whole organisation in order to work up a whole body of comparable materials, that is to say, work up the existing material to the post-partition basis, you would not be able to get the kind of data necessary. I can give you control figures today of a kind but if you are going to set about this matter seriously you must be able to produce control figures which should have an intrinsic validity.

I think it is very important that this matter should be examined against a wider background than railway administration. We cannot go on as an independent country: we cannot go on with the development of the various schemes of economic construction that we have in view, unless we are going to give a great deal more attention to the building up of a proper statistical establishment in the country. As far as the railways

are concerned, I have been impressed right from the beginning of my connection with the Railway Ministry that the Railway Ministry has not the material on which a proper judgment of administrative matters can be formed, and it is my intention to have a senior officer of the Railway Ministry to go abroad and examine the way in which statistical material is compiled in other countries which have made more progress in this matter than we have. I think that is one of the essential lines on which reform is called for. I am prepared to assist Members of the Standing Finance Committee, to the best extent possible for me in the circumstances, but my point is that if you want all the statistical material to be of the most useful kind, on which really satisfactory judgment can be based then you must probe the problem much more deeply than Mr. Santhanam has done.

#### Economy and Efficiency

Now the other point of a fundamental character and equally important is the question of the standard of economy and efficiency which has been attained by the railways. There also I am free to admit that the standard of efficiency that we have achieved is far from being the sort of standard that ought to prevail on our railways. My Hon'ble friend, Pandit Kunzru, put forward the test of operating ratios, that is to say, the working expenses that we incur in relation to our total earnings, that does provide a basis. But, then, if you go to say that in order to judge the standard of efficiency which has been attained by Indian railways you take the operating ratio in this country and compare it with the operating ratio in other countries, then you are going on to some debatable and rather uncertain ground.

I will tell you why. Take, for example, the present position and you want to examine in comparison with other countries whether the position—the standard of efficiency which prevails at present on the railways as compared with the pre-war conditions represents progress or detorioration. Well, we are up against various difficult factors there. The operating ratio is a compound of two factors.

First of all you have this question of the increase in wages, in the price of material, the general rise in the cost of living index and so on. What you have in the way of increase in working expenses is the direct result of that. Now you take the increase of working expenses in this country and compare it with the increase of working expenses in a country like the United Kingdom. First of all, you are up against this: by a very stringent system of control, by a very liberal system of food subsidies they have been able to keep prices down. In this country we had a very lax system of control to start with. For some years we had no control and we have never tried the system of relief in the way of food subsidies. Therefore, our prices have gone up to a much higher extent. Therefore, if you are going to institute a fair comparison between this country and the United Kingdom, this factor must be allowed for.

The operating ratio is really the establishment of a proper proportion between

Your working expenses and your total earnings. Your total earnings are based upon, to some extent, the price that you charge for your products: in other words, your fares and freights. Because of the increase in fares and freights which I proposed last November, I went in great detail into the question and the extent to which fares and freight have been increased over the railway system in about a dozen of the leading countries of the world.

MR. R. K. SIDHWA: What about the conditions of travel there?

DR. JOHN MATTHAI: If you take the most important countries of the world today, the extent to which the post-war fares and freights represent an increase over pre-war fares and frieghts, India stands amongst the lowest. Now the question that my hon'ble friend raised, whether we are offering services of a different quality, that is a different matter. I am really on the statistical question which Pandit Kunzru raised.

PANDIT HIRDAY NATH KUNZRU: May I correct my hon'ble friend? I was not making a comparison between the operating ratio here and the operating ratio in other countries. In fact, if I were to make such a comparison I would not be disturbed by the rise in the ratio during the last four years. But the question I raised was whether we were getting an adequate return for this increased expenditure.

DR. JOHN MATTHAI: If my hon'ble friend is raising the question of the operating ratio as a test at all of efficiency in the railways, if you are going to ask whether we are getting corresponding service, it is another way of describing the question of efficiency, and you cannot determine the standard of efficiency which has been reached in this country unless you are prepared to relate it to standards of efficiency in other countries you will reach nowhere otherwise.

In any case I am very glad to think that this whole question of the operating ratio and the standard of efficiency which that implies, is going to be examined by my hon'ble friend, Pandit Kunzru, and I shall await his conclusions with the greatest interest.

#### Wagon Turn-Round

Then, Sir, the usual question of the turn-round of wagons was raised. Well, I do not want to speak about this question at any length today because it is one of those matters of railway working which we have been discussing ad naus\*um. But there is one general point I would like to make for the consideration of the House and it is this: that this question of wagon turn-round, if you analyse it into all its component elements, ultimately you find that that problem boils down to this. It is a question of the over-use to which railway equipment was put during the war combined with the under-maintenance to which they were compelled to submit. It is question on the one hand of the extraordinary degree of depreciation, wear and tear to which the whole of your fixed assets have been exposed.

On the other hand, it is a question of the manner in which while this wear and tear were going on, you were not in a position, for various reasons, to do even the minimum degree of maintenance. It is really as a result of this fact that there has been a poor turn-round.

I have been charged with being the primary cause of the low standard of production in the country today. "Transport is the bottleneck": that is what you find in every newspaper in the country. I have got so used to it that I sometimes regard myself as a living, walking, breathing kind of bottleneck. I should like for the benefit of the House to make a little suggestion which I think has a certain degree of force in it. I believe if you read any current text-book on the question of railway transport you will find that railway transport depends very largely upon production.

#### The Real Bottleneck

In my budget speech I gave the House a few figures as regards the amount of rolling stock which is likely to be delivered during the course of next year. I said there were about 4,000 general service wagons which are scheduled to be delivered by the end of 1948 and I went on to say that considering the position of labour, the position of materials in this country, it might not be possible for me to get more than 50 per cent of the deliveries which are scheduled to take place. What does that mean? If I were in a position to get from sources of production in the country all the materials that I want, then I should cease to be the bottleneck that I am. In other words. the question that you are faced with is: is not production really the bottleneck, so far as transport is concerned?

If the production system in the country were in a position to function normally (mark you, I am not blaming for a moment those who are responsible for production, the industrialists of the country: I am not blaming them at all, because they are up against the same difficulties) but this business of putting the whole responsibility upon transport, as distinct from production is really a misleading way of stating the position.

It is a vicious circle and if you want to cut into it you have got to handle both things at the same time.

I think my Hon'ble friend, Pandit Kunzru, asked what has happened with regard to the division of capital liabilities as between us and Pakistan. The principle that has now been agreed to is that as regards commercial lines our capital liabilities would be based on the principle of book value, not earning capacity. And as regards the strategic railways the House will remember that the representatives of Pakistan wanted that much the greater part of the liabilities in respect of strategic railways must be borne by us. The arrangement that has been arrived at is that we accept 50 per cent of the liability.

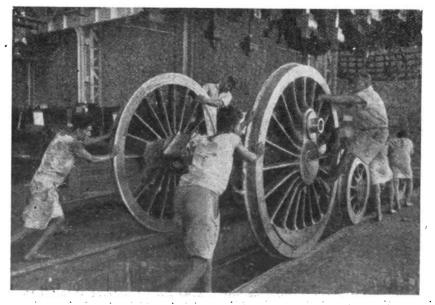

PANDIT HIRDAY NATH KUNZRU: How much does it come to?

DR. JOHN MATTHAI: You have got the figures in the Explanatory Memorandum.

#### Post-War Development

Then, the question has been raised as to what is going to happen with regard to post-war development of railways, of which so much used to be said before the end of the war. I am afraid the position is that we are not able at present to proceed very far with the post-war development plans which were drawn up just before the close of the war. As the House is aware, all big plans of development involve three factors. They involve the factor of finance, they involve material or real resources and, thirdly, they involve personnel. With regard to finance we are not by any means in the happy position in which we expected to be by government in the closing years of the war. The estimates that were then made regarding the availability of surplus revenue have already been proved false.

I am one of those who think (my ideas about finance have been for sometime rather unorthodox) that if there is

The wheels of a locomotive which have been completely overhauled after completing its allotted mileage, are being placed in position to receive the engine frame which will be lowered by crane on to the axles

really a satisfactory scheme of development to be undertaken in the country finance should not be a limiting factor. You can raise the finance if you want it. Finance is really the servant as far as the economic life of the country is concerned and not its master. But there is one limiting factor which you cannot get over and that is the factor of materials, real resources. That is what we are up against as far as the problem of railway development is concerned.

Today in view of the tremendous scarcity in respect of essential materials like steel, cement, timber, etc., if railways go in for an extensive plan of development of the kind we had formulated during the war, you can depend upon it that the problem of inflation would become twice as acute as it is today. That is to say, against growing scarcity if you are going to introduce a growing demand, you are going to intensify the process.

As the result of a very careful examination of this whole position in regard to development, we have come to the conclusion that for the immediate future at any rate our objective should be to consolidate our position. We have been subject to influences of such a seriously disturbing character that for the present I think we should aim at strengthening, stabilising and consolidating our position and what capital expenditure we are thinking of in the immediate future is expenditure which has that kind of consolidation as its objective.

I have been asked various questions as to the implementation of the Pay Commission's recommendations. I do not want to go into that question, because there are outstanding questions arising from the Pay Commission's report which are still being discussed and considered and I would rather that the matter be left at that stage as far as this House is concerned.

What about the officers and members of the Board?

That is really a part of the Government's general decisions on the whole question. It does not concern the railway administration particularly. We are bound in this matter by the decisions of the Government of India as a whole.

#### Regrouping of Railways

I was asked a question about the problem of regrouping. We have an officer now on special duty who is actively concerned with formulating a scheme for the regrouping of the railways which are closely bound up with the partition arrangements. I have not yet received the report of that special When that report is officer. received. then I should certainly consider the suggestion which has been made that that report should be placed before the Railway Enquiry Committee and I should also consider whether other interests should not also be consulted.

I think my Hon'ble friend Mr. Shiva Rao asked me whether anything has been done with regard to contract labour in collieries. We have taken up that question and I am hopeful of making an immediate beginning on that question. The reform of that system, I agree with him, is something that cannot be put off.

A great deal has been said by various Hon'ble Members of the statement that I made with regard to the railway staff and the tribute I paid to it. I still stand by it. I claim in spite of many things that have been said in the course of the discussion that barring a small minority we have a very fine body of men. The House will remember in my budget speech I said that I personally felt hurt at the way in which allegations were being directed against railwaymen. One of my reasons for saying that is that in response to public demand, which has expressed uninterruptedly for period of years, we have been able almost entirely to been expressed Indianise the Railway Board and we are trying increasingly in key posts in the Railway administration to appoint Indian officers and I personally feel not merely hurt. I sometimes feel rather indignant that we should have so little faith in the men of our own country. Do give them a chance: they are aware of these problems and are capable of meeting them.

#### Process of Indianisation

There are some of them who are so anxious to make good under the new conditions and these statements that are made have such a depressing effect on them. We are at the end of one kind of war and we are in the thick of another kind of war, a war which in some respects is really more serious than the war which closed in 1945. Suppose we were in the midst of a war what would be said of the representatives of the country spoke of the Army in the terms in which the railway staff was being described? It goes further than that. I have been severely criticized in certain quarters for forcing the pace of Indianisation. There are critics of Government both here and abroad, who are waiting to see that this process of Indianisation has failed. It seems to me a matter of the greatest importance that these Indian officers who have come to responsible positions should be helped to the largest possible extent by representatives of the country in this House. They need it. They deserve it. I am aware of the doings of a minority, of a few among the railway organisation who are black sheep. It is one of the problems to which we are going to give very close and very detailed attention. It is not such an easy matter as all that.

I do not know if Hon'ble Members are in the habit of reading journals and newspapers in other countries which deal with similar problems there. Just the other day I came across articles in the London "Times" dealing with the question of corruption on the railways. They and we are passing through a period of scarcity, of high prices, and temptation of every kind is therefore offered to those who are conveying goods—essential consumer goods—which are scarce. We in this country are so much in the habit of looking at things entirely from our own isolated point of view that we do not set the comparative background of problems. These pro-

blems are not by any means problems which ara confined And if we have to face this country. problem in a larger measure than elsewhere it is possibly because of the very hard days through which we have had to pass in previous years. It is a bad tradition. We have not been responsible for the Government of this country and we have been simply watching others doing the job. The result is that the sense of responsibility that is called for in these matters has not been sufficiently awakened in us. It will take a little time before we reach that stage. But I think we ought to be patient.

Sir, I have been asked about tourist traffic. It is a matter which we have considered, but for the present I think in point of urgency it does not come anywhere near the other problems which call for our attention. In the first place as far as American tourist traffic is concerned you are not going to attract it unless, along with railway facilities, you are able to provide first class hotel facilities which are lacking in our country today. Unless these things are also handled I do not think today you will make any great progress in that direction.

#### Locomotive Maunfacture

MR. R. K. SIDHWA: What happened to the third class tourist carriages which were built for marriages and other purposes?

I'HE HON'BLE DR. JOHN MATTHAI: They are far too few. Sir, I shall be very brief. I was asked about the question of manufacture of locomotives. Well, at present, as the House knows, the position is the Tata Locomotive Works have made some progress but for various reasons not the degree of progress that we had expected. They have been able to deliver boilers, but I think it will take a longer time before they reach the stage of manufacturing locomotives. So far as the Government factory is concerned, we had intended to set it up at Kanchrapara but after the partition we decided to move it further up, to a place near Asansol. Practically all the arrangemonts regarding that are complete. The orders for the machinery have been placed. The site has been selected. We have made arrangements also for putting up the buildings. And we are sending very shortly an engineer to Continental countries in Europe in order to select technical personnel from the Continent. I believe it would be possible for us to get first-class technical personnel if we canvass the possibility of getting them from Europe.

A number of questions were raised of a purely local character. I am not in a position to give answers off hand to these local problems, but I have made a note of the more important of these. All that I can say at present is that I shall give the best possible consideration to them.

The last point which was raised, I think by the very last speaker, was the question of amenities for passengers. It is perfectly true and it is no use hiding the fact that we have done little in the way of providing amenities for the lowest class of passengers. We have been giving promises all through the

(Continued on Page 321)

## MANUFACTURE OF LOCOMOTIVES size in the country. But today since we are on the eve of a big programme of industrialisation, it is quite likely that our requirements would be much greater and there would be no difficulty about having a factory or two of really economic

RDERS have been placed for the purchase of plant and machinery for the locomotive factory proposed to be built at Mihijam near Asansol, said the Hon'ble Dr. John Matthai, Minister for Railways, in the Dominion Parliament on Feb. 23 replying to the debate on the cut motion moved by Pandit Thakur Das Bhargava to discuss the question of expediting the manufacture of locomotives and machine tools. The Minister hoped that the workshop would be completed in 1950.

#### Dr. John Matthai said:

Mr. Speaker, first of all with regard to the question of locomotives. My Hon'ble friend Pandit Bhargava raised three specific questions. First, whether a site has now definitely been selected for the Factory which was originally intended to be located at Kanchrapara. A site has definitely been selected; it is a few miles off Asansol, and this selection is final having reference to all the considerations which bear upon the location of a factory of that kind. Then he asked me whether orders have been placed for plant and machinery. Orders have been placed for the greater part of plant and machinery. Then he asked me when this Workshop was expected to be completed. I should not like, Sir, to make any prophecies in a matter of this kind, because we are living in times when the circumstances bearing upon the construction of factories are still of a very uncertain kind. But as far as I am in a position to make any statement about it at all, I think the Workshop which is going to be built near Asansol at Mihijam would be completed early in 1950. I hope so, at any rate we should do our best to see that it is completed

#### The Ajmer Factory

With regard to the question of Ajmer in which my Hon'ble friend has always taken a very groat interest, I can give a definite assurance as regards the point which was raised by my Hon'ble friend Mr. M. L. Saksena. We have no intention of closing down Ajmer until we are definitely within sight of the production of locomotives in India. Ajmer has been proving a very useful factory indeed, and I should certainly agree with the suggestion that has been made that before we come to a decision as regards the future of Ajmer we must be certain as to when locomotives would definitely be produced in the country.

That, I think, covers all the substantial points raised by my Hou'ble friend Pandit Bhargava. I must make a reference also to the Tata Locomotive Factory which is part of our scheme. The Tata Locomotive factory has so far been able to deliver, as I said the other day, a few boilers. I expected they would have been able by this time to deliver more boilers than they have done—they have had their difficulties like other factories

in the country—but from the latest reports that I have had I believe that better progress would be made in the near future. If the Asansol factory and the Singhbhum factory both begin to function, then I think between them they would be able to give us all the locomotives that we want over a period of ten to fifteen years for replacement purposes. But if we are going in for new railway construction and we want more locomotives, than merely for replacement purposes, then it would be necessary for us to consider expanding the scope of these factories or having other-factories to be restored.

#### Machine Tools

On the question of machine tools, I am entirely in agreement with the main consideration put forward by my Hon'ble friend, Mr. Santhanam that no country in these days can be a great industrial country unless it has within its borders a first-class factory for the manufacture of machine tools. It goes to the whole root of the problem of industrialisation. The difficulty with regard to Railway's setting up a factory for machine tools is this: since the war various important machine tool factories have been projected or have been started in India—I mean various impor-tant factories, in this sense factories under the auspices of influential and powerful business concerns in the country. Before the war the total requirements of machine tools in the country were not sufficiently large for a factory of economic

size in the country. But today since we are on the eve of a big programme of industrialisation, it is quite likely that our requirements would be much greater and there would be no difficulty about having a factory or two of really economic size, but the problem that we are faced with is this: Railways happen to be the most important consumer of machine tools. Suppose the Railways start their own factory, then, would these private factories which have been started already, get enough scope for marketing their products?

The problem that the Railways and the other Ministries have to consider is that in view of the fact that a certain number of powerfully supported and well-equipped machine tool factories have already been started and the question of providing them with a sufficient market for their products is somewhat doubtful, are Government justified in putting up a factory of their own, since Government are the biggest consumers of machine tools in the country? That is the problem with which we are faced.

Well, there is in respect to that, as far as I am in a position to judge, there is no industry which has increased its capacity in response to war requirements—I am speaking of the world generally—no industry which has expanded its capacity more than the machine tool industry. At present, these machine tool factories in other countries are fully booked with orders, because there are important re-construction demands coming up from all parts of the world, but there will be a different situation in about three or four years from now. At that time, it seems to me quite possible that these factories which have expanded their capacity on account of war requirements and unable to find sufficient outlet for their production in

## DRIVE AGAINST TICKETLESS TRAVEL

The various measures adopted by against railways in their drive ticketless travel were outlined by the Hon'ble Dr. John Matthai. Minister for Railways answering a question put by Mr. V. C. Kesava Rao in the Dominion Parliament on Feb. 24. The Minister said that information so far available which, however, was not quite complete, revealed that the number of prosecutions launched by Government Railways against ticketless travel, during the period August 15, 1947 to January 31, 1948, was 25,452.

The drive against ticketless travel, he added, is being conducted on the E. I., E. P., G. I. P., B. B. & C. I., and O. T. Railways with the co-operation of the United Provinces Government. The scheme which came into force only from Jan. 15, 1948, is considered to be working successfully. Booking office earnings have increased in certain areas and first reports received, mostly relating to the second half of January 1948, show that an amount of over Rs. 55,000 has been collected as a result of the surprise checks

It is the intention to extend the drive to all Provinces. The Bihar and Bombay Government have already indicated their willingness to co-operate in this matter. The Assam Government are assisting by providing the help of armed police on the worst affected sections and they have in addition appointed a special magistrate to try cases in a mobile court. Measures adopted by Railways include the inauguration of a special publicity campaign directed towards securing public co-operation in combating ticketless travel, the provision of improved facilities for purchasing tickets and booking luggage, a stricter check on 'Entrances' and 'Exits' at stations, the appointment of additional checking staff, the introduction of a greater element of surprise in checking, the reduction of opportunities for collusion by controlling Travelling Ticket Examiners from a Central Office, and the co-operation of railway officers of all departments in a drive against irregularities both at stations and in trains. Fencing is being provided or strengthened at stations as rapidly as existing conditions permit.

European countries may want to dump their goods in India. If at that time the railways have already set up their own factory and the most important section of the Indian market has been taken away altogether from the private factory, then a situation might arise which from the general industrial point of view of the country would require very serious consideration.

#### A Different Position

My Hon'ble friend asked me: what about the locomotives. The locomotives are in a different position in this respect, because the machine tool industry is an industry, which, as I said, practically more than any other industry that I am aware of, has increased its capacity and the whole of the world consumption after a period of three or four years may not be sufficient to absorb at economic prices the output of these factories in that respect. The locomotive industry to my mind stands on a different footing from the machine tool industry.

PROF. N. G. RANGA (MADRAS: GENERAL): Is it of strategic importance?

THE HON'BLE DR. JOHN MATTHAI: I do not want, Sir today to express my final view on this question of the railways starting their own machine tool factory, because it is a matter which has to be considered not merely by the Ministry of Railways, but also by the Ministry of Industry and Supply and also by the Ministry of Defence.

PORF. N. G. RANGA: And the whole of the Cabinet.

THE HON'BLE DR. JOHN MATTHAI: I have not so far had an opportunity of consulting the other Ministries on the question. In any case, a proposal for the establishment of a machine tool factory by the railways has been made by my Hon'ble friend Mr. Santhanam himself for consideration by the Standing Finance Committee for Railways and I hope to have an early opportunity of having that question considered in some detail. Pending that I should like for the moment to keep an open mind on the question.

There was one point that my Hon'ble friend Mr. Saksena raised, whether the changing of the location from Kanchrapara to Asansol, whether that makes any difference to the estimates. As far as I know the position, it makes no difference.

MR. B.P JHUNJHUNWALA: May I put one question? Are private firms in a position to supply sufficient machine tools to the railway workshop?

THE HON'BLE DR. JOHN MATTHAI: It is a difficult question to answer off-hand, but the equipment, as far as I know, of some of these machine tool factories is very satisfactory and I should not be surprised if they were in a position to meet the whole of our requirements.

PROF. N.G. RANGA: After these industries have begun to work, is it impossible for Government to think of acquiring these industries and thus run the factory under the auspices of the railways

in view of the fact that these machine tools manufacture is of strategic importance and also in view of the fact that the last Government's Council had recommended that this machine tool manufacturing industry being one of the key industries should itself be taken by the State?

DR. JOHN MATTHAI: Well, Sir, the other day the Prime Minister made a statement in the House explaining Government's policy in regard to nationalization. One of the points made by the Hon'ble the Prime Minister was that even in regard to key industries it is only new units that would be taken over by the State. We therefore expect the machine tool factory should be taken over by the State and this is a point I think that would require consideration in the light of the Prime Minister's statement.

MR. B. P. JHUNJHUNWALA: Have the private firms any preference over the railway workshop in supplying machine tools and other things?

DR. JOHN MATTHAI: At present they have not reached the stage of being able to manufacture the machine tools that the railways require. They have only made a beginning.

PANDIT THAKUR DAS BHARGAVA: (East Punjab General):—Sir, I may be permitted to withdraw my motion.

The motion was, by leave of the House, withdrawn.

## STANDING COMMITTEE FOR ROADS

A meeting of the Standing Committee (Roads) was held on Feb. 25 in the Council Chamber, New Delhi, the Hon'ble Dr. John Matthai, Minister for Transport, presiding.

Discussion centred round the basis of allocation of the Central Road Fund to Provinces. The Committee favoured a revision of the present basis of alloca tions which relied solely on petrol consumption figures with a view to taking into account such factors as gross area, population, and road expenditure from revenue as well as petrol consumption.

As regards National Highways, the second item on the agenda, the Committee considered certain proposals for additions to and modifications of the National Highway system and desired that the matter be taken up with the Provinces concerned.

The Committee approved grants from the Central Road Fund for the Road Test Track at Calcutta, for investigation into the improvement of bullock carts, and for certain sanctioned schemes of road development in Madras, C. P. and and Berar, and Assam.

## WEST COAST MAJOR PORT DEVELOPMENT COMMITTEE CONSTITUTED

THE Government of India have constituted an expert committee known as "The West Coast Major Port Development Committee" to carry out the following two investigations.

- 1. (a) whether a deep-sea port on the stretch of coast covering Kathiawar and Cutch for the accommodation of ships of large size and tonnage at all seasons of the year is required;
- (b) if so, where it should be sited, having regard to construction and maintenance costs, allied transport developments, possibilities of developing existing ports and the needs of the entire area to be served.
- 2. (a) whether a deep-sea port between Mormugao and Cochin for the accommodation of ships of large size and tonnage at all seasons of the year is required:
- (b) if so, where it should be sited, having regard to economy of construction and maintenance of the port and allied transport developments required and having regard to the needs of the entire area: also what measures are necessary for establishing it;

- (c) what improvements are necessary in communications to the existing ports; also what other measures should be taken for the development or provision of additional facilities in these ports as may be found necessary or desirable.
- 2. The composition of the committee will be as follows:
  - Mr. Kasturbhai Lalbhai Chairman.

The General Manager, B. B. & C. I. Railway, Bombay, for the former investigation, and the General Manager, M. & S. M. Railway for the latter.

Mr. S. N. Haji, Scindia Steam Navigation Co., Ltd., Bombay.

Mr. K. Mitter, Docks Manager, Calcutta Port Commissioners, Calcutta.

Mr. J.B. Murray, Chief Engineer, Calcutta Port Commissioners, Calcutta.

Commander D. Shankar.

Mr. V.V. Bhide, Secretary to the General Manager, B. B. & C. I. Railway, Bombay. . . Secretary.

The committee is requested to submit its recommendation to the Government before the end of April, 1948.

## Working Of Railway Grainshops: Enquiry Committee Appointed

THE appointment of a committee presided over by Mr. M. L. Saksna to inquire into the administration of the railway grainshop system, was announced by the Hon'ble Dr. John Matthai, Minister for Railways, in the Dominion Parliament on Feb. 24. The Minister was replying to the debate on a cut motion moved by Mr. Saksena to discuss "Loss on grainshops".

The Minister said:

The two aspects of the question which the House discussed are these: first whether there is justification for the continuance of the grainshop system and the other is whether in point of the administration of the grainshop system, satisfactory results are being achieved.

As regards the first, the House will appreciate that ever since the inflationary process began in this country, it has been felt by people who employ large number of workmen that one of the ways in which inflation can be kept down is by providing part of the remuneration in the form of foodstuffs. To that extent it prevents increase in the circulation of money; that is the justification. The question which arises in this connection is whether in accepting this on the railways, we are exceeding the quantum of relief prescribed by the Pay Commission. Actually what has been done is we have accepted the continuance of the grainshop system, but along with that we have accepted also the lower scale of dearness allowance proposed which has been in existence so far. The Pay Commission's dearness allowances considered are higher than the dearness allowances which are now being paid in conjunction with the grainshop concession to railway employees. That really is the ground on which we are able to justify it in the light of the Pay Commission's recommendations.

#### Dearness Allowances

The House is probably aware that under the Pay Commission's proposals dearness allowance is to increase with increases in the cost of living index. Now that would not apply so far as present system which we have adopted on the Railways is concerned. That is a matter which has to be taken into consideration in remedying the economic policy which is involved. The main point which has been raised by the Hon'ble the Mover is that there are very considerable disparities between different railways in the matter of expenditure incurred on grainshops. Prima facie the expenditure on different railways would vary in accordance with the scope of the articles included, in accordance with the number of dependants, in accordance with the local scale of price and so on, but whether actually the discrepancies correspond to the working of these considerations is a matter on which I am unable to give any reply. It is a matter for investigation. I am prepared to admit that having listened to

the speeches which have been made in the course of the discussion that a strong case has been made for an enquiry into the grainshop system and I propose, therefore, to accept the suggestion made by the Hon'ble the Mover that a committee composed of Hon'ble Members of this House should be appointed straightaway to look into the administration of the grainshop system and I have decided, therefore, to appoint a Committee consisting of my Hon'ble friend Mr. Mohan Lal Saksena as Chairman and Mr. Sauthanam and Mr. Khandubhai Desai as Members, to go immediately into this question and make a roport to us.

MR. MOHAN LAL SAKSENA (U. P. GENERAL): In view of the statement made by the Hon'ble Minister, I beg leave of the House to withdraw my motion.

The motion was, by leave of the house, withdrawn.

## COMMITTEE'S TERMS OF REFERENCE

As announced in the Constituent Assembly of India (Legislative) on Feb. 24 during the discussion on the cut motion relating to the working of grainshops on Railways, the Government of India have set up a non-official committee consisting of Shri Mohan Lal Saksena as Chairman and Shri K. Santhanam and Shri Khandubhai Kasanji Desai as Members, says a Press Communique issued by the Ministry of Railways (Railway Board) on Feb. 28. The terms of reference of the Committee are:

- (1) Whether the existing scheme of supplying foodgrains and other commodities to railway employees at concession rates is fair and equitable as regards eategories of staff admitted to the concession, range of commodities, quantities supplied and the rates charged, and whether the organisation is efficient and economical as regards procurement, stocking and distribution, and otherwise capable of giving the most satisfactory results.
- (2) Whether the overhead charges are reasonable.
- (3) Whether the existing methods of accounting, inspection and control are adequate.
- (4) Whother the losses that are being incurred are reasonable in the circumstances.
- (5) Whether the present system requires to be modified or altered in any respect.
- (6) Whother the present system may be wholly or partially replaced by any

(Continued in Column 3)

## "GUR" TRANSPORT: GOODS SPECIALS ARRANGED

Special arrangements have been made for the transport of 'Gur' from the sugarcane areas to consuming centres, says a Press Note issued by the Ministry of Railways (Railway Board) on Feb. 23.

A 'gur' goods special of 50 wagons was run on Feb. 20 from Muzaffarnagar and Meerut to various stations in the coalfields area on the East Indian Railway. Another train of 65 wagons left the next day from the same stations bound for Gujerat. Of these, 55 wagons were destined for Baroda and 10, for Ahmedabad. A third train is leaving Muzaffarnagar and Meerut for places in the Ahmedabad-Surat area. More trains will be run if justified by traffic requirements.

Late in January, 1948, it was represented by the Ministry of Food that over 3 lakh tons of 'gur' had accumulated in the U. P. for transporting which 250 to 300 wagons per day would be required from various places in the U. P. to various consuming points throughout India. Having regard to the rail transport conditions prevailing, it was not possible to provide odd numbers of wagons at various places for movement in various directions.

During the second week of February 1948, the Ministry of Food checked the original figures and found that actually only about 1.15,000 tons of 'gur' required to be moved, and in order to facilitate this movement, without iterfering with the movement of other essential commedities in India, it was agreed that under Government sponsoring 'gur' should move in trainloads from certain specified 'Gur' producing centres to certain specified consuming areas. Large-scale trainload movements have, therefore, started and will continue as required in consultation with the Ministry of Food.

By the arrangements made, 'gur' is being loaded in the direction in which empties move for transporting other essential commodities, e.g., coal from the coalfields and imported foodstufts from the Bombay area.

#### (Continued from Column 2)

other system while retaining all those benefits of the existing scheme to which the workers are reasonably entitled and keeping the cost within the limits which the Railways can afford.

The office of the Committee will be set up on March 1, and it will immediately proceed to collect material on the working of grainshops. After holding preliminary discussions for a fortnight, the Members will go on lightning tour of various railway grainshop centres. The report of the Committee is expected to be available by May 15.

# RAIL-ROAD CO-ORDINATION SCHEMES

RAIL-ROAD co-ordination in the matter of passenger transport is proposed to be achieved by the formation of road transport undertakings in which railways would be given a minimum of 20 per cent financial interest.

Giving this information in the Dominion Parliament on Feb. 24 the Hon'ble Dr. John Matthai, Minister for Railways who was answering a question put by Mr. V.C. Kesava Rao as to the extent of rail-road co-ordination under consideration for 1948-49, said that schemes for the purpose were under the consideration of the Provincial Governments and were expected to be introduced in most of the Provinces in 1948-49.

In the matter of goods transport, the Minister added, the policy of the Central Government is to encourage road transport for short distances and to reserve long distance traffic, except in perishable and fragil goods, for the railways. A majority of the provincial Governments who consider the matter have accepted it and correspondence with the rest is proceeding.

The new concerns are proposed to be operated on a monopolistic basis ultimately. In this connection, the Minister drew Mr. Kesava Rao's attention to para 14 of the "White Paper" which was laid on the table of the Central Legislative Assembly on January 20. 1946.

#### Para 14 of "White Paper"

The "White Paper" referred to above relates to the policy of the Central Government in respect of participation of State Railways in road motor transport. Para 14 deals with the monopoly question and states: It is the view of the Central Government that competition on the basis of gain will inevitably result in uneconomic duplication. They think therefore that the new joint Companies must in time have a monopoly of the type of road transport on the routes, or in the area, covered by their permits. The extent to which the Companies will operate on branch as well as on main routes will depend on the conditions of the permit imposed by the Transport Authorities. In some cases those authorities may consider that, for the present, certain or all branch routes should be operated by different concerns. In other cases they may require the Companies to operate the less remunerative routes as well as the main routes. This is a matter for evolution and experience. But in any case the joint Companies should have a monopoly on the routes and of the type of traffic (passenger or goods) covered by their permits. management of the companies by a Board representative of the Province and the Railways, whose main interest is good service and of the other shareholders whose main interest may be expected to be profit earning, coupled with real competition on the basis of service, will, it is believed, provide the necessary incentive to efficient operation and to close coordination of services in the interest of the public. What it is necessary to avoid is the domination of these companies, or of any other road transport concerns, but any single financial interest. The proposals in this paper are designed to prevent that.

There remains the not unnatural fear that the Companies will, with monopolies, become so strong as to ignore the public interest, and that the Transport Authorities will be powerless to insist on the provision of better service, since the only redress under the Motor Vehicles Act is the suspension or cancellation of permits, which does not help the travelling public. As far as the railways participating are concerned, the intention is that the Companies should give optimum service. Nevertheiess it is desirable to provide by amendment of the Motor Vehicles Act that the permits should be drawn in a fuller form giving Transport Authorities power to levy fines for non-performance of the services specified in or under the provisions of the permit. In the ultimate resort it would be open to the Transport Authorities to grant additional permits on the same route to other concerns, and to refuse to renew the permit on next date of renewal. Such non-performance is however inherently improbable.

As from March 1, 1948 the Delhi and East Punjab Command has been given a new designation and is now known as the Western Command.

The Command came into existence soon after the partition of the country and its jurisdiction extends over the provinces of East Punjab and Delhi, Rajputana States and Ajmer Merwars.

### FOOD CROPS ON RAILWAY LANDS

In its attempt to make India self-sufficient in foodgrains, the Ministry of Agriculture has been considering the possibility of utilising waste land lying along railway lines, for growing food crops. It is understood that the railways are agreeable to place such lands at the disposal of Provincial Governments or lease them out on certain terms and conditions. In the past encouragement has been given for the cultivation of vegetables by the railway staff on railway lands, but so far vegetable farms have been established mainly in Railway Colonies attached to the bigger stations.

Under the Central Government's plans to increase the food supply, schemes for the survey and reclamation of waste lands sponsored by the Provincial Governments have been eligible for financial assistance from the Centre. Provincial Governments have now been advised to extend their survey and reclamation schemes to fallow lands along railways lines.

The continuance of Railway Priority Control and petrol rationing were among the items discussed by the Standing Committee (for subjects other than roads) for the Ministry of Transport which met in New Delhi on Feb. 27 under the chairmanship of the Hon'ble Dr. John Matthai, Minister for Transport.

The agenda also included items regarding the working of the Motor Vehicles Spare Parts Control, the Bengal Pilot Service and representation of Indian interests on Port Trust Boards.

### Technological Investigations In Cotton

The annual report of the working of the Tschnological Laboratory of the Indian Central Cotton Committee for the year ending May, 1947, published recently indicates that some technological investigations have been completed and satisfactory progress made in others. As in the past, valuable assistance has been rendered to the cotton breeders, the cotton trade industry, not only by carrying out routine tests on a large number of samples sent by them, but also by giving them advice on technical matters.

The assistance given to cotton breeders was in testing their improved strains of select types which would bring better monetary return to the cultivators, and would prove more acceptable to the trade and the industry. The interests of the latter were served not only by carrying out tests for them on trade varieties, but also by scientific investigations on the causes of defects in processing, and suggesting suitable remedies for removing them.

Some of the technological investigations were of fundamental nature while others were of direct practical value to the trade and the industry. Tests on plain cloths manufactured in a mill showed that good quality cottons can be used with advantage to replace East African cottons now being used for this purpose.

Causes leading to neppiness in Indian cotton yarns were investigated in detail and tests carried out on medium staple Indian cotton regarding their suitability to manufacture hosiery yarns.

In addition to these investigations work is in progress on the spinning quality of mixing of Indian cottons with special reference to fibre properties, on the influence of different length groups of fibre on yarn strength, on the effect of storage of Indian trade bales in upcountry centres and in Bombay.

### RESTORE WOMEN AND CHILDREN WEEK

# APPEAL BY PRIME MINISTER AND OTHERS

To arouse public opinion for an all-out effort for the recovery and restoration of abducted women and children, a 'Restore the Women and Children' week was jointly observed by India and Pakistan. The week began on Feb 16.

Broadcast appeals for restoration of abducted women and children were made during the week by the Prime Minister, the Relief and Rehabilitation Minister and other leaders of both the Dominions.

Under the auspices of the Women's Section of the Ministry of Relief and Rehabilitation, public meetings and processions were organised by voluntary organisations, in particular, the Women's Conference and other women's societies.

Pandit Jawaharlal Nehru, Prime Minister, inaugurated the week on Feb. 16, by a special broadcast appeal to the people from All India Radio Delhi at 8.30 pm.

Earlier, Mahatma Gandhi's recorded speech of Dec. 7, in which he spoke on the subject of recovery of abducted women, was broadcast.

#### Remove the Stigma

The Prime Minister, Pandit Nehru, appealed to the nation to bring about an early restoration of all abducted women irrespective of what was done in Pakistan. "By finding a quick and satisfactory solution of this problem, you will be fulfilling the wish of Mahatma Gandhi who felt strongly on this point", he said.

During the last six months, Pandit Nehra continued, a number of very deplorable things had happened in the country, the very thought of which made one hang one's head in shame. The abduction of women was the worst and most horrible of them all. It had brought shame to them and had lowered them considerably in the eyes of the world.

The people of India must remove the stigma from their names. Some time back, the Governments of India, Pakistan, West Punjab and East Punjab had come to a certain understanding on this question and some work had also been done. But the pace was slow and they had not been able to accomplish very much. The work, however, for the restoration must be started once again with renewed zeal and resolution.

How much was done in Pakistan should be no consideration with the people of India. They must do their duty towards those abducted women and help them to return to a place of honour and dignity. "We want Pakistan to do its duty, but, in any case, we shall

give that Dominion full co-operation in solving the problem", declared the Prime Minister.

"Every one of us must do his duty and create an atmosphere in which our sisters can return to their homes and occupy once again the same place of honour among their relatives. They should not have even the slightest feeling that they would not be welcomed by their near and dear ones. Whatever happened was no fault of theirs, and they shall continue to receive from us the same love and affection as they did previously".

In Jammu Pandit Nehru said, he had met some women from the Ali Beg camp and he was ashamed to hear their tales and to imagine the plight of those who had still not been rescued. "I said to myself, if this kind of thing continues to happen in this country, then what is the use of our occupying places of authority".

Pandit Nehru added: "We may forget other things, but we shall take a long time to forget the abduction of women. This problem is a constant source of friction between the two Dominions, and we must solve it as early and as well as possible".

The restoration of abducted women, Pandit Nehru concluded, had also been receiving great attention from Mahatma Gandhi. "You have heard his voice today on the radio on this very subject, and I hope you will carry out his wishes.".

### PROGRESS IN RECOVERY OF ABDUCTED WOMEN

According to a joint report submitted by a committee consisting of Kumari Mridula Sarabhai and Miss Fatima Begam, 1,576 abducted Muslim women and children were recovered from East Punjab during the period Dec. 6 to January 25, says a Press Note issued by the Ministry of Relief and Kehabilitation on Feb. 19.

Figures of recoveries, surported by receipts, are not available in West Punjab but during the same period 1,218 non Muslim women and children were received from that province in the base camp at Amribar.

The figures of recovered women and children from both East and West Punjab are now checked by a committee as the result of a decision arrived at an Inter-Dominion Conference in January last.

### DISCHARGED M.E.S. PERSONNEL

Discharged M. E. S. personnel have been evacuated from all districts, in the N. W. F. P. with the possible exception of Bannu, says a Press Note issued by the Ministry of Relief and Rehabilitation on Feb. 18. All such personnel, who desire to serve the Indian Union, are instructed to report to C. R. I. E., Ambala Cantonment, who will give them the necessary posting instructions.

A transfer office for all civilians, in military employ, who cannot be absorbed by their departments, has been opened in 'P' Block, Raisina Road, New Delhi.

### Rajkumari Amrit Kaur's Appeal

The Hon'ble Rajkumari Amrit Kaur, Minister for Health, Government of India, broadcasting from All India Radio. Delhi on Feb. 19 in connection with "Restore Women and Children Week", appealed to the society that the wronged ones should be received with all the affection that is their due.

Rajkumari Amrit Kaur said:

One of the saddest things during all the recent communal disturbances has been the abduction of women by both Muslims and non-Muslims. Hate and anger breed violence and violence rouses the lowest passions in man. We, have, therefore, to eschew hate and anger.

The wrong afflicted on the souls of these unfortunate women is irreparable but we can, at any rate, retrieve our error up to a point and that is by both sides willingly releasing abducted women so that they may be taken safely to their homes. This is the least act of reparation that we can do to these poor unfortunate victims.

I would also like to appeal to society

at large, and to the relations of abducted girls in particular, that these wronged ones should be received with all the affection that is their due so that they may, in time, recover their physical, mental and moral health and become useful members of society. In no sense can anybody attribute any blame to them.

Molestation, rape and abduction of women is the lowest form of brutality and cowardice. Therefore, only those who have sullied their honour stand dishonoured, not these girls. I am confident that the necessary generosity of heart and mind will be forthcoming. I appeal to the women of India in particular to extend the right hand of fellowship and sympathy to these unfortunate sisters. If communal unity has to be achieved, as it must, if both Pakistan and India are to live, immediate righting of any wrong that is at all possible is one step towards the desired goal.

I trust there will be no delay in putting our houses in order on both sides.

# WRONG-DOERS SHOULD REALISE THEIR MISTAKE, SAYS SARDAR PATEL

THE Hon'ble Sardar Vallabhbhai Patel, Deputy Prime Minister, broadcasting on Feb. 18 from A.I.R., New Delhi, said:

I am taking this opportunity of adding a few words to the powerful appeals which have already been made on behalf of the thousands of distressed women. During the recent disturbances which overspread both West and East Punjab and the Frontier and enmeshed a part of the beautiful Kashmir Valley and Jammu Province, nothing has degraded us more than the foul crimes and barbarities which have been inflicted on innocent women and children who have been forcibly torn from their kith and kin and subjected to most inhuman indignities and violence. Even the law of the jungle does not countenance such insensate wrongs; these are completely alien to the traditions of any society and civilisation. There should be no place, therefore, in this world for wrong-doers of this type and it behaves us all to see that such transgressions of civilised conduct are put down with a strong and firm hand.

### **Essential Mission**

When I think of the sorrowful plight and miserable sufferings of these mothers and sisters, my heart fills with distress and grief. Women of education and breeding, many of whom had been nourished in the lap of luxury; all had led a peaceful and sheltered existence with those with whom they had ties of blood and affection; many were valuable treasures of poor men's houses, which are now left desolate and ruined-all these have been uprooted from their natural surroundings and placed by the cruel hands of frenzied eriminals into conditions of existence which shame humanity and all the virtues and qualities which go to make God's own creature — man. To rescue them from these living conditions and restore them to their original environments is, therefore, an essential mission if men's reputation is to be rehabilitated as that of human beings. Failure in this mission would mean that we are not fit to face the bar of human history and must go down to the future ages as those who degraded humanity to depths lower than those of beasts.

Those who have braved adversity and challenged obstructions and obstacles in this noble undertaking have deserved well of the nation and humanity whose cause they have tried to uphold. The results they have achieved may appear slight when compared to the dimensions of the problem but if we consider how much concentrated effort, public zeal, and patience and grit have been expended on the achievement of these results, we would be able to appreciate not only what has been done, but also what requires to be done to salvage these treasures from the wrecks of human civilisation. It is obvious that an enterprise of such gigantic proportions cannot be success. fully accomplished if we do not have both popular and official support. Such support must, therefore, be given by the Government and the people in both India and Pakistan. To withhold it would be contrary not only to solemn undertakings entered into by both the Governments, but also to all laws of social existence and codes of honour.

### An Appeal

We have also to awaken the conscience of those who have perpetrated these wrongs or who have now acquired possession of these women as though they were goods and chattlels for sale for articles of prize and booty. I would appeal to them to realise their error and to reflect what stakes are involved in their persistence in the wrong course which they have adopted. Neither the sacred name of religion which might have been invoked by them in perpetrating these wrongs, nor the desire for vengeance, retaliation or plunder which might have actuated them, can ever be pleaded in extenuation of the enormity of their misdeeds. repentance and restoration of the wrongs committed can bring them back into

This is, therefore, their opportunity for reclamation. Let them listen to the voice of their own conscience, to the injunctions of their own religion, to the rules of their own society, to the principles of their own existence, and to the codes of honour and chivalry. Let them reflect on how they themselves would have felt if their own womenfolk had to share the fate which, through their instrumentality, has befallen these innocent victims of human folly and lust. I have no doubt that if they bestow a

moment's thought to these considerations, they will themselves realise the errors of their ways and offer to facilitate the task of all those who are engaged in this mission of rescue and succour.

I should also like to add a word for those unfortunate and grief-stricken relations who have lost their mothers, wives and sisters. I can well imagine what torments affect their minds and what agony afflicts their hearts. I also know that many are facing and are prepared to face perils of all kind to get back their dear ones. I have not come across any who is not anxious to claim them back into his home. I would advise them not to lose heart but to persist in their efforts to trace them. After all, where so many thousands are involved, it is impossible for official agencies alone to discover or follow the track. Individual or collective non-official effort, backed by official support, would probably achieve much more than more offical action. I hope, therefore, that neither disappointments no temperary setbacks will damp their ardour and that they will pursue their task with doggedness and determination.

### Message of Sympathy

To the grief-stricken women, themselves I should like to send a message of sympathy and comfort. Their misery and plight have stirred our hearts. They are constantly in our thoughts. Whenever we can get at them, we will do so. They need be in no doubt either of the genuineness of the anxiety of their relations to claim them back or the zeal and intensity of the offorts to rescue them. I realise what cups of bitterness and miseries they must be drinking every minute or hour of their life but patience and faith have moved mountains and melted the coldest hearts. Lot them, therefore, persist in both, and I am sure, they will invoke God's blessings for the success of their rescuers and awaken the conscience of the wrong-doers.

# Lady Mountbatten Requested To Help In Recovery Work

As a result of the Government of India's request to Her Excellency the Countess Mountbatten of Burma (in her capacity as Chairman of the United Council for Relief and Welfare) to take over the work of the recovery of abducted women from States acceding to India and Pakistan, Her Excellency presided over a meeting of States Representatives, Government of India officials and social workers on Fcb. 16 at Government House. The Pakistan High Commissioner and Colonel Nur Khan were present on behalf of Pakistan. Mrs. Rameshwri Nehru, Miss Sarabhai and Dr. Sushila Nayyar also attended.

Ministerial representatives of Patiala, Nabha. Faridkot, Kapurthala and Jind reported on the progress which had already been made in recovering abducted women in their States and on behalf of their Rulers offered maximum help and facility within their respective States. Dr. Sushila Nayyar, who is returning forthwith to Patiala, reported that Her Highness the Maharani of Patiala had herself set up an organisation of voluntary women helpers in that State. The High Commissioner for Pakistan gave full assurance of assistance and co-operation in regard to similar work in the States acceding to Pakistan.

Immediate action will be taken to follow up the decision reached at this meeting. It was decided to obtain weekly reports of progress made and to review the position frequently.

### "Wash Away Your Crimes By Restoring Abducted Women"

-Sm. Rameshwari Nehru

SHRIMATI Rameshwari Nohru.

browleasting from A. I. R.
Delhi on Feb. 19 in
connection with the "Restore Women
and Children Week", called upon every
man and woman in India to render
all possible help to the police in restoring all abducted girls.

She said:

The twentieth centruy is doubtlessly known for the freedom and preservation of the human race. Two world wars have already been fought in the name of freedom. Not very long ago when the war was on three big powers of the world from aboard a ship on the surface of the wide sea, made a solemn proclamation of the freedom of mankind, which is known as the Atlantic Charter. This was pronouncement of the decision that all human beings having been relieved of oppression and slavery shall be afforded with an opportunity to lead a carefree life

The achievement of this goal led to the formation of the United Nations Organization, which has practically all the Nations of the world, including India and Pakistan, as its members, and is in full-fledged session now.

Woman occupies an honourable position in the human race. She shares equal rights with man and this fact having been established it was hoped that she would occupy her rightful place and shall be able to lead a fearless life. But what happened was just the reverse. India attained freedom. India and Pakistan honourably joined the ranks of free countries as two independent Nations, but what befell on the women in both the Dominions is very well known. They were kidnapped and abducted in their thousands and were treated inhumanly.

### Women Sold out as Chattels

Theft of cattle is well-known. In England, at one time, cattle-lifting was quite a popular crime. In the same manner during the course of the last few months a lot of good women were "lifted" by bad people, carried to whatever places they desired and behaved to in any manner they liked. Their honour was outraged almost publicly while they were sold out in markets as chattels. The trader was not dealt with by law, the buyer was not penalized and even the neighbour did not take exception to this trade. The Government could do nothing while the Police never rounded up the criminals. This happened in a free India and in a free Palviern

Aged mothers shricked, fathers felt the pains, husbands or brothers only kept gazing at this ghastly crime while they could do nothing to save them. No army was available, no transport was procurable and no relief could be rendered at the time of the great revo-

lution and a number of our beloved, pious women were made use of as animals.

At this time of kidnapping we could render them no help but their dear homes continued to be deserted in their absence. Peace in the country cannot be restored unless they are restored to their homes. A scheme for their recovery, therefore, was launched and we sent our volunteers both to East and West Punjab who, along with the Police and men volunteers were to help in their recovery and safe transit to their homes.

#### 5,000 Recovered so far

On Dec. 6, 1947, both the Governments of Pakistan and India entered into an agreement that within their jurisdictions they will do their best to restore all abducted women to their homes. The decision arrived at could not be implemented for about a month. Our lady vol-

unteers reached Lahore in January and some of the Pakistani sisters also came into East Punjab. We did not achieve the estimated success but I think in both the Dominions about 5000 women have so far been recovered, which, considering the number of abducted women, is nothing. It is our foremost duty that we restore to her home every sister who has been abducted against her wish. It is not a trade where we might try to keep balance on both the sides.

We need not care to see whether the number of women surrendered by us tallies with that from Pakistan. Competition is always bad but we could tolerate it in some fine things. Competition in sin and mischief only degenerates us. We have already degenerated quite much and our face has been blackened by sins. It is the time now when we can wash away our sins by returning these girls.

We have sinned. We might as well repent. It is only right for us that we return every abducted woman from every corner of the country. It is not the duty of the police alone. It is the duty of every citizen and I hope that every man or woman considering it as his or her foremost duty will render all possible help to the police in restoring these girls.

# "SOCIAL OBJECTION MUST CHANGE INTO WARMEST WELCOME"—MR. NEOGY
